The accompanying reproduction of the latest Coast Survey Chart, No 267, shows the waters on which the present races were sailed and on which future races will be sailed while the cup is in possession of the Seawanhaka Corinthian Y. C. The very full reports which we have published of both the cup and trial races will show that the weather in summer is light, with smooth water for anything larger than 15-footers, the prevailing winds being from off shore, about S.W. The contests have indicated that while a good proportion of sail area will pay in the very light weather, there will be some days of strong winds in which a moderate rig pays, and in a northeaster, or even in comparatively moderate weather, there may be a sea that will test severely these little boats. Even in Oyster Bay, up toward the town, there is sea enough in a strong S.W. blow to suit anyone. The tides are strong, with a rise and fall of 7ft. The general conditions are not so widely different from those in other parts of the United States as to call for a distinctly different type of boat, but of course where the competition is very close the successful boat is likely to be the one which is designed most closely to meet the exact local conditions. There is yet a possibility of a double series of races next year in case Mr. Brand should desire to race in the event of the cup being retained by the club after a match early in the season with another challenger, and in any case there is now a reasonable certainty that open trial races will be held by the club considerably earlier than this year. These races will give every opportunity to ambitious racing men and their designers, and there should be a very large fleet of starters for the trial races.

The following correspondence between Mr. Brand and the race committee explains itself:

SEPT. 29, 1895.

Race Committee, Seawanhaka Corinthian Y. C.:

On behalf of the Minima Y. C., I have the honor to inform you that I have drawn the attention of your Hon. Secretary, Mr. Charles A. Sherman, to the fact that Ethelwynn is not entitled to yesterday's race, as she broke Rule XXVI., Section 1, by discharging and taking in ballast after 9 P M. of Friday evening, the day preceding the race; and that she broke Rule XXV., Section 2, by not having a serviceable life buoy on board during the same race. I must protest against the prize being awarded to Ethelwynn on these two grounds, at any rate until I have heard from my club. Yours very sincerely,

(Signed) J. ARTHUR BRAND, Owner of Spruce.

NEW YORK, Oct. 2, 1895.

J. Arthur Brand, Esq.:

DEAR SIR—I acknowledge the receipt of your favor of Sept. 29, and would inform you that its contents have been carefully considered by the Seawanhaka race committee. As a result of their deliberation, I am instructed to inform you that the protest contained in your letter against awarding last Saturday's race to Ethelwynn is not sustained, for the following reasons:

First—Your charge that ballast was taken aboard or discharged from Ethelwynn after 9 P. M. on Friday, Sept. 27, is denied by her owner, Mr. C. J. Field, with this qualification. As you are probably aware, it was customary on the morning of each race to haul out Ethelwynn for the purpose of polishing her bottom, and as this process involved heeling her over on her side, to avoid the danger of straining her hull the inside ballast was temporarily removed, but restored immediately after the vessel was floated. In the judgment of the committee this action should not be held a violation of the clause in Rule XXVI., Sec. 1, bearing upon the subject, as there was manifestly no intent to alter the yacht's trim, which unfair expedient the rule is intended to prevent.

Second—In answer to your charge that life buoys were not carried on Ethelwynn's deck, in violation of Rule XXV., Sec. 2, while admitting that technically you are correct, the committee holds that this rule is obviously not intended to apply to such very small yachts, and upon this ground also your protest is disallowed. I remain, dear sir, very respectfully yours, C. A. SHERMAN, Sec'y Race Committee.

Both of these protests are purely technical; and in no way affect the merits of the races. Ethelwynn was measured with 100lbs. of lead in addition to the required 300lbs. of dead weight representing crew; and also with two more pigs, or 150lbs. Even with the longer waterline, she was considerably inside of her limit—15ft racing length. Four pigs stowed in the well, two on each side of the trunk at the fore end, were kept in all the time; the extra two, stowed just inside the fore bulkhead, were not carried on Tuesday, Wednesday and Thursday; but were placed aboard on Thursday after the race, in view of Mr. Fred Ball, a much lighter man, taking Mr. Field's place on Friday. These two extra pigs were used on Friday and Saturday, being lashed fast to two eyebolts in the keel, and were not taken out on Saturday morning. The other four pigs, however, were necessarily removed when the yacht was beached, and replaced when she was floated after cleaning, being securely fastened in their usual places. There was no intention of evading the rule, nor was there any such evasion. In regard to life buoys, one was carried on Ethelwynn in the cockpit, in the first races, but was left ashore in all of the later races, it being understood that it was not required. So far as safety went, a naphtha launch was in close attendance on the yacht, and many boats were in the vicinity. If, as Mr. Brand apparently desires, the strict letter of the rule is to be observed, then both yachts must be disqualified; the rule says: 'Sec. 2. All yachts shall carry on deck two serviceable life buoys ready for immediate use." Unless we are very greatly mistaken, Spruce at no time complied with this rule In view of the disadvantage at which Ethelwynn was placed in the race of Friday, with one of her crew sick and the other new to the boat, of the fact that Mr. Brand obtained his choice of course on both Friday and Saturday, and was fairly and conclusively defeated, it would, in our judgment, have been far wiser to have made no attempts to gain a race on pure technicalities.

On Oct. 1 Mr. Brand gave a dinner at the Windsor Hotel to the race committee and Mr. Sturdee, all of the committee but Mr. Kerr being present. During the latter part of the week he was the guest of Mr. Sturdee at Saugerties, N. Y.

Huguenot Y. C.

THE Huguenot Y. C. opened the yachting season of 1895 on Long Island Sound with a very successful regatta, and the same club will give the last race of the season on Oct. 12. On this date the half-raters will be given a chance, and there will be a class for cabin cats between 20 and 25ft. racing length. This class will be open to boats that have not won a first prize during the season of 1895

A special class will also be formed for naphtha launches. Entries may be sent to A. Embury, Pelham Road, New Rochelle.

The board of trustees have decided to close the big house on Election Day. The small house will be fitted up and kept open all winter. As the Defender will winter at the Huguenot anchorage, the club has taken steps to accommodate the visitors, who will undoubtedly appreciate its efforts. Mr. C. O Iselin, who has Defender in charge, is a member of the Huguenots, and took his first lessons in sailing upon the waters which surround their house. There is probably no yacht club in the United States that has grown so rapidly as the Huguenots. It was organized last December by ex-Admiral Connolly of the Corinthian Navy. To-day the club has over 125 members, and has given more races than any club on the Sound with the exception of the Larchmont.

SPRUCE IV. IN PHILIP'S YARD, SHOWING LIFTING BULB FIN AS ORIGINALLY FITTED.

The Huguenot fleet has done splendid service during the season. Among its boats that have carried the red cross to the fore may be mentioned Dragoon, Kittie, Question, Houri, Angora, Punch, and last but not least, Arethusa, which valiantly captured the cruising schooner cup, defeating Vif.

The Huguenots are now preparing plans for the defense of the Seawanhaka half-rater cup, several of its members having placed orders for wee racers At the last meeting of the trustees, Com. Charles Whann, Vice-Com. Connolly and Rear-Com. Gorham were appointed a committee to select candidates for office for 1896.

International Racing.

ON Oct. 2 Mr. G. L. Watson sailed on the Teutonic with Lord Dunraven's two daughters, Capt. Cranfield, Capt. Sycamore and the remainder of the Valkyrie's crew sailing on the same vessel. The yacht is now snugly berthed at Tebo's, the exact plans of her owner being unknown. From what has been said by Mr. Smith, it is probable that Lord Dunraven would like to race here again next year if such a thing is possible. It is doubtful whether this can be done. Whatever Lord Dunraven's views may be, and whatever his intention was, there is no question that many American yachtsmen look upon his action on the last day as an affront to the New York Y. C.; and it is quite possible that the club may not care to go out of its way to give him another race. There is one course open to him, however, which, in our opinion, he will do well to follow. If we are not greatly mistaken, Lord Dunraven's prestige at home has received a severe blow, and as matters now are he cannot resume next season the position which he has held for several years—very close to the head of British yachting. There is still a chance to retrieve himself on this side, in doing which he will regain the respect of his own countrymen. Leaving the America's Cup out of the question, he cannot do better than to fit out Valkyrie as early as possible at New York and to start her in all of the regular open events of the season and in any private matches should the occasion offer. If he abandons all technicalities and letter writing, and puts his boat into as many races as possible, taking the same conditions as are served out alike to all other yachts, he may regain the respect of yachtsmen here and at home. It is impossible to say what the prospects of the class are for next season, but a certainty of Valkyrie's entry would hardly fail to bring out Vigilant and also Defender.

The answer of Lord Dunraven to the letter of the America's Cup committee of Sept. 17 was made public on Oct. 3. It was delivered to ex-Com. James D. Smith, chairman of the Cup committee, by messenger, at his office in this city, on Sept. 26.

NEWPORT, R. I., Sept. 21, 1895.

GENTLEMEN: I have the honor to acknowledge the receipt of your letter dated the 17th inst., and must apologize for not sooner replying, but I was obliged to send to New York for a copy of my previous correspondence.

I cannot accept as entirely accurate your account of a short conversation at the Waldorf between Mr. Canfield, Mr. Busk and myself, but I hope you will excuse me for not entering upon a discussion of matters dependent upon memory and which do not appear to me to be of any great importance, and also for not further commenting upon certain points in your letter, which have, in my opinion, been sufficiently dealt with in former letters of mine.

But it is due to you that I should endeavor to satisfy you on one or two matters.

You express surprise that I could have been in doubt as to whether Mr. Canfield and Mr. Busk were officially representing the committee. In my letter of the 13th I said, "I do not know whether Mr. Canfield and Mr. Busk were officially representing the committee when they came to see me at the Waldorf. I judged by the conversation that they were not, and I understood from them that the committee had not come to definite conclusions upon my letter." I fear I am unable to add much to that. Mr. Busk assured me that if the third race was sailed the dates and times of starting any further races would not be published. I understood Mr. Canfield at first to demur but afterwards to acquiesce with Mr. Busk's opinion. I can only repeat what I said in my letter of the 13th, that I understood the verbal proposal made to me to be "that I should withdraw from my determination expressed in my letter of the 10th, and should sail the third, and possibly the final race, on the condition that sufficient room was secured at the start, and that in any further races my suggestion that the dates of races and times of sailing should not be made public should be carried out." That understanding, had I agreed to it, would obviously not have been binding on the committee, as you now inform me that "the committee did not consider practicable your suggestion to keep secret the dates and times of starting any further races" I may be permitted to observe that your expression "to keep secret" somewhat exaggerates the intention of my letter of the 10th, in which I speak of the difficulty of keeping a clear course "if the dates of races and times of starting are known and advertised."

In furnishing you with details of the times of delivery of certain letters, I most certainly never intended to imply any neglect or discourtesy on the part of the committee, and on reading my letter of the 13th I am puzzled to see how it can have given rise to an impression so far from my thought. I gave the exact times of the delivery of letters because the times mentioned in your letter of the 12th were inaccurate, and I was anxious that you should understand that I sent Mr. Canfield a written reply to his written proposal at the earliest possible moment, and did my best to minimize any inconvenience to the committee, the Defender or the public.

I do not in the least dispute the accuracy of your account of what took place on the 11th at the New York Yacht Club, nor have I ever done so. As I have previously stated, when, on leaving the club, I asked that my letter of the 10th should be given to Mr. Canfield, I meant that he should be at liberty then to open it. If any inconvenience was caused to any one, I can only express my regret; but as I had asked Mr. Canfield some time before to call a meeting of the Cup committee at the earliest possible moment, and as you say in your letter of the 12th that the letter was handed to Mr. Canfield at half-past twelve and was opened at half-past two, I trust that the delay, if any, was immaterial.

As some misunderstanding appears to exist on the part of the public as to my motives in intrusting my letter of the 10th to a third party, with instructions not to deliver it until the protest had been heard, I may repeat that I was anxious to avoid the possibility of any one supposing that, in writing the letter, I was in the slightest degree influenced by the fact that the protest had been lodged or desired in any way to influence the gentlemen hearing that protest.

I do not quite see the object of calling my attention to public opinion, but as you allude to it, I may say that, though I have no idea whether my action in withdrawing is considered justifiable by anybody or everybody, I have not the slightest doubt upon that point.

I have endeavored to avoid controversial matters, and unless I can be of any further service to the committee I should be well content to consider this correspondence closed.

I have the honor to remain, gentlemen, your obedient servant,

DUNRAVEN.

The following reply was delivered to Lord Dunraven at Newport on Sept. 27:

NEWPORT, R. I., Sept. 27, 1895.

My Lord:

I have the honor to acknowledge the receipt of your letter of Sept. 21 to the committee. I received the letter this morning from Mr. Smith, who informs me that he received it yesterday.

I will submit your letter to the committee at the earliest opportunity.

I have the honor to remain, your obedient servant,

A. CASS CANFIELD,
Secretary America's Cup Committee.

Within the past three weeks there has come under our notice an immense mass of criticism of the late races, made up mostly of extreme views from one side or the other. It is evident that much of this is due to the fact that the first reports sent out throughout this country and Europe were the garbled and extravagant stories of the evening papers, these obtaining a far wider circulation than the more accurate and reliable stories of the following morning. As but one instance, the story has been circulated everywhere that Valkyrie's withdrawal was directly due to the interference of tug No. 19 or pilot boat No. 19 on the line on the last eventful day.

We have no desire to prolong a fruitless and acrimonious discussion that may well be relegated to obscurity, but there are a few points that may be stated now in view of the widespread misunderstanding on the part of those at a distance.

In the first place, there was no tug or pilot boat near the line on the last day, and no interference with either boat; Valkyrie's intention of not racing was plain to everyone an hour before the start. In the second place, as long as Lord Dunraven was determined not to go over the course, there was no necessity whatever for Defender to go through the formality of a sailover, or for Valkyrie to cross the line. In the third place, there is no location between Cape May on the south and Bar Harbor on the north, covering the yachting ground of the Atlantic Coast, where steamers and tugs would not follow the yachts; and no course within this area superior to that outside Sandy Hook, all things considered. The difficulty of interference by an outsider can be met in one of three ways; by the doubtful expedient of concealing the dates of the sailing days, by going to some such location as Halifax, Labrador, or Madeira, or by remaining at New York and restraining the large attendant fleet by some one of several plans already proposed. We are inclined to think that the latter is really the most feasible.

In regard to the collision between Defender and Valkyrie, of which the British papers are now saying a great deal, it is well to state that in the opinion of at least a dozen competent witnesses on the committee boat, in the best possible position to judge, there was over 100ft.—to place the limit low—between Valkyrie and the tug, instead of the 6ft claimed by Valkyrie; the former statement being borne out by various photos of the collision.

The FOREST AND STREAM can certainly not be accused of undue partiality toward the New York Y. C. in Cup matters in the past or toward the Cup or regatta committees, but in the case of the collision and Mr. Iselin's protest, from all that we have been able to learn from many sources, the decision of the regatta committee was a perfectly fair one; and the Cup committee certainly did all in its power to satisfy Lord Dunraven.

The following letter, written by an officer of the British Navy to the London *Times*, is well worth quoting as a remarkable exception to the strong statements on both sides:

To the Editor of the Times:

[SIR—Admiral Montagu's letter to the *Times* of the 17th is a useful contribution from a technical yacht racing point of view toward clearing up the dispute on the above subject, but when all the arguments have been heard on both sides, and all the technicalities discussed and freely commented on by experienced yachtsmen and others, impartial minds will insist upon looking at the whole affair in its broades', most general and, in short, in its international aspect, and there can be little doubt that the judgment of history will be against England.

Lord Dunraven, as the representative of this country in a friendly international contest, must expect to have his action criticised freely, not only from a narrow and technical yacht racing point of view, but from the wider aspect of manly and generous sport in the best sense of the word, and when compared with that of Mr. Iselin I much fear that it will not stand well and that his fair-minded countrymen will have to regret it.

There is not much difficulty in putting one's finger on the sore spot, and there can be no doubt that the real point of irritation, that which turned cordiality into coldness and friendliness into unfriendliness, was the incident that occurred at the start for the second race. As Admiral Montagu very truly says, "There ought to exist a certain amount of give and take between competing vessels on such occasions."

There is the strict law, and there is the etiquette, just as there is at whist or any other game, and the distinction between the yacht to leeward holding her own or giving a distinct and gratuitous luff so as to cause a collision is in many cases a very narrow one, and may honestly be a matter of opinion. Lord Dunraven was evidently of opinion that the Defender did not give the Valkyrie room, but luffed into her when she could have avoided doing so, and was thus guilty of a breach of etiquette, which, be it remembered, is far more serious than a breach of rules, as the latter can be summarily dealt with and the former cannot, but remains and rankles

The committee decided that the Valkyrie was in the wrong, and their decision should have been loyally accepted without comment. Unfortunately this was not done, and Lord Dunraven in his letter to Mr. Iselin on Sept. 12 permits himself to write the following sentence: "The regatta committee have decided according to their best judgment, *for reasons which I confess are beyond my comprehension*, that she (Valkyrie) did break the rules."

The words which I have taken the liberty to italicize were, under the circumstances, inadmissable, and by using them Lord Dunraven put himself entirely in the wrong. No man ever admits in his heart that he is "out" leg before wicket; he may growl and grumble as much as he likes so long as he keeps it to himself, but to express aloud his dissent from the decision of the umpire is not in accordance with the best traditions of cricket, or indeed of any other game.

There may have been breach of rules or breach of etiquette, or both or neither, or the Americans may have a different code of etiquette from ours; all this is immaterial; the one broad fact remains that the decision of the umpires was not accepted loyally and without comment Once this golden rule was broken there was no prospect of further friendly racing, and the action of Valkyrie on the day of the third race, although we are told that it was intended to be courteous, appears to me to have been exactly the reverse and to have simply made a fool of the Americans, as it virtually forced them to retain the Cup on a technicality—a result which their whole action in the matter shows to have been entirely contrary to their wishes; so that it is difficult to see where the courtesy comes in

All true lovers of sport will regret that Mr. Iselin's generous offer was not accepted and the second race declared off and resailed. Technically, of course, Lord Dunraven was right in refusing to do so, but I repeat that in such a case technicalities may be held in abeyance and the question treated on broader grounds. Yachtsmen of the best class have never professed to be either jockeys or sea lawyers; they sail for sport and not for money; and I submit that the Americans have throughout the whole business shown a true sporting instinct. They wanted the best vessel to win, without favor of any kind, and they honestly did their best to keep a clear course In this they failed, but I know of no power inherent in the Royal Yacht Squadron or in any other corporation which could have done better in this free country, where the captains of lobster salad steamers have pretty well as much of their own way as they have in the other land of freedom.

Lord Dunraven has undoubtedly put the Americans in an uncomfortable position, and he will himself come home with a grievance. No one can fail to admire the great pluck and perseverence which he has shown in his successive efforts to win back the famous cup, but in this last case—unless some new and unpublished facts come to light—I fear that the impartial verdict of nautical history will say that he has failed to uphold the best traditions of English yacht racing I am, yours faithfully, C. C. P. FITZGERALD Rear Admiral.

That there will be a match for the America's Cup next year is highly probable and in every way gratifying after the late disappointing fiasco, but at the same time we cannot share the general enthusiasm over the challenge of Mr. Charles Day Rose, which is now before the New York Yacht Club. That Mr. Rose is a Canadian and not a native of the British Isles is of no consequence, he is a British subject and there is nothing more out of the way in his challenging for the Cup than in it being defended for the New York Y C, as it once was, by an Englishman. What is more to the point is that his sole qualifications for this, the greatest achievement in all yaching, seem to be a knowledge of the turf and a profound ignorance of yacht racing. Mr. Rose has never owned a yacht and has never belonged to a yacht club or shown any interest in yachting. Not long since he became the owner of a small cruising yacht and still more recently he has purchased an unsuccessful racing yacht of large size. The name he has chosen for his new challenger is most absurd, clumsy and inappropriate, and the designer whom he has selected, though a man who is deservedly held in high esteem, has given no evidence in his existing boats of the ability to make his mark at the topmost point of yacht designing. All this does not prove that Mr Rose may not make a thorough yachtsman and that Mr. Soper may not turn out a 90-ft. cutter faster than Defender and Valkyrie, but at the same there is no disguising the fact that this venture, which involves a very heavy outlay of money and labor on the part of the defending club, is not, as it certainly should be, in the hands of a thoroughly experienced and practical racing yachtsman. With the best intentions in the world. Mr. Rose, in his ignorance of yachting, may easily make some blunder which may render the proposed series of races as abortive and unsatisfactory as the one just ended.

Larchmont Y. C. Races.

THE concluding races of the season at Larchmont have been by no means so well patronized as they deserved, being limited to the schooners Emerald and Amorita, the 34-footers Dragoon and Acushla, and the 21-footer Vaquero I. In spite of a good deal of inexpensive witticism directed at the 34-footers and their coefficients, the class can boast of two good boats, representative respectively of the cutter and centerboard types—Vorant II and Acushla. The former has not been raced steadily or in a way to develop her best points, and it is probable that Acushla will beat her in the majority of races: but at the same time she is a very fine boat, handsome, comfortable and fast. Acushla is the best looking boat that has ever come from the Cape, with very good ends, a sensible and moderate sheer, good freeboard and a wholesome and attractive look about her. She is fast and very handy. The probabilities are that, in view of these practical demonstrations of what may be had in the class in the way of an all-round yacht, more will be built during the coming winter. The 21ft. class has fallen off very much this year, and without good reason; the boats are excellent for afternoon sailing and racing, and closely enough matched to give plenty of sport if sailed at their best. Of late Vaquero has been left in undisturbed possession of the field.

The annual race for the Colt memorial cup, presented to the Larchmont Y. C. by Miss Elizabeth Beach, was sailed on Sept. 21 in connection with the special races for the 34 and 21ft. classes. The schooners Amorita and Emerald were the only competitors for the Colt cup, while Dragoon and Acushla started for the 34ft. prize: There was hardly any wind, and the 34 footers did not finish. Emerald beat Amorita, and in the 21ft class Vaquero sailed over one round of the course. The only times taken were:

SCHOONER CLASS.

	Length.	Elapsed.	Corrected.
Emerald, J. Rogers Maxwell	89.51	3 36 30	3 36 30
Amorita, W. Gould Brokaw	75.07	4 06 57	3 59 57

On Monday, Sept. 23, there was a moderate westerly breeze, the same quintette starting, the schooners for the Larchmont cup and the others for the series prizes, the club prize for the greatest number of points during the season, and Com. Gillig's prize for the greatest number of wins. In response to an offer from the owner of Amorita nearly $1,000 was put up in private stakes by the owner and those Corinthians in the crew of Emerald, in addition to the Larchmont cup. Emerald won very easily, the times being:

SCHOONER CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Emerald	11 35 46	3 49 04	4 14 18	4 14 18
Amorita	11 36 10	4 09 15	4 33 05	4 22 21

34-RATER CLASS.

Dragoon	11 37 40	3 34 30	3 56 50	3 56 50
Acushla	11 38 00	3 47 55	4 09 55	4 09 55

21FT. CLASS.

Vaquero	11 38 00	2 17 39	2 39 39	2 39 39

The final race for the 34ft. and 21ft. classes was sailed on Sept. 24, only the former starting. Acushla won as follows:

SPECIAL 34FT CLASS.

	1st mark.	2d mark.	Finish.	Elapsed.
Acushla	2 04 06	3 44 42	4 33 04	3 10 50
Dragoon	2 08 14	3 56 54	4 51 38	3 29 05

Dragoon's record for the season in the Larchmont series stands 4 firsts and 4 seconds, or 24 points, while Acushla's stands 4 firsts and 2 seconds, or 20 points. Dragoon wins both cups, but can only take one, the club cup going to Acushla. Vaquero wins the two cups in her class, having had no competitor of late. Mr. John F. Lovejoy, who has served very successfully for several years as chairman of the regatta committee, has just been presented by Com. Gillig and other members of the club with a life membership as a recognition of his services The season was formally closed with the annual clam bake on Oct. 5.

Columbia Y. C.

CHICAGO—LAKE MICHIGAN.

Saturday, Sept. 21,

THE Columbia Y. C., of Chicago, finished its season on Sept. 21 by a fine race in a very strong S W. wind. the times being:

SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Mistral	1 36 35	4 16 51	2 40 16	2 39 40
Hawthorne	1 37 37	4 22 56	2 45 19	2 45 19
Toxteth	1 37 10	Did not finish.		

FIRST CLASS SLOOPS.

Druid	1 40 00	4 40 48	3 00 48	3 00 48

SECOND CLASS.

Rambler	1 40 00	4 36 46	2 56 46	2 56 46

THIRD CLASS SLOOPS.

Peri	1 39 17	4 39 03	2 59 46	2 54 12
Valiant	1 36 03	4 33 13	2 57 10	2 57 10
Hattie B.	1 39 38	4 40 13	3 00 35	2 57 19
Nora	1 37 53	4 48 26	3 10 33	3 04 26
America	1 38 18	4 52 53	. . ..	. . ..

FOURTH CLASS SLOOPS.

Skate	1 45 00	3 53 35	2 08 55	2 08 55
Ida K.	1 45 00	4 07 38	2 22 38	2 20 58

Mistral takes a leg for the Steffens cup, to be won twice in succession. The other winners were Druid, Rambler, Peri and Skate, the latter a modification of the Scarecrow, with more sail and ballast,

The Cup Races and Excursion Steamers.

CHATHAM, N. B., Sept. 30.—*Editor Forest and Stream:* In common with my yachting brethren of Canada, I very much regret that the Valkyrie-Defender races ended in a fizzle. Defender appeared to be the better boat—an English yacht capable of beating the best English yacht from England over the favorite English courses. But there can be no doubt about the excursion steamers having rendered a fair test impossible. Even though they served both contestants alike, they rendered the race a game of chance rather than of speed; but human nature in New York must be different from human nature elsewhere if the steamers were not more considerate for Defender than for Valkyrie.

The New York Y. C. can hardly consent to the sailing of such races elsewhere, and the proposal to keep the dates of sailing secret will not, of course, be entertained. The great public wants to see the contest, and must be given a chance to do so.

Why not, therefore, make the course so short that the whole race can be seen from one point, and then require the attendant fleet to anchor? Why not make the course three miles to windward and back, and triangular, with two miles to the leg, as in the Spruce-Ethelwynn match, to be sailed over several times. Then the racers could be seen all the time from the starting point, and the excursion steamers would not be tempted to follow them. The public would see the show and the champions would not be interfered with.

But to make assurance doubly sure could not the officer who issues permits to the steamers to carry passengers to the races make it a condition of the permits that the steamers anchor at such time and place as the regatta committee should order? If the officer has no power to impose such a condition, why not get an act passed at the coming session of Congress that will give it to him?

It looks to me as if the whole excursion steamer difficulty could be easily and effectually ended in this way. If you want another international match sailed off New York, secure such legislation as soon as possible.

As your designers and builders have produced yachts as quick in stays as the English boats, and as your newspapers all testify that Defender's crew change sails as quickly as Valkyrie's the challenger can get no advantage from such a course as I propose.

J. L. STEWART (Miramichi Y. C.)

Riverside Y. C.

Saturday, Oct. 5.

THE special race of the Riverside Y. C. for the 34ft. class was sailed on Oct. 5 in a fresh to moderate N.E. breeze.

The course was from a starting line off Little Captain's Island, around the black spar buoy off Mattinicock Point; thence across the starting line again; thence around the black spar buoy off Center Island Point; thence to the starting line; 20¼ nautical miles.

On the first leg under spinakers Dragoon won, but on the beat back her bobstay parted. At the end of the first round Vorant II. had a lead of 4m. 5s. over Acushla. In reaching across to Center Island in a lighter wind Acushla made up a couple of minutes, and on the return she passed Vorant, the times being:

	Finish.	Elapsed.
Acushla	3 42 36	3 24 36
Vorant II	3 43 39	3 25 39
Dragoon	Disabled.	

A special match has been made for a $100 cup between Vorant II. and Acushla, to be sailed on Oct. 19.

Freelance.

THE trial trip of the new steam yacht Freelance, designed by A. Cary Smith for F. Augustus Schermerhorn, and built by Lewis G. Nixon, of the Crescent Shipyard, took place on Sept. 26; the yacht more than fulfilling the expectations of those connected with her. She left Elizabethport in the morning and ran up to the Sound, starting at Fort Schuyler and running as far as Smithtown Bay. With forced draft she made 210 revolutions with over 200lbs. of steam, running 19 miles in an hour and two minutes. After the forced-draft trial, while lying still, the bonnet of the low-pressure cylinder blew out, and she ran in to Bridgeport, where a new one was procured; she then continued on her six hour trial under natural draft. She was delivered to her owner on Oct. 5. She shows a marked absence of vibration at high speeds.

YACHTING NEWS NOTES.

Gloriana, cutter, has been sold by Com. Gillig through Manning's Agency to Josiah M. Lasell, of Boston.

Yampa, schr., R. S. Palmer, arrived at Halifax, N. S., on Oct. 1, after a passage of nineteen days from Falmouth, Eng. On Oct. 6 she touched at Boston.

Eleanor, steam yacht, W. A. Slater, arrived at San Francisco from Victoria, B. C., on Sept. 13 on her return from Alaska.

The Herreshoff Mfg. Co. has received an order for a racing 2½-rater under the new Y. R. A. rule for Almeric Hugh Paget, an English yachtsman. Work on the new boat will be commenced at once.

Nepenthe, cutter, Messrs. Agar and Dudley, of the Southern Y. C. of New Orleans, returned to that port on Sept. 23, after a long summer cruise, having visited New York and Long Island Sound. Nepenthe is of 46ft. waterline, designed by the late Mr. Burgess.

Defender has been laid up in Neptune Bay, inside of Glen Island, New Rochelle, for the winter.

The Seawanhaka Corinthian Y. C. has secured for its town house a part of the old Jockey Club house, on the S.W. corner of Twenty-seventh street and Madison avenue. The Oyster Bay club house has been closed for the season and the new town house will shortly be opened.

The Cleveland Y. C. has at last, after many difficulties, located itself permanently in pleasant and suitable quarters in a new club house built directly on the waters of Lake Erie. The opening ceremonies took place on Sept. 11.

Gitchee Gumee, sloop, owned by Duncan Gay, of New York, was stolen on Sept. 21 from her moorings, off Pelham Bay Park. On Sept. 27 she was sailed into Port Jefferson Harbor and abandoned by a man who was afterward arrested in New York on board a working schooner on which he had just shipped. The prisoner, James Corbett, a sailor, is held for trial.

The firm of Waterhouse & Chesebrough, of Boston, has just been dissolved by mutual consent, each of the members continuing alone the business of yacht designing.

Jean, steam yacht, has been sold by the estate of the late James Renwick to Miss E. L. Breese, an associate member of the Seawanhaka Corinthian Y. C. The name will be changed to Alsa.

Yacht and Boat Sailing, eighth edition, by Dixon Kemp, is just ready, from the press of Horace Cox. The book has been completely remodeled, many designs of modern yachts being added.

Mr. Lewis G. Nixon, of the Crescent Shipyard, Elizabeth, N. J., has now in hand a design for a full-powered seagoing steam yacht of 225ft. length, which will be built at once for a Philadelphia yachtsman.

Mr. George I. Tyson, president of the Riverside Y. C., and owner of he schooner Nirvana, died on Oct. 7 after a long illness.

Col. Stuart M. Taylor, once well known to American yachtsmen as an advocate of the old type of centerboard yacht, died in Paris on Oct. 6.

A. C. A. Membership.

ATLANTIC DIVISION: David Loree, Jas. A. Smith, Francis S. Way, Francis E. Fratt, Bensonhurst, L. I., New York C. C. Central Division: Alex. M. Lindsay, Jr., Rochester, N. Y.; Harry Ransom Tobey, Port Henry, N. Y.; Waldo F. Tobey, Port Henry, N. Y.; Wm. A. Ostrander, Albany, N. Y.; Joseph P. Coughlin, Troy. Eastern Division: Robert P. Apollonio, Winchester, Mass.; Robert M. Molineux, Boston; Lady Associate, Mrs. Edward S. Towne, Holyoke, Mass.

Rifle Range and Gallery.

Revolver Shooting in England.

OWING to the wind no good shooting was done on Sept. 11 at the North London Rifle Club. Below are the details:

Stationary target, 20yds.:

E Howe	737777—38	Luff	753765—33
B Comber	666657—36	Capt Earle	626675—32
Carter	366777—36	MacCormack	447537—30
Knapp	766773—36	Britton	274647—30
Major Palmer	576656—35	Lieut Clemence	605756—29
Lieut Richardson	267766—34		

Mr. Knapp, who stands third for the revolver championship of the club, forgot to comply with some of the formalities and unfortunately will therefore most likely be debarred from the prize list.

Revolver championship of club to date:

	20yds.	A.	D.	50yds.
Walter Winans	42 42 42 42 41 41	41	42	38 39—410
Maj Munday	40 39 39 39 39 39	39	39	37 37—386
Knapp	40 39 38 38 36 36	41	36	34 34—372
Comber	40 39 39 38 37 36	38	38	35 33—371
Maj Palmer	39 39 38 37 36 36	36	36	31 31—370
Carter	38 37 36 36 36 35	37	37	31 28—351
Luff	39 38 37 36 34 33	33	27	30 27—334
Capt Earle	36 34 32 32 32 30	32	32	33 31—326
Lieut Richardson	38 35 35 34 34 34	33	34	33 28—318

MacCormack, Ricketts, Ashby, Treadwell, C. F. Lowe, Frost, Skilten, Evans, Howe, Rand, Hore, Denyer, Franzmann, Brading, Andrews, Capt. Peters, Clementi-Smith, Chicken, A. J. Comber, Major Jones, Capt. Thompson, Lieut. Chitty, Capt. Cowan, Granville, A. Crawley, Bashford, Diggins, Col. Atherton, Aldridge, Allman, Stallibrass, Baxter, Treadwell, Howell, Garaud, Joyce, Hare, Howard, Lattey, Gill, Varley, MacDonald, Wells, Clemence, Britton, etc., have not shot out their scores yet.

No more shooting has been done at the South London Rifle Club in revolver shooting, Mr. Winans having now a lead which cannot be beaten for the revolver championship of the Club.

Scores to date for revolver championship of South London Rifle Club:

	20yds.	50yds.
Walter Winans	42 41 41 40 40	40 39 39—322
Capt T W Heath	39 39 39 39 38	37 36 36—306
Knapp	40 40 38 38 37	38 35 34—300
E Howe	40 39 38 38 37	36 35 33—296
Lieut J Howard	40 40 38 37 36	34 34 32—290
Clementi-Smith	38 36 35 34 33	35 34 33—277
C F Rand	42 40 39 36	39 35 34
C F Lowe	37 36 32	37 34
Lieut Varley	37 29	35

Mr. Rand can yet by good shooting come into second place ahead of Capt. Heath, with whom there will be an exciting finish for second place next week.

On Sept. 18 Mr. Winans made his tenth highest possible score of the season, shooting at the North London Rifle Club's revolver competition at 20yds. Major Palmer also made the first highest possible score he has made. Both he and Mr. Knapp have followed Mr. Winans's example and taken to Smith & Wesson revolvers.

20yds., stationary targets:

Walter Winans	777777—42	Lieut Richardson	747746—35
Major Palmer	777777—42	Gould	645676—34
C Knapp	777677—41	Lieut Clemence	576466—34
Luff	766776—39	Diggins	346777—34
Comber	766765—37	MacDonald	565467—33
MacCormack	466777—37	E Howe	647763—33
Lieut J Howard	654777—36	Capt W Evans	447646—31

Most unfortunately, Mr. Knapp is not allowed to count his scores toward the revolver championship of the club, as he forgot to enter in time.

Mr. Winans's aggregate is by far the best on record—so far in fact, that he intends to continue shooting, although he has practically won, in order to establish a still higher record.

Scores for revolver championship to date:

	20yds.	A.	B.	50yds.
Walter Winans	42 42 42 42 42 41	41	42	39 38—411
Maj Munday	40 39 39 39 39 39	39	39	37 36—386
C Knapp	41 40 39 38 38 36	41	36	34 34—377
Maj Palmer	42 39 39 38 37 36	36	36	31 31—376
Comber	40 39 38 37 36 34	38	38	35 33—372
Carter	38 37 36 36 36 35	37	37	31 28—351
Luff	39 39 38 37 36 34	33	27	30 27—340
Capt Earle	36 34 32 32 32 30	32	32	33 31—326
Lieut Richardson	38 35 35 35 34 34	33	34	33 28—319
MacCormack	37 30 30 29 27 ..	29	28	28 22
Ricketts	38 38 32 32 26 ..	32	..	19 ..
Ashby	27	..	..	.. ..
Treadwell	29 28	..	29	21 ..
C F Lowe	36 36 34	..	34	.. ..
Frost	39 37 34 34 32 ..	34	..	.. ..
Skilton	32	..	..	.. ..
Evans	35 35 31 29 29 28	32	23	.. ..
Howe	38 36 33 32 32 27	32	32	30 ..
F Rand	37	..	..	.. ..
Hore	36 31 31	..	..	.. ..
Denyer	31	..	..	19 ..
Franzmann	34 32 30 27	..	..	36 36
Brading	30	..	..	.. ..
Andrews	39 36	38	33	.. ..
Capt Peters	35	..	..	.. ..
Clementi-Smith	.. 39 38 34 34 ..	35	34	31 ..
Chicken	37 34 33	..	34	.. ..
A J Comber	36	..	..	.. ..

At the South London Rifle Club on Sept. 12 Mr. Winans made another highest possible score with the revolver at 20yds. This puts his total for the revolver championship of the club two points higher than his winning score of last year.

Below are details of the shooting.

Twenty yards:

Walter Winans	777777—42	Capt T W Heath	677775—39
F Rand	776777—41	E Howe	767774—38
Clementi-Smith	567777—39	C Knapp	757566—36

Fifty yards:

E Howe	675757—37	F Rand	656645—32
Walter Winans	577746—36	Clementi-Smith	725754—30
Capt T W Heath	555755—32		

As we predicted Mr. Rand has come up into prominence toward the revolver championship of the club, and though he cannot now, with the remaining days' shooting, get up to Mr. Winans, he will most probably pass Capt. Heath for second place.

Scores for revolver championship of the club to date:

	20yds.	50yds.
Walter Winans	42 42 41 41 40	40 39 39—324
Capt T W Heath	39 39 39 39 39	38 35 34—307
F Rand	42 41 40 39 36	39 35 34—306
E Howe	40 39 38 38 38	37 36 35—301
C Knapp	40 40 38 38 37	38 35 34—300
Lieut J Howard	40 40 37 38 36	34 34 32—290
Clementi-Smith	39 38 36 35 34	35 34 33—283
C F Lowe	37 36 32	37 34 ..
Lieut Varley	37 29	35 .. ..

From press dispatches we learn that the revolver championship of the South London Rifle Club was won on Sept. 26 by Mr. Walter Winans. His score was 324 out of a possible 336. It was further mentioned that he was leading in the competition for the championship of the North London Rifle Club, which will be decided on Oct. 16.

Presque Isle Rifle Club.

ERIE, Pa., Oct. 3.—Mr. Paul, president of Presque Isle Rifle Club, left Erie last Wednesday to accept a position as foreman in a bicycle works at Stamford, Conn. We are sorry to lose him, as he was a very active member of the club, but he promises to keep up the interest in rifle shooting, and some day we hope to receive a challenge from the new club.

The following score was made by the Presque Island Rifle Club at their regular practice shoot of Sept. 28:

Stidham										
	9	8	7	9	7	6	9	5	10	6—76
	10	10	7	4	8	7	5	7	9	6—73

Lyman Rapid-Fire Target.

THE Lyman rapid-fire rifle targets are finding much favor. They are in two sizes, for 25yds. and 50yds. The smaller one sent post-paid for 15 cents a dozen, the larger one for 25 cents a dozen, by the Forest and Stream Publishing Co.

Trap-Shooting.

FIXTURES.

Oct. 15-16.—WORCESTER, Mass.—Tournament of the Worcester Sportsmen's Club; $100 added money, and a $50 diamond ring to highest average. Chas. E. Forehand, Sec'y.

Oct. 15-17.—ALEDO, Ill.—Annual tournament of the Aledo Gun Club; live birds and targets. J. W. McRoberts, Chairman of programme committee.

Oct. 16-17.—WEIR CITY, Kan.—Live-bird championship of the State under the auspices of the Business Men's Gun Club.

Oct. 16-17.—ELIZABETH, N. J.—Fourth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

Oct. 19.—CHICAGO, Ill.—Third shoot of the Cook County Trap-Shooters' League, on the grounds of the Garfield Gun Club, at 2 P. M. W. F. de Wolf, Secretary of the League.

Oct. 22-24.—BALTIMORE, Md.—Dupont Smokeless Powder Company's tournament at live birds. Stanley Baker, Sec'y.

Oct. 23-25.—ATLANTA, Ga.—Annual tournament of the Clarke Hardware Company; targets; $700 added money.

Oct. 25-26.—SEATTLE, Wash.—First annual tournament of the Washington State Sportsman's Association, under the auspices of the Seattle Gun Club; live birds and targets. C. F. Graff, Sec'y.

Oct. 27-30.—SAN ANTONIO, Texas.—First annual tournament of the San Antonio Gun Club; $1,000 added money. Willard L. Simpson, Sec'y.

Nov. 5-7.—KEWANEE, Ill.—Annual tournament of the Kewanee Gun Club.

1896.

Jan. 4-5—PHŒNIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the auspices of Texas State Sportsmen's Association and management of J. M. George and O. C. Guessaz (Texas Field).

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

May 5-8.—New York.—Tournament of the American E. C. Powder Company; $2,000 added money.

May (second week) —MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1 —MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 8-13.—BUFFALO, N. Y.—Thirty eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

The San Antonio Gun Club have issued a circular setting forth their claims to liberal support by the trap-shooters. We quote the following from it: "This is our first tournament and our maiden effort, but we will give you one of the best shoots ever held in this country and the greatest ever held in Texas. Our grounds are perfect and our trap service will be unexcelled. We shall have fifteen traps with electric pulls and all duplicated—in other words double service. We guarantee you $1,000 in added money. We have no handicap and will only say that we have let the bars down, but we shall give a dead square shoot and no favors shown. In this we mean what we say, and referee's decision will be final. We give you three days at targets and one day—the last—at live birds, and you will have good ones. Our added money is distributed as follows: First day, $200; second, $240; third, $290, and fourth, $270. Only three live-bird events on fourth day. We have one live-bird event, 25 birds, $15 entrance, $200 added, five moneys. Here is your chance. We have one target event, 25 targets, $5 entrance and $100 added, four moneys. We have eight target events each day, no entrance less than $2 and no added money less than $25. It will cost you $82 to enter every event. If time will permit we will give extra events—sweepstake."

The West Newburgh Gun and Rifle Association's tournament, to be held this week, Oct. 9 to 11, on the club's grounds at Newburgh, affords excellent opportunities for shooters to compete. On the first and second days respectively there are ten events on the programme, and on the third day live-bird events. Extra events will be arranged to suit visitors. Fifty dollars will be given divided as follows: $20, $15, $10 and $5, to the shooters making the best averages on both days on clay targets. Ties divided unless otherwise agreed. Moneys will be divided as follows: Entries of 12 and under, 50, 30 and 20 per cent. Entries over 12: 40, 30, 20 and 10 per cent. Any shooter in a tie may withdraw his share of purse. Targets, two cents each, to be deducted from purse. Shoots begin at 9 o'clock sharp each day. If time permits, other sweepstakes will be shot at targets. All guns shoot from same distance. Rapid-firing system.

When secretaries of gun clubs send us scores made at their clubs' tournaments, we would much prefer to receive manifold copies of the scores in detail to clippings from newspapers. We can depend on the former, while inaccuracies are liable to occur in the latter. FOREST AND STREAM's squad pads, for the use of gun clubs at tournaments, will enable the managers of any tournament to keep affairs in the cashier's office in a satisfactory manner at an extremely low figure. By using them, too, no trouble will be experienced in furnishing FOREST AND STREAM with a complete record of all events in detail.

Mr. Thomas F. Russell having resigned from the presidency of the Emerald Gun Club, of New York city, an election was held recently to fill the vacancy. The candidates were: L. H. Schortemeier and Dr. G. V. Hudson, ex-Secretary of the Emeralds. Twenty-nine members were present at the election. Schortemeier receiving a majority of the votes cast he was accordingly declared the president of the club. In the club shoot which followed the election, H. P. Fessenden (28) and Nick Maesel (25) were the only ones to kill straight.

The Kingston, N. Y., *Leader* of Sept. 17 contained the following: "The Pansy Gun Club, at their meeting held on Saturday evening, besides deciding to become incorporated, as told in yesterday's *Leader*, accepted the resignation of W. Scott Smith as Secretary, and Capt. J. Rudolph Kenyon was elected to fill the vacancy. Howard Myer was appointed a committee of one to confer with representatives from the gun clubs of Poughkeepsie, Marlborough, Peekskill and Newburgh toward the formation of a Hudson River league of trap-shooters."

The charges against Mr. J. G. Messner lodged with the Pittsburg Gun Club, in the matter of alleged improper remarks concerning Mr. J. O'H. Denny, to whom he had issued a challenge, seem in a fair way to be settled amicably. Mr. Messner had tendered an apology to Mr. Denny, but the club held that such did not constitute a defense, but that the club would accept a public apology to Mr. Denny. This Mr. Messner consented to do, but had not done so at our latest advices.

Next week's important fixtures are: Oct. 15-16, The Worcester, (Mass.), Sportsmen's Club Tournament; Oct. 15-17, annual tournament of the Aledo (Ill.) Gun Club; Oct. 16-17, Live-bird Championship of the State of Kansas, held at Weir City, Kan., under the auspices of the Business Men's Club; Oct. 16-17, Fourth Bi-monthly Tournament of the Elizabeth (N. J.) Gun Club.

The Baltimore, Md., *Sun* is our authority for the statement that Billy Fieles, of Christiana, Pa., and Bert Claridge, of Baltimore, Md., will shoot a race at 100 targets per man, expert rules, for a stake of from $100 to $500 a side. Fieles, through Mr. W. W. Linthicum, of Baltimore, challenged any shooter in Maryland to a contest under the above conditions.

A new gun club has been organized in Scranton, Pa., under the title of the North End Gun Club. The officers are: President, John Van Bergen; Vice-President, Joseph F. Knatt; Treasurer, Thomas H. Jones; Secretary, P. W. Lynch. The club will hold shoots every two weeks.

It is to be hoped that those two great clubs in Chicago, the Eureka and the Garfield, will bury whatever tomahawks they may be waving, smoke the pipe of peace, and treat us to some more of those excellent team races which, as a rule, do so much to promote interest in trap-shooting.

The Worcester Sportsmen's Club will hold a grand tournament on Oct. 15 and 16, Worcester, Mass.

The double attraction of $1,000 added money and a chance of seeing the Corbett-Fitzsimmons fight on October 31 ought to draw a good crowd of Northern shooters to San Antonio, Texas, on Oct. 27-30, the dates of the San Antonio Gun Club's tournament.

The American E. C. Powder Company has issued a very pretty card calling attention to its tournament near New York city, May 5-8, 1896. With $2,000 added to the purses, a large attendance of shooters at this tournament is a certainty.

When the first shot is fired at the DuPont Smokeless Powder Company's tournament at live birds at Baltimore, Md., the live-bird season of 1894-95 may be said to have commenced.

As we are at present busily employed shooting at ducks and eating snipe on the shore of Lake Erie, drivers and twisters (save of the snipey kind) are hard to come at.

Shorty Bacon, Charlie Gay and Jack Parker will be found facing the traps at the Clarke Hardware Company's shoot at Atlanta, Ga., Oct. 23-25.

Rolla Heikes has gone into retreat in the vicinity of Huntsville, Ala., where he will shoot quail and get into trim to win first average at Atlanta.

EDWARD BANKS.

The Baltimore Handicap.

BALTIMORE, Oct. 5.—*Editor Forest and Stream:* At the date of the present writing, Baltimore seems to be the Mecca toward which the eyes of all the true and faithful American sportsmen are turned, and within the next three weeks the pilgrimage will begin. If the prayers of the numerous faithful are answered, the autumn winds will blow softly, the sun will shine never so bright, the forests and fields will be arrayed in all their autumnal beauty, and the face of nature will break into one glad, bright smile. And why? Just three weeks from to-day will mark the opening of the DuPont tournament.

The prophetic vision of the would-be champion summons before him, as he quietly enjoys his evening siesta over well-seasoned pipe or fragrant cigar, the scene in its entirety, with himself in the chief title rôle. He sees the well-planned grounds with club house in the distance as he descends from the electric car, and with his gun slung across his shoulder, and the ubiquitous small boy lugging his shells, he betakes himself by way of the board walk across the fields, in company with a numerous throng, each one being actuated by the same impulse, bound on the same mission, striving for the same goal, namely, the championship of America. Our friend, the would-be champion, smiles with an air of self-complacency as he contemplates the throng; he even feels a chord of sympathy vibrate through his bosom as he meditates their certain defeat, for already he sees himself the possessor of the beautiful trophy which denominates him the champion *par excellence*, causing him to be the cynosure of all eyes, the envied of every man who can shoot a gun.

As he comes upon the grounds he notices the elaborate preparations made for the accommodation of all contestants; the three sets of traps; the platforms marked off at regular intervals for the various contestants in the handicap events; the birds, well fed, clean and looking as if ready to fly for their lives; the cashier's office with its full quota of clerical force taking entries; the small arsenal of guns of every description glinting brightly in the sunlight and being made ready for the fray; the shooters attiring themselves in costumes which best suit their requirements; the handsome dogs, restive to begin their work retrieving the birds that may award the skill of the shooter, and all the other thousand and one sights that are incident to a great tournament.

His mind and heart, however, are centered on one event, so he does not evince much interest in the various sweepstakes that take place, although he enters and shoots through them all and, of course, comes out high man in each event, standing alone and putting first money in his pocket, so that when the main event is called he is pretty close to being the custodian of all the funds on the grounds. But now comes the crucial moment of his life as he steps to the score in the DuPont Smokeless Powder grand championship handicap, which is to decide the champion of America at live birds. With steady hand and unruffled voice he calls "pull" and the race is on. It would be a work of supererogation to follow him through the entire event. Suffice it to say, he kills them all, whether fast or slow, tailers or towerers, duffers or screamers; nothing too hard, nothing too easy. The cracks of the country look upon him in open-eyed wonder and ask in mysterious whispers who he is and where he is from. To all this he pays no attention, but taking the trophy and as much of the purse as he can carry he starts for home to see his best girl, show her the evidence of his skill and tell her what a wonder he is with a gun.

Let us hope that his vision is but a precursor of what is to follow, and that he may not be disappointed by finding that there are others, who, while they may not dream as well, shoot better than he does.

Judging from the demand for live birds in this vicinity, one might suppose that nearly all the shooters along the Atlantic sea board from Mason and Dixon's line, north, had gone into training. We know it is so in this section. Men who have not been tempted to shoot at a pigeon for many moons are getting into the harness, and from the reports that are coming in every day the man who walks away with the championship will know that he has been to a shooting match.

We learn from the committee who have the tournament in charge that their correspondence is daily increasing, letters being received from every part of the Union. Quite a large number of entries have already been booked at this early date, which augurs well for a large field of entries before the day of the big handicap arrives.

As has been announced through the press and also in the programmes of the tournament that have been gotten out, entries can be made now to the DuPont Smokeless Powder tournament committee, No. 32 S. Calvert street, Baltimore, Md., accompanied by the forfeit of $10. Upon receipt of entry record is made of same, and he is given his handicap. Contestants will shoot in the order in which they enter. The committee is very desirous that all shooters who propose entering for the championship event shall make their entries at the earliest possible date, in order to afford the handicap committee sufficient time to properly handicap them. While the entry list will be kept open until the twentieth gun is fired in the event on the morning of Oct. 24, it is much to the shooter's interest to make his entry before that time, thereby affording the handicap committee time to look up his record and place him advisedly, rather than wait until the last moment and then run the risk of being more heavily handicapped than his record, if fully known, would warrant.

Arrangements have been made with the Trunk Line Association for special railroad rates. All shooters and visitors attending this tournament will be given a rate of one and one-third fares, full fare being charged coming to this tournament and one-third fare returning. The Trunk Line Association will have their representative on the tournament grounds all day of Oct. 24, to furnish certificates to all shooters and visitors who desire to avail of the reduced fare. The programme says that this tournament is to be shot under National Association rules. This is a mistake of the printer's; it should read American Association rules.

The magnificent trophy, consisting of solid silver loving cup and onyx pedestal, which is to award the victor in the grand championship event, has been shipped to New York and will be seen on exhibition in the window of the Winchester Repeating Arms Co., No. 312 Broadway. After remaining there a week, it will be shipped to Chicago, where it will be displayed in the rooms of the well-known sportsman, Mr. Mussey, No. 104 Madison street.

It is estimated by the known ones that there will be at least 150 entries in the grand championship event; large delegations from the following points will be present: New York, New Jersey, Philadelphia, Chicago, St. Louis, Pittsburg, Boston, Washington, Staunton and the South.

Any one contemplating attending this tournament and wishing hotel accommodations arranged for them can have this attended to by addressing the committee.

STANLEY.

The Baltimore Tournament.

BUFFALO, N. Y., Sept. 30.—*Editor Forest and Stream:* In your issue of Sept. 28 you give a synopsis of the programme issued for the Baltimore, Md., live-bird tournament. It states that "the object of the E. I. DuPont de Nemours & Co.'s grand Smokeless Powder championship handicap live-bird tournament is to bring together each year the representative gentlemen live-bird shots of America and of the world to determine from year to year the champion wing shot.

"In order to attain this end a tournament of sufficient magnitude to attract the best shooters of the country has been inaugurated, and in the main event—the DuPont Smokeless Powder grand championship handicap—the purse is guaranteed to be at least $1,000 in addition to the championship trophy.

"This, it is hoped, will prove sufficient inducement to bring together in one grand handicap race all the leading live-bird shots of this country, so that whoever wins the championship will have won it from his peers, and will stand pre-eminently as the champion live-bird shot of America, so long as he successfully defends his title according to conditions governing holder of trophy."

I have quoted at length because it is necessary that I should do so before putting my case to you. When you have heard that case, it seems highly probable that you will agree with me that it is a hard one:

My pretentions to being a live-bird shot are not unworthy of an aspirant for championship honors; and, in fact, I'd dearly love to win the coveted title. But what show have I? From the above it appears that in order to become the full-blown champion live-bird shot of the world (yes, of the world) I must take part in the handicap event described, running the chance of being placed on the 29 or 30yds. mark, while another J. G. Messner waltzes up to the 26yds. mark and bags trophy, cash and title of champion. All shooters will agree with me that in such an event as a handicap the victory of no one save one of the scratch men could possibly entitle the winner to appropriate the name of champion of America, much less of the world. In a championship event all starters are placed on equal marks. For obvious reasons an exception is made in yacht racing, where time allowances are awarded. For similar reasons 10-gauges and 12-gauges would not stand on the same marks in a championship contest.

Then again: The notice also states that DuPont Smokeless shall be used exclusively in the handicap. That is hard on me again. I have gone to great trouble, and have spent much time and money, in finding out what load and what powder enable my gun and myself to do our best work. I don't use DuPont Smokeless and have never fired a grain of that powder. I use —, well, it's either E. C., Schultze, American Wood, black, or some other powder. Now then, if I want to be a champion, I have got not only to run the risk of conceding three or four yards to a man who can shoot as well as I can, but who may not be so well known, but have also to change my powder and load, and possibly my gun too. That is pretty tough, I think, and not consistent with real championship conditions.

The latter conditions would read: 12 gauge guns, any powder, and all shooters on one mark. 48 GRAINS ——.

Bayside Gun Club.

KEYPORT, N. J., Oct. 2.—The Bayside Gun Club held its second monthly shoot this afternoon, twenty-four members facing the traps. D. W. Walling won the badge with a score of 19.

Conditions of shoot, 25 targets per man, known angles, unknown traps. The appended scores show a very marked improvement over last month:

T Compton ..... 0011010101001010000000100— 8
W Werner ..... 1001001101011000000000010— 8
W Watts ..... 0101101011011010011110—16
A Carhart ..... 0111001010010100001101000—10
W H Perrine ..... 0000010011000001011110001—10
W Curtis ..... 1000010000001101001001100— 8

J R Walling ..... 1101000101010111010110101—14
W Maurer ..... 1000101000000001100101100— 8
W B Walling ..... 0001100101001111011000010—10
E Seabrook ..... 0101101110010001000100100—10
M Brower ..... 0111001000010110010010100— 8
C Covert ..... 1101000000001110001010100— 8
W Maurer ..... 0000000000000000111101001— 6
D W Walling ..... 0110111101111010101111111—19
J Aumack ..... 0101000001000001001000100— 6
Wm Brower ..... 1111001101110111000001010—14
T Kelsey ..... 1000000000100110101101100— 8
G Pease ..... 0011000110100001111011100—12
Dr G G Hoagland ..... 1111101100101010101100110—14
G M Walling ..... 0010110010000101000100110— 9
C Ackerson ..... 1011001111111110000101001—15
H E Ackerson, Jr ..... 1100000001111001110001110—12

The Messrs. Ackerson arrived too late to compete for badge.

Wm. Walter, of the Bayside Gun Club, of Keyport, N. J., may well be styled a handy man with the gun. At the last club shoot he won three straight sweeps of 5 targets each, scoring 13 out of 15, shooting with one hand. He used a Winchester repeater and shot expert rules.

H. E. Ackerson, Jr., of the Bayside Gun Club, of Keyport, N. J., is a lad of only 14 years, and has been shooting but a couple of months. At the last club shoot he arrived on the grounds in company with his father too late to contest for the badge. He shot a string of 25 for practice, however, shooting the last 15 in deep twilight. His score of 12, shooting expert rules, I think is very creditable under the circumstances. WIDGEON.

The DuPont Tournament.

DR FORT'S REPLY TO OUR SUGGESTION.

IN our issue of Sept. 28 we made the following note regarding the clashing of dates between the Baltimore and the Atlanta tournaments:

"Our attention has been called to a fact which we had overlooked, viz.: that the dates selected for the live-bird tournament at Baltimore, Md., were practically the same that had been selected some months ago by the Clarke Hardware Company, of Atlanta, Ga. It is a very great pity for the success of both tournaments that this mistake should have been made by the Maryland management. The attractions at Atlanta outside of the actual shooting are so many that the single fare rate to that city will act as a decided counterbalance when it comes to weighing the advantages of both shoots. If not too late, and we don't see that it is, as it is nearly a month yet until the dates chosen, it would be a gracious as well as advisable act on the part of the Baltimore people to choose a later date."

It seems that our suggestion, which was offered merely as such, has been construed into a criticism on the management of the Baltimore shoot. Dr. Samuel T. Fort, of Ellicott City, Md., under date of Sept. 30, writes as follows, being evidently of the opinion that the note was a criticism:

"I have just seen your astringent criticism of the Baltimore management of the DuPont Smokeless Powder tournament, in regard to conflict of dates with the Clarke Hardware tournament in Atlanta, and would say that there was no intention on our part to conflict with this or any other tournament, we having too much at stake to attempt such a thing. Our dates were chosen before the announcement of the Clarke Hardware Co.'s tournament through the sporting press, and while it was important to have claimed our dates earlier than we did through the same medium.* When we found that they were to have a tournament the matters in connection with our tournament had already been pushed too far to go back. Programmes were in the hands of printers, birds contracted for, and now when the Clarke Hardware Co. have refused to postpone we cannot go back, having already ten forfeits in hand from men in different parts of the country. We cannot do more under the circumstances than be sorry for the conflict of dates, and still hope that the Atlanta contingent will postpone, for there are several from here who want to attend, but cannot in face of our own tournament. We also feel that the FOREST AND STREAM should get both sides of the question before claiming 'bad management' upon the part of the Baltimore committee. It is simply unfortunate and we are just as sorry as any one else can be, but where live birds and several thousand dollars are concerned in carrying out a programme you will readily see that it is impossible for us to postpone."

In justice to the Clarke Hardware Co., of Atlanta, Ga., it is only right to say that it was not that firm, nor anybody in the South, who first called our attention to the conflict of dates.

*Dr. Fort has evidently omitted the end of this sentence.

Green Ridge Gun Club.

SCRANTON, Pa., Sept. 30.—The Green Ridge Gun Club had a shoot on Saturday, Sept. 28. Following is the score:

H D Swarts (100) ..... 0111111111111111111111101111111111111111111111111111111111111111111111—97

Iron City Gun Club.

CINCINNATI, O., Sept. 28.—Ironton, O., sportsmen furnished a rare treat to local and visiting sportsmen, and H. E. Norton, A. L. O'Connell and Dr. Shattuc increased their long list of friends by the courtesies they extended to all present. Dr. Shattuc is a fine target shot, and O'Connell was dissatisfied if he left a large enough piece of a target for the judge to see it. The boys were in high glee. Drs. Sample and Vickers, from Huntington, W. Va., headed a jolly party and sustained their reputation as genial sportsmen. Norton will be one of the "cracks" in '96. This was his first attempt at the traps, and although he wore "bloomers" and coached O'Connell, he smashed targets in great shape. Waddell, of Cincinnati, started in at a rapid pace, and to even up results with everybody accepted a self-imposed handicap, shooting alone in half the events at unknown traps, unknown angles. Appended are the leading scores of the day:

	Shot at.	Broke.	Per ct.		Shot at.	Broke.	Per ct.
O'Connell	175	142	81	Douthett	150	119	79
Sample	175	125	71	Stout	140	103	73
Waddell	165	132	80	Rogers	125	85	68
Norton	175	124	71	Stew	100	71	71
Shattuc	175	155	89	Dean	45	31	70
Vickers	175	125	70	Connell	45	29	34
Albert	150	125	76	Glockner	45	28	62
Skinner	155	112	72	Edwards	15	6	40

C.

The Grand Midwinter Texas Shoot.

SAN ANTONIO, Texas, Sept. 30.—*Editor Forest and Stream:* I desire to correct the statement scattered broadcast throughout the land that the San Antonio Midwinter Tournament, to be held in January, 1896, is to be an "individual shoot."

The idea of a midwinter tournament was suggested by Mr. J. L. Hayden, of the San Antonio Business Men's Club. I was practically sent by the Business Men's Club to the Memphis shoot to advocate the San Antonio Midwinter Tournament, and I was armed with credentials from the club. Besides this, the Texas State Sportsmen's Association has endorsed this shoot, and Texas will send a greater attendance to the January tournament than ever before. The added money fund will consist of donations from members of the Texas Association, and the shoot will be distinctly a Texas Association affair—not a State shoot, but a national tournament and sportsmen's exposition and dog show.

The present Texas Association was organized nineteen years ago, and has always stood staunch for game protection. It has placed itself on record as the enemy of crooked trap-shooting, such as dropping for place, etc. Its shoots have at all times been characterized by fairness and impartiality; and the fact that the Texas State Sportsmen's Association will father the great midwinter tournament next January is a guarantee that it will be one of the greatest shooting events that have taken place up to date. O. C. GUESSAZ.

Tournament of the Middletown Gun Club.

CINCINNATI, O., Sept. 26.—One of the most notable shooting events of the season was that held at Middletown, O., on this date. The day was windy and it kept the sportsmen guessing at the angles and speed of the targets. The two Dromios, Jacoby and Sebald, presided in the office and over the traps, and in their accustomed steady way the boys were made to pace the score in quick order. Milt Lindsley, Girton, Lee and King were present, representing the King Powder Company; R. S. Waddell, of Cincinnati, representing the DuPont and Hazard Smokeless in good style, and Henry Goodman looked after the interests of the Bandle Arms Company. Only a few shot through all the events of the day, and the strong west wind was sufficient excuse that the scores were not higher. Although the entries numbered about twenty, the principal records were as follows:

	Shot at	Broke.	Per ct.		Shot at.	Broke.	Per ct.
Waddell	200	178	89	Sebald	145	120	83
Lindsley	200	128	64	Happy	120	82	68
Girton	200	156	78	Pruno	140	119	85
See	200	152	76	King	65	46	70
Taylor	200	149	75	J B	110	76	69
Goodman	200	149	75				

BUCKEYE.

Endeavor Gun Club.

JERSEY CITY, Oct. 7.—Herewith find scores made at prize contest of Endeavor Gun Club, at Marion, N. J., Sept. 28. Entrance in sweeps nominal; in prize shoot, price of targets:

Events:	1	2	3	4	5	Events:	1	2	3	4	5

No. 2, 5 unknown angles: Van Brunt 4, Hegeman 3, Bennett 3, Shepard 2, Deacon 4, O'Brien 2, Wynn 3, Eddy 2, Cropsey 2, Pool 2.

No. 3, miss and out, three re-entries allowed:

Bennett 1000110
Wynn 1011111111010
Hegeman 1010010

Deacon 1110011111101111
Van Brunt 11111100100
Cropsey 10001110

Wynn and Deacon divided.

No. 4, 10 reverse angles: Bennett 7, Hegeman 7, Deacon 5, Van Brunt 4, Cropsey 5, Shepard 6, Knowlton 8, Richardson 5.

No. 5, 10 known angles: Bennett 8, Hegeman 9, Knowlton 2, Van Brunt Deacon 7, Shepard 7.

Bridge City Gun Club.

LOGANSPORT, Ind., Sept. 27.—*Editor Forest and Stream:* The Bridge City Gun Club held their annual tournament here this week. It proved a success in every way save that the attendance was not large as expected and rain fell during the forenoon of the first day. The programme announcing $150 added money, $75 worth of merchandise, a fine medal and $60 added to that, together with some specials and prizes for high average, brought together such good shots as Rike, Dando and Raymond, of Dayton; Young, of Springfield; Shorty Bacon, of Mibmorsburg; Ruble and Skinner, of Chicago; Livinguth, Hill, King, Park, and others, of Indiana.

Most all these men shot through the whole three days in every event. Livinguth, of Lafayette, was much in evidence, as he won the first average, breaking 499 out of a possible 535. Losing but five during the last day, and most of them being at reverse pull. He was closely followed by Young, of Ohio, with 494 out of 535, and he lost the five difference all in one match. Ruble came in for third with 490, though King following down in the last event on the reverse pull, as he scored but 15 out of 20. His loss here and that of some of Rike's and others' low scores is attributed in a great part to using shells not accustomed to. As shooters often run short of shells after shooting three days, it was noted that all of the shooters had fifty of their best and regular loads laid away for the final contest, the medal shoot. Those who provide loaded shells at these tournaments do not understand the requirements of the shooters. They get regular machine loaded shells 2⅝ and often soft shot, when mostly every trap shooter uses 2¾, 2⅞ or 3in. shell. The shell often contains only 32 grains of powder instead of 42 to 46, as they should. Few shells are sold at tournaments, yet many more could be sold if they were loaded to order.

The club was very liberal and put up all the money and prizes, though coming out "in the soup." Dr. Thomas did his part and made everybody happy. W. Tramp Irwin was engaged and fulfilled the duties as manager and was untiring in his efforts. The shooting grounds are inside the park inclosure and traps face east, having fairly good background.

The scores:

First Day.

Elliott	11101011101110011111001011111111111111111111	42

John Ruble won the fine gold medal, $30 in cash, $5 for best score, with a Lefever gun, and $5 for best score with the DuPont powder. Reeder won the prize for best score with Schultzs powder. Rike, Young, Livinguth, Park, Trimble and Hill (shot off tie) got each $5 for six highest guns. Many people were out to witness this event, and Dr. Thomas had the military band upon the ground.

There will in all probability be another tournament held here next year, though the management are a little discouraged at the losing part. I think they will try to make it all up next year. J. F. E.

The Interstate Season.

PITTSBURG, Pa.—*Editor Forest and Stream:* The series of tournaments given by the Interstate Association during the season of 1895 has ended, and perhaps a few lines touching on the work of the Association would not be amiss.

Nine tournaments were held during the spring and summer, and when I say that the object of the Association was fully realized, do not think it is merely an assertion. Target shooting was given a decided stimulus, and scores of new patrons of the diversion were developed and largely in a section where the entertainment was yet in its infancy. The South was a big and permanent gainer by the tourneys. Of course there were not so many targets trapped as in competitions held in the North, and the reason is quite plain. The percentage of shooters in Dixie is much less than in the North. However, the manner in which the Southerners appreciated the sport will convince any one that in a few years hence the North will have to look to its laurels in skill if not in numbers.

Starting in with that big event, the annual Grand American Handicap, in April, the line of success followed month after month. There were no half-way events, and all must be considered successful. True, the entries at one or two tournaments was not large, but the advance of trap shooting—the main object of the Interstate Association—was marked in each particular locality. They drew contestants and onlookers from the country around within a radius of 100 miles and over. Not one was purely local.

The Grand American Handicap which was decided at Paterson, N. J., attracted shooters from points as far west as Denver. The claim has often been made that this handicap would soon be classed among the world's largest shooting events. Each contest proves that the claim was not a wild enthusiastic break, for year by year its scope has been extended, and advance has always been prominent at each succeeding tourney.

Pittsburg, Pa., turned out a large number of shooters at the April target tournament. They came from New York, New Jersey, Ohio, Virginia, West Virginia, District of Columbia, eastern and western Pennsylvania and other points. It had the most general representation of any of the target competitions. True, its location and long patronage of the sport was an advantage over other cities, but even then it must be given a great deal of credit. The jump to the South began with the tournament at Wilmington, N. C., in early May. It was a new field to some extent, but none the less sport-loving. Shooters were present from a distance as well as from the nearby towns, and all went home delighted with the experience. Lynchburg, Va., came next, and it can be said in all fairness that it was one of the best tourneys of the series. The little places near by sent a baker's dozen shooters, which, with the local club and those who came from a distance, made a very respectable entry list. In June the Interstate traps threw targets in the thriving city of Vicksburg, Miss. Shooters from far and near helped to break them. I was highly pleased with the result there. It seemed to me as if the pastime gained in favor from the time the first gun was fired. The tournament created that healthy, earnest talk which is bound to lead to results. Macon, Ga., had its tournament in July, and even if the peach carnival was going on at the same time the sport did not take a back seat. Apparently it gained many admirers and future devotees. "'Way down in the land of cotton" might be apropos in prefacing my remarks about the next event, which was held in New Orleans, La. Distance did not seem to bother gun men in that section, for they were there from points hundreds of miles away. Some said they had been target shooters in a small way, but hereafter felt as if they would never cease singing the praises of the diversion. Charlotte, N. C., came next. An Interstate tournament wasn't exactly new there, for this bright little city had been favored before, and right well she deserved the visits. Tourneys are quite popular with the sportsmen there, and the breaking of targets goes on with a regularity that indicates that the boys are in love with it. The final shoot was held at Shepherdstown, W. Va. It was none the less successful, and all were pleased with the result.

While the Association has not laid out a circuit for 1896, nor will they until after the annual meeting in December, it is very probable that the South will again be visited during part of the season at least. The territory took up with the sport so largely and earnestly that it would hardly be good policy to pass it by with but one series of tournaments.

Gun clubs in the South desiring the aid of the Interstate Association in giving tournaments during the early part of 1896 should make application for same as soon as possible to Mr. J. A. H. Dressel, Sec'y-Treas., 313 Broadway, New York, N. Y., or to the undersigned at 122 Diamond Market, Pittsburg, Pa.

ELMER E. SHANER,
Manager Interstate Association.

James River Valley Tournament.

JAMESTOWN, N. D., Sept. 25.—The management of the James River Valley Fair's target tournament, held at Jamestown, N. D., Sept. 25 and 26, confidently expected that at least twenty sportsmen would shoot through all the events each day, but the unfavorable weather cut down the attendance at the fair and was the chief cause of the small number of entries.

Besides the Jamestown shooters, there were present: R. W. Main, of Cando; F. H. & Q. S. Sprague, of Grafton; H. Swartout, of Sanborn, and C. E. Robbins (Parker) and O. M. Guptill (Burgess), from Fargo.

The shooting grounds were located at the south end of the race track furthest from the main entrance, and a high cold wind from the north kept the air so filled with dust that often it was impossible for the shooters to see the direction a target had taken.

Nearly all the local shooters had extra business that demanded their attention during the Fair week, and could not give the tournament the time they otherwise would.

Much credit is due to Messrs. Blewett and Rankin, of Jamestown, for their efforts in making a success of the tournament. The Fair Association officers fulfilled all pledges and treated the shooters very courteously. Bluerock traps and targets, with North's electric pulls, were used with satisfaction to all. In order not to interfere with the races, ball games and other sports, the number of events was limited to three, comprising 50 targets each day.

There was no stopping for place. The utmost harmony and good feeling prevailed, and all in attendance will look forward with pleasure to the time for holding the next Jamestown tournament.

The complete scores are as follows:

No. 1, 15 singles, known angles, $1.45 entrance, four moneys: P. Blewett 10, Swartout 10, Main 14, Donnelly 8, Parker 12, Burgess 11, Rankin 6.

No. 2, 15 singles, unknown angles, $1.45 entrance, four moneys: Blewett 9, Swartout 13, Main 13, Donnelly 5, Parker 13, Burgess 9, Rankin 4, Hewitt 9.

No. 3, 20 singles, known angles, $1.60 entrance, four moneys: Blewett 16, Swartout 16, Main 16, Donnelly 7, Parker 17, Burgess 19, Rankin 12, Hewitt 12.

C. E. R.

Atlanta.

ATLANTA, Ga., Oct. 4.—*Editor Forest and Stream:* We have received several communications from the DuPont Live Pigeon Shoot, to be held in Baltimore, Md., the same dates as ours. For some reason their dates conflict with ours, but from looking over all the leading sporting papers we find we have had these dates under the head of fixtures etc., for several weeks prior to them. We have declined to postpone our shoot, on the grounds that we had priority of dates, and also had gone to quite an expense toward programmes, advertising, securing of grounds, etc. It would not be justice to the shooters attending our tournament, inasmuch as two days later there will be a $1,000 added money shoot at San Antonio, Texas. This will give our visitors an opportunity of attending the San Antonio shoot with very little additional expense.

Mr. Jno. Parker, of Detroit, Mich., has charge of our tournament, and this, we are satisfied, will give every one attending perfect satisfaction.

THE CLARKE HARDWARE COMPANY.

NEW PUBLICATIONS.

SHOOTING PICTURES: A series of twelve *facsimile* water colors by A. B. Frost. New York: Chas. Scribner's Sons. Parts I. and II. Price, $2.50 per part.

The art features of sport afield and afloat have been recently enriched by a meritorious series of shooting pictures from the brush of Mr. A. B. Frost, who is well known as a skillful artist. These pictures are so realistic and the subjects so tastefully selected that they can be promptly recognized and accepted as typical incidents in the experience of every sportsman in his pursuit of game in the woods, on the marsh or water, the prairie, the upland; in short, all the sports with gun on land and water. They not only appeal to the sportsman as works of art, but they sympathetically interweave themselves in memory with the incidents of which they are so truthful a reflex. The series comprises twelve pictures, reproductions of the original water colors. "Ruffed Grouse" portrays the home of that bird in the dense wild woods, rougher still in their tangle of underbrush, rocks and fallen wood. In the foreground is a ruffed grouse, the prince of game birds, seeking concealment behind a log; in vain, however, for an exceptionally well-drawn setter is pointing him accurately, while further in the background the shooter stands, gun in hand, ready for the swift shot when the bird takes wing. The gold, brown and green of the autumn leaves give fine color contrasts to the picture. The figure of the shooter perhaps could be better drawn. "Summer Woodcock" is in happy keeping with its title. The shooter stands in the vividly green and dense cover, gun at shoulder, ready to shoot the woodcock, which is just passing a small opening, through which a patch of sky can be seen. The dog is in the background looking up at the flushed bird. In this picture a curious effect is produced by the posture of the shooter and a slight foreshortening of the gun, for he seems to be pointing his gun many yards to one side of the bird, and from the peculiar effect it is impossible to determine the point at which he is aiming. "Bay Snipe" is a scene of flat shore, with its peculiarities of rank green vegetation, sand bar and shallow water. The shooter, in a blind in the foreground, has his gun at his shoulder ready to fire on some incoming birds which all too trustfully come to his decoys. Numerous birds thrown loosely behind the blind show that the shooter's success has been good, and that all sorts of birds are welcome. "Rail Shooting" portrays shooting in different places working through the shore growths. In the foreground a shooter standing up in his boat is aiming at a rail, the pusher steadying the boat with his pole and at the same time intently watching the result of the shoot. There are stretches of water here and there which reach far away into dim distance, while the pretty yellow of the dead water grasses and reeds makes a most pleasing effect. The other pictures are entitled Prairie Chickens, Ducks from a Blind, English Snipe, Quail Shooting, Ducks from a Battery, Fall Woodcock, Rabbits, Quail—a Dead Stand. Each plate is mounted on heavy cardboard 19×26in., ready for framing. The pictures are accompanied by a descriptive text, crisp and airy as a breeze from the woodlands, original and vigorous in style, written by Mr. Charles D. Lanier, and the text is further illustrated by excellent pen-and-ink drawings, also the work of Mr. Frost.

PUBLISHERS' DEPARTMENT.

Three Limited Trains to Atlanta, Ga., via Southern Railway.

TO ACCOMMODATE the heavy travel to Atlanta, Ga., on account of the Cotton States and International Exposition, commencing Sunday, Oct. 6, in addition to the two limited trains now in operation between New York and Atlanta via the Pennsylvania R. R. and Southern Railway, "Piedmont Air Line," a third train will be put on which will be known as the Exposition Flyer, leaving New York daily at 11 o'clock A. M., reaching Atlanta following morning at 10 o'clock. This train will be composed of Pullman drawing-room, sleeping and vestibule coaches. The equipment of the new train will be excellent in every respect; the hour of departure and arrival at Atlanta are most convenient. This will, no doubt, as soon as known to the traveling public, be as popular as the famous Washington & Southwestern Vestibule Limited operated by this system between New York and Atlanta, which will continue to leave New York as heretofore daily at 4:30 P. M.

Bicycle Saddles from a Medical Standpoint.

MESSRS. HULBERT BROS. & Co. say they had no idea that cycling had received so much attention from physicians until they started advertising their Mesinger saddle and its advantages from an anatomical standpoint, when the numerous calls and applications from the medical fraternity proved to them conclusively that they are giving this subject a great deal of study. They are one and all convinced when shown the Mesinger saddle, manufactured by the above firm, that the last objection to bicycle riding has now been overcome.

A well-known racing man came into the Bridgeport agency of Messrs. Hulbert Bros. & Co. bemoaning the fact that his doctor had forbidden him to ride for a month. He was persuaded to try a Mesinger saddle, and at the end of a week came in delighted, saying that he had kept up his track work every day for the week, and at the end of the second week his doctor pronounced him cured.

Sport at New Berne, N. C.

AT this season Northern sportsmen are beginning to turn their attention to the Southern shooting and fishing resorts. New Berne, N. C., is situated in country prolific of game, and in the immediate vicinity are to be found ducks, snipe and quail, as well as bear, deer and turkeys. The black bass and rock bass fishing is especially good at present. At New Berne is the Hotel Chattawka, a modern hotel supplied with all conveniences.

The New Navy Rifle.

IT is reported that the Winchester Repeating Arms Company has received the contract for furnishing the first lot of 10,000 of the new .236 Lee magazine rifles to the navy.

Answers to Correspondents.

No notice taken of anonymous communications

R S., Chicago.—All time bets on the third race are off.

E. E. P., San Francisco.—We have no lines of racing shells.

——, Orange, N. J.—You will find suitable designs in our back numbers.

W. C. D., Philadelphia.—You will find good rabbit hunting at Canadensis in Monroe county.

M. W. L., Norristown, Pa.—No one has the lines of Defender except her designer, and they will not be published.

R. C., Brooklyn.—There is no book; you will find several designs in the back numbers of the FOREST AND STREAM.

P. W., Kalamazoo, Mich.—The official and unofficial measurements of Defender have been published in our recent issues.

W. H. C., Chicago.—The questions you ask cannot be answered positively; the points are matters of opinion on which yachtsmen differ.

A. N. V., Chatham.—Ethelwynn is a centerboard boat; her full dimensions will be found in our late issues. A 1-rater would cost about $800. These boats will float if capsized.

MIGNON, New York.—The Treasury regulations are as a rule not enforced rigidly in the case of small yachts, but if the authorities choose to enforce them, as is sometimes the case, they must be strictly complied with.

H. W. W., Newark, N. J.—Is it lawful to kill deer in Sullivan county, N. Y.? Also if you can shoot quail, rabbits partridge, woodcock, etc., on the 25th day of October in the Northern District of New Jersey? Ans. 1. No. 2. Yes. See *Game Laws in Brief.*

J. W. F., New York.—1. Can a non-resident shoot in Michigan without paying a $25 license, or does license apply only to large game? 2. If I own a house and forty acres of land in Michigan, and reside there two months every year, would that make me a resident? 3 A year ago I bought a Gordon setter pup, but failed to get her pedigree; as she has turned out very well, what must I do to make her eligible to compete at the next New York dog show, or where should I register her? Ans. 1. The license is required only for the hunting. 2. No. 3. List her with the American Kennel Club, No. 55 Liberty street, New York.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

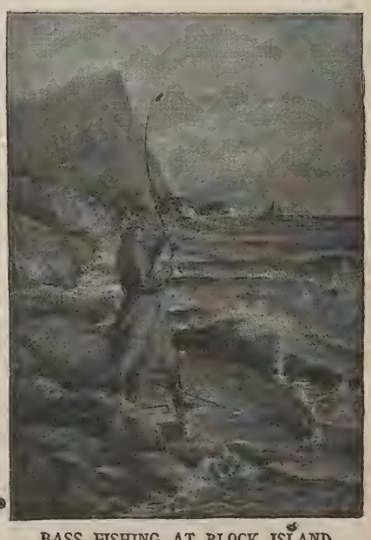
FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

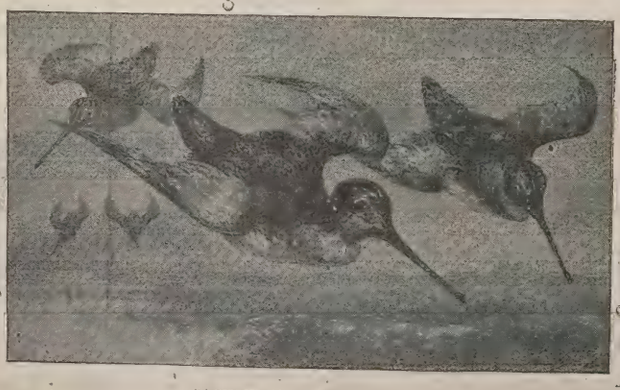
HE'S GOT THEM.

AS PREMIUMS.



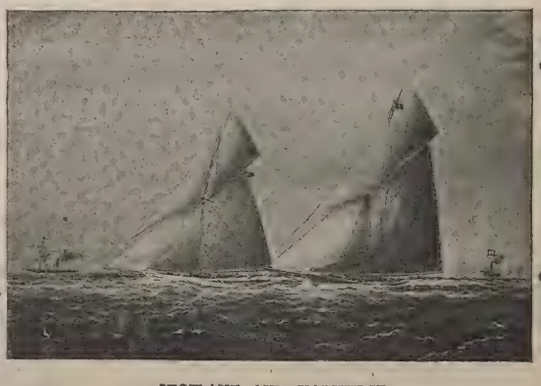
We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, $5.
Forest and Stream *6 months and any two pictures*, $3.



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.



Copies of them may be seen at this office, and inspection is invited.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

SUNRISE AND SUNSET.

IN our columns this week will be found an earnest recountal of the misfortunes of two of the brethren who unintentionally violated that clause of the game laws of Illinois which enjoins (we quote from the *Game Laws in Brief*) that it shall be unlawful to hunt, kill, trap, or ensnare, or otherwise destroy, any wild goose, brant, duck, rail or other water fowl, between sunset of any day and sunrise of the next succeeding day at any period of the year, etc., etc.

Our correspondent, in conclusion and in objection to the sunrise and sunset clause, remarks: "I think that the game laws are far from being correct in regard to shooting before and after sunrise. If a stipulated time were given, say between the hours of 6 A. M. and 6 P. M., I am sure the game laws would not have been violated by us."

It surely was mortifying to come within the action of the game laws by beginning to shoot ten minutes too soon, but there would be a difficulty in making a fixed time, since a time which might be daylight in one part of the season might be dark at some other part, and the ill effects of disturbing ducks in the darkness are well known.

Many of the States specifically legislate against night shooting. The District of Columbia enjoins that no person shall kill or shoot at any bird or wildfowl in the night time.

Missouri provides that it is unlawful to shoot or kill wild ducks or geese between sunset and sunrise by means of explosives of any kind.

North Carolina is in line in regard to prohibiting night shooting. Its law reads that no person shall put out decoys before sun-up or let them remain after sun-down, between the 10th of November and the 20th of March, and on every Wednesday and every Saturday between the 10th of November and the 20th of March no person shall put out decoys. Batteries must take up decoys at sun-down and go to a landing until sun-up.

The New Jersey law reads that it shall be unlawful for any person, with intent to capture or kill geese, duck, brant or other web-footed wildfowl, to hunt after or pursue them in any manner, excepting between one hour before sunrise and one hour after sunset.

Oregon has a still more stringent law, as follows: "Every person who shall at any time between one hour after sunset and half an hour before sunrise fire off any gun or build any fire or flash any light or powder or other inflammable substance upon the margin or in the vicinity of or upon any lake, pond, slough or other feeding grounds frequented by wild ducks, geese, swan or other water fowl, with intent to thereby shoot, kill or disturb any of such water fowl, shall be guilty of a misdemeanor."

Minnesota prohibits all kinds of shooting on its waters between dark and daylight.

Maryland, in specifying the legal shooting days for wildfowl, adds: "And each of the said days shall comprehend the time intervening between one hour before sunrise and half an hour after sunset of each day, and no more, and is not to include any part or period of a night."

Washington prohibits the shooting of water fowl at all seasons between the hours of 8 o'clock P. M. and 5 o'clock A. M.

New York declares that wildfowl shall not be killed or hunted except during the hours in each day commencing one hour before sunrise and terminating one hour after sunset, and on Long Island the restriction of the time of killing is to be between sunrise and sunset. In seeking to get possession of the most desirable stands for black duck shooting on the Long Island shores, a very early start is necessary to secure possession before the ordinary early riser seeks to occupy the stand for his own use. But often the very early riser will find the stands occupied by still earlier risers who are calmly camped in phlegmatic possession waiting for the legal shooting hour, and caring nothing for the chagrin and disappointment of their competitor, who arrived too late.

Probably the most novel restriction is that mentioned by a correspondent as being in common use among the multitude of market shooters about New Orleans, one adopted by common consent and said to be commonly observed—that is, the earliest morning hour for commencing shooting is when the shooter can read the time in the earliest morning, holding his watch about 24in. from his face. Of course this presupposes a great deal to insure proper action; first, the shooter must possess a watch or have an obliging friend; second, his eyesight must be unimpaired; and third, his arm must be strong enough when duck shooting to hold the watch 24in. from his face.

So long as ducks fly by and shooters are ready to kill, it is not an easy matter to adjust time to a nicety. The shooter is not gazing at his watch or the eastern horizon when there is a flock of ducks in sight or when he hears the swish of wings. Probably it will remain an unsolved problem as to whether the proper moment to shoot should be regulated by the sun or watch, or the presence of a duck within shot. There is always a possibility of a struggle then 'twixt love and duty.

MICHIGAN SPRING SHOOTING.

THE laws of Michigan in regard to the killing of wildfowl, as they now stand, read as follows:

"No person shall kill any wild duck, wild goose, or other wild water fowl or snipe, save only from the 1st day of September in each year to the 1st day of January in the year following; provided, that it shall be lawful to hunt and kill jack-snipe, red-headed, blue-bill, canvas-back, widgeon [and] pin-tail ducks and wild geese, between the 1st day of September in each year and the 1st day of May next following."

Spring shooting is thus forbidden so far as mallard, black duck (black mallard) and teal are concerned, the distinction being drawn between what are known in that State as "marsh ducks," such as mallards and teal, and "river ducks," *i. e.* canvas-back, red-head, bluebills, etc. "Marsh ducks" breed in the State, whereas "river ducks" move up North to nest.

The last session of the Legislature, as we understand it, witnessed a big fight that was made on behalf of those who wished to prohibit spring shooting altogether within the confines of the State of Michigan. The claim is made by those who advocate the propriety of shooting "river ducks" in the spring of the year, that this fight was made chiefly by sportsmen in the interior of the State who were not directly interested in the sport.

On the other hand, those who favor spring shooting urge that river ducks, although present in great numbers in the fall, are not killed to any great extent, the conditions not being favorable for the sport. It is only in the spring that big bags of red-heads and blue-bills are made, canvasbacks being successfully pursued in very few localities on account of the scarcity of that food which this duck is so fond of. In the fall, the marshes, overgrown with wild rice from which the seed has already fallen, and choked with water weeds that in many instances cover the surface of the water, are not favorite haunts for river ducks.

It is in the spring, when the winter's ice has passed out, carrying with it the weeds, and leaving the bottom of the marsh clear of all debris, that the river ducks, on their way North, stop five or six weeks to feed on the wild rice that was securely hidden from them when they passed South in the fall. It is then that the flocks of redheads and bluebills come into the marshes, swing in to the decoys and finally find a resting place in the stomachs of a certain portion of the human race.

Those who own marshes that abut on the shores of Lake Erie, and those who rent them for the privilege of shooting over them, are as a unit in favor of spring shooting under the conditions existing in other States. "But stop spring shooting in all the States and we will fall in line," say they, adding: "But if you do that, why not shorten the season in the South? Why should they be allowed to bang away all the winter at ducks that cannot go anywhere else on account of the frozen North? The great slaughter of ducks takes place in Southern waters, not in the marshes of Michigan."

This is the old familiar plea which is heard in one State after another: "If the rest wouldn't shoot in the spring we wouldn't; if they will, we shall." The problem of stopping spring shooting is an involved one because of that ubiquitous "if." It is simple enough to criticise the plea, and to say that the sportsmen of each individual State should rise to a loftier patriotism and deny themselves for the sake of others; but the hard fact remains that sportsmen are human beings, and it is against human nature to perch very high up among the patriotic branches when ducks are flying.

Nor does there appear to be any practicable expedient by which the several localities with their individual interests may be brought to an agreement respecting uniform duck shooting laws. We have had national associations—national in name, but not in influence—and one after another they have adopted beautifully framed resolutions for the abolition of spring shooting; but in the very nature of things they could not do more than this. For, in the first place, there is hardly a State where the sportsmen themselves are agreed on the subject; and the State delegate in a national convention represents only a fraction of his own State. Again, no general recognition can ever be accorded to a national sportsmen's association by the legislatures of the States at large. If the problem of the prohibition of spring duck shooting is ever solved, it will not be by the agency of any such self-styled national association. If there is a solution, where shall we find it?

Two Connecticut gunners were climbing over a fence; one of them was pulling his gun after him, muzzle foremost; the gun caught in the fence, exploded and shot the man who was pulling it; then the other man endeavored to extricate it, and it went off again, killing him. The *Evening Post* heads its story of the occurrence a "Remarkable Shooting Accident." There was nothing remarkable about it. A gun pulled muzzle foremost through a fence goes off as a matter of course; it would be remarkable if it did not. If there are two barrels and two men to do the pulling, both barrels will go off, and if it were a magazine gun with six charges, all the six could be depended upon to discharge and wound or kill six victims if there were so many unfortunates within range. The truly remarkable feature of these affairs is that so many grown-up men with guns never learn to use common sense in the gun-fence combination.

Our Yellowstone correspondent sends note of the interesting project now under way in the Park of corralling the buffalo within a strongly fenced inclosure, where they may be permanently restrained within an area which may be protected. The practical result of this undertaking will be watched with decided interest. Under existing conditions the buffalo are diminishing at a frightful rate. The difficulty of guarding the game against the raids of poachers, spurred on by the rewards offered for heads, is so considerable, that if the remaining herd is not confined within the more restricted area, it must perish at the hands of these pirates. The funds required to carry out the fencing should be forthcoming. The buffalo cannot be permitted to take its place among the extinct mammals of the continent.

The three Rochester sportsmen who went over into Ontario to shoot game without a license, and were fined for violation of the Canadian non-resident law, deserve no special sympathy. They had no excuse for running into the trouble. It is the business of every man who goes shooting first to inform himself respecting the law. If they had exercised ordinary prudence the Rochester shooters might readily have ascertained that they would be required to pay either license fee or penalty. Nevertheless the action, related elsewhere, of the hotel keeper, who informed on them and pocketed his share of the fines, is most fittingly to be characterized by the pungent idiom common in some localities, where it would be said that he had "done them dirt."

The Sportsman Tourist.

IN JONES'S BAYOU.—I.

CHATTANOOGA, Tenn., Oct. 5.—*Editor Forest and Stream:* I have just put down a copy of FOREST AND STREAM of Aug. 10 and had been reading the account given by Horace Kephart of the Arkansas swamp country. I have hunted and traveled so many miles in this indentical country that an account of it possesses a peculiar interest for me. I was once engaged on a survey from Alexandria, La., to Pine Bluff, Ark., and crossed the White, Arkansas and Red River swamps. We did very little hunting, as we were busy; but I can vouch for the plenitude of both deer and bear, and the finest waters for fishing. I have never been in a country where deer are more plentiful than in the blue cane of Arkansas, excepting one place. That place is the rolling pine forests of western Louisiana that lie between the Red River and the Sabine. I gave an account of this country in a former article, entitled "The Big Thick of Eastern Texas." The time that I write of now was the year of 1883.

I was stationed at Nitta Yuma plantation, on Deer Creek, twelve miles north of Rolling Fork, Miss. The plantation was the property of Dr. and Mrs. Phelps. My rod man, Julian Fleming, and I had been comfortably located in the elegant home of Dr. Phelps all winter. We were engaged in the engineering department of the railroad running from Memphis to New Orleans, following the course of the Mississippi River.

We had been unusually fortunate in gaining an *entrée* into the family of Dr. Phelps. The railroad ran through his plantation, and as we came to him well recommended he opened his hospitable doors and invited us to stop with him. We had been there about four months, enjoying the fruits of his well-laden table and the society of his charming wife and daughters, when lo! our death knell came. We received orders about April 1 to go to Jones's Bayou, eighty miles south of Memphis, in Bolivar county, Miss., and to report there at once to Maj. Gordon, the locating engineer, and in charge of the construction of that division of the road. I had heard of that part of the line and somehow had a presentiment that it would fall to my lot to go there and live about twelve or eighteen months with the natives and wild animals. What a change, from the elegant society of a true Mississippi gentleman's family to that of the typical swamp crackers, who inhabited the canebrakes of Bolivar county. Well, the change must come. So about the 1st of April we bade farewell to our kind friends at Nitta Yuma plantation, and Fleming and I took the road to Bolivar county.

We hired a conveyance that landed us in two days at Greenville. There we completed our equipment for camp life and I supplied myself with a good .44 Winchester. I already owned a .32cal. of the same gun, so I thought I was prepared to make the best of swamp life, if swamp it must be.

We remained at Greenville several days, then hired a good mule team and driver to carry us and our luggage to Jones's Bayou. We had about fifty miles to travel in that wagon through as dismal swamp country as a man ever set foot in. My, how lonesome and desolate I felt! and Fleming was worse off than I was. He had just graduated at Bethlehem University in Pennsylvania, and having lived in Philadelphia all his life he was a tenderfoot sure enough. I had lots of fun at his expense, trying to make out that the country was a gread deal worse than it really was. I needed something to elevate my own spirits.

Well, after the second day of jolting in the wagon we arrived at Jones's Bayou in the middle of a sixty-mile canebrake. There were a few old settlers living along the banks of the bayou wherever they could find a point of ground above high water mark. So we chose the most inviting looking of the places, and alighting at the gate soon made arrangements for board. The next day I mounted a horse, and riding several miles to the camp of the locating engineer's party found Major Gordon. I was instructed that I was expected to take charge of the grading and trestle building on twenty miles of line and that I was located just in the center of my work. Well, I was glad of that, as I was told also that the small farms on Jones's Bayou were about the only cleared places in Bolivar county; as the balance of the county up to present explorations was a solid canebrake. Eheu! I will use that word now, as I belong to the church at the present time and have begged forgiveness for my past sins; but I did not need any one to supply adjectives for me at that time. Thanks, Brother Dick of Connecticut, for helping me out with a suitable expression for my disgust of that country. Well, enough of this. But, reader, just imagine if you can a poor disconsolate cuss doomed to live at least eighteen months in the middle of a canebrake sixty miles long and forty miles wide, "blue cane," too! and some of it as large as your wrist and 20ft. high; or, as Kephart says, "a perfect sea of fish poles."

Well, kind friends, if I had not been a natural born lover of all outdoor sport by heredity, as well as by inclination and cultivation of my feelings, I could not have stood the test.

I at least learned how to hunt while I was in that canebrake, and came forth eighteen months afterward with more experience and trophies of my skill than I could have acquired in some time in the ordinary course of life.

It was April, so I sheathed both of my rifles, like a good sportsman, and went to work. I enjoyed the fishing at all spare hours, however, and kept our table constantly supplied with bass, perch and brim. There was a lake or old bed of the Mississippi River about five miles from my lodging place, which I soon found.

I always "Do in Rome as Romans do," so the first thing I did upon my entrance into Jones's Bayou society was to cultivate the acquaintance of the people. I boarded with Mrs. Beavers, who was a widow. She had two grown sons named Lem and John and a son-in-law named Jim Pyron. Just across the bayou lived Uncle Andrew Jackson Taylor, who in his younger days had been the best hunter and trapper in that whole section of country, and who knew every water hole and game trail in this region. Up the bayou one mile lived Uncle Zachary Taylor Jones, who had four grown sons and a yard full of sandy-haired girls. Two miles up the bayou lived Uncle John Randolph Martin, who had no children at home, but said he was the father of ten or eleven grown-up sons and daughters who were scattered all over Missouri and Arkansas.

Eheu! Why did I not have some forewarning of the illustrious neighborhood that I was emigrating to? If I had only known in time, my name would have been Alexander of Macedonia Julius Cæsar Hannibal Nelson Howe Marlborough Napoleon Bonaparte William Pitt Wingfield. However, when I told my new friends that I was born and raised in the State of nativity of Howell Cobb, Alexander Stevens and Benj. Hill, and now resided in the State organized by John Sevier, Sam Houston and Davy Crockett, and that gave birth to Andrew Jackson and Zachary Taylor, they received me with open arms. I had gotten right "plumb" (excuse the expression) in the middle of a lot of old Tennessee settlers, and the fact that I hailed from the "old home" of these plain but honest people gave me an *entrée* into their best society and good wishes. I do not intend to make fun of these people, but I cannot refrain from noting the ludicrous nomenclature of all the residents. Nearly every one of the older set was named for some of our illustrious forefathers, from George Washington on down the line.

Well, one day I was passing Uncle John Randolph Martin's house about dinner hour, and the old man hailed me, and nothing would do him but that Fleming and I should come in and "have a bite of grub." These people when they once take a fancy to one cannot do enough for you. Everything on earth that they have they will press upon you, and not one cent will they take in return for time, accommodation or any article they furnish you. If you are stingy or close in dealing with them, however, you might as well "pack your duds," as they say, and leave the country. Many a hundred of Winchester cartridges and many a fancy hunting knife or drinking cup or cartridge belt, or some nice article, that they took a fancy to, have I left in Bolivar county, Miss. We went in and took our seats at Uncle Martin's table—not, however, until we had removed our coats, to be in keeping with our surroundings. Uncle Martin hunted and fished for a living "mostly." He cultivated a small field of corn and owned a large drove of hogs that lived the year around on the heavy mast, and also a considerable herd of cattle that thrived and fattened on the switch cane and bull weeds.

Each resident has "his mark," and it is considered a greater crime to kill and steal a steer or hog that belongs to one of the neighbors than to kill a man. Uncle Martin opened the conversation about as follows: "Well! Wingfield, they tell me that you have got two brand new repeaters down at your lodging place, and that you can shoot a squirrel's eye out with airy one of them."

"Not quite so good as that, Uncle Martin, but I am not a bad shot."

"Well, as I don't do nothing else much but hunt and fish, we will be good trottin' mates."

"All right! Uncle Martin, I would rather hunt than eat any day, so I will be with you."

Uncle Martin then told me of the lake or "Snake River," as he called it, and said that he had a dugout or canoe on the river and invited me to come up next morning and go fishing with him. It is needless to say that I accepted. I was looking for just such chances as that to find out the country and learn the watering places of game and the fishing places. I tried to induce Fleming to go with me, but he had no sporting inclinations and so remained at home.

By sunrise next morning I was at Uncle Martin's house mounted on a mule, with creel slung over shoulder and with a new outfit. I had a split-bamboo jointed rod at the house, but did not bring it, as Uncle Martin said there were plenty of poles over on the river bank. I also remembered that I was in the land of fish-poles, so I did not bother myself in carrying one. Uncle Martin was waiting for me with his mule tied to the fence, and as soon as he saw me coming he mounted. We at once struck into a cattle trail that led through a solid wall of cone, and after traveling for something over an hour came out on the bank of the river. The Mississippi River is now thirty miles from the point we were at, but some time back in the ages it had run through this channel. The river often cuts through a bend, thus straightening its course, and leaves the old bed miles back in the swamp. Thus Snake River was formed. Land that used to be in Mississippi is now in Arkansas, and *vice versa*. The town of Greenville, Miss., has been moved back from where it used to be more than a mile in the last thirty years, and the old town site is now near the middle of the river. We at once dismounted, and while Uncle Martin was selecting and cutting a half dozen nice poles, I began turning over logs and chunks looking for angle-worms. I soon had an oyster can full and came up to Uncle Martin humming a tune, and ejaculating on what fine worms I had secured. Upon my word, I never saw such worms. Some of them looked to me to be a foot long and as large as a lead pencil. This rich alluvial soil, overflowed every year as it is, seems to grow everything rank, even to angle-worms.

We set to work fishing from the bank. I got out a perch hook and line, and taking a comfortable position on an old log, with my back against a tree, prepared to have a lazy time of it. But not much of a lazy time did I have. I soon got intensely interested and forgot that there was a tree behind me to lean against. Uncle Martin was squatted on the bank a few yards from me, with his home-made line, which looked as big as a shoe string, chawing his quid and spitting tobacco juice for a rod out into the stream.

All at once "kersplash" went my red striped and streaked cork; down under the water it went and did not return. Old Uncle Martin chuckled. "Them Limrock hooks of your'n is good uns," he said; "kotch the fust fish that tackled it. I'll get one and try it myself terreckly."

I now felt my fish tugging with all its might at my line, and as luck would have it I had made the line of ample length, so that I could cast it out 25 or 30ft. into the stream. The fish never once let my cork come to surface, and after playing him around a few minutes as best I could with the long cane pole, dragged him out endways and landed him on the bank. He was a beauty, a genuine brim. How his scales did sparkle, and his many colored sides flashed a gleam of joy to my heart for every color reflected. My first fish weighed approximately 2lbs.

Now it was Uncle Martin's turn. His bottle stopper went under, and before you could wink your eye—"kerplunk!" his fish hit the bank 25ft. from the place where he was sitting. I had to laugh. The old man turned around and in a half-insulted tone of voice said, "What in the eheu air you laughing at?"

"Why, the manner in which you captured that fish of course, Uncle Martin."

"Well, hain't hit all right?"

"Why, of course it's all right; but I never saw one caught as quick as that before."

"That is all right then, I 'lowed that you wus making fun of me."

"Oh, no! Uncle Martin, I would never make fun of you; I think too much of you to do that." But I was almost ready to explode. To this day I can see that old man grab his pole, put one end of it between his knees and come over-handed with that perch.

It was a good one too, about the same size as mine, but of a different variety. His fish was what we call in Georgia and Tennessee a "goggle-eyed perch." It was black on the back like a bass, had red eyes and a big mouth like a bass. These perch are the most voracious of any species of fish we have in our Southern waters. They will bite at anything, from a young wasp to a live minnow. They are game too, and don't you forget it. A 2 or 3-pounder will make a reel hum a tune.

I had hardly gotten my bait back into the river before another fish had it. I gave him a little twitch, just enough to hook him, and then played him until he was tired down. My pole was at least 20ft. long and the line about 30ft., and by pulling it in and running the pole out as far as I could reach, I could make a pretty good-sized circle with it. While I was thus engaged, Uncle Martin made another "yank" with both hands over his shoulder just the same as before. I burst out laughing this time, but before the old man could say anything I apologized to him and told him that I was not laughing at him, but at his method of catching fish. He brought out his fish, a nice large sun perch.

The old man gathered his perch in, put him on the string and seated himself again. All this time my fish was swimming back and forth in a half circle, coming in and then going out in the stream again. It kept me busy too, as I felt the line strain several times when I was too slow in slipping the pole through my hands. At last I succeeded in tiring him down, and dragging him close up to the bank, got Uncle Martin to go down to the water's edge and run his hands under him and lift him out. He was a goggle-eyed perch and as large a specimen as I ever saw. He must have weighed 4lbs. I told Uncle Martin that I considered that a fine piece of work, to catch as large a fish as that with a perch line and a little delicate perch hook and no reel to play him with. He asked what I meant by a reel, and I told him I would show him. I then picked up my creel and emptied it on the ground by his side, showed him my reel and how it worked on the jointed pole I had at home, and also all the new-fangled fishing tackle that I had, including a spoon and troll line and a pocketbook with every imaginable hook and fly that one could want. He looked at it in astonishment and then said, "An' did you buy all them doin's jest to ketch fish with?"

"I most certainly did," said I.

"Gee whiz! An' what did you pay fur all them tricks." I counted up $12 for a split-bamboo pole, $8 for a moderately good reel and about $15 worth of hooks, lines, flies, corks, sinkers, leaders, etc.; total $35. The old man liked to have fallen over backward. "Well," he said, "I have seed and hearn of some mighty powerful fools in my time; but you are the durndest biggest fool I ever heard tell of! Why, man, $35 will buy five steers, and them good uns at that."

"Why, Uncle Martin, my little outfit here some of our Eastern sportsmen would not pick up in the road. I have seen Englishmen and New Yorkers come to Pensacola and Jacksonville, Fla., with fishing outfits that cost over $100; and one Englishman, Mr. Jno. Scott, used to come to my father's farm in Georgia every year and hunt quail, and he had a Greener shotgun with four different barrels and one stock that he said he paid $800 for." The old man listened attentively and when I finished only grunted. I think he thought I was trying to stuff him and would not express himself. Well, we fished on, never changing our location, as the perch and brim were biting just as fast as we could attend to them.

About 10 o'clock the old man said he was tired of "yanking perch" and would go and get his boat and he would show me some fishing right. I could not see, to save my life, how it could be any better, as we must have had at least a bushel of as fine fish as I ever saw. I was eager to see what he meant, however. He disappeared up the bank and in ten minutes I saw him floating down toward me, steering with a long paddle and standing perfectly erect in a boat I was afraid to sit down in. He called it his "perogue." It was nothing on earth but a log hollowed out and sharpened at both ends, and would turn over if you looked at it cross-eyed. I surveyed his boat suspiciously and told him that I was a good swimmer; but did not care to get my clothes all wet and have to remain so all day. Uncle Martin chuckled and said, "Crawl in; thar hain't nairy bit o' danger. I hain't paddled this kind of a boat for fifty years and crossed the Mississippi a hundred times in one for nothin', and not learn something."

Well, I did not want to appear afraid, so I pulled off my coat and vest and shoes with the firm conviction that I would have to swim out. But I sat level and did not scare every time the boat reeled to the water's edge, so we did not get wet. Uncle Martin stood up straight as an arrow in the stern of the little rocking thing and did not seem at all uneasy. His complacency soon restored my equilibrium of mind and I was laughing and jesting with him in three minutes after I entered the dugout.

He paddled out 200yds. from the bank and all at once he dropped the paddle in the bottom of the boat and reached down after a harpoon which was in the boat. He said: "I see 'em, they are busters too." I said, "See what?" "Why, them fish; don't you see 'em?" I looked, and just ahead of us was a school of buffalo fish, some eighteen or twenty, lying just under the water sunning themselves. The old man steadied himself, raised his harpoon, then sent it flying through the air. The coil of line was around his arm. The harpoon went straight to the mark, for it had scarcely struck the water when the line commenced to spin out at a terrific gait. Uncle Martin never moved a muscle. Only allowed the line to run through his horny hand, checking the fish every now and then. When the end was almost reached he checked him and then the fish commenced to tow the light canoe around. In ten or fifteen minutes he had it played out, and then dragging it

up alongside the boat paddled to the bank and took the fish out. The harpoon had gone deep into the back of the fish and the wonder to me is that it had not killed him sooner than it did. This fish must have weighed 35 or 40lbs.; it was over 3ft. long and looked to me to be 12in. thick. Uncle Martin repeated this operation until he had three of these monsters lying out on the bank. I asked him what on earth he was going to do with them, and he said that he was fishing for money now, that "ketching pierch" was mostly for fun. I told him not to kill more than he could carry home and he said that he wouldn't. He said now he would show me some fishing right: "That he only ketched pierch with me jest to amuse me and let me have a good time and see all the sights." He said "that the river was full of the finest black bass that I ever seed and he was going to let me haul in a few."

He went to his saddle, and taking out a long cotton picking bag that had been tied behind him on the trip out, brought out a 10ft. minnow seine. It was a home-made affair, but as good and as strong as any that ever came out of a sportsman's supply store. I now began to open my eyes, and to realize that I had been laughing at one of the most expert fishermen that I have ever had the good fortune to meet. Old Uncle Martin's methods were crude, but he got there just the same. He is what I would call a "pot-hunter or pot-fisherman," as he always hunted, just as he fished, for meat and not for sport or glory.

The following February, when the swamp overflowed and we hunted ducks together in his boat, he would swear like a Turk because I insisted on scaring the ducks and shooting them on the wing. He would say, "What on 'arth is the sense of killin' one duck a flyin' when you could shoot into the bunch a sittin' and git a dozen at a shoot?" Old Uncle Martin could not hit them "a flyin'," as he expressed it, and he wanted ducks and not sport.

Well, we got out our trout lines and I took that wonderful "piece of tin," as Uncle Martin called my spoon, and got into the boat. He paddled us down the river for about a mile and then ran the boat up into a small lagoon or bayou that emptied into the river. I saw now what he was after, it was live minnows. We scrambled out of the boat right into the water and commenced dragging the seine. I did not say anything, but was waiting to see how he was going to preserve his minnows without any minnow pails. I did not have to wait long. After one or two unsuccessful hauls and after we got the water muddy we caught a seine full of fine large ones. Uncle Martin said not a word, just dragged the seine up to the side of the boat and diving into that wonderful cotton bag brought out a common gunny sack. I "tumbled" to his plan in a minute, and thought to myself what a fool I am. This old backwoodsman will teach me a few things if I only watch and keep my mouth shut. He put the minnows in the sack, and fastening the top of the sack to the side of the boat by means of two nails that were already there, simply dropped the sack into the water. One or two more hauls gave us all the minnows we wanted, and rolling up the seine and scrambling back into the boat he paddled out into the river. Now the fun began, or rather the procuring of fish; as I never could see much fun in fishing with a hand line.

Uncle Martin had a ponderous homemade hook and cord that resembled a plow line more than a fishing line. I asked him why he had it so large and he replied "that he made it big so the big fish could not break it and so the letle ones could not pester him afoolin' with it." His logic was good from his standpoint, but how I did long for my split-bamboo rod so I could play my fish and run out the 200yds. of platted enameled silk line that I had provided myself with. More than once I had my hands burned trying to play a fish with that fine line. It seemed like a red hot wire when it was running through my fingers. However, I managed to bring several large ones up to the boat side, and old Uncle Martin would grab them in his iron claws and stuff them into his cotton bag. Every time a big bass went into that bag I think he saw two bits shining in front of his eyes. I enjoyed the sport hugely for a while, but finally it got monotonous, and especially as my hands were getting sore from the line. I would not have broken that line for twice its value, for I could not replace it so far from civilization, and I had made up my mind to come back to that place many more times and bring my split-bamboo along. What fun I had in store for myself playing those big fellows.

After capturing probably a half dozen nice bass and throwing back as many more smaller ones, I wound up my line and watched Uncle Martin. As soon as I began to wind my line on the spool he protested. Said "he did not fetch me out thar fur nuthin', an' he wanted me to help him ketch his sack full." I told him that he would have to excuse me, as my hands were sore and I had enough. "Wal, I'll ketch 'em myself then," was his reply. And "ketch 'em" he did. The sweat was rolling off of him, as it was now past mid-day and pretty hot; but he kept at it. Finally, after he had "ketched" his sack nearly full he "'lowed" that he was hungry, and that he was ready to quit. I don't call Uncle Martin's methods sport. The novelty of the whole business interested me, and as the Mississippi River overflows Snake River every year or two and puts thousands of fish back there for every one he catches out, I guess there is no complaint to make. The old man was simply using what nature had supplied him in abundance, and really destroyed nothing. And as he expressed it, "He did not care a durn for sport; he wanted meat, and meat brought money."

We now paddled back to our starting point, and soon had a fire and cooked some of the fish and ate some of the cornbread and onions, which the old man had brought along. We had two big sacks full of fish of all kinds; so, after reaching his house, I selected about 20lbs. of the nicest ones for my own use and Uncle Martin made a bee line for the railroad camp to sell the rest. He told me afterward that he got over $8 for that day's catch. The last thing he said to me was: "Now, Wingfield, I tuck an' showed you my fishing place 'cause I like you; but if you show the place to any of them railroad hands, you need never to come arter me to go with you anywhar ag'in." You may bet your last shilling that I never gave his place away, although the foremen on the works heard about my catching so many fish, and dogged at me for six months to show them where it was. Uncle Martin had about twenty good bear hounds yelping around his yard, and I knew that I was dead sure to want to go hunting with Uncle Martin as soon as frost came; so I kept his secret locked in the innermost recesses of my soul and breathed it to no living man.

Chattanooga, Tennessee. A. B. Wingfield.

EARLY DAYS IN THE CONNECTICUT BACKWOODS.

Once more as in old days I seem to ramble
In the sweet winding ways among the trees.
Deep are the shades on flower and bramble,
And dreamy the air with the drone of the bees.

While arranging my back numbers of Forest and Stream, now packed away, but not forgotten, I again enjoyed the charming stories of boyish joys and sorrows recorded in the boyhood number of Jan. 7, 1892; and the varied experience portrayed in that excellent issue brought back many recollections of early days, when as a lad of 12 I lived on the shores of beautiful Lake Pocotopaug, a placid sheet of pure cold water, hemmed in on the north by the forest primeval, while on the south shore nestled Easthampton, the quiet little hamlet of my birth. The lake, about twelve miles in circumference and nearly circular in shape, was fed mostly by springs gushing forth from the sandy bottom, and the limpid waters abounded with the gamy bass and voracious pickerel and the usual attendant small fry-perch, roach and dace. In the small coves that indented the sandy shores were suckers of prodigious size, which in the early spring we used to spear by the light of birchbark torches; and very good eating they were till the warmer weather rendered their flesh soft, muddy and unfit for use. Great lusty fellows were the pickerel and bass. Well do I remember the day father and I went to the little inlet and father took a pickerel of 5lbs. 4oz. weight, and how I viewed him with feelings akin to awe as the great gaping jaws and staring eyes emerged from the lake.

Pickerel of 3 to 5lbs. were frequently captured both by skittering among the lilypads with rod and line and by trolling. But most of the large ones were taken by a method I have not seen in vogue elsewhere. A small tree was selected and taken out to a chosen spot in the lake, usually near shore; there weighted with stones it was sunk in water of sufficient depth to cover the spreading branches, and a landmark was taken to locate the tree for future visits. In a few days the fish became accustomed to the new object and in accordance with their well-known propensity to lurk in the shadows of brush, logs and the like, settled in the shades of the new retreat. Then the fisherman equipped with a stiff pole (pole, mind you) pulled out and quietly anchored at the bush; and the hook, baited with a strip of fish or a dead minnow, was lowered nearly to the bottom, then by a series of quick short jerks raised to the surface. In response a dark object would dart from 'neath the submerged branches, a pair of hungry jaws would close on the minnow; a glimpse of mottled green and yellow sides, a tremendous surge on the line and the battle royal was on. Every resident fisherman planted several of these trees, and I have seen four to six pickerel taken from one tree at a single visit.

And then what sport we did have in the winter months fishing through the ice with the old-fashioned tilt-up. We had to hustle, with a score of these set and the fish biting fast. It really seemed as though the supply of pickerel was inexhaustible.

The bass fishing was mostly done with trolling line and spoon (home made). The bass ran from 2lbs. to 4lbs., and occasionally larger. While perch fishing at Markham's Point my brother Add captured one of an even 5lbs., and he was not tortured by any unnecessary fancy work either, but yanked ashore in quick time with no material damage to the tackle, which for size and strength was simply astonishing. With proper handling these bass must have made gamy fighters, but we knew little of the ethics of angling, and were content to "haul" them out in our own way. At the north shore of the lake it was shallow and reed-grown. It was a favorite feeding ground for wild ducks, and occasionally a mallard helped to vary our simple bill of fare.

My brother (who was two years my senior) and I spent most of our time on the lake, for we came of fishing stock and were passionately fond of the gentle art. After a time we moved back into the wilderness and bade adieu to the dear old lake. This was the woodsman's ideal home. The roomy old gable-roofed house was situated on a small cleared eminence sloping down to an old orchard in the rear, and beyond and on all sides were woods and woods—

The pines and spreading grand old oaks,
Whose branches span the laughing brooks.

The nearly interminable growth was broken here and there only by those depressions in the heavy foliage indicating the smaller growth that covered the banks of the numerous woodland streams intersecting the country. These dashing, tumbling streams were the natural homes of the speckled trout; and along the banks the grapevine and wild clematis ran riot among the spice bush and alders, and the damp rich fern-clad soil was the favorite feeding ground of countless woodcock; the whole region was rich in game; the grand old woods teemed with squirrels and wild pigeons; the swamps and open copses were the homes of partridge and rabbit; and along the woodland stream were mink, muskrats and an occasional otter. Trout was a common dish on our table. All this was thirty years ago and in the Land of Wooden Nutmegs. Ah! little do the sportsmen of these days of depleted game covers and tenantless streams realize the pleasures of those early days.

My brother and I soon accustomed ourselves to our new surroundings, and it being in early autumn,

When free October ranged its sylvan ways,

we soon filled the covers and runways with snares and traps; and what strings of game we took out of the woods. Little did we realize we were thus employing the very means that have caused a dearth of game, the absence of which I have many times since had occasion to regret. But that was before these enlightened days of Forest and Stream; and in those earlier days the woodsman was compelled to rely mainly upon the products of nature and his own resources to gain a living. And then we were boys, with a boy's neglect of the future.

A notable event occurred in my maiden shot with the gun—an event I long had cause to remember. Father owned by inheritance the traditional old long-barreled musket, which in his hands proved a terror to the foxes and squirrels of that region. The old arm was an object of veneration to us boys; but at last the natural desire to become a mighty hunter so far overcame this feeling that I resolved at all risks to try the old gun. Well knowing that my parents would never consent, I watched my chance. One fateful day I crept in, and taking down the old gun from the pegs hurried to the old orchard in a whirl of excitement. The old saying that "devil helps his own" was soon verified; for on the top branch of an old buttonwood sat a golden-winged woodpecker as if for my special benefit. Not content to stand on *terra firma*, but thinking to get nearer, I clambered upon the old wall and with a supreme effort raised the heavy piece to my shoulder, shut both eyes and pressed the trigger. I have thought that that gun was loaded for elephants; for an explosion followed that seemed to rend the earth; and I have a dim recollection of turning sundry flip-flaps through the unresisting air, while the old cannon landed in the grass 10ft. away, and a cloud of feathers floated quietly after the sole remains of the unlucky flicker. Regaining my scattered senses, I took an inventory of damages—a bloody nose, both elbows skinned, one shoulder knocked out of plumb, and a long rent in the most useful part of my trousers, completed the list; and picking up the cause of all this misery I sorrowfully wended my way homeward, well knowing that there was a hereafter to come; and it came in due time, for I soon met my maternal ancestor hurrying across the orchard with white face and trembling voice. Hearing the explosion, she had immediately missed the old gun and sallied forth to find her dead offspring. Finding I was not seriously injured, a revolution of feeling naturally followed; and then, holy smoke! didn't I dance to the music of the birch.

We found a market for our game through the medium of a traveling dentist, who, in addition to his business of extracting teeth and fitting new ones, on each weekly visit to those regions bought up all the surplus game from the scattered inhabitants and shipped it to a New York house at an immense profit to himself. He traveled with a stout horse and roomy wagon and usually came out of the woods with a miscellaneous collection of game. It made no difference if some of it was a trifle old, it sold just the same. And what ridiculous prices he gave us for all this—six cents for squirrels, eight cents for rabbits, ten cents for woodcock, five cents for pigeons and forty cents a pair for good plump partridges. I have since thought he must eventually have become a millionaire; for, of course, his profits were large at these prices. But the small amounts we received were our salvation through the winter months.

We naturally found ample opportunity to study the habits of our furred and feathered neighbors, and had many caged pets. One spring we attempted to raise a brood of partridge chicks, but lamentably failed. While trouting one fine May morning we came suddenly upon a bevy of these downy little chaps under the guardianship of the mother bird, who went through the customary broken wing performance and other cunning tricks they know so well, to entice us from the vicinity. A lively scramble followed, which ended in the capture of eight of the little beauties. We took them home and placed them in a slat inclosure, attached to a snug little coop, where they thrived and grew on a diet of bugs, worms and insects, until one unlucky day father gave them warm corn meal dough. This proved a mistake, for on the morrow we found the little innocents all dead, their crops swollen to an enormous size, which fact supported our theory that the warm dough had baked in that organ and burst the tissues. Soon after this we captured several young red squirrels, and caged and fed them; but as the pugnacious little rascals grew up they clawed and bit one another, till for humanity's sake we released them, and they wandered off a maimed and mangy lot.

Our traps (the old style figure 4) set for fur-bearing animals yielded well, and father went monthly to the village to dispose of his skins. More especially was this branch of the business under his charge; and anything that "wore hair" was welcome if only salable. His pack usually consisted of muskrat, mink, fox and rabbit skins, and on rare occasions an otter's valuable pelt. He disposed of the lot to Capt. Buell at prices about on a par with the dentist's prices for game. Capt. Buell marketed his furs in the adjoining city of Hartford, and as he was a veteran sportsman and a good judge of the article, the prices were satisfactory to himself, no doubt. The Captain kept the only place in the village for the accommodation of the chance hunter or angler, and posed as the village oracle on all matters pertaining to the craft; but, like all mankind, he was not averse to making a penny, honest or otherwise, at the expense of his neighbors.

One autumn, when the foliage donned the usual rich colors, and the clear, frosty mornings and gray squirrel's fretful bark were suggestive of the hunt, then the new gun came, a double-barreled 12-bore, fancy for those days, with shiny stock; and the old musket was relegated to the garret. Father said the old gun was too heavy for him in his declining years, but we boys always surmised that the old gentleman had formed a wholesome dread of the butt end of the old cannon, which had developed a tendency to kick like an army mule (as I well knew). Of course we youngsters were duly cautioned not to "tetch that air gun," which admonition only served to convince us that our special mission on earth was to test its merits as soon as possible. This feeling "grew on us" till one morning we slyly secured the weapon and hurried to the woods. As we passed along a red squirrel chattered defiance at us from his perch on a broken limb projecting from a large chestnut. Add, who carried the gun, blazed away at the rodent, which dropped end over end into a stone heap beneath the tree. It was his death wound, but as we rushed up he was still feebly struggling among the stones, and, forgetful of all else but his possible escape, Add clubbed the gun and hammered the life out of him. As the poor squirrel kicked his last and the excitement was over, we stood aghast at the result. That was a sick-looking gun stock; all bruised and battered it presented a sorry sight, and the hunt terminated right there. As we sneaked home we planned to smuggle the gun in and trust to circumstances to get out of the scrape. But retribution was swift and sure, for the paternal head of the household "nailed" us as we left the woods. A few pointed remarks, a hurried inspection of the wrecked gun, and—well, we will omit the grand *finale*, and only say that Add as the chief culprit (much to my relief) sat on the extreme edge of his chair for some time after Well, the youth of those days were essentially the same as at the present time, and these little episodes were soon forgotten or else accepted as one of the elements necessary to a boy's early education, and this instance was the more readily overlooked by Add, as it proved the principal factor to our future happiness; for, being convinced

that we were determined to emulate the mighty Nimrod at any cost, father purchased through the agency of Capt. Buell for each of us a light single-barreled gun, with which we soon became expert marksmen, and thus was added a new pleasure to our already happy lot. In the pleasant springtime we roamed the mossy banks of the adjacent woodland stream with our primitive tackle, now stopping at some well-known eddy or lucky spot to "yank" some unlucky speckled inhabitant over into the next county, now pausing to dabble in the limpid waters or watch the swirl of some big fellow foraging for breakfast, and indulge in some boyish "swear," as "By gosh," or "By hemlock, ain't he a whacker?" And then in the ripe autumn,

> When the mellow brown hue creeps over the grass
> And a hazy blue veils the low hills—

the season now doubly welcome since the advent of the new guns—what vistas of happiness were continually before us. The daily visit to the snares, the more extended rambles in the woods, the return home laden with the various odds and ends so dear to a boy's heart, this close communion with God's best handiwork—nature, ah! this is something to think of in these busy days and clank of the chains.

The only drawback to our pleasure was snakes, and rattlers at that. Many a time did I prove myself a good sprinter when "dusting" from that immediate vicinity, upon hearing the warning rattle of one of these pleasant companions. But as they only inhabited the rocks and ledges we really were in no danger of their deadly fangs.

Perhaps the recital of our hunt after big game would not be amiss. This hunt occurred in the fourth year of our residence in the woods, and although it was not conducted according to the code laid down by the Boone and Crockett Club, still the results were stirring enough to satisfy the most exacting. It certainly will never fade from my memory. For some time the different members of the scattered community had been treated to fleeting glimpses of some strange animal, and this fact, coupled with the disappearance by night of sundry chickens and ducks, proved that some nondescript animal of inordinate appetite was roaming the woods. No one was certain as to its identity, for no one had seen it under favorable circumstances, and in the stories told by different individuals it ranged in size from a cow down to a small dog. But all agreed that for the common welfare the beast must be hunted down; and one fine morning a motley band surrounded the swamp where the nondescript was last seen. We boys were ordered from the ranks, but followed close on the heels of our elders. Moving slowly, the circle grew smaller. As they grew near the heart of the tangled mass all eyes were bent on the suspected spot, and as they closed in on the last available hiding place the excitement was intense. Suddenly one man saw something move; another had a glimpse of a tawny coat of hair; then the hunted beast with an unearthly yell bounded forth in a wild dash for liberty. The crash of musketry and confusion of voices, mingled with yells of pain, and the crashing of bushes, made a perfect babel of sounds; and when the smoke lifted—well, gentle reader, you should have been there.

The sudden appearance of the beast had made all hands heedless of consequences, and those that stood in the way of the hurtling lead caught it hot. Old Peleg Adams lay tightly wrapped in the loving embrace of a snarl of bull briers, peering comically out from the brim of his old hat, which, partly shot away, hung down around his face like a halo of glory, while the No. 10 cowhides of Jim Clark, who lay in a similar predicament, reposed gracefully on his bosom. Hen Clark, at the first savage rush of the beast, dropped his gun, grabbed the low branches of a maple and promptly drew himself up, lost his hold, slid down into a spreading fork and hung helplessly, kicking and swearing, out of harm's way. Old Archer had caught it bad, for he was wildly hopping about on one leg, its mate clasped tightly in both hands, said member well riddled with bird shot. His gyrations suddenly ended in a backward tumble over an old log into a bed of black muck. On this same log sat Jim Carbury nursing one ear, which never again would quite match the other, for a couple of stray buckshot had bored their way through it. The remainder of the expedition was in a more or less demoralized condition.

The purpose of the hunt was, however, accomplished, for the beast lay dead among the briers, and the able-bodied members gathered around a lusty great wildcat, the largest ever seen in that region in the memory of the oldest inhabitant. Becoming cooled down somewhat, one of the party ventured the remark to Carbury (as the leader), "Wall, Jim, there's a good pelt for ye anyhow." "Not by a darned sight," growled Carbury, "let the blame cuss lay thar. I got enough to remember him by," and he tenderly stroked his wounded ear.

That was a sick-looking expedition as it filed out of the swamp. There were the tattered and torn, the lame and the halt. Old Ben Archer, perched on the back of the most powerful of the band, who strode in the van, served as a beacon for the rest of the party, while we boys brought up the rear, dragging the wildcat.

After a time the serpent came into our Eden, and like Othello our occupation was gone. Through the instrumentality of the dentist the fame of our hunting grounds spread afar and the woods became crowded with an army of sportsmen from Hartford, Middletown and like places; then father, becoming disgusted at this insuasion of strangers, moved back still deeper into the wild woods and the pleasures of the old home remained only in memory.

Connecticut.

A Master Hand on Tarpon.

Editor Forest and Stream:

No doubt you have seen the article in *Badminton's Magazine* for August by Otis Mygatt on tarpon fishing. I consider this the best article on this fishing that I have seen, and knowing the writer can say that of all fishermen whom I have seen he is the most skillful. He has done alone what few or none ever did with tarpon—hooked, worked and gaffed a large tarpon from a row boat at anchor. By placing the reel under his arm he held the fish and gaffed it himself. Now any man who has worked a tarpon to gaff knows the strength and endurance required to do this. So far as I know, no man ever brought to gaff eight tarpon in one day except Mr. Mygatt, in fact few men could stand the strain required to do it.

Chas. A. Dean.

TWO DAYS IN THE ROCKIES.

Among the great peaks and ridges of the mountains one occasionally finds, far up some deep cañon, a hillside park with a southern exposure where the soil is unusually rich, and where as soon as the snows melt luxuriant grass at once springs up.

To such a spot Johnnie Barrett had driven his horses last winter, and had left them to rustle for their living among the scrub oak and buck brush. About the middle of March he decided on taking a trip up to see how they were faring and if possible to bring them out.

Many of the sportsmen who have hunted on the great mesa in the northern portion of Garfield county and the White River district in Rio Blanco county, Colorado, will recall with pleasure the pleasant days they have spent under Johnnie's guidance and the tempting dishes of trout and flapjacks that he is so skillful in preparing. Johnnie's companion on the present trip was an ambitious sportsman, always ready for any kind of an outing, whom we will call Phil. Owing to a delay in securing horses the boys did not get started until late in the afternoon. Their course at first lay along the great coal ridge through which the Grand River breaks at New Castle. Here may be seen one of the greatest coal formations in the country. Veins varying from 2 to 90ft. in thickness, and pitching from 25 to 55 degrees, are so numerous that only a few are worked. In many places where the big veins crop out they have ignited spontaneously, and the heat has been so great that the rocks have been fused into a spongy mass exactly resembling lava.

Near New Castle there is a large spot near the summit of the ridge where the fires are still smouldering and where the snow never accumulates. The grass here is green in winter, and the locality is a favorite wintering place for deer.

At the time Johnnie and Phil started out the snow varied from 2 to 7ft. in depth on the lower mountains. The south slopes were nearly all bare, but there were great piles on the northern slopes and in the cañons. Leaving the road at Middle Elk Creek the boys turned up that stream just as the sun was setting. In an old beaver pond the mallards were quacking vociferously, but they were safe, for nothing smaller than bear or lion was considered fit for the .40-90 Winchester single-shot which Phil carried.

Darkness settled down in the cañon soon after sunset, and for some time only the roar of the creek and the noise made by the horses broke the stillness. Suddenly far up the creek was heard a succession of clear, sharp whistles repeated at intervals of two or three seconds and sounding exactly like a blast on an empty cartridge shell. Both stopped and listened.

"Some one whistling for assistance?" queried Phil.

"No, lion," said Johnnie. "Keep quiet, he may pass close to us."

Nearer and nearer came the sounds—then ceased. Soon they were repeated some distance below. The crafty beast had made a detour, and as there was no possibility of overtaking it in the darkness the boys reluctantly continued on their way. Their destination was Sam's lonely cabin, and this they reached about 9 o'clock, just as Sam was retiring. A lusty yell brought him out with a light to see who his visitors were, and soon the horses were stabled and the boys were getting on the outside of a good hot supper. Hanging outside the cabin were portions of the carcasses of a deer and a fine elk. Inside the floor and some of the chairs were covered with deer skins. On the wall was a fine pair of elk horns which supported two Winchester single-shot rifles, one a .25cal. rim-fire, the other—which Sam had christened Long Tom—a .40-90.

The crowning feature of all was a massive reclining chair made of solid oak and fastened together with ½in. bolts. One could assume any desired position, from upright to reclining, by simply leaning backward or forward, and the chair would retain its position without the aid of springs or clamps. Sam had made it during his leisure time in the winter and swore it would cost him $200 the coming summer, as he would be lounging in it when he should be working.

After a pull at the pipes all hands turn in and turn out at an early hour next morning, for a hard day's work is ahead of them. Cooking a hasty breakfast the boys wrap up a few flapjacks, put on a pair of Norwegian snowshoes and start out up the cañon. For the first few hundred yards the traveling is excellent across the fields, then the narrow gorge is reached. Here there is a tangle of berry bushes, trees, fallen logs and brush. The snowshoes are removed and the boys make their way as best they can, carrying the shoes on their shoulders and scrambling through brush and over logs—at one minute on the crust of the snow, at another floundering waist-deep or skipping from rock to rock along the edge of the creek. At one place it becomes necessary to cross the stream on a log which is covered with snow 15in. deep, and this is successfully accomplished on the shoes—quite a trick to balance one's self on a log and keep the snowshoes from overlapping. After a couple of miles of such traveling the snowshoes are left behind and the ascent of the cliffs commenced on the side exposed to the south, which is nearly bare of snow. For carrying a rifle in such places a sling strap is necessary. The muzzle should be upward and on no account should project higher than the top of the head. Phil once had a narrow escape while climbing a cliff with his rifle slung too high. Just as the summit was within reach he made a spring forward and the barrel caught in a branch of a tree, nearly throwing him backward over the precipice.

After a long climb one of the hillside parks before referred to is reached. The snow in some places is over 2ft. deep, but in many places it has melted away and the grass is already 6in. high.

Scarcely have they struck the snow when they came upon the fresh muddy tracks of a good-sized bear. They are very fresh, having been made since the sun thawed the frozen ground, but the snow now is so soft that it is impossible to follow them with any prospect of success. Half a mile an hour would be good traveling in such snow over the hills, and bruin is suffered to continue on his way unmolested. Working their way down below snow line the boys come to a heavily timbered ravine, where a year ago Johnnie had killed a fine elk and a large silver-tip bear—a species of grizzly. Standing on the edge of the ravine Johnnie rolls a few rocks down, while Phil gets his rifle in position to catch anything that may attempt to climb the opposite side, which is comparatively open, but nothing appears. Descending to the bottom, the boys come upon the fresh tracks of a silver-tip or a cinnamon, they cannot tell which. The cunning old rascal had been startled by the rocks, but instead of climbing the opposite side he had sneaked off down the ravine through the heavy timber and had struck into the heavy snow, where pursuit was impossible. Did Johnnie swear? Well, Phil says he don't just remember what was said, but that he has a vague recollection of seeing some one throwing down his hat and dancing a wild can-can on it.

It was evident that the bears had left their winter quarters and were moving around for something to eat, so the boys decided to exercise the utmost caution in approaching any likely looking places.

Deer were frequently within range, but it would have been folly to fire at them when signs of larger game were so plentiful. After hunting for about an hour the boys came to a narrow ravine, and cautiously climbing up the side discovered a large mountain lion sunning himself on a rock about 100yds. away. Phil took a careful aim for the chest and let drive, but the bullet struck a little low, smashing one fore leg and passing upward into the body, but too far back to cause immediate death. The great beast rolled over, but quickly recovered himself and started up the hill at a rapid pace. His wound soon told on him, however, and facing around he awaited his pursuers with glaring eyes and lashing tail. Phil was soon within range, and taking a good rest struck him squarely in the eye, killing him instantly.

By the time he was skinned it was nearly sundown, and the boys realized that it would be impossible to return to Sam's cabin that night, so concluded to make the best of a night in the hills. Both had eaten nearly all their lunch at noon, and at first it looked as though lion meat would form the *piece de resistance* for supper and breakfast, but Johnnie was equal to the emergency.

Descending to the stream, he pulled a piece of fine wire from his pocket, attached it to the end of a pole, made a running noose at the end and was soon pulling trout out of a deep hole at the rate of one every forty seconds. At the fourth fish the wire broke close to the pole and the trout escaped with the wire dangling behind him. It was necessary to catch that fish and recover the wire or resort to lion meat; and again Johnnie was equal to the job. Splitting the end of his pole, he inserted a large pin and fastened it in place with a piece of string. A few jabs in the gills with this improvised spear soon caused the wire-bedecked fish to turn up his tail, and by thus securing the snare the boys were enabled to catch sufficient trout for supper and breakfast.

A night in the hills in winter with no blankets or wraps is not to be recommended for a single person, but two or more may endure it without serious discomfort. Selecting a thick spruce tree for a shelter, Phil commences laying in a good supply of fire-wood, while Johnnie proceeds to broil some trout on sharp sticks. A few cold flapjacks and several hot trout fortify them for the night, and after satisfying their hunger both commence cutting fine spruce twigs and spreading them under the tree for a bed. When a good layer has been secured the fresh lion hide is spread over it, the fire is replenished and the heat from it reflects from the foliage above and thoroughly dries and warms the bed. Then both turn in, and when the fire dies down Johnnie replenishes it and dozes off for another half hour, and so on until he has been on duty as fireman for a couple of hours, when he awakens Phil, who attends to it for two hours more, and so on until daybreak.

Breakfast consists solely of trout; for the flapjacks have all been eaten, and after it is over the boys return to the trout hole and secure a fine mess of fish. Having insured a sufficient supply of provisions to last another day should they be obliged to remain out, they commence to look for the horses. After a long search the distant notes of a bell are heard and soon the horses are discovered feeding on the new grass which they will scarcely leave for the handful of oats which Johnnie holds out to them. They are pretty thin, but have done well considering the severity of the winter.

It is impossible to get them out owing to the deep snow, so Johnnie reluctantly leaves them and both boys start back to camp, where the fish and lion hide had been left. The return trip with the fish and hide was a severe one, but when they had filled themselves full of trout, potatoes stewed in cream and flapjacks, and enjoyed a nap in Sam's famous chair before the fire, both were ready to start again on a similar trip.

Edw. F. Ball.

New Castle, Colorado.

WISCONSIN WANDERINGS.—II.

At Glenwood I was introduced by the clerk of the little hotel to Mr. C. M. Bunker, cashier of the Glenwood Manufacturing Co. Having made friends with Mr. Bunker's setter before the introduction, it took very little time to come to an understanding with Mr. Bunker. He said there were "some chickens about ten miles out, but it is the first of the month and I can't get away" [I knew right then that he was not a reader of Forest and Stream, or he would have said "chained to business"], "which I regret exceedingly. If you care to go alone, you are welcome to my horse and buggy, dog, and gun, if you have no gun with you." And this generous offer was made to a man whom he had never seen, nor heard of perhaps, before. It will be better understood what a generous offer it was when it is known that the dog is a nervous, high-bred one, that a poor handler might spoil in a few hours; the horse a high-bred animal also, and has a record of fifty-five miles in seven hours to a common buggy and over common country roads, and the gun a new hammerless that has every speck of dirt cleaned off before it is allowed to go into its case. The offer was an illustration of the free masonry of true sportsmanship.

I told Mr. Bunker that no words could express the honor he did me in putting such property at my disposal, but I could not think of accepting, for not having seen the dog handled in the field I might spoil him, and we would hope that some day we might both have a day off together. "I am very sorry I can't go," said Mr. Bunker; "but if you don't care to go alone, come to the office with me and we will talk together anyway."

At the office the talk was about guns and ammuntion. Mr. Bunker was an enthusiast over nitro powders, but had not used any of the Troisdorf, and wished to get some shells loaded with it. I had some in my trunk, and a new ejector gun that he wished to see; so I suggested that he could spare an hour or two and that we have a gun and ammunition trial, to which he agreed, but as we left the

office he turned back and said, "John, hitch my mare to the buggy and bring her round here; if anything comes up in my line tell them I'm out for an hour or two." Then to me, "Get ready to go shooting and I'll pick you up at the hotel."

It was a plain case of couldn't stand it. The talk had warmed him, and as we stepped out of the office the mellow October sunshine struck him full in the face, the nearby hillsides were covered with the crimson and gold of the maples, a little white frost still showed in the shady places, and there was just a breath of whispering south wind. Bunker broke the chain right there and in ten minutes we were out of sight over the hill, speeding along the level road of the valley for two miles, then up the hill to the higher ground, the mare spurring the ground with her feet and finding even the hills not enough for her rejoicing strength. Surely there never was a pleasanter morning nor a better horse.

In less than an hour we pulled up at a farmhouse ten miles from town, hitched the horse, and started for those chickens; but, as we learned later, five or six different parties of shooters had recently been after them, killing some and scattering the rest to the four corners of creation. We saw but one chicken, chased it a long way and brought it back with us. Also a partridge, which was in some brush we passed through.

The three hours' tramp had given us keen appetites, so we went into that farmer's house and partook of his hospitality (to the extent of 50 cents). The bread and butter were excellent, the tea very nice, and the comb honey fit for the gods. I can't say about the gooseberry pie—we looked at it, but did not taste it. After dinner and a half hour's loafing on the sunny side of a big strawstack, we went after the rest of those stray chickens, but did not find them. We got after some partridges in brush so thick we could only hear and not see them. I suppose they are all in there yet.

About 3 o'clock we drove a couple of miles toward town and stopped at a very promising looking place for partridges. Mr. Bunker started along an old logging road and I went at right angles to the road, but as the road had a turn in it I was soon walking parallel with it and about 50yds. from it. I saw Mr. Bunker and supposed he saw me, but it appears he did not. A few minutes later I heard a partridge fly, and as I turned to look felt a severe stinging sensation in one eye, and in my neck and right arm and shoulder, at the same time hearing the report of Mr. Bunker's gun, though it did not need that to tell what was the matter, for I had felt the same thing twice before. For a moment the eye was blinded by the concussion of a pellet that struck at the outer edge of the eye socket and is now probably imbedded somewhere in the cushion of fatty matter that lines the eye socket. Two more went into the neck just below and to the left of the "Adam's apple," one in the cheek bone right at its upper point, and sixteen in the shoulder and upper arm. Although considerably stunned by the shot so near the eye, I looked toward Mr. B. and was glad to note that the leaves were so thick that he could not be seen and was not to blame. I called out, "You got me that time." "Yes, I got it all right," said he. "But you got me too," I answered.

Then there was a crashing of falling brush, and presently a white, scared face appeared out of the leaves, and it turned whiter if possible when he saw me sitting on the ground, my white shirt front soaked with blood from the two neck wounds, blood running in a stream from the eye shot, and one side of my face smeared with blood from the cheek shot. By this time I had found that the sight of the eye was all right, and was in better spirits than before the shooting, caring nothing for the other hurts, for they would soon get well, and the scared and sorrowful face of Mr. B. would have excited the sympathy of any one, so I called out, "It's all right, partner. Nothing serious; and you were not in the least to blame." But he would not be comforted, and insisted on bringing the buggy and going to the doctor at once. I told him we did not need any doctor, and I could hunt partridges again after a little. "Well," said he, "you've got more grit than any one I ever knew, but I'll not let you hunt any more to-day." So we drove back to town, and I departed on the evening train, feeling that I had one more true friend. Some day we expect to be afield together again and make a lot of disturbance among the Glenwood partridges, and they are there in goodly numbers.

O. H. HAMPTON.

A Bit of Blue China.

THE Irishman who, while grubbing a root from the foundation of the levee, so tenderly replaced the little crayfish he had unceremoniously dragged from his subterranean cavity and carefully piled the clods over it, saying, "Oi wouldn't hurt yez fur th' wurld. Oi'll lave ye to make more wurrk fur me another toime," made another find.

On the Arkansas shore, three-quarters of a mile from the river, in a wild and tangled forest, several miles from a civilized human habitation, the pieces of an old-fashioned blue china vessel were excavated from under the roots of a sweet gum tree, measuring 4ft. across the trunk near the ground. The china was 4½ft. below the surface of the ground, and lying between the original "buckshot" surface and the heavy alluvial deposit above. The tree, being of slow growth, was doubtless a century old.

TRIPOD.

MISSISSIPPI.

Bee Hunting.

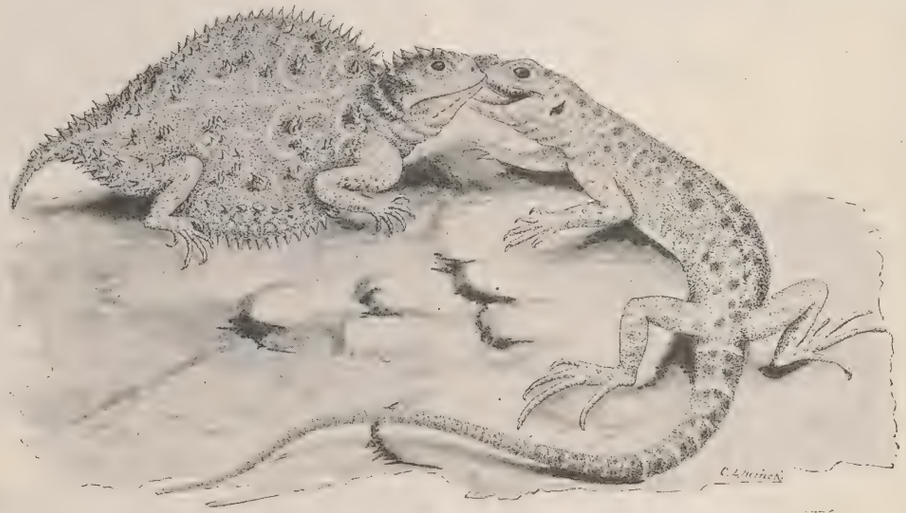
Editor Forest and Stream:

I have often wondered why some one does not write in the FOREST AND STREAM on bee hunting. It would be interesting to hear how much honey has been taken from a single tree. Much might be written on lining bees that would be of great interest to me and I am sure to many besides.

Although not having done much of it myself, I know men who hunt honey a good deal, and they have related to me incidents connected with the craft that are exceedingly interesting. Many facts might be brought out that are not known to the general reader, for instance, bees do not always take a "bee-line." They are very averse to crossing water. I never heard of a bee crossing the lake, which is from a mile to three miles here. Bees carried by their tree will not come back to the hunter, etc., etc. A bee hunter here took 264lbs. of honey from one tree, and doubtless double or triple this amount has been known by readers of the FOREST AND STREAM to have been found.

We have found three trees this summer and hunted very little. The largest had 48lbs. in it. Can any one explain why bees are only found on buckwheat in the morning? We distinguish two kinds of bees here, the ordinary black bee and the Italian. There are doubtless many kinds or varieties of bees found in the United States. There are different kinds of bee hunters, such as old bruin and the kingbird, "darned Vermonters" and "Gork fellers."

There are different kinds of honey, as buckwheat and basswood honey. In many localities bees and honey abound, while in others almost none are found. By not going too much into the matter covered by books on bees, could not some readers of the FOREST AND STREAM entertain us with personal incidents connected with this to me most interesting subject? I have often wondered why bee hunting never became a fad among "city boarders" while in the country. It's a wonder to me we don't meet members of a bee hunting club on some warm summer day out with their bee boxes, catching bees from the roadside sweet clover, and many other flowers of the useful and useless plants and weeds. H.



ESSEX COUNTY, New York.

Natural History.

LIZARDS AT WAR.

EVERYONE has seen the curious spiny "horned toad" which one's friends often bring as a graceful reminder of desert experiences. Perhaps some of us have kept them as pets and laughed at the grotesque gravity of manner and absurd sobriety in disposition. Perhaps, too, you have wondered as I have how such a spiny coat as is worn by these lazy people from the land of *Poco Tiempo* (pretty soon) protects or aids them in their desert struggles. But this and other mysteries were solved by an incident noticed the other day. In fact, I am minded to become a volunteer war correspondent for the nonce, for surely I never had opportunity to record so lively and resolute nor so ludicrous a skirmish as this one.

It was not far from the city of Albuquerque, in sight of the quaint Indian church about which collects so much of historic interest. But the battle of which we were witness was between representatives of races far more primitive than those which awakened the zeal of Father de Niza or the cupidity of his companions. Their allies can be traced back to so ancient a geological period as to make a non-professional head swim. In short, the battle was between several representative reptiles who discussed their respective rights and privileges in true cavalier fashion.

A NEW MEXICO DUEL.

Circumstances unnecessary to relate in detail had brought together in a small inclosure upon the gravelly mesa members of three different families of lizards. Here was the undoubted king of the ranch, the horned toad, crowned by nature in a grotesque and thorny fashion. While very young he appears as a shapeless dab whose only safety lies in the power to adapt his colors to those of the object on which he lies. And even now his corpulent, almost disc-like body, girt with a cuirass set with spines and blazoned with armorial bearings of nature's own devising, short bandy legs apparently too weak to bear the ponderous dignity of the body and ridiculously inadequate for the part he was about to play, and sleepy pig-like eyes beneath the front piece of his crown complete a picture of saurian grotesqueness unimaginable to one who has not seen a "horned toad" in the flesh. I had often kept them in confinement and had grown familiar with their placid disposition and their slothful habit of hanging upon the front of their cage sunning their white smooth bellies, as well as with the miraculous dexterity with which they catch an incautious fly without disturbing their own characteristic gravity. One question which had often occurred to me was to be answered by the battle episode, "What are the spines for?" The second party in the fray was formed by a pair of peculiar spotted and banded lizards, which are among the most graceful and agile of the scaly tribes. The ground color of their suit is a yellowish gray, as in all desert forms; across the back is a series of transverse bands of creamy yellow, and these blend on the tail to form half rings of that color. The intervals between the bands have spots and blotches of chestnut brown and red, as well as smaller mottlings of dark brown. The head is short and wide, with prominent eyes and a blunt snout. Underneath the vestments are marbled white. In fact these are very holiday warriors, though it must be confessed that in that suit they are wonderfully protected from view among the parti colored pebbles which make the background of their daily range. The other participants in the fray were non-combatants—a variety of small striped and spotted lizards, whose cowardice does not entitle them to further description here.

As we approached the scene our attention was caught by the strange posturing and gesticulations of a pair of our graceful warriors. They stood facing each other, mouths wide open in a horribly suggestive grimace, displaying a series of many-pronged, acute teeth which seemed ready to fulfill all the menace of the facial contortions. Suddenly there was a fierce leap and snap, and the aggressor sprang nimbly away, leaving minute tooth marks upon his enemy's throat. Slowly they again approached, standing high on their legs or their very tiptoes, as I have seen spiders dancing about a helpless fly. Mouths were thrown open and the thrust and parry began anew. How long the duel might have gone on I can not tell, for neither seemed exhausted or better tempered, but this stage of the play was terminated by the—perhaps unconscious—interference of his majesty, the crowned toad, as we may prefer to call him. If he really thought his dignity or pomposity could settle such a dispute, he was soon undeceived. The amiable little disagreement between the relatives was postponed, and both actively resented the intrusion. This seemed to be something his lordship had not at all counted on. Flight was impossible, but there followed the most ludicrous attempt at self-defense I ever saw. The Spartan mother's injunction to "bring back your shield or come home on it" would be absolutely obeyed by the horned toad, for in the most literal sense the broad, dollar-round body is the shield. The whole body becomes expanded and the under surface is hollowed like a saucer to spread the broad, thorny back against the foe; then lowering the legs on the side toward the enemy and standing on highest tiptoe on the other side, the shield-like back is turned confidently in the direction from which the danger is apprehended. To see the once placid animal stilting around in this one-sided manner was too comical for description.

But our duelists are by no means disconcerted. In blind fury at first they rush upon the interloper, and the first attack fairly impales one of the "attackees" on the sharp horns which form his toadship's crown. Shaking loose with some signs of pain he goes tearing about the arena in a wild fury, which is wreaked on one of the non-combatants. A poor unobtrusive "brittle tail" is seized by the throat and is soon *hors de combat*. But soon the warriors return to the charge, and this time with greater caution. One on one side and the other on the other is an order of battle against which the toad's tactics are insufficient. Soon one of the attacking party closed upon his majesty and fixed powerful vise-like jaws upon the side of his head; blood flows from wounds in the unprotected throat. In vain does the toad shake his head and claw wildly upon his enemy. It was a sight in miniature much like that of an alligator pulling down a bull. The lizard held on like grim death and the toad seemed to give himself up for lost and may have made many vows never again to interfere in a quarrel not his own. Like many another royal quarrel, this war was settled by outside intervention. The greater powers took all parties prisoners, and they now expiate their violence in an old soap box covered with wire screen, where the late combatants may at any time be seen in their several cells.

NEW MEXICO. C. L. HERRICK.

White Mink.

GUELPH, Ont., Canada.—I do a little taxidermy and have received for mounting a mink absolutely white, in other respects normal. Such a specimen has not been seen in this section before. Quite a number of sportsmen have expressed a wish to know if such an occurrence of albinoism is rare or not. Hence this communication.

W. H.

LATE Tuesday afternoon a young lady named Cora Carson was driving a herd of cows when suddenly a small deer appeared. The deer joined the herd of cattle and went to the barnyard on the old Holcomb place, now occupied by John Carson. The young lady thought it would be a good plan to put the deer in a stable and accordingly performed the act. At night when Mr. Carson came home she informed him what she had done. They went to the barn together. Mr. Carson opened the stable door and the deer ran out into the barnyard, whereupon the young lady proceeded to recapture the animal. The deer kicked considerably when recaptured, but the young lady and Mr. Carson finally succeeded in getting the animal back into the stable. At this writing (Wednesday morning) the deer is still in the stable and is doing well.—*Elizabethtown (N. J.) Post.*

C. V. HOOPER, Al. Van Epps and H. Smith returned from the Icicle range Saturday, where they had been fishing, rusticating and prospecting. They discovered a new lake on the apex of one of the mountains and listened to the weird and luxurious music of the whistling pig, of which there are many in that high range. This peculiar animal resembles a fox more than a pig and weighs from 25 to 40lbs. In color it ranges from a dark or iron gray to almost white. Its whistling propensities are marvelous, and many a time it has fooled the lonely prospector into the belief that he was not entirely companionless in the mountains. Mr. Van Epps declares they are musical wonders, and that they often give open air concerts of the most entrancing nature.—*Leavenworth (Kan.) Times*

Game Bag and Gun.

CHICKEN SHOOTING.

Chicken shooting is a much simpler form of wing-shooting than is that of quail, woodcock, ruffed grouse, snipe or ducks. Indeed, it may be considered the simplest of all wing-shooting, for there is in it no cover to obstruct the view or to shield the bird; the birds are large, slow of wing and easily approached. As they frequent the open prairie, the shooter requires no knowledge of woodcraft, and his powers of endurance are but little tried, since in most instances he rides in a wagon until such times as the dogs point. Moreover, in chicken shooting, a fair degree of skill with the gun will produce more material results in the way of birds brought to bag than will the same degree of skill exercised against any other game bird.

All this is true up to a certain limitation—one of weather;

THE CHICKEN COUNTRY.

that is, when the frosty nights come and the cool, steady winds of fall set in, the birds become wilder naturally. If they have been disturbed much by pursuit, it adds to their wariness and wildness. Also, as the autumn weather becomes more pronounced, the birds become stronger, more heavily feathered, and take much longer flights. Early in the season their flight may be from 50 to 200yds.; in late September or early October it may be so far that the eye can but indistinctly mark their lighting, or they may even fly entirely out of sight.

Considering the size and hardihood of the chicken in withstanding the extremes of heat and cold, it is rather an easy bird to bring to bag. Ordinary loads of ammunition give good results up to the time when colder weather changes its habits, as aforementioned. After that, when its body is protected by a thick coat of feathers—when it flushes wild at the extremes of gunshot range, or even quite out of gunshot—heavy loads, skillful shooting and good dogs are required to bring this bird to bag.

After the chickens pack—which they do as soon as the nights become frosty and the days windy—the sport may then be considered as ended, for it is so uncertain in all its details that it is very unsatisfactory in its action and meager in its material results. This limitation in the average season is in the latter part of September or early in October; though, as the habitat of the chicken covers a vast area of country—from the Gulf of Mexico far up into British America—no arbitrary season can be set for the change from sluggish habits to wild activity; but at whatever time the warm weather ends, the lazy habits of the chicken end also.

Although chicken shooting, in the quality of the sport it affords, may be inferior to other kinds of wing-shooting, yet it comes happily at a time when there is a dearth of other shooting—that is, in August and September. Furthermore, it gives shooting to the multitude. The home of the chicken is so vast and so accessible, and the birds so plentiful, that more than any other bird it affords shooting for the people. Woodcock are scarce in numbers, and they frequent but limited tracts of country. A high degree of skill is necessary to insure even moderate success. After the woodcock is brought to bag the shooter has secured something which, if properly cooked, will tickle his palate more than it will fill his stomach. It is but a mouthful as compared to the *embonpoint* of the chicken. The latter, however, is not a bird which at its best appeals much to the palate, but it is very filling. When skinned and fried, as is the common formula for cooking it by many of the good people who dwell in its native heath, it is positively repellant. Eheu! But, however ill cooked, it never loses its filling qualities. Skinned and fried in grease, or skinned and boiled and stewed, there is always a good quantity of it. A young chicken may withstand the blighting attempts of a cook who, in his or her fitting vocation, might have made a good rail-splitter or a good washerwoman, but I suspect the flavor of the young chicken is not inherent—it is probably due more to a good appetite and the better relative flavor of a young bird than an old one. Nevertheless, in this country, the habitat of the chicken, many of the people toil unceasingly to supply the common needs of life, and a shade or two more or less of flavor in food is a matter of no moment. The filling properties are important. People who grow the world's supply of wheat and corn, or who toil at loom and hammer, have neither the time nor inclination to study symphonies of taste in every swallow. Think not, wise reader, that I scoff at honest toil and bad cookery. Both have their uses, else they presumably would not exist, and many a man who knows good cooking knows little besides. But under better opportunities the chicken improves. In the cities, under the skillful touches of a *chef*, it is a table bird at which the lip may not be flippantly curled; but under such circumstances it could not be otherwise, for a skillful *chef* can so artistically prepare and cook a rat that it would be palatable and poetical. In any event, a chicken which goes through the transformation of being killed, cooked and eaten all in one day has not been given proper opportunity to qualify for a good thing. After it has severed its connection with this world, it must be allowed several days to appear at its best. There is necessarily some care to be observed as to the correct juncture if the bird is not kept on ice; but as to the length of time, it varies with the latitude and the degree to which the taste is cultivated. In Louisiana, where there is but the shadow of a real winter, the man of moderately cultivated taste hangs his birds up by the neck on the wall of the gallery, or veranda, they thus being subject to only the natural changes and conditions of temperature, some of which, in truth, are quite warm. About the average probationary time is three weeks, but the arbitrary and conclusive test is that when the bird is to a nicety fit for cooking the feathers voluntarily detach themselves in ones and twos, leisurely, and withal reluctantly, dropping off. This for the man of ordinary taste; the epicure prefers that the bird hangs even a while longer. Its true gamy flavor is thus perfected. Thus prepared, it owes no blush for its unworthiness. Thus prepared, it is the prince of good table birds, excepting the ruffed grouse, the quail, the woodcock, the snipe and a few others. Thus prepared, no one could recognize it as a relative of its unfortunate brother, ignominiously skinned, hastily fried in grease and eaten with a knife. But this is a digression, and in bad form too, inasmuch as the ethics of true sport are distinct and apart from considerations of the stomach's needs, notwithstanding that if the stomach fails the whole superstructure falls.

Returning to a consideration of the bountiful shooting afforded by the chicken, it has been mentioned that the woodcock is few in numbers and its habitat restricted to peculiar conditions, which are too well known to make description necessary. The quail inhabits a large area, but it is comparatively a much more difficult bird to kill, and owing to its surroundings incomparably more difficult to approach. In the chicken country nearly every man and boy is a chicken shooter; in the quail country not one in a hundred is a quail shooter. As for the snipe, it is migratory, following certain lines of flight in which there is a food supply, for this reason affording sport to a few in a few favored sections. But the chicken, beginning in western Louisiana and extending far into Texas, thence northward through the Indian Territory, Nebraska, Kansas,

STOPPING TO WATER.

Iowa, Illinois, Minnesota, the Dakotas, thence through a vast scope of country in British America, it affords opportunities to the people in the way of sport which can not be afforded by any other bird. Franklin thought the turkey should have occupied the easy and dignified position that the eagle does now as a national emblem, although he properly should have had a quart of cranberries rampant with the bird, but the prairie chicken would be a better emblem on the escutcheon, for it is prettier, braver, less noisy and more domestic.

However little the pursuit of the chicken may test the endurance of the shooter who rides comfortably in his wagon, it can truly be said that the work is most gruelling to the dogs. To keep the pursuit up to the proper standard, a brace of dogs at least is needed, and when only a brace is used a shooter must confine his efforts to early morning or evening hours, when the heat is less distressing and the birds, moving about in search of food, are easier to find. If the shooter desires to work in the forenoon till say 10 o'clock, and beginning at 4 o'clock in the afternoon, two brace will be none too many, and even then care will need to be observed in working them within their powers. This is on the assumption that the dogs are in proper condition. Out of condition, the dog can work but a few minutes in the hot sun, and then inefficiently. From 10 o'clock till 4 o'clock there is little gained by seeking, if the day is clear and hot. The birds then are not moving, and they are correspondingly difficult to find. Running in the hot sun is very exhausting to the dogs, and if persisted in will result in staleness of the dogs—a state in which the dog is worn and ceases to take interest in the pursuit. Both his physical and mental powers have been partially exhausted, and only rest will restore them. This, however, often requires many days—sometimes weeks—hence it is the easier plan to conserve the dog's energies than to lose them for the season.

JINGO.

In chicken shooting, experienced shooters find a crate a necessity when more than one dog is used. As to the form of the crate, it varies as much as the tastes of the shooters. Some have crates made entirely of slats; others are planked up solid, excepting that open spaces with iron bars are left in the ends or sides for purposes of light and ventilation; while others again are partially slats, partially boards. In any event a crate of some sort is useful and quite necessary. A jug or keg is necessary to provide a water supply. The dogs require quantities of water and need it often. Without it they cannot work up to their proper form, aside from more important humane reasons. However hot it may be on a plane with the shooter, seated comfortably in his wagon, it is many times hotter in the long grass, where the heat is reflected and the breeze is less even if there be any at all. One of the commonest scenes in chicken shooting is that of watering the dogs. Intelligent dogs will often come in for water without orders, and on having their thirst satisfied will promptly and cheerfully resume their work. Some dogs, full of spirit and eagerness, require the careful eye and judgment of the master to check their effort and bring them in to take the needed drink. Do not foolishly imagine that a stimulating drink for the dog is necessary. It is positively harmful. Alcoholic stimulant does not make a dog wiser or more enduring, however much it may add to the powers of his master. As to the latter, as the nerve centers in part cease to co-ordinate, misfit thoughts may result in funny sayings, but the shooting powers for the time being degenerate; the eye, the hand, the judgment are deficient in the true and prompt unison which comes from a brain clear and undisturbed. It is therefore best for man and dog that the flask be left at home, but if it must be taken along, it is best for the dog that his master do the drinking, accidental discharges of the gun excepted.

There is no arbitrary length of time to set for any dog to work. If the shooter observes that a dog is narrowing

VEHICLES USED IN CHICKEN SHOOTING.

his range, or is blown so much as to be distressed, it is wise to call him in and turn out another dog in his place. There is an astonishing degree of difference in the capabilities of dogs in respect to their endurance—some can run but a short time before being blown, while others will run for a long time in a hot sun with no apparent sign of distress. Again, others fatigue easily, though apparently strong and able to stand the work so far as appearances indicate, while others seem to be strangers to fatigue.

In chicken shooting a wide ranging dog is a necessity, but there is no quality more difficult to describe, for, though his range be wide, it must be to the gun. A dog may range wide and find plenty of birds, but from a sly inclination to self hunt he may be a most difficult dog to shoot over. On the other hand, a dog that is honestly playing to the gun is easily managed and successfully shot over, even though his range be very wide. Every dog which ranges wide is not necessarily a good chicken dog, for there are many ill-broken dogs and ones of ill disposition which will range wide with little thought of working to the gun. Notwithstanding that the work is on prairie, there is much opportunity for the dog to display judgment in beating out his range properly, and also industry in using his nose and legs constantly. Indeed, a good chicken dog is rarer than a good quail dog, and of the latter there is not an over stock. While the prairie appears much the same everywhere to the untrained eye, it nevertheless presents a diversity of topography. There are shallow basins, miniature water-sheds, hills and valleys, yet all so near a level that they are not readily apparent to the novice. There are stretches where the grass is very short, others where it grows luxuriantly. The wise dog learns to take advantage of these differences while seeking for chickens quite as much as he does when seeking quail. Wise dogs even learn the habits of chickens so far as they relate to the dogs' use in seeking. Wise dogs will beat out the stubble quite thoroughly morning and night, heeding it but little in the midday hours. A dog of exceptional knowledge will beat entirely around the stubble to hit off any scent of birds which may have come in to feed, or having fed, have gone out into the open prairie. Oats the chicken fancies but little, and generally speaking it is a waste of time to beat out oat stubble if wheat, barley or flax is within a reasonable distance. If in a wheat country, the best course is to beat out the stubbles in early morning, later skirt around their edges, about 100yds. out in the prairie. If it is all open prairie then go ahead anywhere and trust to luck and work. The chicken is

MINNIE T.

spoken of here as being a prairie bird. It is generally so written of and so considered. This is not strictly correct, for it is found in the sand hills of western Nebraska, those desolate and barren heaps, often entirely devoid of vegetation and at best sustaining but a sparse growth of grass. In the hollows, where the washings of centuries have encouraged a feeble fertility, small patches of vegetation struggle for existence; yet in that vast desolation chickens abound in abundance. Grasshoppers afford a bountiful supply of food for them, but in what way the grasshoppers earns a livelihood it is not easy to conjecture.

In such sections as contain cover—dense brush or timber—the chicken has learned that it affords protection from the shooter; so that instead of taking its flights out into the open prairie when pursued it seeks the protection of cover.

As it is not all of fishing to fish, so it is not all of shooting to shoot. In August and early September the prairie country has on its best bib and tucker. The prairie is a rich green, tinted in quiet tones with the colors of the wild flowers, and the soft yellow of the grain fields makes a gentle yet pleasing color contrast. Later, when the grain is harvested and the yellow stubbles and monster stacks fade away into irregular and dim perspective, its glory is changed, but not lessened. The pure prairie air, the immensity of distance from horizon to horizon, the novelty everywhere, have quite as much part in exciting enthusiasm as has the easy trick of knocking the life out of a few or a many stupid and inactive birds.

B. WATERS.

Texas Quail.

WACO, Tex.—The quail season opened on Oct. 1. While the crop is unusually large, very few were killed on account of rank vegetation: we expect early frost, though, at which time we can easily make good bags within a few minutes' drive from town. Recent rains insure good duck shooting. F. E. H.

The Prairie Chicken Scarcity.

EDMONTON, Alta, N. W. T., Oct. 3.—There has been a great scarcity of chickens throughout the Northwest Territories, and duck shooting is not good at all. P.

PUT up stovepipes or go shooting?

DAKOTA GOOSE SHOOTING.

ON the third day of October last I landed on the depot platform at Mayville, Dak., with gun and hunting duds. I had promised K., a cousin of mine who resides there, to make him a visit in the fall shooting season, and there I was. At his office whom should I find busy loading shells and preparing for a hunt but friend H., of Jonesville, Wis. This was an agreeable surprise, for H. is a crack shot and a genuine sportsman who enjoys the camp and is handy with frying-pan and coffee-pot. He told me K. was out, but would be home in the evening; he was expecting me, and the plans for the campaign were all made. Evening brought K., who had developed into an enthusiastic sportsman; and if he and his wife did not make me feel welcome and at home during my stay may I never pull trigger again.

Noon of the next day found K., H., myself and one A., who resides at Mayville, a big-hearted, social fellow, in a spring platform wagon, rigged out with tent and provisions for several days, bound for Golden Lake, about eighteen miles west, where, according to reports, the geese were plenty. It was bright, sunshiny weather, with the crisp, bracing air which makes a fellow feel so good and creates a wonderful appetite. The country for about sixteen miles was almost as level as a floor. It would be a sight for many an Eastern man to see the rich soil and the immense wheatfields, where in several places the steam threshers were at work. K.'s splendid driving team made short time of it, and at about 3 o'clock we arrived at the lake, and could see a flock of white brant, or snow geese, sitting on a sand point jutting out in the water. It was decided that A. and the scribe were to try and crawl within range, while K. and H. drove to the opposite shore. In this way we would stand more chance of getting a shot at them. By crawling on all fours, and sometimes dragging ourselves at full length, we reached the lake shore, where we had some tall rushes to cover us; and we fairly got within long range. By this time K. and H. had reached their place, and as we rose up so did the geese. A. let loose his 8 and I my 12-bore on them. Four dropped at once and some more went down in the rushes out in the lake, and we heard H.'s 8-bore as the flock went over him. We called out to K. and H. to bring the boat, that was to be somewhere on their side; but the distance was too far to make us understood, so I started around the east shore to get there. After walking a distance, I scared a crippled gray goose out of the rushes on to the lake, but the distance was too far for a shot. When I reached the south side, K. had got hold of one of our cripples, which had swam clear across the lake. H. had dropped one, found the boat and was on the way across to A. K. and myself sat down, lit our pipes and watched H. pick up four of the nearest killed birds. Then a race took place between the crippled gray goose and A., in which finally A. and 8-bore came out ahead. I now took the boat and found three more in the rushes. This commenced fine: eight birds the first four shots.

It was now getting dusk and we went to the shed on a wheatfield close by, where the team was hitched. We put the team in one end of the long shed, built a fire in the open air and cooked our supper; but I shall not soon forget the long faces of H. and K. when it was discovered that the coffee had been left behind. After chatting around the fire we put it well out and bunked in the spare end of shed. I need not mention to many of the readers what a good rest a fellow enjoys after spending such a day, if fairly fixed.

Next morning we were up early, but there were no geese, so we walked about a mile west, where there is a marsh several miles long, but in one place about fifteen rods wide. H. and K. waded across, and we had a fine chance for pass shooting at ducks, of which there was a considerable number in the marsh. How many times H. wiped our eyes I will not mention (those rubber hip boots he kindly lent me made me feel so comfortable standing in the cold water that I have no hard feeling over it). Here we spent most of this day.

The next day it was fine weather, but with no geese, so we had a whack at the ducks again, and as A. did not feel well we concluded at noon to drive back to Mayville and rig out for a trip in a different location. We came home about sundown, when most of the game was distributed. Our bag was ten geese, forty-one ducks and nine snipe.

The two next days were rainy, cold and disagreeable, and we spent the time most comfortably in K.'s office talking over old times, loading shells and interviewing the few farmers that came in from the country in regard to game, but we were always prompt on hand to do justice to Mrs. K.'s table. She certainly must have had experience in hunters' capacity by the way the table was supplied, and the hearty way we were told to do our best did not lessen our appetites either.

Monday morning at sunrise found us about forty-five miles northwest of Mayville on a large wheatfield with some small lakes close by. Here the straw had been hauled away from the thresher, but not burned. We jumped out, set the decoys and fixed places in straw piles, while K. took the team to a shed about eighty rods south. We had hardly got fixed before a flock swung by my place, and I had the luck to drop one to each barrel, which made me chuckle to myself, being for once ahead of H. and the 8-bore.

It now commenced to cloud up and the flight of the few geese that were around seemed to be more to the northwest. H. and A. went out on the stubble, laid flat on their backs some distance apart, and before long dropped one each, mighty long shots and single birds at that. The forenoon flight was now over; we dug two pits in what we thought was a better location. It now looked quite stormy and there was a slight sprinkle of cold rain. When we had all fixed H. and A. went over to the lakes, K. and I went to the shanty. On some of these large wheatfields there is often a shed for teams and a shanty for the men, and these are not used except in seeding, harvesting and threshing. The door was not locked, there was an old stove, with a table and a straw bunk across one end of the uncovered floor. This was right in our hands. We started a fire in the stove, and after shedding a copious amount of tears we finally got the smoke to go out through the old battered stovepipe. H. and A. now came and reported no luck. We had a very comfortable dinner. Outside it was quite disagreeable in the drizzling northwester. After a while the weather cleared up and we took our places in the pits, expecting good sport, as the weather was just right. H. and A., getting tired of waiting, went to the lakes again. Toward sundown some small flocks came by, but did not decoy well, yet we got some long shots and dropped several. K. went to pick one up that he thought done for, but it started on a run, K. after it with gun in hand; finally the goose spread its wings and sailed off, leaving K. much disgusted for not giving it another shot when in range. While K. had his race three cranes came by my pit; I shot, but did not stop any. While K. was talking with a farmer driving across the field a flock of geese passed over and he dropped one right on the team. It was now getting dark and we started for the shanty, where the boys had a good laugh on me. K. poured out about a pint of ground coffee in a cup and asked me to put it in the cooking tin we boiled our coffee in. I thought I did so, but when K. took the lantern to see if the pot boiled there was the coffee high and dry on top of the dark cover laid over the pot.

We spent a very comfortable night, and were on the pits at daylight; but there were no geese. A single crane came by, and we all let loose on him; he only made a circle and came back in range of H. and A.'s pit, where he was dropped in fine style, much to H.'s satisfaction, as he wanted the bird to mount, having none in his large collection. The weather was now clear and crisp, but with no signs of geese; so at noon we backed up and started for Golden Lake. When about half way we came to a small lake. Here a large flock of snow geese was circling around, and part lit on a wheat field close by. Here we used our old tactics. A. and myself got within 75yds. of them, when the flock arose like a small cloud; we let loose on them, and to our surprise only one dropped, K. and H. getting no shot at all. We fooled around here till dark, got one more, and then started again for Golden Lake, where we arrived at our old camping place about 9 o'clock. The boys again had a good laugh at the scribe's expense. A. started at once for the lake shore to build a fire, K. and H. took care of the team, I got the grub box on my shoulder and started after A., but lost the direction, and had to come back to the shed and take a new start. Well, it was pitch dark and with no fire yet to steer by.

Next morning brought bright, clear weather with strong southwest wind; we could see no signs of geese, so we all went down to the lake shore for a whack at the ducks, and to prepare an extra good breakfast. The writer was detailed to supply the snipe, and soon brought in nine. A good fire having been built in the lee of the lake bank, H. soon had the snipe in the frying-pan, and a master of breakfast it was. We had just pitched in, when a single pelican came flying and lit close to the shore beyond a point to the north of us. This made H. and A. drop everything. Casting a longing glance at the snipe in the frying-pan, they grabbed their 8-bores and started off on a run. We soon heard the boom of their guns and on coming back H. carried the dead pelican with a beaming countenance. Here was a worthy subject for his skill as a taxidermist. Breakfast over, fire put well out, we went to the marsh and had some splendid duck shooting, the wind blowing strong and ducks flying low; but no geese showing, at noon we packed up and came back to Mayville early in the evening. Our bag was sixteen geese, one crane, one pelican and twenty-five ducks. The pelican measured 8ft. 6in. between tips of wings. These were small bags for so many guns; but the geese had not yet come in any great numbers to the feeding grounds, or might have taken another flight. K. was disappointed; he wanted to show me what he called Dakota goose shooting, but I had to start for home next day. We all admitted having had a splendid time, a fair amount of game, and we had hopes of having more such trips together in the future. The next day I was on my way home, where I arrived all right and found all well. S.

BELOIT, Wis.

OCTOBER.

A Reverie.

WHAT better than this cool, steely autumn weather can bring the hunting instinct to the top in the sportsman's heart? That feeling which in itself makes the breath freer, the eye brighter, the step lighter. What can better bring to his mind the remembrance of happy hours spent treading field and forest, every nerve tingling with enjoyment, every sense alert to catch the faintest sign of game?

Perhaps it is the pheasant or quail, so hard to flush, so quickly out of range; or it may be the quiring bark of a gray squirrel has attracted your attention.

Look there! He's on that big chestnut! Look there! His big bushy tail (that's all) comes into view as, carefully keeping the limb between yourself and gun and his body, he works his way swiftly to the end, where, with a long, flying leap, he may gain the denser woods and freedom.

A sudden chatter! A flash of gray as he clears the intervening space at a bound. You peer through the smoke. Something dropped sure. Yes, something dropped, but it's only a "six-buncher," loosed by your charge; and you proceed to regale yourself on the contents of the "six-buncher" as somewhat of a consolation for the loss of the squirrel, who can be heard chattering away in the forest beyond, but with a trifle more defiance in his voice than before, you imagine.

Your gun lies by your side or leans against a tree. With a burr in your fingers you are most unprepared for a quick shot. But this is just the time that our long-eared friend Brer Rabbit chooses to whisk across, a rod away, and disappear. An instant more and you would have had that fellow; but it is no use to follow him. Your dog is a setter; won't chase rabbits.

But you grasp your gun firmer, hitch it a bit closer to your shoulder and start off once more. "Go ahead, pup, and make up for lost time. Whoal steady, there. That's a stand sure." Now go on. There's a rustling in the underbrush, and with a roar of wings the noblest of all game birds bursts into view. Yes, and out of it just about as quick.

But you have fired the old reliable right, and there is a thud, and once more the rustling in the underbrush and among the leaves. "Fetch!" And the next moment your retriever has deposited in your hand a fine pheasant. It is placed in the pocket of your hunting coat. With new zest you start out; But a glance at your watch—whew! half-past six. Who would have thought it? Time to quit, and you start for home happier than if that last grain speculation had netted you a hundred more.

CHAS. A. BARRON.

CHICAGO AND THE WEST.

Montana Elk and Bears.

CHICAGO, Oct. 11.—Lieut. Elmer Lindsley, 6th Cavalry, stationed at Fort Yellowstone, writes from camp that Gen. Doe, Assistant Secretary of War, Mr. Wm. Doe, his brother, and himself have been on a long hunt in the country south of the Park, and have been fortunate enough to secure eleven elk, two bears and quantities of trout and grouse, to say nothing of some fine duck shooting at Henry's Lake. The whole trip was most pleasant and fortunate.

I have not yet heard of Capt. Brand, the German army officer who went out with Billy Hofer's partner for his guide in September, but hope he has met with success.

Furs and Game in the Far North.

Friend Thomas Johnson, at Winnipeg, sends the information that one dealer, Mr. Secord, at Edmonton, had received the following skins and peltry: 205 musk ox, 137 bear, 3,500 martin, 550 beaver, 50 otter, 50 cross fox, 100 red fox, 10 silver fox, 15 wolverine, 7 wolf, 108 lynx, 500 mink, 2,000 rat, 10 fisher and 40lbs. castorum. Mr. Secord estimates the value at $20,000.

Mr. Johnson says that probably 500 musk ox were killed last season. He states further that he also saw a number of buffalo skins, and remarks that though he has seen tens of thousands in his day he never saw any so fine as those he saw last week. "We have only 200 or 300 left," he writes, "and it seems a pity some means can not be devised to save these magnificent specimens." Going further into the matter of game supply, he paints a most alarming picture of the wildfowl situation. He says:

"I read with interest the FOREST AND STREAM editorial on game protection; but we have much to do here yet in that direction. A week ago to-day I was shooting at Big Lake. Of course you don't know where Big Lake is, but if you will get a map of the Northwest Territories and look up Calgary, 840 miles west of here, then find Edmonton, some 200 miles north of Calgary, and search for a small lake about ten miles northwest of Edmonton, near St. Albert, you will see marked Big Lake. My bag was eight ducks! Five years ago if I so desired it would have been —well, all I wanted.

"This week the Northwest Assembly have passed a law limiting the number of chickens any one gun can kill in a day to twenty; our next step will be to find a means to prevent the extermination of our big game. As for the ducks, you in the United States are responsible for their almost extinction. I passed scores of lakes that I have seen black with ducks—lakes that have been their breeding grounds for—ages and not a sign of a duck to be seen. We have the breeding grounds here, but if you will insist on killing every duck that shows its head in its winter quarters, don't blame Canada for the cause of their extermination."

I add to the above valuable information the comment of a writer in the Winnipeg *Tribune*, who says in a late issue during his remarks on the grouse and fowl supply: "A most serious question is the threatened depletion and destruction of our game supply. What seems the most feasible plan to prevent this is limiting the number any one individual can kill in a season. Some oppose this on the theory that you cannot make a law to prevent it and put it in force. The writer, however, disagrees with this theory, being satisfied that the killing of large numbers was created from a desire to make a record, and a record don't amount to anything if you cannot proclaim it. The second trouble is, that farmers are also getting good dogs and are reserving their shooting. So that if Manitoba settles up as fast as we all prognosticate and desire, the time will soon be here when the same principles will have to be adopted to perpetuate our game supply as are in vogue in older settled countries."

This from the far North, a land so remote that most American sportsmen only dream of going so far as even to see the edge of it. Meantime, this winter will see five times as many Northern shooters go to Texas as ever before. It is painful to reflect that FOREST AND STREAM is one of the most potent agencies for the destruction of game when it pursues its duties as a newspaper in its field. Many who read its columns read of the good game fields, but forget the wise counsel of self-restraint and gentlemanliness which these columns have always urged. I venture now this prediction: The North will eat up the shooting of the South. Alone, the Southern men would have their sport forever. And I venture this counsel to the Southern men: That if they this winter see their generous country and its hospitality violated by shooters from any section, they do not wait to bother about any game laws, but extend the ungentlemanly shooters an invitation to leave the country and leave it soon. I think this will be better than game laws, being more direct and more easily understood. It will not be needed by all visiting shooters, but it very likely will be needed by some. This is the prettiest game law in the world.

Opera Bouffe Moose.

The daily dispatches this week chronicle a novel suit against the State of Minnesota, instituted by one Alexander Phair. It seems that the latter, who is a Willow River farmer, was out without his gun, and was attacked by a moose and nearly killed. As Minnesota has a three years' close season on moose, Mr. Phair, being a law-abiding man, stayed his hand, and only said, "Oh, please don't," when the moose jabbed him. Then he sued the whole State of Minnesota on the ground that this opera bouffe moose was a ward of the State, and put up by the latter to butt, jab, horn, hook, gore and have fun with him, the said Phair; which wasn't phair, because he couldn't retaliate legally, since he just loved the game laws. This is a pretty funny law suit, and the first of its kind. But how about the hundreds of illegal moose found dead along the waters of the Rainy Lake region since the mining boom began there?

Killed by a Tame Elk.

Far more serious than the above is the report from Forest Park, St. Louis, this week, telling of the killing of Keeper Henry Nelson by a bull elk, one of the park herd. The animal was goring an elk calf, and when Nelson tried to stop it the elk turned and drove its brow antlers through his breast, pinning him to the fence. This same elk is said to have killed a man in Lincoln Park, Chicago.

Sanguinary Moon.

For a brief time the hunter's moon of October has had a sanguinary look, pending the heated discussion in the press dispatches between Mr. A. L. Trude, of Chicago, and Police Commissioner Roosevelt, of New York, as to the ability of the latter to hit a goat, a bear or a flock of wild barns. Mr. Trude is reported to say that certain Rocky Mountain guides told him that the only bear Mr. Roosevelt ever killed was a trapped one, and that the only goat he ever shot was a dead one propped up by the guides. Mr. Roosevelt very properly stigmatizes this as in no wise consistent with fact. Mr. Trude was one of the very ablest of Chicago's criminal lawyers before he retired and went in to have a good time. He is possessed of a biting tongue, but is not reputed to be malicious in any way. I am inclined to think he wishes to engage in daily journalism, and has bought him a new hat, through which he is practicing. Either some guide has filled him up or he has filled up some reporter. Now, all guides do not agree on this point, to say nothing of gentlemen who no doubt could, if they liked, say more to the point than any guides. Taswill Woody, an old and respected guide, once told the writer that Mr. Roosevelt was the best shot at big game he ever saw. On the contrary, no guide has ever told me that Mr. Trude has ever slain even a West Side goat tied with a rope. Are we to infer from this that Mr. Trude has never shot a West Side goat? By no means. Perish that thought as unfair and illogical and injurious to Mr. Trude's reputation as a sportsman. May it not therefore be that equal unfairness exists in the strictures upon the marksmanship of the gentleman unfortunate enough to live in New York? I will admit that appearances are against any man that lives in New York and cannot prove an alibi; but let us hope that this matter can be settled without any one getting irritated or doing anything further to ruffle the feathers of white-winged peace.

The Krag-Jorgensen Rifle.

The new U. S. military Krag-Jorgensen rifle has this week received most unfavorable criticism after thorough tests on the range at Fort Sheridan, in the hands of the best marksmen of the garrison. It is said a strong effort is making to induce the Government to go back to the Springfield. The city press says of the trial made:

"The test was of short duration, as those conducting it gave up in disgust after they had used fifty rounds of ammunition. The range was in fine condition and the atmosphere all the most fastidious marksman could desire. It was the hope of the officers who were trying the rifle to find some justifiable excuse to set aside the verdict that the weapon was unreliable in its accuracy of fire, but in this hope they were disappointed, for of the fifty shots fired the best score made was thirteen, with only one center and three fours. The judges were perplexed and showed it as they marched from the range. When asked for an opinion of the qualities of the rifle tested they refused to reply."

Chicago Restaurant Cases.

Deputy wardens lately secured evidence against five Chicago restaurant keepers for serving illegal game. This week the cases all came to trial and fines were imposed. G. H. Williams, of the Lakeside restaurant, failed to enter appearance to plead.

Monument to George Fulton.

The subscription books for the purpose of erecting a monument in memory of Hon. George Fulton, of Texas, the "Prince of the Southwest," lately deceased, have been opened and are now circulating among the sportsmen of the South and the North. Mr. Fulton entertained hundreds of sportsmen. He needs no monument in their hearts, but let this shaft be built to say he needs none to tell others after his friends are dead, that sportsmen remembered gratefully as good a friend and sportsman as ever lived.

Reads It on the Court House Steps.

Dr. L. W. Cock, of San Marcos, Texas, now in Chicago, is an intimate friend of Tom Glover, who sent him up to me with the prettiest spotted cat skin I ever saw—I never could tell which I liked the most, the Doctor or the cat skin. Now Tom Glover has a father, an old gentleman who likes to hunt and fish. Of him, although I never saw him (or his son), I have a pleasant mental picture. "Every week," says my Chicago Texan to me, speaking of his San Marcos friends, "when the mail comes that brings the FOREST AND STREAM, old Mr. Glover goes over to the post office, gets his FOREST AND STREAM, and walks over and sits down on the court house steps and reads it all through. This is one of the regular San Marcos happenings every week. He sits right in the same place every time, and I reckon he always will." I hope he always will, through the sunshine of many long Texas years.

He is Known.

The gentleman on the Boston hen paper who stole the items from the Chicago and West woodpile is known, and if the offense is repeated not even our regard for his family will prevent us from making his name public. I can't work hard to make a Boston holiday. Go get something fit for me to steal, and I won't say a word.

Which reminds me of an odd incident I saw not long ago. One night last month, when the Chief with Two Stomachs was taking his vacation in Chicago, he and a California friend of his and myself were going home about 8 o'clock, when the party was approached by a good specimen of the genus bum, a low-down loafer who had only one arm, and who would fain be drunker than he was. "I'm only a poor, good-for-nothing bum, gentlemen," said he, "with only one arm and not long to live, but I'm awful thirsty. Can't you give me the price of a drink?" No one paid any attention to him, but he walked along and became more importunate, and then insolent when asked to leave. At last the Chief with Two Stomachs paused and looked at him calmly. "You poor, low-down cuss you," he said, "if your other arm was off I'd lick you!"

Anglers Win in Iowa.

Frequent mention has been made of the attempts of anglers in Eastern Iowa to break up seining and netting in the bayous and river mouths along the Mississippi River. There have been many arrests made in the last two years and much litigation has resulted between the sportsmen and the market fishermen. At first defeated, the anglers went to the Supreme Court and have now just won an important victory there. The Dubuque *Telegraph* covers this in the following paragraph:

"LANSING, Oct. 5.—One of the most important cases ever decided by the Supreme Court of this State was that of the State vs. Haug. The question raised was whether the State had jurisdiction of the lakes and sloughs along the Iowa shore of the river. A local fisherman, Gilbert Haug, was arrested on complaint of the Lansing Rod and Gun Club for seining on Big Lake. The District Court discharged him, holding that because the sloughs are fed by the Mississippi River they are a part of the river and exempt from the operation of the statute. The Supreme Court now reverses that decision and thereby holds that fishing can only be legally prosecuted hereafter with hook and line except in the main channel of the boundary waters of the State. Fishermen's rights have always been a mooted question until this decision, which finally settles the matter so far as seining is concerned."

Castalia Trout Club.

The total catch of trout at the famous Castalia Trout Club, Castalia, Ohio, for the past season was 1,760lbs., 4,600 trout being taken. The largest one weighed 3½lbs. The club will stock the waters with 100,000 small fry from the best streams this fall. They also expect to raise 500,000 in their private hatcheries. The club is in fine condition.

Mr. J. W. Oswald, of Toledo, is an able member of the Castalia Club. He has made a plaster cast of the record trout and of a 2lbs. trout captured by Mr. John A. Waite, and has painted the casts in the trout colors, with surprisingly life-like results. Mr. Oswald has not been content at home, however, for one learns of his fishing the Conejos and Gunnison, in Colorado, this summer, with great success and enthusiasm.

En Passant.

Mr. H. O. Wilbur, of Philadelphia, is in Chicago this week, and it is natural that as a sportsman he should drop into the Western office of FOREST AND STREAM, *en passant*, as we say in Chicago.

Anglers Win Again.

Oct. 12.—The upper court at Oshkosh, Wis., has supported the fish wardens (*i. e.*, the anglers) in their late vigorous crusade against illegal netting in Lake Winnebago and kindred waters. The cause of protection slowly gains. It is a curious fact that the idea of protection has always advanced more rapidly in regard to fish than in regard to game, probably because it has been better pushed.

Guinea Fowl and Grouse.

A Chicago restaurant man, when this week asked to plead on the charge of selling illegal prairie chicken, demurred on the ground that the bird put on the bill of fare as prairie chicken was really guinea fowl. He said no one could tell the difference, and that many restaurants used the latter under the former name, they costing much less than prairie chicken. The case was thereupon dismissed, but the restaurant man was at once tried on a charge of offering "grouse" for sale on his bill of fare, and was promptly fined. Bogus guinea-grouse meat seems not to be so cheap, after all.

A Clinker.

Last week I mentioned a little chicken hunt I had with Mayor A. G. Lewis, of Moorhead, Minn., but I forgot to mention the chief *dramatis persona*, that is to say Mr. Lewis's lemon and white pointer Leo. This dog I should consider it a great misfortune to lose, but no crime to steal. He is a chicken dog of the sort to love, and yet good enough to win on the bench or in the field. I think I never saw a dog with such steam-engine vigor and speed, yet he knew his business and was staunch as any. Mr. Lewis thinks of a Southern trip this winter, and if he takes Leo with him, Leo will just about go off a point in a half mile or so of cactus and they never will find him again until the leaves of the judgment book unfold.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

NEWS FROM YELLOWSTONE PARK.

YELLOWSTONE PARK, Oct. 2.—*Editor Forest and Stream:* There has just been completed in Hayden Valley a fence for a buffalo pasture. There is about a square mile inclosed. The fence is very strong and high, so located that it includes the trail over which the buffalo pass often in winter in going from one part of their winter range to another. There are also about fifty tons of hay in two stacks with a fence around them and inside the pasture. It is the intention of those in charge to corral about twenty buffalo if possible and hold them in this inclosure. There is a fine grove of pine timber for shelter, with good feed and water and some hop country, so that the conditions are favorable for the buffalo to be contented. At present there are three openings on the trails; these will be closed when the buffalo are once inside the inclosure.

There is no doubt that many of the Park buffalo were killed last winter and spring on the western side of the Park. There was so little snow that they were not compelled to go to their usual winter range for feed. There is no telling how many buffalo there are now in the Park. Some place the number at about seventy-five. If the new corral proves a success it is hoped that enough money can be obtained to fence in several thousand acres in Hayden Valley and hold all the Park buffalo where they can be held and protected. As it is now they can roam at will, and do go outside the reservation into Idaho and Montana, where there is no protection at all.

One trouble about the buffalo pasture now will be to keep the elk out. When I was last there, there had been a large band of these animals inside the inclosure. The elk are very numerous in the Park. Large bands were in Hayden Valley and around Mount Washburn. I passed within 50ft. of several while crossing Washburn on the Norris trail.

The antelope have increased this season very much, but unless something is done to kill off the coyotes, which have increased very fast, they will kill hundreds this winter, when the antelope are forced on to their very limited winter range at the mouth of Gardiner River. The people of that town could see the wolves killing the antelope last winter and hear their yelps as they hunted their meat. Bands of ten and twelve coyotes were often seen running the antelope. I have had them follow me for half a mile at a time barking at my dog. It was very aggravating to have them sit within 20yds. of one and bark or yelp at you and you not to shoot. I am in hopes orders will come from Washington to have as many of

these animals killed as possible. I for one would like to see them all go.

Snow came very early this year. About Sept. 20 we had 2, then 4in. of snow in Hayden Valley, with over 1ft. on the higher mountains. It is snowing in the Park now.

The travel is over for this season, the last party of tourists starting out Oct. 1. As fast as they go around, the hotels will be closed; by the 6th inst. all will be out of the Park. The troop of cavalry at the Lower Geyser Basin starts for the Mammoth Hot Springs by the 5th for their winter quarters. Additional scouts have been hired, who have started out on long trips scouting for hunters who are supposed to be after the buffalo.

Very few Eastern hunting parties were in the field south of the Park this summer. The so-called Indian war frightened some of them away. There was no war at all; the killing was all on the part of the whites.

The road work has been pushed very fast this summer. It is now possible to drive from the Thumb or West Arm of Yellowstone Lake to the southern boundary of the Park and Snake River via Lewis Lake and the Lewis River, from there over a rough wagon trail to Jackson's Lake.

A road has been grubbed out through and a short distance over the pass at the head of Cornelian Creek, west of Mt. Washburn, and a careful survey made to Yancey's. When this is completed it will be possible to make the circuit of the Park, taking in the principal objects of interest without repeating any part of the road.

I looked for and tried to find some of the rainbow trout planted in the Gibbon River above the Virginia Cascades by the U. S. Fish Commission, two years after the plant was made. I found rainbow trout above and below the Cascades this year. The circumstances were not favorable, as it was a very cold, windy and cloudy day; I tried the stream only with flies. It has been reported that no fish have been taken for two years above the falls, and is claimed that they have all gone below. If this is so, the stream ought to be stocked with some kind of trout that will not go down, as it is impossible for them to return.

The usual number of bears were to be found around all the hotels in the Park this summer. One black one at the Grand Cañon used to come to the very door of the kitchen, and one of the employees used to lay down on his back with a piece of sugar in his mouth, which he would hold for the bear to come and take. I did not see this, but have no doubt of it, as some men are foolish enough to do such things. The last time he tried it something disturbed the bear while he was taking the sugar, and he gave the man quite a severe scratch in the face.

Two large grizzlies that camped at the Lunch Station at the Thumb were very troublesome, breaking into the storeroom several times; they were not so tame as the bear at the Cañon; no one wanted to fool with them.

Quite a collection of birds have been captured for the Zoölogical Park this summer, and cared for at Fort Yellowstone. It is intended to secure a number of animals to add to this collection before sending them on to Washington. H.

BOSTON MEN WITH GUNS AND HOOKS.

BOSTON, Oct. 14.—The distinction of being the final victim for fresh-water fishermen at the end of each season around Boston belongs to the pickerel. I don't know how well he appreciates the honor, but if his bump of self-conceit is at all developed, he must feel quite elevated, mentally, on being lifted in by such distinguished men as seek his company at this time of year. None are too proud to do him honor. It is a long stride in every sense from angling for salmon in the Restigouche and elsewhere to lifting out pickerel in the Sudbury and Charles rivers and the ponds about Boston; but when the fascination for fishing is once acquired it is hard to shake off, and when the best is not obtainable, most anything that wears a fin is made to do service. The Topsfield River is at present giving the best results, but the fishing for pickerel is being carried on with fair success in many other quarters. The ponds on the Cape are quite productive, and some of good size have lately been taken there. The Sudbury River has always been a favorite place, and being only a few miles from the city and easily reached by train, a great many go to that stream. I can only account for its standing the strain of constant fishing so well year after year from the fact that it is a hard stream to fish, being full of holes and weeds. It takes plenty of patience and hard work to secure results there; but those are qualities that rightly belong to every good fisherman.

The Messrs. Epting (father and son) passed through Boston a few days ago en route to their home in Philadelphia. They have been spending the summer and fall up to the present time at the King and Bartlett camps in Maine, and seem well satisfied with both the fishing and shooting which they have had. Between Eustis and Dead River station they stayed for a few days at I. W. Greene's farmhouse in the hopes of getting some shooting. It rained quite hard during their stay at this place, and they were unable to get much shooting, although they are convinced that there are many birds in that vicinity. Harry Pierce, of the King and Bartlett camps, came out over the buckboard road a few hours ahead of Mr. Epting, and saw an immense cow moose just off the road at Spencer Stream. He pinned up a paper notice to that effect on the road, which our friends saw, but no trace of the animal was visible to them. The next day two gentlemen with their wives came out, and on reaching Spencer Stream one of the ladies who happened to be a short distance ahead was seriously frightened by coming suddenly right on to the same big moose. It did not take the animal long to get out of the way, and her exit was accompanied by noises which indicated that she was about as much scared as her observer. The place where the moose was seen is a favorite place for large game, and deer and other animals are frequently seen there by sportsmen going to and from the camps. A large buck deer was killed at King and Bartlett about a week ago by a Boston sportsman. The animal had a particularly fine head and pair of horns, and the lucky shooter was delighted with his good fortune. The shooting on the preserve has been very good up to the present time, and it is expected to improve a little later after a few more killing frosts have dropped the leaves from the trees.

The bass fishing at Lake Winnepesaukee in New Hampshire is not yet finished for the season. The fact is proven by the recent departure of a number of Boston people (probably the last party of the year) who have recently started for this interesting locality. The party consists of Arthur Taylor, J. L. Newton, Everett Townsend and wife and two or three others. They have gone to Centre Harbor on the shore of the lake, where they have a comfortable house. The fishing will be done from the yacht Triton, and considerable attention will also be given to partridge and woodcock shooting. Two weeks will be the length of their stay and a royal good time is confidently expected.

Forty-two dozen smelt taken down at Hingham harbor the other day by one party are not a very bad score by any means. This kind of fishing is wonderfully good every year at old Hingham by the sea; no better place can be found near Boston. We have had some cold nights recently and the smelt fishing is consequently much improved. They are beginning to get a few down at Quincy and also at Cohasset. A little more cold weather and Boston harbor will begin to yield its annual quota of smelt. When this condition is reached the season is fairly started, and everybody both catch and eat this delicate little fish.

The coot shooting around Cohasset is now very good. Reports say there are plenty of birds, but they are wild and quite scattered. There are many shooters on hand nearly every morning, and several of them have made excellent scores. One young man (whose name I did not learn) while out in his boat alone was tipped over by a huge wave and nearly lost his life. Two good guns and all his ammunition went to the bottom of old ocean promptly, and he has determined now to let coot shooting severely alone, at least until he has recovered from his fright. At the Curtis stand, at Great Pond, near Cohasset, the duck shooters have been doing well, and hope to have even better sport a little later.

E. W. Davis, of New York city, a member of the Cascapedia Salmon Club, spent a day or two in Boston this week while on his way to the river for the second time this year. This time it is not salmon, but caribou, that Mr. Davis is after. There is a high plateau down there not far from the fishing grounds, and the guides have told him that caribou shooting of the best kind can often be found there in the fall. He has enjoyed moose shooting in Nova Scotia and caribou shooting in Maine, and prefers the latter to any other large game found in the East. Another inducement to hunt this animal in Canada and the far North is found in the extra beauty and development of the head. In Newfoundland the horns grow to immense size and frequently have so many blades that it is a wonder how the animal can browse with any comfort. Mr. Davis is a thorough sportsman and greatly enjoys both shooting and fishing. He is interested in many salmon pools on the Cascapedia, and the club of which he is a member owns some miles of the upper waters of that stream. These are the waters which were formerly reserved for the Governor-General of Canada, and are considered the very best in the Province; 39lbs. was the weight of his largest fish this season, but he has taken them in the past up to 51lbs. His son, only 13 years old, captured one this season of 38lbs. and a number of others of less weight.

Not a few Boston sportsmen are trying the Adirondacks this year and most of them seem well pleased with that interesting region. One large party has just returned, and one of the members, who has made many trips into Maine, is so well pleased that he has even now decided to repeat his visit next fall. The party mentioned is called the Blue Mountain Club, and consisted of Dr. and Mrs. W. G. Kendall, Mr. and Mrs. F. H. Ricker, E. S. Merchant, Jas. Nichols, John Walker and Percy Martin, all of Boston; Dr. and Mrs. Homer Emerson and J. W. Brophy, of Milton; T. B. Coffin, of Gloucester, Mass., and Mrs. Barber, of Hartford, Conn. The Blue Mountain House at Spring Cove, N. Y., about twenty-five miles from Tupper Lake, was made the club headquarters, and it was from there that the trips to the different runways for deer were taken. The club has been visiting the same region for 13 years, and it is a custom to give each season a championship flag to the person who killed the largest buck. A lady, Mrs. Ricker, won the trophy this time by killing a noble animal in the rapids of the middle branch of the St. Regis River. Eight deer were killed by the entire party. Dr. Kendall made many fine photographs on the trip, which I hope to have the pleasure of looking over. He also killed two deer, and his only regret lies in the fact of his losing a magnificent buck which was very oddly marked with a white face. Well, there are other days coming, and that buck may be there next year. Who knows?

HACKLE.

RANGE OF GAME SHOOTING.

Editor Forest and Stream:

I read Tiam's last letter with genuine pleasure, for it was frank, manly and straightforward, and he stuck to his text. There was, moreover, no attempt to depreciate the value of the opposition by ridicule founded on mere surmise.

I can admire the convictions of any man once I am convinced that they are convictions, regardless of how they agree or disagree with my own; for, notwithstanding Tiam's surmise that I am juvenile in my ideas and expressions, I have long since passed the age when I believed the ideas or whims of any one man or two men were laws to his or their fellows. We must appeal to the broader lawmaker, general usage and general circumstance, for the true inspiration of a general rule of action. Of course, the ethical laws of sportsmanship are the unwritten laws; but the unwritten law, once it is an accepted law, is often the more rigidly enforced and the more severely punished, as may be seen when an individual breaks the unwritten laws of society.

I will not go into any argument concerning the matter further than to say that I think the numerous circumstances cited by Tiam support my contention against long-range shooting at large animals, for if it is so uncertain at the short ranges, how much greater then must it be at the longer ones? The nice point I will not attempt to decide. Yet there must be a range beyond which the chances of a kill are so uncertain, though the possibilities of a severe wound are so great, that it is worthy of more consideration than is given to it.

Tiam, I think, must himself appreciate the weakness of the argument *ad hominum* which he advances; but, as I said before, my purpose is not to argue. I think he wrote a manly, frank letter and I wished to tell him so.

DICK OF CONNECTICUT.

The FOREST AND STREAM is put to press each week on Tuesda Correspondence intended for publication should reach us at th latest by Monday, and as much earlier as practicable.

THE GUNNISON COUNTRY IN '94.

ABOUT Sept. 1 a couple of friends from Illinois came out to join us in our annual hunting trip. The party leaving Leadville was composed of six, one more joining at De Beque, where we obtained our outfit. Dave, the eldest and best natured, the Doctor, Jack, George, Colorow Jim, and "The Rocky Mountain Guide," composed the party. We left De Beque in wagons and on horseback, going up Plateau Creek to its head, down Surface Creek to the Gunnison River. From there the next sixteen miles lay over a barren, desolate mesa that could not produce as much life as a coyote; but all things have an end, even a desert, and we finally reached the finest valley in the Rocky Mountains, the Valley of the North Fork. One can hardly express his surprise, after having passed over the dreary waste without seeing a living creature save our own caravan, to come suddenly into a country literally "flowing with milk and honey." On every side were immense orchards, vast fields and splendid farmhouses, plainly indicating prosperity and happiness.

We left the North Fork at its junction with Minnesota Creek, going up that stream for seven miles, where, at the last ranch we were to see for four weeks, we left our wagon, and packed up the rugged sides of Mt. Lambert to the head of Coal Creek. A more lovely spot to make camp one could never find. In the midst of plenty of feed for our horses, with a splendid spring rippling over clear white pebbles and an abundance of wood for our camp-fire, we pitched our tent. At every point of the compass stood snow-capped peaks without number. To the north of us were miles and miles of unbroken quaking asp draws, well watered with springs and small streams, the summer resort of deer and elk. To the south, extending away up into the snow-caps, ran an immense body of spruce and pine, in the deep shadows of which game of all kinds resort for rest. To the east, a vast rolling, rugged series of hills and valleys, with beautiful glades and parks ending in a long backbone-like ridge, whose sharp peaks, round domes and turret-like points were defined sharp and distinct against the ever cloudless blue of the horizon. Who can describe the beauty of that ridge? It was made up of every hue of the rainbow, and was defined so distinctly that one could not guess anywhere near the distance it was from here until first having gone over the ground. One would think surely that he could see every living animal on its rugged sides. Yet it was the home of hundreds of Colorado's greatest game animal, the mountain sheep, and not one could be made out, even with the aid of a powerful field glass. Did you ever try to follow the mighty big horn? If you are not nervous, try it just once. I say just once, but it is not necessary, for it is two to one that the first will include all the trips of that kind you will ever take. When you get back in the evening, tired beyond expression, and gaze on the architecture of wonderful nature, the grandest panorama man ever beheld, you will exclaim, "It is most wonderful to behold, but it is different when you get there." The chances one will take to get his majesty are enough to appall the most daring; and when after it is all over one sits three miles away and gazes on the spot that looks not more than half a mile distant at most, one will tremble at what he has gone through. The great mass of snow and ice, the perpendicular cliffs, the narrow shelf-like ledge one must pass over, are all blended into a picture before him that artists would give worlds to reproduce.

Our party was quite successful in getting specimens of all the different animals in that part of the State, and so well did we enjoy our trip that life during the month of September in future will be a burden if from any cause we are unable to spend it among the snow-caps.

The incidents of the trip were so numerous and so thoroughly enjoyed by all that they will long be remembered—the number of trout that came to Jack by his skill with rod and fly, the great twenty-eight point buck that fell victim to Colorow's old reliable at half a mile distance; the success of the Doctor and Jack as jackers might be questioned by some, but I am sure that George and Jim will back me in saying that it was more interesting even than Buffalo's ghost dance. But were I to mention even all that happened on that trip, it would take all the space that FOREST AND STREAM has for other purposes; so I will only note two that may be of interest to others.

It was our custom to leave the main camp in the afternoon and go some miles into the country we wished to hunt the next day, so as to be near to the game at daybreak. On one of these trips the Doctor and Colorow were aroused during the night by the low grunts of a bull elk. So close did he seem to be that they felt sure he must show himself soon. So with rifles ready they scarcely breathed, straining their eyes with all their might; but it was impossible to get sight of him. Apparently he was near where the horses were feeding; but it was no use, they could not see him. You may imagine with what impatience they waited for day to break. It never occurred to them to make a torch of the abundance of material at hand, with which they could have blinded the old fellow and had him as badly "rattled" as they were. But as soon as it was light enough they were on his trail, but only got sight of him once, about a mile off, that only increased their ire.

Another incident that happened to Jim was of unusual occurrence, and may be of interest to some. While out after elk one morning he jumped a fine young bull in a heavy patch of scrub oak brush, with here and there a bunch of three or four tall, slender quaking asp trees. The bull was a splendid young fellow, about 3 years old, with a neat head of horns. Jim was quite anxious to get him, but so thick was the brush that it was quite difficult to get sight on him. After some twisting and pulling he finally got what he supposed was dead aim, and let drive 375grs. of lead at him, and over he went; but no sooner down than up, and away down the hill. Jim thought of course he was a dead bull, and as soon as he could find the trail started after. He soon made up his mind that something was wrong, as there was not sufficient blood on the trail for a badly wounded animal, though he continued to follow for some distance before giving it up, as he finally did, and returned to camp. But the more he thought the matter over, the more he was convinced that he should have hit the elk a hard blow, so he concluded to return the next day and examine more closely. On finding the spot where the bull had stood, the first thing that met his eyes was the ball lying on the ground in front of him. On picking it up it was seen to be covered with elk hair, the edges of the ball

turned over so as to hold it firmly. More surprised than ever, Jim looked around for a cause of such results, when his eye caught a little round hole through a 9in. quaking asp tree, behind which the elk was when the shot was fired. So the mystery was explained. Jim has the ball and will keep it in memory of "one bull that he did not get."

And so the time passed all too quickly, with every day some new adventure. But the time came to depart, and we had to return once more to the byways of "men and things," and wait with impatience the coming of another fall when we can spend another month with the snow-caps, and probably it will be in the Gunnison country.

PER SE.

CAYUGA LAKE WILD GEESE.

IN FOREST AND STREAM of a recent date M. Chill, of Ithaça, tells of some wild geese that wintered near there last year. He cannot be very well posted about the game of that section, or he would know that there are at least two flocks which have wintered on Cayuga Lake for the last ten years, and I do not know how much longer. There have also been other flocks like the one he mentions, which have stayed occasional winters. I remember at least one flock that wintered near South Lansing not over ten years ago.

One of the regulars wintered on and near the farm of E. Brown, of Aurora. The farm is about three miles from the village. The other one spent its winter vacation on the Mitchell farm, near Lake Ridge.

M. Chill speaks very slightingly of the goose and would seem to imply that hunters were scarce when he says, "A couple of hunters chanced that way and secured five of the honkers." I suppose if his hunters had chanced along they would have got all they could carry of the fifty-four which I spent some time studying that same winter near Lake Ridge.

It happened this way: I had been teaching for some time about two miles north of their feeding grounds before one of my boys found out accidentally that I liked sport and kept guns. "Why," said he, "there is a large flock of wild geese around here. Why don't you shoot them?"

Well, I did not jump more than 2ft. high on account of my official dignity. As soon as I got my nerves steadied down I asked, "Where?" "Down on Mitchell's wheat field." "Where is that?" He pointed the direction.

That afternoon was one of the longest in the term; but 4 o'clock came at last. A quick trip home, a quicker change of clothes, and the old 10-gauge and I were going 'cross lots through the snow as fast as possible. After climbing innumerable wire fences, which abound in that neighborhood, I came to a rail fence and a wheatfield. While wondering whether it was the right one or not, I heard somebody say: "Honk, honk, honk!" The second time they spoke found me looking under the bottom rail of that fence. I thought the scenery would be nicer viewed that way, and it was; for in a minute or two ten geese came up from the lake right toward me. The hammers of that old 10-gauge came back mechanically. They kept coming straight on until, just as I was bracing to give it to them, they lit just out of range in the wheatfield and began to feed one at a time, never more—the rest watched. By and by there was more honking and the same thing was repeated. They kept coming until there were fifty-four of them there, just too far away—say 20rds. By that time three or four would feed at a time.

Think of it! fifty-four big fat fellows walking around, "so near and yet so far."

Tantalus of old was nowhere to my feelings.

By and by the novelty wore off and I began to get cold, but dare not move for fear of scaring them away; so there I had to stay in the snow until they got ready to go back to the lake, at about dark. To encourage the poor hunter one or another of them would start to come over to the fence, but they never got there. Subsequently, on going there after the snow was off, I found by their droppings that they had never been within 10rds. of the fence.

When home at last tired and hungry, the first move was to get out my 20lb. muzzleloading target rifle. A careful examination showed that the barrel was in perfect order and it seemed to be clear at any rate that I could blow through it.

This was a famous rifle which my grandfather had made for long range target-shooting. One hundred rods was not much more than point blank range for it. I had got it for a keepsake, never expecting to use it much, as it was too heavy.

Daylight next morning saw the big gun mounted in a fence corner. The geese were equally prompt in keeping their engagement. Waiting until they were all there and pretty well bunched, the rifle was brought to bear on the neck of one of the foremost ones, which was in line with a row of bodies. I took a last peep through the fine globe sight and touched the hair trigger.

Shades of Nimrod. Draw a veil over the scene that followed.

The cap snapped.

The gun seemed clear when I loaded it, but it had stood a long time. The grease kept the powder from catching.

That was only the beginning of a chapter of accidents which befell me while trying to get one of those geese. Every night and morning saw me after them. The keen delight with which I studied those geese can only be known to a lover of nature. Sometimes I would take my telescope and watch them all the afternoon of a Saturday or Sunday. They would keep about in one place out in the middle of the lake, only coming ashore to feed nights and mornings or stormy days.

They did not go back to the wheatfield any more, but moved over to some large buckwheat fields.

The last time I saw them, April 15, they were all there yet, fifty-four of them.

One day, in trying to get to the fence on one side of the field where they were, I had to cross an old meadow grown up to weeds; when I was part way across they saw me or minded me and left. When I got up I had crawled within fifteen rods of an old she fox, which I shot. She was eating an old hen. The fox is not very easy to still-hunt, yet those geese were scared at fifty rods, while the fox did not see me at fifteen.

They came back last year, but did not stay long. I think they must have had private advices from the clerk of the weather which led them to winter in Mexico that year.

HARRY S. HOWE.

BOSTON HUNTERS OF MAINE GAME.

BOSTON, Oct. 11.—The Maine hunting season is on in full force, but it has taken several days for deer to get into the Boston markets. They first appeared a day or two ago. One was an enormous doe. It must have weighed nearly 300lbs. There were two others of smaller size—yearlings, evidently. The owner of the store admitted that the deer had just come from Maine, but as to how and by whom he had nothing to say. Possibly a couple of sportsmen have just returned, each with his legal two deer, and have sold them in the market to help eke our their expenses. Or possibly the underground railroad for shipping game from Maine is to be in operation this season. After all, the only remedy is that proposed by the FOREST AND STREAM—stop the sale of game in all markets.

Mr. George Lanphier, who has delivered the FOREST AND STREAM to a good many patrons for a number of years, is a sportsman as well as a newspaper man. He started for Schoodic, Me., Tuesday, on his fall shooting trip. He is accompanied by his brother and a Mr. Tucker and son. They go for large game. Mr. George Lanphier has a record of a moose and a bear, taken on his shooting trip two years ago.

Talk about partridge shooting in Maine. Well, it can be done. The birds are plenty, but it takes a smart hunter and an excellent wing shot to get them. They are fairly well able to take care of themselves, especially in the sections that are considerably hunted. A Boston gunner and a good shot from Auburn, Me., with a young school-teacher of 17, also from Auburn, were out on Saturday, in the town of Hebron, Oxford county. Mountains, rocks and scrub spruces are plenty in that town. The party started twenty-one partridges in all. They had a good spaniel that treed the birds as well as any dog in the world could do. But even when treed the partridges in that town will not stand till the hunter is fairly in sight. They know how to fly. For dodging behind a scrub spruce, down the mountain or over the rocks and ledges they have no equal. Instantaneous wing shooting is the only way, and snap shots at that. This does not bring the birds half the time. The party used a good many shells, with the result of one bird, shot by J. F. Moody, Jr., the young school-teacher. His record is already six partridges since the open season begun, and he has only Saturdays for shooting.

Shooting in that part of Maine is peculiar. Oh, yes! A couple of Boston gunners, or gunners from some other town near that city, came down to Hebron the other day with a view of hunting partridges for market. They had a couple of well-trained dogs—a pointer and a setter. One day's hunting over rocks and ledges, and in scrub spruces and hemlocks so thick that a man can scarcely penetrate them, was sufficient to make them weary and their dogs lame and footsore. They got not a bird, though starting about the usual number. On the second morning they packed their grips, called their dogs and departed in the direction of the railroad station, declaring that the ground is too rough for either hunters or dogs.

Mr. Frank F. Dodge, of Stephen Dow & Co., with his cousin and camp partner, are just back from their fall hunting and fishing trip to Nova Scotia. They built a fine camp on Lake Debois last year, and are greatly pleased with their location. They have secured by purchase a high point of land for a camp site. The trout fishing is good, and this fall they have been pleased with the shooting. Partridges are so tame that their guide caught one with a running noose at the end of a stick. They were on a moose hunt and did not care to fire a gun, and the guide took this method of catching birds for the table. Black ducks they found to be fairly plenty, though it is early in the season for them. They evidently breed in that lake. Mr. Dodge had the good luck to get seven out of one flock by using both barrels, and he considers this good shooting. There are no deer in the woods there naturally, but a few have been liberated with the expectation that they will multiply, since all the conditions seem to be favorable to their existence. Moose are found and caribou, when they happen to migrate that way.

I have just heard a disagreeable report. It comes from sources that cannot be disputed. A barber in the town of Arlington, Mass., has returned from a shooting and fishing trip to the West Branch of the Penobscot, in Maine. He got home before the legal season on deer had opened, or must have started before that date. But he brought home three deer, or there were three deer shown by him. My informant says that he boasts of shooting deer and partridges galore out of season.

Mr. James D. Kinsley is back in Boston and into the wool trade from summering in Andover, Me., where he goes annually with his wife and children. He is an enthusiast with rod and line. But he says that the brook fishing in that section has been greatly injured by the drought. Brooks that usually carry a good volume of water have been dried up this summer, and there is danger that they are greatly harmed as trout brooks. Partridges he says are most remarkably plenty, though he had but little of the open season. Deer he saw a number of times when on his fishing trips. He thinks that more people have been at the Upper Dam the past season than ever before, and the Richardson and Beaver ponds have been very extensively fished, or fished with a good deal of persistence. Alas for those noble ponds! the ideal fishing grounds of J. Parker Whitney and Sam Betton! They too are doomed to be fished out. But these sportsmen in days gone by took only a few trout for the table. Now the fishermen who go there brag of hundreds taken to be wasted.

The extremely dry weather continues in Maine, though there has generally been rain enough to extinguish the forest fires. But if the rain continues to hold off, the danger will be great, especially when the leaves are all off the trees. The dry weather is stopping the mills and factories, and in many cases the operatives have taken to the woods for extended hunting and camping, simply for want of something else to do. A report from Madison, Me., to-day says that the woolen mills are shut down for want of water in the Kennebec, and a number of the operatives have gone north into the woods for a fortnight's stay and deer and partridge shooting. A Bridgton, Me., report says that the mills there are shutting down for want of water, and that some of the men have gone away on gunning trips.

Oct. 12.—More of the deer hunters are departing and getting ready. Mr. Wm. H. Coggin and Mr. S. Matherson, Jr., are off for the wilds of Aroostook county beyond Kingman. They will be joined by some friends of Mr. Coggin in Maine. They have organized a camp there, and have their guides and everything in readiness. They expect a couple of deer each, and will be about as likely to get them as any party that tries, for the section is an ideal one and the guides are experienced. Mr. Coggin is a new convert to Maine shooting. A couple of years ago he shot his first deer in that State, and has been an enthusiast ever since. An account of his adventures was given in the FOREST AND STREAM at the time. F. W. Tucker and Fred Bemes are a couple of young Boston gunners who have been at the Upper Dam on a shooting and fishing trip. Each has shot his deer—his first one—and they are now hunters during life. They were accompanied by a friend from Lawrence. Senator W. P. Frye, of Maine, is out from camp—his own—in the Cupsuptic Narrows. He is reported to have shot a deer before breaking camp. He also saw a caribou on one of his hunting trips, but was not fortunate enough to get him. Several moose are reported seen in the vicinity of the Rangeleys.

SPECIAL.

GRASS LAKE, ILLINOIS.

Misfortunes of a Day's Hunt.

J. K. AND I had made up our minds to have a good time at the opening of the hunting season, Sept. 15, by spending one day at fishing and one day at hunting. We left Chicago Friday, Sept. 13, and arrived at Antioch safe, where Robert awaited us and took us to his hotel. We got everything in readiness for the next day's fishing and started out early next morning. We fished all morning, but did not get a strike, as the bass would not bite; so we went home, and after dinner we decided to be boys once more and have some fun with the small fish. Luck seemed to be against us, as all we could catch were two sunfish. We went back to the house in disgust, but with the hope of having a good day's shoot next day.

We left shore next morning about 4 o'clock with the intention of going to some place near Hackberry Island, which is nearly a two hours' row from Robert Selter's shore, as the wild rice is very thick this time of the year. We rowed up the channel about half-way to the forks, where both of us stopped. We heard somebody calling as if in distress. We listened and heard them calling for help. We answered their call and turned our boats in the direction of the call. We found that we would either have to row around the channel or push through the rice. We finally got through the rice in the open water. There we could see in the distance a dark form. On reaching the spot we saw two men standing in the water and hanging to a boat and shivering with the cold so badly that it was a difficulty for them to talk. They had started out with two boats that were dry and leaky, and thought they could reach the forks in safety, but they went down before they got half-way there. J. K. got in my boat and gave the boys his to go home in, and we started back to the channel; and what a job it was with two in one boat! We got through O K, but thought it would be too late to go to Hackberry Island, and it was then 5:15 o'clock and they were shooting all around us. We rowed up the channel a way and pulled our boat up on shore and got ready for shooting. The sun was not up yet, but it was light enough to shoot, although it was cloudy and looked as if the sun would not come out at all that day. I had a few shots, but missed them both. Then J. K. shot and got one. He had no more than got the bird in the boat when along came a man who pulled his boat up on our shore, pulled back his coat to show his star and said: "I am the deputy game warden."

J. K. said: "What can we do for you?" (thinking himself safe).

"You are violating the game laws by shooting before sunrise."

We were both thunder struck and looked at one another in amazement, as neither of us would ever think of violating any game laws; in fact, we kept some of the hunters from going out on the 14th to shoot. The deputy took both our guns and said to J. K.: "Come along with me and I will fix it up in a few minutes." J. K. went with him and fixed it up by leaving a deposit of $10 to appear at the Columbia Club, Fox Lake. He then gave us back our guns and said with a smile, "You can shoot now," although the sun was not up, nor did it rise until 7 o'clock. I asked the deputy what time the sun was supposed to rise. He said 5:30 o'clock. At that rate we had been shooting ten minutes before time. That, it seems to me, is a close call for game laws, especially when a fellow has waited five months minus the ten minutes.

We went back to our blind, only to see it occupied by somebody else. That again was discouraging. We finally found a resting place. That is about all it was, as the ducks would pass us on either side by about 100yds., leaving us to look at others shooting. J. K. let out a sigh and said: "Well, Charles, that is what we get for leaving Chicago on a Friday, and on the 13th day of the month too. I expected we were going to get some good shooting after saving those fellows this A.M."

I will not say how many birds we got, as neither of us could hit anything after such an excitement, even if they would happen to come within our reach; and those we did drop would get lost in the rice—all but a few.

I think the game laws are far from being correct in regard to shooting before and after sunrise. If a stipulated time were given, say between the hours of 6 A.M. and 6 P.M., I am sure the game laws would not have been violated by us; and if this is going to be kept up strict, as Mr. Blow says, many a true sportsman will be caught in the same trap.

C. W. D.

Mrs. Jones's Seven Deer.

BOSTON, Oct. 12.—*Editor Forest and Stream:* An article has come to my notice published in the FOREST AND STREAM of Oct. 12, written by your correspondent Special, referring to an article in our Boston papers which reported the killing of a buck by my wife, Mrs. Jones. Special says that "it is to be hoped that this story is true, but thinks it very like one told for a couple of years in succession," and implies a possible doubt of its correctness.

Since 1878 I have passed fifteen hunting seasons in the Adirondacks, most of the time in Franklin county, on a tract of land owned by Mr. P. A. Ducey, located south of

Paul Smith's. My wife has been my companion seven seasons, and in that time has killed seven deer, six of them bucks, and two of them in particular being very fine specimens. The last three were bucks and were killed, one in 1893, one in 1894 and one in 1895, at precisely the same place, on a land runway, in the woods. In each instance, except the last, Mrs. Jones was entirely alone. This year, however, our oldest son, 10 years old, was with her. In this particular place the race is usually a short one. The deer were jumped up fresh from their feeding ground and went to Mrs. Jones on the full jump, with a pair of very fast hounds behind them, and in each instance Mrs. Jones succeeded in killing the game. She uses a .32 Winchester rifle, and would be considered not only a very good shot, but a very cool one. It is the simplest thing in the world to miss a buck when he is on the full jump on a land runway. The aim must certainly be very quick and accurate, and the best and coolest hunters frequently miss them. Mrs. Jones has killed three in succession under practically the same difficult circumstances, and we who were in camp and know the facts consider that, from a sportsman's standpoint, her achievement has been unequaled by any other lady in this section of the country during the past few years; at least if it has, the facts have not come to our notice.

At the first of the three deer above mentioned Mrs. Jones fired two shots, both taking effect in the fore shoulder. At the second, a very large buck, she fired three shots: the first shot was a clean miss; the second straight through the chest, touching the heart; the third, as it proved an unnecessary shot, was fired at the butt of the ear while the buck was struggling to regain his feet after his first fall. At the third buck she fired two shots. Her first chance shot was a fairly good one. As the buck passed a small opening she fired, and, as it proved, shot him plumb through the side, a little above and a trifle back of the heart. He continued to run so strong that she fired a second and unnecessary shot, which proved a miss, as the buck fell after running about 100yds.

WESTLEY JONES.

ONTARIO GAME AND FISH.

BELLEVILLE, Oct. 5.—Here as elsewhere ducks have been very scarce. If there were 200 killed on the opening day, Sept. 1, within a radius of thirty miles of this city, there certainly were not more. And yet the law is fairly well observed in this district—almost as well as the game law in the north of England. The trouble is that there are too many shooters. The fall ducks have begun to arrive, but the weather has been too fine for sport among them.

Two residents of Rochester, N. Y., who were hunting in Peterboro county without having gone through the formality of taking out a license, were brought before Game Warden Smith, who imposed a penalty of $25 on each of them.

An impression got abroad that persons who owned ponds or creeks and had stocked them with trout might take such fish out any time. I had the matter referred to the Fishery Department at Ottawa, and the result was a complete upset of that contention.

Bass fishing has been very good, and several keen sportsmen from your side of the line have enjoyed it. Now that we have in our Hotel Quinte a hostelry second to none anywhere, and greatly improved accommodation at Massassaga Park, there will no doubt be a large influx of visitors next season. As an additional attraction, there are a number of trout ponds—mostly private, but fishable for a very moderate consideration—within an easy drive of the city, and there is splendid fly-fishing for bass in the Trent River, fifteen miles away.

A considerable number of maskinonge have been caught this season at their usual haunt in Mosquito Bay. Yesterday, in fact, a 13½-pounder was caught within a mile of the city. At Stoco Lake, some twenty-five miles hence, some fine ones were taken, the largest, which was secured by a lady, weighing 37½lbs. At Hay Bay, which Piseco visited some years since, all records have been surpassed. Over 400 maskinonge have been caught there this year, and the season ought to be at its best just now.

Should any of your readers want specimens of the black squirrel, I have no doubt that Mr. James Munro, of this city, can furnish a few. R. S. B.

Sea and River Fishing.

THE LAKE WENTWORTH BASS.

Editor Forest and Stream:

Thinking that my brother anglers would be interested in a few lines told of a day's bass fishing in Lake Wentworth, I have presumed on your kindness to the extent of writing them.

Seth C. Bassett and Enoch H. Howes, enthusiastic anglers of this city, first called my attention to the fact that good fishing was to be had there, they with two others having taken seventy-six in a day's fishing a couple of months ago, and I made up my mind to try it, still-fishing at that (don't tell Dr. Henshall), as late as Oct. 1, being unable to go before that time.

I left home with my wife (which serves me right, for now I'm "in it" to the extent of buying another rod and automatic on account of that same) Oct. 3, 1895, at 9:30 A. M., and at 1 P. M. arrived in Wolfeborough, N. H. This beautiful village is at the end of a branch of the Northern Division of the Boston & Maine Railroad, four hours from Boston and two hours from North Conway, and has been a favorite summer resort for over forty years, affording accommodations for over a thousand guests. The view is one of great beauty, and includes the narrow Wolfeborough Bay, beyond whose shining levels the peaks of the Belknap range rise with grand effect, like Vesuvius from the Bay of Naples; the vast blue line of the Ossipee range closes in on the east, and to the northward, beyond the Red Hill's long range, the imposing crests of the Sandwich Mountains cleave the sky. The facilities for boating, riding and fishing are of the best.

A mile or so back from the village is charming Lake Wentworth, five and one-half miles long, two to four miles in width, and endowed with several islands (the largest of which is Stamp Act Island, near the center of the lake, containing about 160 acres) and an abundant store of fish, including landlocked salmon and black bass (*Micropterus dolomei*). On its eastern shore stood Wentworth House, the great feudal mansion of John Wentworth, the last royal governor of New Hampshire, who fled from this fair domain to the British fleet at Portsmouth, bearing Lady Wentworth with him. The house was attacked by patriots in 1775, and burned to the ground in 1820. Six miles distant is Copple Crown, whose summit commands a bird's eye view of Lake Winnepesaukee and its mountain walls, with Chocorua, Mount Washington, Kearsarge, Isles of Shoals, Wachusett and Monadnock.

The human interest of this region is hardly less than that which lends such fascination to similar localities in the Old World, and among the many natural beauties of this "Switzerland of America" its lakes and rivers command a noble and lasting place. From the placid loveliness of the lowland ponds, environed by grassy hills and rich farmlands, to the wild picturesqueness of the lakes of the far North, where the wild cry of the loon is heard by night and the deer and moose come down to drink, there is nearly every variety of water scenery and of attractions for the lover of nature and of the sportsman. Lowell, Thoreau, Everett, Bartol, Starr King, Winthrop and other foremost leaders of American thought and action have here found abundant themes for study and inspiration.

But to return to my fish story. On our arrival at the village we sought the hospitable roof of Mr. W. D. Hersey, to whom we had been referred by Mr. Bassett, and found there a warm welcome when we made known that we were anglers. We had written Mrs. Hersey a few days before of our intended trip, but the letter had been mis-sent, which, however, made no difference to the good old lady, who did everything to make our visit pleasant. We at once made inquiry for a guide, and were fortunate in finding as good a one as man need have—one silent and willing, two of the most important requisites in a guide, to my mind. Such an one we found in Phil Marden. He has a good fleet of boats, plenty of nice tackle (if a man happens along destitute), a good boat house, a bait tank well stocked, and Phil knows the fishing grounds as a father knows his children, having been on the lake thirteen seasons. (N. B.—His address is Wolfeborough Falls, N. H.)

At 4 o'clock we started for the fishing grounds near the center of the lake, just south of Stamp Act Island, near which Walter H. Goss, our popular jeweler, has a beautiful cottage, erected on an island of about an acre in area. I was equipped with an 8oz. lancewood. Bass will leap (Dr. Ellzey to the contrary notwithstanding), and of all the fish that I gathered in on that trip not less than three-fourths of them did leap, some of them more than once, and from 1ft to 3ft. from the water, as many of my brother anglers will readily believe. It was my wife's first trip after bass, and she would like to tell Dr. Ellzey of the many beautiful sights that gladdened her eyes on that delightful outing.

Soon after dropping anchor Phil had a minnow on my No. 2. A minute later I had a strike, the game heading for a great rock that showed near the surface of the water a short distance from our anchorage. It looked as though he had gone under it for a couple of minutes, and Phil remarked, "I guess he's under it all right." But he wasn't, and failing in doing so darted for the anchor rope, bass like; but after a few minutes' careful handling I swung him round to the side of the boat and Phil passed the net under him, declaring him "game." He weighed a pennyweight under 2lbs., and had leaped from the water twice, once on each side of the boat. That was but the beginning of the sport. We stayed on the ground a little over an hour, but the story need not be told—the runs, the jealous care my automatic took of the slack line given by the fish, the leaps and sulks, and all the devices with which bass are conversant. Phil had said before going out that the bass-fishing season was over—that we should get a few probably—but when we left after an hour's fishing we carried home seven black bass, several weighing nearly 3lbs. Our outing made us relish the delicious meal spread before us by Mother Hersey, and no one knows better than she how it should be done.

In the evening Mr. Hersey and I visited an arm of the lake where boys were shooting muskrats by moonlight, after which we walked down the shore of the bay, which in the beautiful light of the autumn moon shone like a silver sea.

Next morning—after a delightful rest—we were on the lake shortly after sunrise, and the same old story, dear to the heart of every lover of the "gentle art," was repeated, and when we left the lake at 11 o'clock I had a string of fourteen bass, comparing well in size with the catch of yesterday, and Phil remarked that it was a catch of which I might well be proud.

At 4 o'clock we bade good-by to our friends at Wolfeborough, after one of the most delightful outings we have ever taken. It was one of the most beautiful days of early autumn, and the balmy air, the glorious sunset behind the grand old peaks of the Mountain State, left an impression upon me that I shall never forget, and returned me to desk and pen a rested and a better man.

> "To him who in the love of nature holds
> Communion with her visible forms, she speaks
> A various language; for his gayer hours
> She has a voice of gladness, and a smile
> And eloquence of beauty, and she glides
> Into his darker musings with a mild
> And healing sympathy, that steals away
> Their sharpness ere he is aware."

My wife and I have enjoyed many outings together, but the remembrance of none are more precious or lasting than that of our outing of two days at Lake Wentworth, here pictured by the novice hand of

CAMPEROUT.

HAVERHILL, Mass.

Susquehanna Notes.

MARIETTA, Pa., Oct. 7.—Fishing is excellent in the Susquehanna, although the water is lower than known for many years. At this point good catches of black bass and salmon (pike perch) have been made during the past week. Local fishermen say bass have never bit more readily than at present and the fall fishing promises to be extraordinary.

I have the following records of catches for the week just ended: Messrs. Henry S. Rich and Harry Knipe, 4 salmon and 3 bass. Messrs. Samuel and John Engle, 4 salmon 3½lbs. each and one bass of 4½lbs. Joseph Roberts on the 4th took 44 bass, running small in size. To-day, Oct. 7, Jacob Mumma took 33 bass, 2 salmon and 2 sunfish. The bass run 2½lbs. downward.

Numerous other catches have been made and we are having what, for this place at least, might be termed a piscatorial feast. STEHMAN.

POTOMAC FISHING.

BLACK bass angling in the vicinity of Washington is rounding up in great shape this season. The river is very low, clear as crystal for some time, and the fish readily take the hook, leaving nothing to desire but a few days off and a good supply of bait. For the latter a good many young carp are in use, but about the best minnow now is the silver-sided fresh-water smelt of the Potomac, a toothless jawed fish of good bass-bait size, very common in the river in the vicinity of the long bridge. Some difficulty is experienced in transporting this minnow up stream to the fishing grounds, but those successfully carrying them along are well repaid for the trouble, as the bass are especially fond of them.

A number of the Washington Anglers' Club members have made regular outings for bass, among whom may be mentioned Messrs. Coburn, Fearson, Otterback, Benzler, Einstein, all of them meeting with good success during the past month. Of course, as Benzler says, fishing here is not easy, in fact to be successful requires hard work.

Up the river further, Seneca, Point of Rocks way, and on up to the celebrated Woodmont waters, many bass have made their last struggle for freedom during the past few weeks. Messrs. Curtis and Laird have had their days of fine sport, landing on several occasions good baskets of fish. Mr. M. A. Tappan is now up river with some friends, and on his return we expect to hear glowing accounts of good hunting and fishing.

Salt-water fishing in the lower Potomac and in Chesapeake Bay has been indulged in by hundreds of Washington anglers. Messrs. Newman and Wetzel report fishing so good that they literally "filled the boat."

Fortress Monroe or Old Point Comfort, with its good hotels and fine salt-water fishing, is a Mecca for not only many Washingtonians, but for many tourists from far and wide. Among the good fishes here are the bluefish, salt-water trout or weakfish, tautog, known as blackfish, sheepshead (the writer has seen some very fine specimens of sheepshead brought in from a few miles distant from the wharf), and several choice kinds of the smaller pan fishes. BART.

Black Bass in the Bay of Quinte.

POUGHKEEPSIE, N. Y.—*Editor Forest and Stream:* I have just received from a brother angler, George H. Christy, Esq., of Pittsburg, Pa., with whom I have spent many pleasant days in the past on the Bay of Quinte, but whom I was prevented from joining on his trip this year, the following score card of black bass taken on Oct. 9, 1895, which will show you that my statements in regard to the wealth of these waters during the months of September and October have not been exaggerated.

Date, Oct. 9, 1895. Waters, Baker's Island Flats. Weather, cold and clear. Wind, northwest—moderate. Largest fish, 4½lbs. Total number: A. M. 17, P. M. 16. Total weight, 72lbs. Oarsman, Edward Danny, of Clayton, N. Y. Bait, sour mash shiners.

Maxim: *De minimis Angler non curat.*

J. S. VAN CLEEF.

A Big Bass in the Sound.

ONE day early this week Messrs. Sidney N. Mayer and S. Julien Held, of New York, had an extraordinary piece of fishing luck while trolling, in the water off Rye, N. Y. The fish struck heavily the bloodworms and bait with which they were trolling, about 15ft. from shore, and after a fierce half-hour fight, during which he pulled out about 500ft. of line, he was landed about a quarter of a mile from where he was first struck. Though thoroughly exhausted, he was too large for the landing net and required the assistance of the boatman to lift him from the water. It proved to be a striped bass weighing 31lbs., in length 44in., and in girth 23in. Mr. Mayer was the fortunate fisherman, while Mr. Held looked on. Mr. Mayer will have the fish mounted as a trophy of good luck and rare skill.

Do You Fish?

If so, you may be glad to know that the streams along the line o the Lehigh Valley Railroad have been restocked with many varieties of fish, and it will pay you to visit them if you want good sport. Address Chas. S. Lee, General Passenger Agent, Philadelphia, for fu l information.—*Adv.*

Game and Fish Protection.

A New Hampshire Shipper Fined.

NASHUA, N. H., Oct. 7.—*Editor Forest and Stream:* Commissioner Wentworth, of this State, made quite a haul yesterday, convicting James Shea, a butcher of Wilton, N. H. of shipping twenty-five partridges out of the State in direct violation of the law. Shea was fined $250 and costs; total, $266.66—quite an expensive operation for Shea. There was no reasonable doubt that nearly all the birds in his possession were snared birds; but that is a more difficult matter to prove, and he was only fined for shipping from the State.

This prosecution will prove a great blow to one of the worst nests of snarers, illegal shooters and shippers that can be found in New England, and reflects great credit on Commissioner Wentworth.

Some slight idea of the great drain from this source can be gained from the fact that this sort of business has been done *sub rosa* for years along the line of the Wilton Railroad, the number of birds running up into the thousands each year; but owing to personal considerations it is nearly impossible to secure evidence enough to cause conviction.

A warrant was issued yesterday for a Frank Stearns, of Lyndeboro, who, it is alleged, furnished Shea with most of the snared birds. Stearns escaped by diving under a horse he was unharnessing just as the officer arrested him. The warrant will be kept though, and he will be promptly arrested if he returns to this part of the country. A warrant was issued to-day for an illegal shipper at Russell's Station, on same line of railroad, and the offender will probably appear in court to-morrow on two distinct complaints.

These are not all the shippers by any means with which we are afflicted, but they are two of the principals, and their

conviction will surely have a very wholesome effect on the rest.

I think I am safe in saying that Commissioner Wentworth has accomplished more in the line of prosecutions than ever has been done in the State before during the same length of time by any one man.

Prior to this considerable time and money have been spent looking up evidence in this particular section, nearly always without avail. We have, however, within the past few days discovered evidence enough to cause great sorrow in the ranks of the poachers, and the end is not yet.

Oct. 9.—A sort of a P. S. to my letter of yesterday. Commissioner Wentworth had the following men before Judge Hoitt this morning, with the results annexed:

Walter A. Russell, Russell's Station. Shipping twenty partridges to Boston. Fine and costs, $220.04. Paid.

G. A. Reynolds, Lyndeboro. Snaring one partridge, $18.50. Paid.

H. M. Stevenson, Lyndeboro. Snaring one partridge. Fine and costs, $18.50. Paid.

The two latter undoubtedly have snared many more birds, but the evidence was not very strong, and as they were willing to plead guilty to one each, it was thought best to accept the plea rather than risk not being able to fully prove a much larger complaint. There are more "on the list."

B.

Non-Residents in Canada.

TWO WEEKS ago Monday morning three representative young men of the Fourteenth Ward, John Pauckner, a brother of Alderman William Pauckner, of No. 68 Alexander street; William Peeters, of No. 28 Cypress street, and Henry Kraashaar, of No. 172 Mt. Hope avenue, left their homes with the intention of spending two or three weeks among the lakes of Upper Canada. It was in the morning when they made their start. The sky was clear and the hearts of the young men were happy as they thought of the sport they were to have across the line. Each one carried a Parker hammerless gun and in their wagon were sundry other articles necessary for campers. They boarded a Central Hudson train and early in the afternoon they were subjected to a rigid examination by the Custom House officials at Suspension Bridge. The official said that after once getting their guns over the border they might shoot as much as they choose.

They went to Peterboro, Ont., by rail, where they stopped for one day, continuing on the next morning to Chemung Lake, nine miles north. Their stay there was brief, and the next day they went to Buckhorn Lake, Deer Bay, camping in the evening at Lovesick Lake. With them the three young men carried a tent, stove and other camping utensils. They were accompanied by three guides and a female cook, whom they had hired at Peterboro at $7.50 per day for the four servants. Remaining at Lovesick Lake four days, the merry party enjoyed themselves hugely. From that place they journed on to Clear Lake. At this juncture the three unsuspecting sportsmen met with trouble. In short, they unintentionally violated one of the laws of the United Kingdom, and contributed $75 to Queen Victoria's pin money. It seems that after Pauckner, Peeters and Kraashaar left Lovesick Lake they took a road leading to Burleigh Falls, a celebrated Canadian watering place. J. H. Holmes, the proprietor of the Burleigh Falls Hotel, greeted them cordially, and the three men purchased a stock of provisions of him, for which they paid the landlord about $10. They spent considerable money at Holmes's hotel, and proceeded on to Clear Lake, reaching that body of water Friday night, Sept. 20. Pitching their tent, the three innocent "Yanks," thoroughly tired, lay on their rude cots and slept the sleep of the just.

The next morning they were up bright and early examining their guns and boats. Unbeknown to them they were preparing to violate a Canadian law, and Landlord Holmes was spying upon them. While at the hotel Pauckner told Holmes that neither himself nor his companions had taken out a license to shoot in Canada, which costs $25, and Holmes volunteered no advice. As soon as they had left the place, however, he hitched up a horse and drove to Lakefield—a village distant about fifteen miles—where he found Postmaster John Coseman, to whom he confided his secret. He said that the three Americans carried guns without a license to shoot game. The postmaster telegraphed to Belleville, eighty-seven miles distant, for Game Warden H. K. Smith. Holmes then returned to his home, congratulating himself that he had made a good day's pay. Game Warden Smith started for Burleigh Falls immediately after receiving the telegram, and on the following Monday morning drove to the shore of Clear Lake. Our three friends were out in a canoe fishing, all unconscious of their danger. Smith was accompanied by his deputy, and catching sight of Pauckner and his two friends out on the water, he jumped into a boat and rowed out to them. He informed the three sportsmen that they were under arrest and showed his commission as game warden and magistrate of the township. The three offenders rowed to the shore with the warden and were tried, convicted and sentenced on the green shores of Clear Lake.

They were charged with shooting without a license, and when Peeters demanded a jury trial he was given the marble heart. Smith declared at first that he would fine each of them $50 and confiscate their guns, which were very valuable, and the ammunition besides. Peeters and Pauckner parleyed with him for nearly an hour, and he finally consented to let the unfortunate Rochesterians off with a fine of $25 each. They paid $75 in cold cash to the warden and went back to their tent to ponder. Smith had not seen the men shoot anything, but he considered five dead partridges which were hanging on the side of their tent as sufficient proof of their guilt. All kinds of game were in season, excepting deer. Smith and his deputy were seen hanging around the lake for three or four days afterward, watching for an opportunity to arrest the Americans again and bleed three more fines from them. One was enough for the unfortunates, however, and during the remaining three days that they stayed on Canadian soil they did not fire a shot.

The Canadian game laws offer a bounty of one-half all fines to any person who gives information to a game warden which will lead to the arrest and conviction of a poacher. Holmes therefore made $37.50 out of his contemptible trick. There were more than twenty-five Rochesterians registered at Mr. Holmes's hotel at the time, and they were justly indignant at the treatment accorded their fellow Americans by the landlord. Several of the guests declared that this will be their last season at the Burleigh Falls Hotel. One man named Ingraham, a Pennsylvania millionaire, stopped at Holmes's hotel two years ago and was treated in exactly the same manner as were Pauckner and his two companions. Ingraham was very indignant and has since built a cottage on Jack's Lake, a few miles distant, where he can fish as much as he likes without being near Holmes, who, Pauckner says, is considered to be the meanest man in Ontario.

The three young men were so downhearted after their unpleasant adventure that they packed up their goods and returned to Peterboro the next night. At that city they became acquainted with John Huffman, proprietor of the Huffman House, who proved a true friend to them. Huffman tried to have the affair investigated, but could do nothing. He declared it to be the most contemptible trick that has been credited to Holmes. Holmes has not eclipsed his past efforts in that line. Pauckner and his two friends returned to Rochester last week, ten days sooner than they had arranged. They feel rather blue and are thoroughly angry at the Canadian Government, and its game wardens in particular. All three men declare that they will never visit Canada again with a view to sport.

The story of the adventures of three Rochester sportsmen in Canada, published in our local columns yesterday, has a moral which we hope will be heeded by every American who in the future finds himself at Burleigh Falls, Ont. This is the moral: "Do not put up at the Burleigh Falls Hotel, J. H. Holmes, proprietor, nor spend a cent in that house under any circumstances."—*Rochester Democrat and Chronicle.*

The Kennel.

FIXTURES.

BENCH SHOWS.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show. John L. Lincoln, Sec'y.

FIELD TRIALS.

Oct. 22.—Columbus, Wis.—Northwestern Beagle Club's third annual trials. Louis Steffen, Sec'y, Milwaukee.

Oct. 29.—Assonet Neck, Mass.—New England Field Trial Club's fourth annual trials. Arthur R. Sharp, Sec'y, Taunton, Mass.

Oct. 30-31.—Monongahela Valley Association Trials, Greene county, Pa. W. H. Beazell, Sec'y, Homestead.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 5.—Oxford, Mass.—New England Beagle Club trials. W. S Clark, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, 250 West Twenty-second street, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

HUNTING.

Nov. 13.—Western Massachusetts Fox Club's meet.

Oct. 15.—Buckfield, Me.—Monmouth Fur Club's third annual meet. Wesley C. Prescott, Sec'y, Monmouth, Me.

Nov. 18.—Owingsville, Ky.—National Fox-Hunter's Association's second annual meet. H. L. Means, Sec'y, Louisville, Ky.

Oct. 28.—Barre, Mass.—Brunswick Fur Club's meet. Bradford S. Turpin, Sec'y.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.

Jan. 20.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.

Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.

COURSING.

Oct. 23.—Goodland, Kan.—Altcar Coursing Club's meeting. T. W. Bartels, Sec'y.

Oct. 28.—Goodland, Kan.—Kenmore Coursing Club's meeting. C. F. Weber, Sec'y.

Northwestern Beagle Club of America.

MILWAUKEE, Oct. 9.—*Editor Forest and Stream:* Following is the list of nominations for the Northwestern Beagle Club's third annual field trials to be held at Columbus, Wis., beginning on Tuesday, Oct. 22:

CLASS A.

For dogs of all ages, 15in. and over 13in., that have not been placed first in any all-age class at any beagle trials held in America.

ROYAL ROVER—G. A. Buckstaff's b., w. and t. dog (Rover—Singer G.).

SPOTTED CHIEF—G. A. Buckstaff's b., w. and t. dog (Krueger's Bob—Pearl Caroline).

KING LEAD—C. Niss, Jr.'s, b., w. and t. dog (Goodwood Driver—Goodwood Music).

ALDERMAN—H. A. Dillingham's b., w. and t. dog (Krueger's Bob—Fannie).

TONY W.—Louis Steffen's b., w. and t. dog (champion Tony Weller—Topsy S.).

CLASS B.

For bitches of all ages, 15in. and over 13in., that have not been placed first in any all-age class at any beagle trials held in America.

PEARL CAROLINE—C. Niss, Jr.'s, b., w. and t. bitch (Krueger's Judge—Krueger's Pearl).

RUTH C.—H. A. Dillingham's b., w. and t. bitch (Base—Nellie).

NELLIE S.—C. Spellberg's b., w. and t. bitch (Waldo—Flora S.).

FLORA S.—C. Spellberg's b., w. and t. bitch (Prince—Spotty).

LADY E.—R. Engelmann's b., w. and t. bitch (True—Dolly).

PANIC—E. H. Rummele's t., b. and w. bitch (Doc—Peg).

CLASS C.

For dogs and bitches of all ages, 13in. and under, that have not been placed first in any all-age class at any beagle trials held in America.

SPEEDIE—Dr. A. White's b., w. and t. bitch (Bounce—Nellie).

ROYAL DICK—G. A. Buckstaff's b., w. and t. dog (champion Royal Krueger—Baby W.).

QUEEN SINGER—C. Aiss, Jr.'s, b., w. and t. bitch (Rover—Singer G.).

PHYLLIS—Truman Sear's b., w. and t. bitch (champion Royal Krueger—Flora K.).

PRINCE II.—Theo. Zschetzsche, Jr.'s, b., w. and t. dog (Brittle—Judy).

CLASS D—DERBY.

For dogs and bitches, 15in. and over 13in., whelped on or after Jan. 1, 1894.

RINGER—R. Engelmann's b., w. and t. dog (True—Dolly.)

RAMROD—R. Englemann's b., w. and t. dog (Black Joe—Flora).

DYKE—Henry Hiller's b., w. and t. dog (Finder II.—Molly).

UNSER FRITZ—G. A. Buckstaff's b., w. and t. dog (Royal Rover—Bess).

TEN SPOT—G. A. Buckstaff's b., w. and t. dog (Jim Lee—Spaedte).

HARK—Louis Steffen's b., w. and t. dog (Lee II.—Daisy B.).

CLASS E—DERBY.

For dogs and bitches, 13in. and under, whelped on or after Jan. 1, 1894.

OONAH—Truman Sear's w., b. and t. bitch (Sandy—Phyllis).

SPEEDIE—Dr. A. White's b., w. and t. bitch (Bounce—Nellie).

CHAMPION CLASS F.

For dogs and bitches of all ages, 15in. and over 13in., having won a first prize any beagle trial held in America.

MAYFLY—H. A. Dillingham's b., w. and t. bitch (Doc—Peg).

CHAMPION CLASS G.

For dogs and bitches, 13in. and under, having won a first prize at any beagle trial held in America.

JUDY—Theo. Zschetzsche, Jr.'s, b., w. and t. bitch (Spelo—Nell).

The headquarters are at Hotel Whitney; accommodations $1 per day; transportation to and from grounds, round trip, 50 cents per day. LOUIS STEFFEN, Sec'y.

Ranging at Field Trials.

BOSTON.—*Editor Forest and Stream:* Mr. Brailsford's communication in FOREST AND STREAM of Oct. 12 is most courteous in its tone and forceful in its good sense. His remarks impressed me as being worthy of the most earnest and respectful attention of American sportsmen. He has ripe experience and sound judgment to draw on for his conclusions. He is acknowledged as being an authority on English field work with dogs and gun, both in cover or open, turnips or moors, the latter being much the same as our prairies, so far as the work and requirements governing a dog's work are under consideration.

Of course we need a dog that will range well, that will range wide and fast, but that is not all of field work. Mr. Brailsford says that on the moors the dogs must range wide and fast, but their range must be controlled and the dog must work under the direction of his breaker or handler. He further in substance says that these rules are elementary and good on the prairies as they are on the moors.

A chief feature of what is called wide ranging is the utter helplessness of the American field trial handler; the dog goes whither it lists. The whistle is going incessantly, with as much result as if it were blown at a runaway horse or locomotive behind time. The handler has no control whatever of the dog in many instances, and in not a few he has to shape his own course more or less by the dog's whims and inclinations. If the dog chooses to hunt out a certain section, the handler has no alternative but hunt there too. It is not an exhibition of work such as the gentleman sportsman would care to adopt for his pleasure afield. Mr. Brailsford has advanced his ideas with gentle courtesy, but they contain the serious principles of true gentlemanly sportsmanship nevertheless. It may be true that we may not desire our dogs broken to precisely the same lines as the dogs are broken in England, but still we should have them broken. No one will deny that there is a difference between proper training and no training at all, or at least a training which is mixed, some details being well taught, other ones quite essential being but partly taught or not at all. That is one reason, in my opinion, why the work of the American dog is of such a peculiar character. The trainer teaches the dog to point well if he can do so, and back after a certain loose and feeble fashion, perhaps imperfectly and indeed perhaps not at all, and the rest of the dog's effort is much accordingly as the dog is pleased to exercise it. The slipshod training is not a matter which the American trainer seems to care to discuss very much. I have read many of their writings, their suggestions on improving field trials and field trial clubs, and quite frank and assertive criticisms on the doings of the judges, but I think I have yet to read a line expressing any dissatisfaction with their own doings, their own skill or the progress of their profession toward improvement. To teach a dog to hunt to the gun properly is no doubt much more laborious than to give him experience in pointing and leaving the rest of the work for the shooter to do: that is, to scurry and chase the dog in his work, as Mr. Brailsford describes in his letter. I for one would like to see American owners take up Mr. Brailsford's ideas for thorough discussion, for they contain the matter of long standing complaint in field trials, and no doubt they are an old grievance with owners who have dogs broken for their own private use.

HUBITE.

Newton Field Trials.

Editor Forest and Stream:

The first meeting of the United States Field Trial Club, to be held in North Carolina Nov. 7 next, promises to be one of the best the club has held. There are a number of young dogs now in training and entered in the Derby, that are reported to be "cracker jacks," and the outlook now is that some high class youngsters will be shown, while the All-Aged Stake will be a veritable battle among giants. Nearly all of the older dogs that have been seen at the trials for the last two seasons and that are eligible to run are entered in those stakes. The accommodations for visitors will be of the best character. The rates will be $2 per day, including the lunch sent out at mid-day. The meeting will be presided over by Dr. N. Rowe, president of the club. For two years the president (owing to ill health) has not been able to attend the club meetings, and all will be gratified to again see him in the saddle. As I shall be on the grounds some days before the opening date, I will with pleasure secure rooms and saddle horses for those who desire it.

W. B. STAFFORD,
Sec'y U. S. F. T. Club.

National Beagle Club.

PREMIUMS and entry blanks for the sixth annual field trials of the National Beagle Club of America are now ready and have been sent to all owners of beagles that are known. Those that have not received any can procure the same by furnishing their address, and the necessary blanks will be forwarded at an early date. Any information desired will be cheerfully supplied. Our trials last year were very successful, and the club hopes that their selection of such well-known judges as Messrs. Turpin and Quynn will be the means of swelling the list of entries to a larger number than ever. The trials begin Nov. 11 and continue every day until finished. Entries close Oct. 19.

Mr. George F. Reed, of Barton, Vermont, has made the liberal offer of a nice bred bitch, not less than three months old, a special prize to the owner of the dog or bitch that marks his or her game best by giving tongue. Donor not to compete. Judges to decide. Other specials will be offered and published in the press later on.

GEO. W. ROGERS, Sec'y.

The Whippet Races.

THE whippet races of the Country Club were run at Clyde Park, beginning on Oct. 9. The first event was:

The National handicap, for dogs of any age, owned by members of the Country and New England Kennel clubs.

First Heat.

Owner, name and finish order.	Weight, lbs.	Start, yards.
Oliver Ames, 2d, Ames Flasher, 1	14½	20
Hunnewell & Brooks, Snow, 2	22½	6½
J. Murray Forbes, Spring, 3	19½	10¼
Walter J. Comstock, Paddy, 4	20½	8¾

Winner's time, 12²⅝s.

Second Heat.

Oliver Ames, 2d, Ames Flyer, 1	14	20½
Hunnewell & Brooks, Spot, 2	22½	6½
Walter J. Comstock, Tyrant, 3	22	7
Walter J. Comstock, Blackburn Billy, 4	28	1

Winner's time, 12s.

Final Heat.

Name of whippet:	
Ames Flyer	1
Sport	2
Ames Flasher	3
Snow	Scratched

Winner's time, 12s.

Brookline handicap, for bitches of any age, owned by members of the Country and New England Kennel clubs.

First Heat.

Owner, name and finish order.	Weight, lbs.	Start, yards.
Walter J. Comstock, Mary, 1	13	20
Hunnewell & Brooks, Zip, 2	22½	5½
Oliver Ames 2d, Ames Favorite, 3	15½	13¾

Winner's time, 11⁴⅝s.

Second Heat.

Oliver Ames 2d, Ames Fashion, 1	12½	21¾
Oscar W. Donner, Streak, 2	21½	6½
Walter J. Comstock, Nancy Hanks*	15½	13¾
Walter J. Comstock, Bella*	14½	15¾

* Engaged in fight, did not finish.

Winner's time, 12s. In this heat the winning whippet won with a margin of about 10yds.

Final Heat.

Name of whippet:	
Mary	1
Ames Fashion	2
Zip	3
Streak	4

Winner's time, 11⁴⅝s.

The programme of the day's sports was carried out under the direction of the following officials:

Stewards, Edward Brooks, H. H. Hunnewell, Jr., O. W. Donner, Winslow Clark, Allan Forbes, James E. Green, Arthur R. Sharp, Robert F. Perkins, Oliver Ames 2d, James L. Little, Samuel Hammond, Jr., Arthur W. Stedman and A. Hollis White; D. E. Loveland, clerk of course; Frank F. Dole, handicapper and starter; Walter C. Baylies, flag steward; James Mortimer, judge; Francis M. Curtis, clerk of the scales.

Second Day—Thursday, Oct. 10.

The autumn handicap, for dogs of any age, $2 entry fee, with $100 added; 50 per cent. to first, 25 per cent. to second, 15 per cent. to third and 10 per cent to fourth.

First Heat.

Owner, name and finish order.	Weight, lbs.	Start, yds.
Samuel Ford, Buck, scratch	27	2
Samuel Berry, Turpin, 1	25⅞	3½
Harry Mellor, Spider, 2	22	7

Winner's time, 12²⅝s.

Second Heat.

Walter J. Comstock, Tyrant, 3	22	7
Samuel Berry, Bendigo, 3	15⅝	11¾
Oliver Ames 2d, Ames Flasher, 1	14½	20

Winner's time, 12¹⅝s.

Third Heat.

Hunnewell & Brooks, Spot, 2	22½	6½
James Connor, Black Eye, 3	19	11
Robert Bedford, Spring, 1	16	16

Winner's time, 12¹⅝s.

Fourth Heat.

Hunnewell & Brooks, Snow, 2	22½	6½
J. Murray Forbes, Spring, did not finish	19½	10¼
Samuel Berry, Tim Toddie, 1	14⅞	20
Oliver Ames, 2d, Ames Flyer, scratched	14	21½

Winner's time, 12¹⅝s.

Final Heat.

Name of whippet:	
Turpin	4
Ames Flasher	3
Spring	2
Tim Toddie	

Winner's time, 12s.

The Country Club Handicap, for dogs and bitches of any age, owned by members of the Country and New England Kennel clubs, $2 entry, with $100 Cup added, Cup to first, entry fees to second.

First Heat.

Owner, name and finish order.	Weight, lbs.	Start, yds.
Oliver Ames, 2d, Ames Flasher, d, 1	14½	20
Hunnewell & Brooks, Snow, d, 2	22½	6½
Walter J. Comstock, Paddy, d, 3	20½	8¾

Winner's time, 12¹⅝s.

Second Heat.

Oliver Ames, 2d, Ames Flyer, d, 1	14	21½
Hunnewell & Brooks, Spot, d, 2	22½	6½
J. Murray Forbes, Spring, d, 3	19½	10¼

Winner's time, 12²⅝s.

Third Heat.

Walter J. Comstock, Mary, b, 1	13	20
Hunnewell & Brooks, Zip, b, 2	22½	5½
Oliver Ames, Ames Favorite, b, 3	15½	12¾

Winner's time, 12s.

Fourth Heat.

Oliver Ames, 2d, Ames Fashion, b, 1	12½	21¾
Oscar W. Donner, Streak, b, 2	21½	6½

Winner's time, 12⁴⅝s.

Final Heat.

Ames Flyer, d	3
Ames Fashion, b	2
Mary, b	1
Ames Flasher, d	4

Winner's time, 12s.

Third Day—Friday, Oct 11.

The Boston handicap, for bitches of any age, $2 entry, with $100 added, 50% to first, 25% to second, 15% to third, and 10% to fourth:

First Heat.

Owner, name and finish order.	Weight, lbs.	Start, yards.
Oliver Ames, 2d, Ames Fashion, 1	12½	21¾
Hunnewell & Brooks, Zip, 2	22½	5½
Harry Mellor, Nell, 3	16½	13¾

Winner's time, 12¹⅝s.

Second Heat.

Oliver Ames, 2d, Ames Favorite, 1	15½	13¾
O. W. Donner, Streak, 2	21½	6½

Winner's time, 13s.

Final Heat.

Hunnewell & Brooks, Zip, 1	22½	5½
Oliver Ames, 2d, Ames Fashion, 2	12½	21¾
Oliver Ames, 2d, Ames Favorite, 3	15½	13¾
O. W. Donner, Streak, 4	21½	6½

Winner's time, 12¹⅝s.

The Maiden Handicap, open to all, for dog and bitch puppies under 12 months. $2 entry, with $100 added; 50% to first, 25% to second, 15% to third, and 10% to fourth.

First and Final Heat.

	Weight, lbs.	Start, yards.
W. J. Comstock, Fred, 2	19½	10¼
A. E. Hoey, Whisper, 1	14½	17
Samuel Jackson, Little Mary, 3	13	20
P. H. Welch, Trilby, 4	9	34

Winner's time, 12⁴⅝s.

Fourth Day—Saturday, Oct. 12.

The free-for-all handicap, for dogs and bitches of any age, $2 entry, with $100 added; 50 per cent. to first, 25 per cent. to second, 15 per cent. to third and 10 per cent. to fourth.

First Heat.

Owner, name and finish order.	Weight, lbs.	Start, yards.
Oliver Ames 2d, Ames Fashion, b., 1	12½	21¾
Harry Mellor, Nell, b., 2	15½	13¾
Alfred E. Hoey, Whisper, b., 3	14⅜	17
Hunnewell & Brooks, Zip, b., 4	22½	5½

Winner's time, 12¼s.

Second Heat.

Oliver Ames, 2d, Ames Flyer, d., 1	14	21½
Samuel Berry, Turpin, d., 2	25⅞	3½
Hunnewell & Brooks, Spot, d., 3	22½	6½
Harry Mellor, Spider, d., disqualified	22	7

Winner's time, 11¼s.

Third Heat.

Robert Redford, Spring, d., 1	16	16
Oliver Ames, 2d, Ames Flasher, d., 2	14½	20
Samuel Berry, Bendigo, d., 3	18⅝	11¾
Samuel Ford, Buck, d., scratched	27	2

Winner's time, 12⅛s.

Fourth Heat.

Samuel Berry, Tim Toddie, d., 1	14⅞	20
Oscar W. Donner, Streak, b., 2	21½	6½
James Connor, Black Eye, d., 3	19	11
Oliver Ames, 2d, Ames Favorite, b., scratched	15½	13¾

Winner's time, 12¼s.

Fifth Heat.

Thomas Shallcross, Jack, d., 1	18½	11¾
J. Murray Forbes, Spring, d., 2	19½	10¼
Hunnewell & Brooks, Snow, d., disqualified	22½	6½

Winner's time, 13¼s.

Final Heat.

Name of whippet:	
Ames Fashion	1
Tim Toddie	2
Ames Flyer	3
Spring	4
Jack	5

Winner's time, 12s.

The Consolation handicap (post entries), for dogs and bitches of any age not having won any of the above money, $2 entry, with $75 added.

First Heat.

W. J. Comstock's Paddy	1
Hunnewell & Brooks's Snow	2
H. Mellor's Nell	3
Comstock's Blackburn Billy	4

Winner's time, 13s.

Second Heat.

Berry's Bendigo	1
Forbes's Spring	2
Comstock's Tyrant	Disqualified

Winner's time, 13s.

Final Heat.

Comstock's Paddy	1
Forbes's Spring	2
Hunnewell & Brooks's Snow	3
Berry's Bendigo	4

Winner's time, 12¼s.

Vagrant Nell.

Editor Forest and Stream:

Some twenty years ago there came into my possession a female hairless Mexican dog. Of far more than average intelligence, sprightly, of a happy disposition, affectionate and beautiful form, I recollect her as a most loving and lovable animal; but she was a natural born runaway, and kept me always guessing—when out of sight—as to her whereabouts.

On at least two occasions she was stolen during her runaway spells, and more by good luck than wit was each time recovered as she was about to be taken by her captors from the city; so to save worry and future trouble, a small but stout steel chain was purchased and securely locked to a well-fitting collar; for be it known that though symmetrical in neck and head as in body, she could free herself from a loosely fitting collar.

A collar and chain were her disgust, and she would when desirous of having a play spell in the yard come and fawn and beg of me, or in fact any one of the family, to have the distasteful object removed, at least for a time, as much as to say, "Please do take these ugly things off of me. They are neither comfortable nor pretty for a nice lady like me to wear."

And when her wishes were complied with, her joy was excessive and evinced by kisses, licking the hands and all joyful canine antics and vocal expressions possible.

But a constant watch was indispensable, for if allowed out of sight but for an instant she was off with the speed of a 2:40 racer, no one could calculate whither; for with all her beauty and natural goodness she was like many people in the world, a born vagrant.

I come now to one of the curious manifestations of genuine dog wit. One beautiful summer evening, as I sat on the garden side veranda of the house, my office boy, who had taken her out for a walk, returned, and as he led her up the walk from the gate she broke away and rushed up to me with almost frantic manifestations of joy, although she had left me only a half hour before with Otto at the opposite end of her chain as her custodian.

Otto reported that during their walk she had been unusually restive, trying repeatedly to get away and once succeeding, leading him a merry chase before recapture.

So amid her supplications I said: "Nell, you have been a very bad girl, so your chain cannot be removed, but you may play in the back yard with it on if you like." Comprehending, perhaps more from the look of severity on my face than from my words, the condition of my mind, she with evident signs of chagrin quietly betook herself out some 15ft. away.

Having nothing in particular to engage me, I watched her as a leisurely smoked my after-dinner cigar.

Soon I noticed (it was just in the dusk of the evening, a time suited to what was happening) that she was busily engaged at the border of one of the flower beds in scraping together perhaps a pile of dirt.

Cautiously making my way—for my curiosity was up—near enough to see what she was doing, I saw a curious sight. So intent was she engaged that I drew very near, near enough to put my hand on her, but she paid not the slightest attention to my presence. She had gathered the chain into a neat little pile and was in the act of burying it with loose dirt from the border of the flower bed. With head bowed low, nose touching the mound, she completed her work. The chain had all disappeared except the few inches reaching to the collar.

For a moment she seemed to note if her work was well done, and then with a glad bound she broke away, supposing that the hated chain had been buried beyond resurrection. But lo! the hated object still clung to her, and I shall never forget the look of pathetic disgust that mantled her face and eyes as she slunk away to her favorite place on the porch.

Poor Nell finally paid the penalty of her vagrant inclinations, as some dog thief evidently captured her.

DR. DENNIS.

The Champion Stake.

CHARLOTTESVILLE, Va.—*Editor Forest and Stream:* I was glad to see that excellent letter by Mr. Ed. Dexter and Mr. W. W. Titus in your issue of Sept. 21. Such an association as therein suggested might make an exhibition of what can be done with the highest class shooting dogs that can be bred when trained to the utmost pitch of perfection.

Good shooting dogs are what the public are after; not dogs that require a professional handler to manage them, but ones that do their work without requiring cautioning or coaching of any kind.

Mr. Brailsford, whose thorough knowledge and vast experience are unrivaled, evidently thinks that American dogs are not taught to range as well as they ought to be. Let us consider whether his opinion is correct, or if he is only objecting to a system that differs from what he is accustomed to. We know that there is a vast difference between American and English hunting grounds. No doubt the English system is the best for that country, but have we the best possible system for this one? It seems to me that we have two systems, a field trial system and a shooting dog system. Field trial dogs as a class do not hunt out the ground sufficiently thoroughly, but show what is called their "bird sense" by picking out the most likely places for game and missing the less likely ones. By so doing, no doubt they secure a greater number of points in a given time than they would otherwise do, and are in fact the best sort of dogs one can have, when we have unlimited space and a horse to ride; but when we have neither of these luxuries, I don't think most of us appreciate this sort of ranging.

Shooting dogs, as a class, beat out their ground more thoroughly, but do not range sufficiently wide when they ought to.

Would it not be a good idea for this Field Trial Champion Association to make a specialty of ranging, which is the only weak point that our dogs have. It is only a matter of more careful training, and the result would be that the sporting public would no longer say "that they don't want to shoot over field trial dogs." On the contrary, they would soon find out that they are the most satisfactory kind of shooting dog.

If the field trial dog has any other weakness besides that of not ranging properly, it is want of stamina; so I would suggest that all the first heats should be for four hours, and the subsequent heats no longer than the judges think necessary.

I contend that ranging is the most important part of a dog's education, and requires far more time and skill than everything else put together. It is natural for a dog with brains to find out the places which birds prefer to use, but unnatural for him to study the convenience of the man who wants to shoot them.

C. E. MCMURDO.

A Work on Retrieving.

FETCH AND CARRY, a Treatise on Retrieving, by B. Waters, is intended to cover the full scope of retrieving, from the first attempts of the dog as a pupil to the most finished work to the gun on land or water. It treats the subject as a distinct accomplishment, which it really is, and not a mere incidental branch of the finding dog's education. The two systems in use, the natural method and the force system, are minutely described, and it is shown that these systems when properly applied are largely complementary to each other. Instructions are given on the manner of handling broken retrievers, and on the manner of handling two retrievers at one time so that they will not interfere with each other. Many hints are given to the amateur for his own self-discipline, which will greatly add to his success in training, and the self-restraint inculcated will be of service to him in any calling in life. Many incidental features of retrieving in conjunction with the finding of birds are fully treated, and the advantages and disadvantages of having one dog do the work of finding and retrieving are specially explained. There is no more important part of a dog's work to the gun than is retrieving, whether the shooter is afield for pleasure or profit, and there is no part which as a rule shows such unskillful training and as a natural consequence such slovenly performance. The work contains seventeen chapters, on the following subjects: The Amateur Trainer, The Importance of Retrieving, The Natural Retriever, The Educated Retriever, Implements and Commands, The Natural Method, The Force System, Seeking Dead and Wounded Birds, Incidental Training, Wildfowl Retrieving, The Irish Water Spaniel, The Chesapeake Bay Dog, Handling Retrievers, English Retrievers (by Capt. C. E. McMurdo), Qualities of the Retriever, The Finder-Retriever and The Dog's Mentality. The work is written in plain and simple style, the aim of the author being to convey as much information in as small space as possible. The qualities of a high-class retriever are fully described, the manner of inculcating the accomplishment is minutely explained, the faults of the amateur trainer are frankly told, and the qualities which he should cultivate in himself as a trainer are pointed out, and besides being clearly told how to teach the dog this and that part, he is also told the reasons for it. In short, it covers the whole theory and practice of the art. It is neatly bound in cloth, is illustrated, and contains 124 pages. Price $1.50, postpaid. For sale by Forest and Stream Publishing Company, 318 Broadway, New York.

R.

Providence Show.

WILMINGTON, Del., Oct. 11.—*Editor Forest and Stream:* I notice in your issue of Oct. 5, containing report of the recent Providence bench show, your reporter mentions Mr. Geo. Thomas's fox-terrier Spinster as the winner at Toronto. I beg leave to refer to report of Toronto show, where my imported bitch Wawaset Lucy won first in open and novice classes.

JAMES FERRIS BELT.

Newburgh Show.

SPARROW'S ROOST, NEWBURGH, N. Y., Oct. 11—*Editor Forest and Stream:* In your report of the Newburgh dog show, special mention is made that there were no poodles present. I beg to say that I was given first prize for a black French poodle, Diavolo, by Cidi (challenge) out of Snowball, winner of four prizes in larger shows.

ETHELWYNN.—From Photo by J. S. Johnson, New York. Copyright, 1895.

The American Waterloo Cup.

THIS event, so eagerly looked forward to by American coursers, was begun on Oct. 8, at Huron, S. D., and successfully concluded. Much enthusiasm was displayed by owners and spectators. Mr. Wm. Stephenson, Dinsdale, Iowa, judged and the slipping was done by Mr. Joseph Dodd, Letcher, S. D.

The competition was quite national, representatives being present from the extreme east and west of the United States, though the strongest representation was from the coursing country east of the Rockies.

The greatest interest centered in the main event, the Waterloo cup, for thirty-two greyhounds of all ages at $25 each, $200 added money, making a total of $1,000. The winner gets the cup and $400, the runner up $200; third and fourth, $50 each. The sixteen dogs beaten in the first round have a consolation purse, the winner to receive $100; runner up, $50; third and fourth, $25 each. In addition, there is a plate for the eight dogs beaten in the second ties, $75 and the plate going to the winner, and $25 to the runner up. The first round of the American Waterloo cup resulted as follows:

Fearnot beat Dakota, Master Dennis beat Van Hoop, Van Aafke beat Royal Buck, St. Claire beat Trilby, Diana beat Caliph, Charming May beat Sunol, Bed of Stone beat Major, Prince Fullerton beat Nellie Weed, Frank Green beat Donald, Master Glenkirk beat Raven, Long Odds beat Rangarok, Pearl beat Lady Dedlock, Gilkirk beat Kirkglen, Miller's Rabbie beat Flying Buck, Eleanor beat Yorkshire Lad, and Lucien Swift beat Emin Pasha.

This finished the running of the first day. The weather was exceedingly favorable for coursing and the attendance of spectators was large.

On the second day a strong wind prevailed, the weather on this account being so disagreeable that the spectators were perceptibly lessened in numbers. The second round of the cup and the first round of the American Coursing Derby were run through. The second round of the cup resulted as follows: Fearnot beat Van Aafke, Diana beat Master Dennis, St. Claire beat Charming May, Bed of Stone beat Frank Green, Master Glenkirk beat Prince Fullerton, Pearl beat Long Odds, Sigelkirk beat Miller's Rabbit, Lucien Swift beat Eleanor.

On Thursday the American Waterloo purse, for defeated dogs of the first round, was competed for with the following results in the first round: Dakota beat Van Hoop, Trilby ran a bye, Royal Buck being withdrawn. Sunol beat Caliph, Major and Nellie Week were both withdrawn, Donald beat Raven, Ragnarok beat Lady Dedlock, Kirkglen beat Flying Buck, Emin Pasha beat Yorkshire Lad. In the second round on Friday, Dakota beat Trilby, Sunol ran a bye, Ragnarok beat Donald, Kirkglen ran a bye, Emin Pasha being withdrawn, sick. In the semi-finals Sunol beat Dakota, Kirkglen beat Ragnarok. It was not necessary to run a final course for this stake, as Sunol and Ragnarok belong to the same owner, D. O. Miller, of Oxford, Kan.

Following is the result of the third round for the cup: Diana beat Fearnot, St. Claire beat Bed of Stone, Master Glenkirk beat Pearl, Gilkirk beat Lucien Swift.

The competition for the cup was hotly contested on Friday by the dogs remaining in. The weather was fine, the attendance large. Following are the results: Diana beat St. Claire, and Gilkirk beat Master Glenkirk. In the final Gilkirk beat Diana after a grand course. Gilkirk is owned by Messrs. Arthur Melrose and H. Scott Durbin, two popular young Englishmen.

The American Coursing Derby was for sixteen puppies, whelped on or after Jan. 1, 1894; $100 to first; runner up, $50; third and fourth, $17.50. The first round resulted as follows:

Vangundie beat Merry Maid, Miss Muffet beat Glenrosa, Crow Dog beat Hot Stuff, Minneapolis beat Colonel D., Rochester beat Iceland, Volusia beat Wayfarer, Van Brulie and Indianapolis ran a bye, San Joaquin being withdrawn sick; Vanbree beat Banker.

In the second round Vangundie beat Miss Muffet, Minneapolis beat Crow Dog, Rochester beat Van Brulie, Van Bree beat Volusia. Of these, Rochester and Minneapolis are owned by N. P. Whiting, of Minneapolis, and the two others by Dr. Q. Van Hummell, of Indianapolis.

In the semi-finals, Minneapolis beat Vangundie, and Van Bree beat Rochester. In the final, Minneapolis beat Van Bree decisively, and won first.

The result of the competition for the plate for eight dogs beaten in the second round was as follows:

Master Dennis beat Van Aafke, Frank Green beat Charming May, Long Odds beat Prince Fullerton, Miller's Rabbie beat Eleanor. Second Round—Frank Green beat Master Dennis, Miller's Rabbie beat Long Odds. Frank Green won the final heat after a somewhat unsatisfactory course.

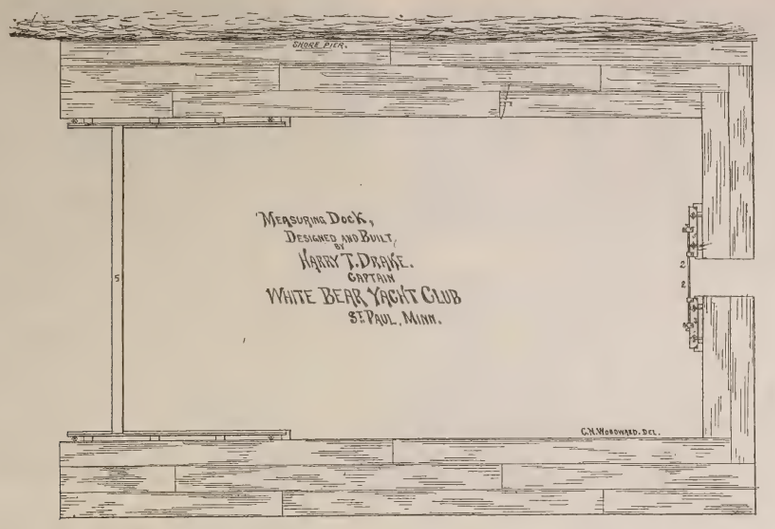
POINTS AND FLUSHES.

The well-known St. Bernard dog Melrose King (Alton—Judith) was recently purchased by Mr. Robert H. Burrows, East Orange, N. J., of Mr. E. H. Moore, owner of the Melrose Kennels. Mr. Burrows is owner of the Seaforth Kennels, a kennel devoted to St. Bernards, of which high type and the best quality are conspicuous features. The acquisition of this valuable dog will greatly add to the merits of the kennel. Melrose King has won high honors in the prize ring and distinguished himself as a stud dog. Mr. Burrows is energetic and intends that Melrose King shall have the best of opportunities in the stud, so that much may be expected of him in the future. He is of the same litter as Alton, Jr., a litter of great prize winners and dogs of high quality. Mr. Burrows informs us that the price is a large one. In our business columns will be found the advertisement of the Seaforth Kennels.

Mr. Geo. Laick, Tarrytown, N. Y., under date of Oct. 12, writes us as follows: About a month ago I sent a beagle dog to Mr. Daniel F. Summers, Thorndale, Pa., to be prepared for the National Beagle Club's field trials. I have since received word from Mr. Summers that the dog got away from him while in the woods. The dog answers to the name Sport, is about 12½in. high, is a very well formed good specimen of a beagle, has tan head and ears (tan on head and ears not very dark), white stripe on face running a little to one side on forehead; body nearly all black and tan except neck, legs and belly. Should any one of your many readers hear of the whereabouts of my dog they would confer a great favor by notifying Mr. Daniel F. Summers or myself.

A. D. Fiske, Worcester, Mass., offers beagles for sale and at stud. A. Bradbury, Monument Beach, Mass., offers trained pointer. Box 77, Waterville, N. Y., offers rabbit dog and setter. J. M. Kelly, Montrose, Pa., offers Gordon setter. Chas. H. Mills, Baltimore, Md., offers setters, one broken. Edwin W. Fiske, Mount Vernon, N. Y., offers cockers. James Baird, New Haven, Conn., offers broken setter.

Mr. Fred G. Browning, Tarrytown, N. Y., writes us as follows:



"Ripon Stormer (27,800) has been sold by the Mere Kennels, of Tarrytown, N. Y., to Mr. Fred H. Bowersock, of Lawrence, Kan., who is going in extensively for fox-terriers. 'Stormer' was first in challenge class at the late Danbury show, and has yet several more years of usefulness before him. In the West he should be well nigh invincible."

Mr. W. H. McQuoid, Middletown, N. Y., has purchased of Mr. George N. Clemson the English setter dog Kingston, bred by Messrs. Avent and Thayer. Kingston won second in the E. F. T. C.'s Derby, and third in the Manitoba Field Trials, 1892. Mr. McQuoid has placed him in the stud for the convenience of Northern breeders, and his announcement will be found in our buisness columns.

The *Herald* of Oct. 15 relates a mad dog story of uncommon weirdness. It had a scare head, though the story itself was short, shorter than the scare head. Twelve laborers, the story goes, were eating in a shanty at Jerome Park "when a mastiff darted through the door and sprang snarling on the table. Foam dripped from his jaws, and he snapped savagely at the terrified men." One man was wounded in twenty places, then the mad dog was driven off. Observe that the "mastiff" foamed at the mouth. The daily reporter never leaves off the foam. A dog suffering from rabies does not foam, but without foam the reporter's story would be forceless. But, withal, who will now dare say that thirteen at table is not an unlucky number?

SPRUCE IV.—From a Photo by J. S. Johnson, New York.

Yachting.

In commenting on the Spruce-Ethelwynn races, the *Yachtsman* says: "To liken small things to great, Mr. J. A. Brand has been no more fortunate with Spruce IV. than was Valkyrie III. It is to be regretted that the main point of similarity in these two series of international sailing races is that there has been a protest in each case, and in each case has the protest been decided in favor of the defending boat. Mr. Brand's protest against Ethelwynn was on the score of a breach of the sailing rules, and if we are to believe the cabled reports, the manner of settling it was simplicity itself. The sailing committee declined to uphold the protest because the alleged foul sailing was unobserved by them." The *Yachtsman* should know well by this time that the first cabled reports are in no way worthy of credence; and in justice to a committee that has done everything possible to comply with the wishes of the challenger, might have withheld its ungenerous comments until the facts were known. Mr. Brand's double claim, resting in each case on a matter of distance, as no contact of the boats took place, was supported only by his statement, and was opposed by an equally positive denial on the part of Mr. Ball that Ethelwynn was at any time near enough to interfere with Spruce. The two parties being equally trustworthy and equally competent to judge distance, and their statements differing diametrically, it then rested with the protesting party to furnish corroborative proof of his statement. This he could not do, and the protest was then of necessity dismissed. Up to the time of writing the *Yachtsman* was evidently in ignorance of Mr. Brand's additional protests.

Apart from the intense animosity displayed in these letters and others of British origin, even worse if possible than that blustering abuse which characterizes some American papers, and which we have repeatedly condemned, most of the British criticisms display a lamentable ignorance of simple, every-day facts. We have no taste for an international contest in abuse and vituperation, and it would be absurd to attempt a sober technical argument with men who assume from the start that the Sandy Hook Lightship is moored inside of New York Harbor; that the Cup races are started with a 10-minute interval in which to cross the line, or that Capt. Haff is a Swede or Norwegian.

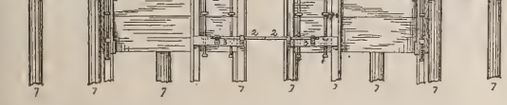
Yachtsmen may remember a letter which appeared in a leading New York paper immediately after the last Cup race in 1893, in which, over the signature of a yacht owner and a member of the New York Y. C., a number of extraordinary and most untruthful statements were made. The sequel came a week or two later, when the writer of this epistle was declared insane and confined in an asylum. We are reminded of this case by several anonymous letters in the last issue of the *Field*, in which the violent and abusive tone and many misstatements suggest a similar origin.

An order for a racing 15-footer for next year has already been placed with Gardner & Cox by Vice-Com. T. J. Preston, Jr., of the Passaic River Y. C. The Montreal yachtsmen have taken up the idea eagerly and are already planning a number of new boats. A challenge from Mr. Brand is also a certainty, so there is every prospect of good racing in the class for the coming season.

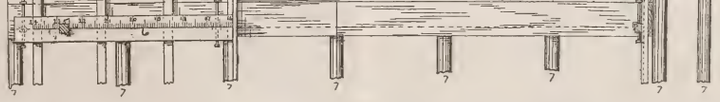
We feel that under the circumstances we owe the fullest possible apology to the *Yachtsman* for attributing to it the blundering and inaccurate "history" of the America's Cup which has recently appeared in the *Yachting World*. We can only plead in excuse the necessary hurry and worry under which our work was done during the week of the Cup races, and which led to the involuntary substitution of one title for the other.

The New Y. R. A. Rule.

From this time forth all the British yacht designers will begin to work under the new rule finally adopted last June, and which we fully described in our issue of June 22. The rule under which the later British yachts have been designed, adopted in 1887, is as follows:



$$\frac{L. \times S.A.}{6000} = R.$$



The rating of a yacht is obtained by multiplying the length on waterline by the sail area, and dividing the product by the constant number 6000, the result being a measurement in cubical units approximating to the old Thames tonnage. In this method of measurement the sail area is calculated from the drawings of the sail plans, such topsails, working, sprit or club, as are carried being included in the measurement. The established rating classes and the varying proportions of length and sail found in practice were as follows:

½-rating.....16ft. l.w.l.× 163sq. ft. sail to 17ft. l.w.l.× 178sq. ft. sail.
1-rating.....18ft. l.w.l.× 334sq. ft. sail to 20ft. l.w.l.× 300sq. ft. sail.
2½ rating.....25ft. l.w.l.× 600sq. ft. sail to 28ft. l.w.l.× 536sq. ft. sail.
5-rating.....28ft. l.w.l.×1071sq. ft. sail to 33ft. l.w.l.× 909sq. ft. sail.
10-rating.....34ft. l.w.l.×1765sq. ft sail to 36ft. l.w.l.×1666sq. ft. sail.
20-rating.....45.5 l.w.l.×2637sq. ft. sail to 46.5 l.w.l.×2580sq. ft. sail.
40-rating.....59ft. l.w.l.×4087sq. ft.
60-rating.....64ft. l.w.l.×5625sq. ft. sail to 68ft. l.w.l.×5294sq. ft. sail.

The new rule is $\frac{L. + B. + .75\,G. + .5\sqrt{S.A.}}{2} = \text{Linear Rating.}$

"Linear Rating," so called, is the racing length expressed in feet.
In this formula:
L=Length on l.w.l. as now measured.
B=Greatest beam wherever found.
G=Under-water girth of the vessel from l.w.l. to l.w.l., taken at .6 of the load waterline from its fore end and measured along the actual outline of the vertical cross section at that station. If the draft forward of that station exceeds the draft at that station, twice such excess to be added to G. In the case of centerboards the extreme drop of the board to be multiplied by 1.5 and added to G. In taking these measurements all hollows in the fore and aft under-water profile of the vessel and centerboards to be treated as filled up straight. Bulb or ballasted boards to be measured in the same way as fixed or finkeels.
S. A.=Sail area.

The following classification has been adopted to accompany the rule:

NEW. (Linear) Rating.	OLD. Rating under existing rule.
18ft. rating.	0.5 rating.
24ft. "	1.0 "
30ft. "	2.5 "
36ft. "	5.0 "
42ft. "	10.0 "
52ft. "	20.0 "
65ft. "	40.0 "

The question of the practical working of the new rule is a very important one, and only time can tell what the resulting type will be in the various classes. The following from an English local paper, the *East Anglican Times*, is interesting as showing the opinions of experts in the small classes:

"A meeting of gentlemen representing the racing interests in the 1-rating and 0.5-rating classes on the Thames, the Crouch, the Orwell and the East Coast was convened at the Great Eastern Hotel, Liverpool street, London, on Sept. 20, for the purpose of considering the effect of the new Y. R. A. rating rule, and to ascertain the views of the meeting as to the adoption of the old or new rating rule for next season. The chair was taken by Mr. Graham Robinson, and among those present were Mr. Edward Packard, Jr., Mr. E. T. Packard (who convened the meeting), Mr. W. P. Burton, Mr. A. E. Sidgwick, Capt. Eaves, Mr. Sidney Turner, Mr. Frost Smith, Mr. J. F. G. Winser, Mr. Geo. Terrell, Mr. Linton Hope, Mr. H. W. Ridsdale, etc. The chairman, in opening the proceedings, pointed out that it was not yet fully understood what the effect of the new rule would be, and he himself did not quite follow what it was likely to eventuate in. If the upholders of the new rule could show that it was likely to produce a better type of boat, then that would be a very strong argument in its favor; but if, on the other hand, they could not see that it would do so, it was possible that they would not care for a change, but rather 'bear the ills they had than fly to others they knew not of.' Mr. E. T. Packard formally opened the discussion by calling upon Mr. Linton Hope to deliver an address. Mr. Hope, on rising, said he would do his best to demonstrate what type of boat would probably be evolved under the new rule, but of course he could only speak roughly, as it was impossible at present to tell how it would turn out. He exhibited to the meeting two designs which he said might be built to come under the new 18ft. class—one a deep-bodied boat, carrying about 320ft. of sail area; and the other of the 'skimming dish' type, with rather less sail. Both were about 18ft. on the waterline. In comparing the two, he said that in ordinary weather the 'skimming dish' would be almost certain to beat the deeper boat, but in very light winds the latter would most probably win. The displacement of the larger boat would be 1,900lbs., and the smaller (the 'skimming dish') about 1,000lbs. The class of boat which the new rule would hit hardest was the 'fin-bulb,' and in his opinion the 'skimming dish' type was favored. Hence, boats built under the 18ft. class would be about the same size as the present 1-raters. As to the relative cost of the two boats, the deeper boat would be considerably more expensive. Questioned as to how dagger plates would be affected, he replied that they were still possible, but would be much shallower, and consequently wider. When 'housed' they would come up some distance above the deck line. He then exhibited drawings under the 24ft. class. Here again he took as examples of the extreme type two boats—one of considerable displacement, 21ft. on the waterline with 600ft. of sail, displacing three tons, and Thames measurement five tons; and the other, of very little displacement, and carrying rather less sail, with more beam. As in the 18ft. class, he considered that the smaller boat would beat the larger in anything but a very light wind, but the latter would naturally be much more expensive, and would, perhaps, cost £250.—Mr. H. W. Ridsdale, who followed, thought that the most desirable point of the new rule was that every type would be built. It had been said that the new boats would be much larger than the old, but after all he considered size to mean the value they could get for their money, and under the new rule they would get good value. As to their relative speed, no doubt the 'skimming dish' was capable of greater speed, but not greater average speed. This was exemplified by the races between the Britannia and the Vigilant and Satanita, the two latter having admittedly greater speed, but every one knew which was really the best boat.

"Mr. Frost Smith spoke in support of the new rule. He doubted very much whether it would produce boats of such extreme dimensions as Mr. Linton Hope had suggested. He thought by adopting the new rule they would induce a great many more yachtsmen to go in for racing. He mentioned that he was present at the meeting of the Y. R. A., when the matter was thoroughly threshed out, and what appeared to be the opinion of the meeting was that they did not want excessive speed at the expense of the other qualities of their boats. The chairman stated that in reply to the circular sent out there were sixty-five replies, thirty-five being in favor of the new rule and thirty in favor of the old rule. Mr. Terrell considered on the whole it would be better to adopt the new rule, and regretted that it would seem to interfere with vested interests. Mr. Rouse also spoke in favor of the new rule. Mr. E. Packard, Jr., remarked that whenever a new rule was passed some one was bound to suffer; but, as one of the oldest members of the Y. R. A., he was jealous of the position which that body occupied, and he was quite sure that the efforts of the Y. R. A. in promoting sport had met with the approval of the yachting community at large. This attempt to introduce a rule which should get rid of some old extreme types of larger boats they all hoped might be successful in promoting a better type of boat than could be produced under the old rule, but he dissented from the views of the last speaker as to vested interests. He had seen racing on the Clyde, the Solent and the East Coast, and his experience was that boats like the White Rose and the Arlette were admirable cruisers, and could beat the 'skimming dishes' as frequently as the latter could beat them. He hoped that the conclusion of that meeting would be to refer the question to the Y. R. A. to carefully consider as to the size of the boats evolved under the new rule, and whether the limit of 24ft. was the most desirable one. He hoped that they would fix the limit of the two classes so as to make the size and expense practically about the same as at present.—Mr. W. P. Burton recommended that a new class of about 15ft. should be established to take the place of the present 0.5-raters. He considered that the new rule quite upset the existing classes.—Mr. E. T. Packard entirely agreed with Mr. Burton's suggestion. He believed he was right in saying that the Y. R. A. intended the new 24ft. and 18ft. classes to take the place of 1 rater and 0.5-raters, but it was clear that the rules applying to those classes would have to be altered for the new rule, since it would be quite impossible for three hands to manage a 24ft. boat, and still less could two hands manage an 18ft. boat.—After a little further discussion, the chairman put it to the meeting whether the new or old rule should be adopted, and, only one dissentient, it was decided to adopt the new rule.—Mr. W. P. Burton then proposed, 'That the Y. R. A. be asked to reconsider the number of hands allowed in the 24ft. and 18ft. classes, and that this meeting suggests the number of four hands in the 24ft. class, and three hands in the 18ft. class. Further, that a 14ft. or 15ft. class be recognized by the Y. R. A., with a crew limit of two hands.'—Mr. Linton Hope seconded the motion, which was carried by an overwhelming majority.—It was further resolved, by eleven votes to four, 'To request the Y. R. A. to consider the desirability of appointing a sub-committee to adjudicate and legislate upon the classes of 24ft rating and under.'—Votes of thanks to the chairman and to the convener of the meeting (Mr. E. T. Packard) concluded the proceedings."

A Measuring Dock for Yachts.

The measuring dock here illustrated was designed and built for the White Bear Y. C., of St. Paul, Minn., by Harry T. Drake, captain of the club. It is well adapted for the accurate measurement of length in any manner, and especially for the measurement on a line parallel to and at some distance above the water. It is of inexpensive construction, and where the tide does not prevent it will be found most useful in clubs having many small yachts. Following are the specifications:

1. Opening for stem of boat to lie in without interfering with bobstay or rigging in any way.
2. Sliding bars that can be adjusted to the point where the cutwater intersects the water, or 2in. above it, as in the White Bear Y. C., or more.
3. Wooden supports for bars 2-2, which are lowered or raised to the desired position by means of the set screws, 4-4-4-4, which pass through lugs in the pier.
4. Set screws for raising or lowering the pieces at the bow and the scale 6.
5. Piece of 4×4 straight timber, the ends of which rest on and are supported by scale 6 and which is moved along on the scale until it comes in contact with the boat when properly trimmed, showing her exact length on the water or 2in. or more above, as the rule may require. It is not attached to anything, so that it may be removed when the boat enters the slip; then it may be put on the scale and shoved or slid along until contact is made with the boat, the stem having been placed and held in position at both ends until the length is officially announced.
6. Scale, one on either side, marked in feet and inches from 16ft. to 24ft., there being no boats shorter or longer than that in the club.
7. Pier supports.

The measurer has used his discretion in placing the ballast, but an arbitrary rule proposed by Dr. James M. Welch is a good one: Find the length of the boat on the water when light in smooth water, then make an indelible mark inside of the boat across the floor $\frac{1}{15}$ abaft the center of the light waterline, then place the required ballast on or as near that mark as possible, then measure the load waterline.

In practice $\frac{1}{15}$ abaft the center is near the center of buoyancy of most of the boats.

The Ends of Up-to-Date Yachting.

Irving Cox, in New York Sun.

With the miserable fiasco of the America's Cup races of 1895 fresh in our minds, and with an apparently *bona fide* notification of a challenge for 1896 in the hands of the New York Yacht Club, I would like to make a few remarks on the present yachting situation.

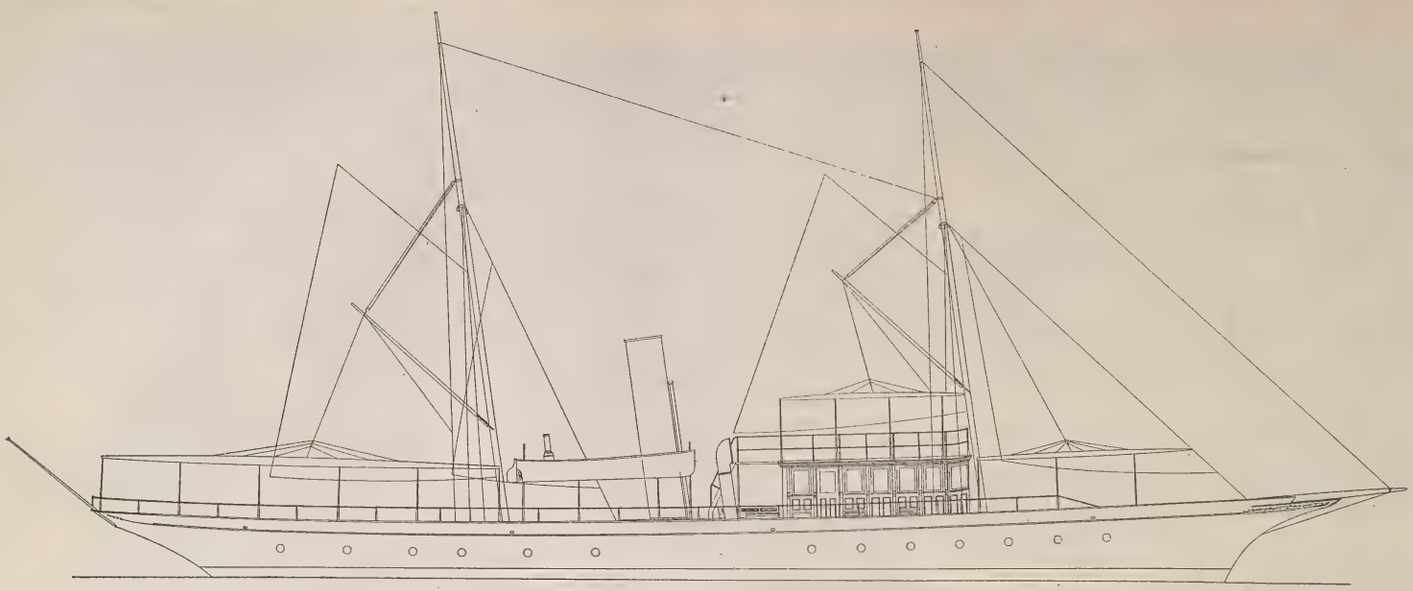
There is no doubt that every effort was made to render the Valkyrie-Defender races a brilliant success and a fitting close to an interesting racing season.

That they were not successful was largely due, no doubt, to the mistaken action of Lord Dunraven in withdrawing Valkyrie.

Yet, after all, were not the conditions, although equally fair for the American and English boats, in a large measure to blame for the complication? Strip the whole question of its mazy conditions and restrictions, and what do we find was the intent in challenging and accepting the challenge for a race between English and American boats? Simply and solely to test the relative speed of the yachts of the two countries, and incidentally to defend and win the America's Cup.

After nearly a year of the most far-reaching and lucid discussion, after the expenditure of at least half a million dollars, after infinite care in preparation and wonderful skill in designing and building two boats for this purpose, what is the result? The conditions are so manifestly unfair, says Dunraven, that unless your honorable committee will guarantee that no one shall use the Atlantic Ocean until I am entirely through with it, I shall be forced to withdraw Valkyrie and go home.

There is no need of going over past history. We all know that Dunraven was wrong, and he is probably in a fair way to that conclusion by this time himself. I say, however, that had it not been for the fact that all our late cup races have been—like the Westerner's cure for chills, one grain of quinine in a quart of whisky—one grain of racing in a quart of words, Dunraven would never have dared to quibble out of a race of such importance, trusting to word pictures to hide the fact that he came over here to race and didn't.



One day could have settled the question, boat against boat and the devil to see fair play in the absence of other referees. But no; the conditions of the deed of gift, or of letter No. 2,186, folio 87, prevented it. Now, what we want to do next time is to avoid the sickening mass of conditions, destroying the deed of gift and the America's Cup as well, if necessary, to that end, and have a race—I repeat, have a race; which on reflection must seem reasonable to us all.

We have reached a very delicate point in sailing yacht architecture and we should walk with open eyes. For the first time in the history of the Cup races the boat built in this country to defend was narrower and deeper than the challenger. Watson made a radical departure in favor of more beam and sail, while Herreshoff took the opposite course and developed a much deeper and narrower boat than Vigilant, the successful defender of two years ago.

I do not wish to be understood as saying that Herreshoff copied Watson or that Watson copied Herreshoff; in fact, I have no doubt that each reached his results independently of the other, and as a logical sequence of the behavior of former boats of their own; but still facts are facts.

Were the spirit of the late Edward Burgess to return to this world and be shown Defender and Valkyrie III. side by side, he would without doubt think Valkyrie III. was the American representative and Defender the English.

This truly remarkable state of affairs is worth studying, for in these days of exact methods nothing in the make-up of a racing yacht is left to chance, but all is carefully worked out, and the results proved.

ALCEDO—STEAM YACHT—Designed by Waterhouse & Chesebrough, 1895.

Taking up the subject of the first modern international race, that of Genesta and Puritan, we find the two types as distinct as possible, Genesta, the challenger, being best described by that now most obsolete term, cutter, narrow and deep, while Puritan was an American sloop in her entirety, although English influence could be seen in her rig and method of ballasting. Pictures taken of these boats in dry dock show plainly the marked difference in form and type, and also show, when compared with Valkyrie III. and Defender, wherein lies one of the greatest evils of our modern successful racing yachts, which is the small amount of under-water body when compared with boats of only a few years ago, like Puritan.

Even Puritan, although of much less displacement than Genesta, shows up as a roomy and comfortable craft: one that might be and probably would have been built if there had never been such a thing as international racing. Can one honestly say the same of Defender, with her aluminum construction, her immense draft, prohibiting ordinary summer cruising, and her lack of room below, and her extremely costly construction?

I think not, and while I appreciate the patriotic spirit that induced the Defender syndicate to spare no expense to retain the America's Cup, and the genius of Herreshoff in evolving such a perfect racing machine, I can but feel that it has been talent and money, if not wasted, not well spent.

Puritan was no more like Genesta than chalk is like cheese. She was broad and moderately shallow, with only about thirty-seven tons of ballast, mostly used inside, and depending on form very considerably for stability. Genesta was a much bulkier boat, with over seventy tons of lead outside and no stability due to form—very much narrower and deeper.

We must remember that although we defeated Genesta, we yet had to change our type to do it. Every one knows who knows anything at all about racing in England during the five years preceding the Genesta's challenge, that England was ahead of us in the building and general design of racing yachts. They had greater speed, they had better rigging and sails, and they were much better built. Puritan was a distinct improvement, but it must be confessed that her points of superiority over existing American boats were for the most part points of similarity with the English craft of her time.

Both Puritan and Genesta were boats that while a trifle large were still one-man boats and not syndicators. They cost between $20,000 and $30,000 to build and were good cruisers when not racing. Genesta when compared to Valkyrie III. was not much over half as wide, 15ft. against 27. Yet on 83ft. waterline length she is a heavier boat than Valkyrie and had more inside room available. I mean she was far more heavily built and carried a rig that she could swing in a race or across the Atlantic, either one. True, Valkyrie has the advantage of greater beam, but aside from that I pronounce Genesta the more sensible boat of the two and challenge criticism on my statement. If we compare Puritan and Defender the result is the same. Puritan is a sensible boat; Defender is an expensive freak and nothing more; fast, seaworthy and beautiful, but yet far from the boat that a man would build if no other boats were ready to beat him.

Compare the section of Puritan with its slightly hollow garboard, its light draft, with the wine glass which represents the modern idea of all that a yacht should be. Remember that Defender cost about five times as much, and then say that yacht designing has progressed along sensible lines if you can. For my part, I deny it.

There is one thing that we all seem to forget in dealing with the question of yacht racing—or rather, two things.

One is that the racing of sailing yachts is a sport that has outlived its days of usefulness, and is now very much as archery when firearms came in, standing on very precarious footing, and liable to be wiped out by the improvement in steam yachting unless nursed very carefully.

The other point is that speed in sailing yachts is relative, not absolute; in other words, it is the distance by which one boat beats another in a race, and not the absolute speed made by either during that race, that shows the superiority and makes a fast or a slow boat.

A better race is had and a much more interesting one when two boats sail at an average speed of four miles per hour, one winning by a few seconds, than when they sail at a fifteen mile galt and one wins by ten minutes. Speed is a good thing, and so long as we sacrifice nothing of value to it let us have speed to the last second by all means, but we must remember that there is absolutely no use in building boats that are uncomfortable and very costly to build unless some object is to be really gained by it, and not a few seconds' or even minutes' speed at the sacrifice of a whole summer's comfort.

The whole system of yacht building and racing is radically wrong, judging from the standpoint of sport. From the naval architect's point of view everything is lovely, and we are making rapid strides toward the perfect boat of the future—all lead, draft, sail and cost, with no body.

Just think for a moment. Eight or ten years ago if a man wanted sport on the water and had a little money to spare, say two or three thousand dollars, he could build or buy the equivalent of our modern 40-footer, only a larger and roomier boat. With her he could have all the racing he wanted and could calculate on four or five seasons' use at the very least before his boat was really outbuilt and obsolete. Now the most he could do for the money would be a 25ft. fin-keel, with scarcely room enough aboard to hide a broad-brimmed straw hat in case of a squall. True, the little boat is most beautifully designed and constructed, and would, in a race, have no difficulty in disposing of the big, roomy centerboard of former days. But what of that?

As I said before, speed is relative, not absolute, in sailing yachts, and had the fin-keel never been evolved the old centerboard would be just as good a racer as her modern sister. Of course, as in everything else, there is a great deal to say on the other side of the question. The modern boats are marvels of beauty in design and construction, and, due to the great care required in their construction, the workmanship of the average yacht builder has greatly improved, and also his knowledge of the various problems to be met in building a boat, so that we see no more of the dismal failures due to an absolute lack of knowledge.

Then, again, the new boats are uncapsizable and very weatherly, and if you do get caught in a blow you are safe if not comfortable. What I have tried to show is that we have gone too far in the matter of speed and have nearly spoiled yachting by so doing. Our boats are too deep for our harbors, too expensive for our pockets, and in all except the very larger classes too uncomfortable and cramped for our families to take any pleasure in cruising, so that yacht racing is, under the present auspices, doing harm to the sport of yachting and really threatens its practical death as the amusement of many. This must not be. Yachting and yacht racing, almost the only sports that belong to the class of *bona fide* amateur sports, must not be relegated to the ranks of professionalism. The remedy is plain if we would but use our common sense and grasp it. Let us simply get together and settle upon a model which shall represent the ideas of all our naval architects and be at the same time a sensible type of boat. Then let each yacht club duplicate this model and lines and state in their race programmes that no competing yacht shall deviate more than 10 or 12 per cent. from the standard so set. It may be said that this would discourage yacht designers and hamper them, but as I see it we yacht designers are not to be considered in the matter at all. The people who sail the boats, who own them and who pay for them are the ones whose ideas should be met. As I have said before and say again, the absolute speed of a yacht propelled by sails is not the vital point in her make-up, nor even one of her vital points. All she need do is to sail as fast as or a little faster than the others, and if the others are sensible, comfortable boats she can and will be the same. The new boats not carried to extremes are exactly what we want, and will make fast, comfortable and seaworthy vessels. The schooners prove this, and, as a matter of fact, boats like Lasca, Constellation and Emerald show that yachts can be built, and keen sport had with them, which are not—confessedly not—so fast as they might have been had every element but that of speed been disregarded in their design. Well, I've had my innings, and as the Irishman said when the judge fined him $5 for thrashing a man who had cheated him, "I'm glad I done it and will take $10 more of it at the same rate."

The Steam Yacht Alcedo.

Among the new yachts of the year is the handsome steam yacht Alcedo, designed by Waterhouse & Chesebrough for G. W. C. Drexel, of Philadelphia, and built by George Lawley & Son, South Boston, under the supervision of the designers. The yacht is 124ft. over all, 102ft. l. w. l., 16ft. 2in. beam and 6ft 6in. draft, of composite construction and schooner-rigged. The hull planking is of clear Georgia pine, 2⅜in. thick, fastened to the steel angle frames by screw bolts and nuts, bronze fastenings being used up to 2ft. above the waterline. As shown in the sheer plan, there is but one deckhouse, of mahogany, 18ft. long and 8ft 6in. wide, used as a deck saloon and dining hall, the galley being directly below. The hull is of specially strong construction, the scantling conforming to the requirements of the United States Standard Steamship Owners', Builders' and Underwriters' Association. There are four watertight steel bulkheads and the frame is stiffened by a system of steel diagonal straps over frames and deck beams.

Beginning at the fore peak below deck, inside the collision bulkhead are the chain lockers and the under-deck engines of the steam capstan, then comes the crew's toilet room, and then the forecastle. The next space is devoted to the captain's and engineer's stateroom to port and messroom to starboard, the latter fitted with mess table, set bowl and folding berths for steward and cook. The galley is 10ft. long and of the full breadth of the ship, very fully furnished with a French range, an ice box of one ton capacity, sink, etc. The steward's pantry, on the starboard side, has a dumb waiter to the dining saloon just above.

The engines are located forward of the boiler, triple compound, with cylinders 9½, 15½ and 24½in. by 13in., designed and built by the Fore River Engine Co., of Weymouth, Mass.; the condenser is 6ft. long, 8ft. diameter and has 650sq. ft. of cooling surface. An independent circulator is used, of the centrifugal type, running at 200 turns. The boiler was made by the Almy Watertube Boiler Co. Abaft the boiler room is a thwartship bunker, serving to keep cool the after cabins. The total bunker capacity is eighteen tons.

The owner's room is immediately aft of the third bulkhead and the bunker, 11ft. long and of the full width of the hull, communicating with a private bath-room piped for fresh and sea water, hot and cold. Then comes the main saloon, 13ft. 6in. long, then the steerage, with toilet room to starboard of stairs and a stateroom to port, and then the after stateroom. This after room is finished in mahogany and butternut, the other rooms are finished in mahogany and white enamel.

Particular attention has been paid to the plumbing and ventilation, the baths and set bowls are all connected with a tight waste tank in the after hold which has an outboard vent and is emptied by a steam syphon. Each room is ventilated by a deck opening in addition to the side lights, and a special 8in. exhaust ventilator is fitted to the bilge aft. The cabin joinerwork and fittings are well arranged and in very good taste. The steering is done entirely from the bridge, one of Snelling's combined steering and telegraph apparatus being used. It is needless to say that the workmanship is excellent throughout, as in all the Lawley-built boats.

Model Yachting.

At the regular monthly meeting of the American Model Yacht Club, held at the club room, No. 227 Fulton st., Brooklyn, N. Y., on October 4, the perpetual challenge trophy articles were revised to read as follows, viz.:

Article 3—Dates.—This trophy is open to all duly organized and recognized Model Yacht Clubs of good standing and responsibility composed of members of lawful age.

And it is to be sailed for once each year, either on May 30, July 4, or the first Monday in September, when challenged for, and on no other date, except as hereinafter provided.

Art. 4—Challenges.—All challenges must be received by the club, or by the trustee holding the trophy, at least ninety days before the date specified for a race.

All challenges must be accompanied by a certificate, properly executed before a notary public with a seal, as to the existence of the challenging club as follows, to wit:

To all whom it may concern:

We, the undersigned, being of lawful age, do hereby certify that the Model Yacht Club of.....
is a regularly organized and recognized model yacht club of good standing and responsibility, and composed of members of lawful age.

.....Commodore.
.....Secretary.

State of.....
County of..... .....
.....Commodore,
Address.....
.....Secretary,
Address.....
being duly sworn, each for himself deposes and says that he has read the foregoing certificate and subscribed his name thereto, and that the same is true to his own knowledge.

Sworn to before me on this.....day of.....189..

.....
Notary Public,
County of.....
State of.....

For the balance of the article (No. 4) and the full text of the articles as revised in 1894, see Forest and Stream of March 23, '95.

Brooklyn, N. Y.

The America's Cup.

The following letter was received on Oct. 9:

"Royal Victoria Y. C.,
Ryde, Isle of Wight, Sept. 28, 1895.

"*To J. V. S. Oddie, Secretary New York Y. C.:*

"Dear Sir—I beg to confirm by letter my telegrams of Sept. 23, as follows:

"I, in behalf of the Royal Victoria Y. C., and in the name of Charles D. Rose, a member af the club, challenge to sail a series of matches for the America's Cup in 1896, with the cutter yacht Distant Shore, load waterline length 89ft.

"In the event of this challenge being accepted, I should be much obliged if you would kindly inform me what dates, courses and conditions the New York Y. C. will propose to govern the races.

"I have the honor to be, sir, your obedient servant,

"Percy Thellusson.

"Secretary Royal Victoria Y. C."

A special meeting of the New York Y. C. was held on Oct. 14 to consider the challenge, about fifty members being present. The following resolutions were adopted:

"*Whereas*, An unconditional challenge for the America's Cup, stating load waterline length of challenging vessel, has been received from the Royal Victoria Y. C. in the name of Mr. Charles D. Rose;

"*Resolved*, That the challenge be accepted; and, further

"*Resolved*, That a committee of seven be appointed by the Commodore, with full power to confer with the challenger and arrange the conditions of the match. As soon as final arrangements have been completed, the committee shall report the same to the club."

The committee appointed by Commodore Brown is:

Former Commodore J. D. Smith, A. Cass Canfield, J. Frederick Tams, Latham A. Fish, Gouverneur Kortright, Archibald Rogers and J. R Busk. These gentlemen constituted the Cup committee of 1895, which arranged and conducted the recent Valkyrie-Defender series, and their reappointment is considered a substantial indorsement by the club of everything they did in connection with those races.

The following cables were sent by Secretary Oddie:

Thellusson, Secretary Royal Victoria Yacht Club, Ryde, England:

Challenge accepted. Committee appointed, with full power to arrange conditions. Oddie, Secretary.

Another cable was sent to Mr. Rose and read:

Charles D. Rose, No. 39 Hill street, Berkeley Square, London:

Challenge accepted. Have notified Thellusson. Oddie Secretary.

The Cup committee held a meeting on the adjournment of the club meeting.

Beverly Y. C.

230TH RACE.

Saturday, Sept. 14.

The doubtful prizes in fourth class cats are decided by measurement of Howard, which takes first prize by ¼s., Dawelle taking second prize.

The 231st race, sail off in third class cats and fifth class sloops, was sailed off club house Sept. 20, in moderate fluky so'wester. R S. Hardy, judge.

THIRD CLASS CATS.

	Length.	Actual.
Melro, D. L. Whittemore	20.03	1 47 07
Doris, John Parkinson	21.01	1 51 46
Elna, John Parkinson	20.01	1 51 51

FIFTH CLASS SLOOPS.

Waskite, H. N. Richards	12.09	1 16 05
Hilda, Robert Winsor	12.03	1 32 09

Melro and Waskite win.

Champions for 1895.—Cats: Second class, Anonyma; third class, Melro; fourth class, Howard; fifth class, Imp. Sloops: Fourth class, Grilse; fifth class, Waskite.

YACHTING NEWS NOTES.

The basin, railways and lower shops of the Fifty-fifth street yard formerly used by Mumm and by Wintringham have been leased by Piepgrass & McGown, who will carry on the same business of yacht building and repairing. Mr. Piepgrass is the son of Henry Piepgrass, the City Island builder. The firm is now putting a new stern on the steam yacht Charlotte.

A private match was sailed last week between the cutter Thelma, N. L Francis, and the schooner Serkara, Mr. Fuller, from Marblehead to New York, starting on Oct. 11. Shortly after the start Thelma parted her bobstay and returned to Marblehead for repairs, starting anew seven hours later. She was unable to catch her rival after such a handicap.

There is now partly plated at Roach's yard, Chester, a sea-going steam yacht designed by Gardner & Cox for Richard Stevens. She is 140ft. over all, 115ft. l.w.l., 20ft. beam, with excellent accommodations and ample coal capacity.

Hattie Bradwell, the largest sloop on Lake Michigan, has been sold by Thomas Bradwell to John W. Welles, of Menominee, for $3,800.

Veltha, steam yacht, has been sold by J. L. Bremmer to R. L. Lippitt, of Providence.

Erl King, steam yacht, Major A. H. Davis, sailed from Boston on Oct. 7 for the Western Isles and thence to Southampton.

The yachts Edna B. and Fleetwing were wrecked at anchor off Cleveland on Oct. 12 in a sudden and violent gale.

Steam Yachts and Launches

Canoeing.

Red Dragon C. C.

The Red Dragons closed a very successful racing season with the last race for canoe yawls or cruisers on Saturday, Oct. 5. Nixie, designed, built, rigged, owned and sailed by her owner, H. E Bachmann, won the cup presented for the season's yawl races by Com. Fenimore

with 16 points. Charlee, an up-to-date sharpie, also designed, built and sailed by her owner, H. E. McCormick, being second, with 11 points for the season's work. R. G. Fleischmann's Tadpole has 9 points; and Pluto and Olie, owned respectively by Lloyd Titus and E. W. Crittenden, have 4 points each. There were five races for the record, first place counting 5 points, second 3 points, and third 1 point.

Olie won the special race of the Riverton Y. C. for canoe yawls on July 13, with Feather, F. W. Noyes, second. Feather also won the last record race on Oct. 5, but not having been in any of the previous record races, Noyes did not claim any points. Feather is probably our fastest canoe yawl, but she has been at Atlantic City nearly all summer, so has not been thoroughly tested against the other boats.

The contest for the record sailing prize for canoes, given by our quartermaster, J. E. Murray, was not nearly as interesting as that of the yawls. Capsizes, breakdowns and various mishaps, causing withdrawals, were frequent, and only too certainly seem to verify the fact that the old style canoe with comparatively long cockpit, as most of ours are, is not a fit craft to sail races in, with anything like a decent sized rig and slider to correspond.

Commodore Fenimore won three of the four canoe record races, and was second once. His boat is the bathtub cockpit sharpie canoe Smuggler, somewhat of the Battledore type, and she was sailed for all she was worth, finishing one race all alone in a heavy wind and sea, with all her forward deck and about a foot of her mainmast under water, almost completely water-logged. Fenimore was perched on the after deck to keep her from diving clean under every sea.

J. M. Hamilton, with Fineen, a St. Lawrence Co. boat, somewhat like Bat, with a canvas bucket cockpit of the Yonkers C. C. style, won one race and was second twice. M. D. Wilt, with Her Name, an old Lassie model Everson lap streak 15ft. canoe, was second once. Total points: Fenimore 18, Hamilton 11, Wilt 3; Osceola, Omar Shallcross, and Kie Loe, H. M. Rogers, no points.

In the special race for canoes in the Riverton Yacht Club regatta, July 13, Smuggler won with, Her Name second. In the race for the club sailing trophy for canoes, on the fall regatta day, Sept. 14, Smuggler and Her Name again finished in the same order.

We have given both the triangular and straightaway and return courses a very fair trial during the summer, and aside from the convenience of the triangular course from the spectators' point of view, I think almost all of our sailors prefer the windward and leeward course.

The river is almost a mile wide for a considerable distance above and below the club house, and several of the races were sailed over a triangular course under very favorable conditions; but the other one, around a permanent channel buoy, about three miles above the club house, had the call. The prevailing summer winds on our river almost always made this latter course a beat and run, with sometimes a very close reach one way.

The fall regatta and camp-fire on Sept. 14 was a success in every way. We had plenty of entries and nearly every race was very close.

Yawl race:

Nixie, H. E. Bachmann	1
Tadpole, R. G. Fleischmann	2
Pluto, L. R. Titus	3

Olie, E. W. Crittenden, and Hadji, C. B. Keen, also sailed.

Sailing race for canoe sailing trophy:

Smuggler, A. S. Fenimore	1
Her Name, M. D. Wilt	2
Fineen, J. M. Hamilton	3
Kie Loe, H. M. Rogers	4

Single paddling, decked canoes, about ½ mile:

Ithanel, M. A. Freeman	1
Her Name, M. D. Wilt	2
Osceola, F. M. Crittenden	3

Tandem paddling, decked canoes, about ½ miles:

Ithanel, M. A. Freeman and L. LeRoy	1
Osceola, F. M. and E. W. Crittenden	2
Enid, F. L. Wise and H. Blumner	3
Kie Loe, M. D. Wilt and H. M. Rogers	4

This race was the prettiest and closest race of the day, inches only separating first and second, and all four crews finished with not over a length between first and fourth.

Tandem paddling, open canoes, ½ mile:

Gyp, F. M. and E. W. Crittenden	1
Wandering Willie, M. D. Wilt and H. M. Rogers	2
Chiquita, F. L. Wise and H. Blumner	3

Won by a length, half a length between second and third.

After the regatta supper was served, and after supper a roaring camp-fire was started on the beach and all hands had a good time.

Vice-Com. Hand, of the Atlantic Division, and G. V. Parker, of the Island Canoe Association, were honored guests. Mr. Hand said he came to talk shop and have a good time. He certainly did both, and as a result the Red Dragons all want the Atlantic Division meet for 1896 on the Delaware. We have several good camp sites, good sailing water and lots of room for miles up and down the river, and splendid facilities for transportation and supplies.

We have gotten the half-rater fever pretty badly. Several of our members were over to see the Spruce-Ethelwynn races, and after a good deal of informal discussion pro and con—mostly pro—it was determined at the last meeting of the club to have a 15ft. racing class in the club. Two or three of the yawls will be altered to the single-stick rig, and probably three or four new boats will be built for the class during the winter.

Altogether things are very prosperous with the Red Dragons.

PHILADELPHIA, Oct. 12. M. D. WILT.

A. C. A. Membership.

NORTHERN DIVISION: Associate—Miss Cartwright, Miss Mary F. Cartwright, "The Maples," Kingston, Ont.

Rifle Range and Gallery.

Cincinnati Rifle Scores.

CINCINNATI, O., Oct. 6.—The following scores were made to-day by members of the Cincinnati Rifle Association at their range. Conditions, 200yds., off-hand, 3lb. trigger pull, rifles under 10lbs. weight, standard target, 7-ring black.

Gindele	9	9	10	8	10	10	9	6	10	10—91
	7	8	9	8	10	8	10	10	10	9—89
	9	5	10	10	8	7	9	10	8	9—85

	5	0	2	5	7	4	7	4	4	9—47
Bacon	8	4	6	6	3	6	7	7	7	7—61
	8	6	3	9	4	10	6	5	5	7—63
	5	4	5	5	8	9	7	7	5	5—60

Revolver Shooting in England.

LONDON, England, Sept. 27.—Very few members shot at the disappearing target at the North London Rifle Club on Sept. 21, as they have completed their scores in that competition for the revolver championship of the club. The following were the scores shot:

Sept. 21.—Target appearing at intervals of five seconds:

Maj Palmer	777555—36	A F Allman	666660—30
Capt Earle	777642—33	Luff	755543—29

At 50yds. the following scores were made on the same date:

Walter Winans	677747—38	Knapp	762563—29
Carter	766673—35	Denyer	543456—27
Lieut Howard	347777—35	Brading	624436—25
A J Comber	476746—34	Capt W Evans	354624—24
Major Palmer	574567—34	A F Allman	434227—22
B Comber	476465—32	Gibbons	307272—21
Capt Earle	634657—31	Gould	352344—21
Bashford	465475—31	J MacCormack	434450—20
Lieut Richardson	464755—31	Howell	242334—18
Luff	655445—29		

For the revolver championship of the club the scores stand as follows:

	20yds.	Alternate hands.	Disappearing target.	50yds.
Walter Winans	42 42 42 42 42 41	41	42	38 39—411
Major Munday	40 39 39 39 39 39	39	39	37 36—386
C Knapp	41 40 39 38 36 36	41	36	34 34—377
Major Palmer	42 39 39 38 37 36	36	36	31 31—379
A J Comber	40 39 38 37 37 37	38	38	35 33—372
Carter	38 37 36 36 36 35	37	37	35 31—358
Capt Earle	36 34 32 32 32 32	32	33	33 31—327
Lieut Richardson	38 35 35 35 34 34	33	34	33 31—322

It will be noticed that Major Palmer has come up into third place. Many of the members are following Mr. Winans's example and using Smith & Wesson revolvers and U. M. C. ammunition.

The revolver championship of the South London Rifle Club has been won by Mr. Walter Winans with a total of 324, Mr. Rand being second, and Capt. T. W. Heath third; details not yet to hand.

A Revolver Shot Abroad.

LIEUT. SUMNER PAINE sailed from New York on the Lucania Saturday for a long absence on the Continent. He will go at once to Paris, where he intends to supplement his studies begun at the Harvard Medical School by a course in the city hospitals.

Mr. Paine takes with him two revolvers—a Colt's and a Smith & Wesson—and also two target pistols, and he will no doubt find time to give the Johnnie Crapauds points on the niceties of target shooting with their favorite weapons.

Lyman Rapid-Fire Target.

THE Lyman rapid-fire rifle targets are finding much favor. They are in two sizes, for 25yds. and 50yds. The smaller one sent post-paid for 15 cents a dozen, the larger one for 25 cents a dozen, by the Forest and Stream Publishing Co.

Trap-Shooting.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Oct. 19.—CHICAGO, Ill.—Third shoot of the Cook County Trap-Shooters' League, on the grounds of the Garfield Gun Club, at 2 P. M. W. F. de Wolf, Secretary of the League.

Oct. 22-24.—BALTIMORE, Md.—Dupont Smokeless Powder Company's tournament at live birds. Stanley Baker, Sec'y.

Oct. 23-25.—ATLANTA, Ga.—Annual tournament of the Clarke Hardware Company; targets; $700 added money.

Oct. 25-26.—SEATTLE, Wash.—First annual tournament of the Washington State Sportsman's Association, under the auspices of the Seattle Gun Club; live birds and targets. C. F. Graff, Sec'y.

Oct. 27-30.—SAN ANTONIO, Texas.—First annual tournament of the San Antonio Gun Club; $1,000 added money. Willard L. Simpson, Sec'y.

Nov. 5-7.—KEWANEE, Ill.—Annual tournament of the Kewanee Gun Club.

Nov. 7-8.—WELLINGTON, Mass.—Annual fall tournament of the Boston Shooting Association. H. M. Federhen, Sec'y.

Nov. 12.—NEWARK, N. J.—All-day shoot of the South Side Gun Club; New Jersey Trap-Shooters' League contest in the afternoon. W. R. Hobart, Sec'y.

Nov. 27-28.—IRONTON, O.—Holiday tournament of the Iron City Gun Club. H. E. Norton, Pres.

1896.

Jan. 4-5—PHŒNIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the auspices of Texas State Sportsmen's Association and management of J. M. George and O. C. Guessaz (Texas Field).

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2 000 added money

May (second week) —MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2 000 added money.

May 12-14 —DAYTON, O —Annual tournament of the Ohio Trap-Shooters' League. Ed. Taylor, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1 —MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 8-13 —BUFFALO, N. Y.—Thirty eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

The Brooklyn, N. Y., *Eagle* of Saturday, Oct. 12, contained the following in regard to the proposed interclub live-bird tournament at Dexter Park, L I.: "A dozen delegates, representing as many clubs, held a meeting at Dexter Park yesterday afternoon and completed arrangements for the Dexter Park live-bird championship tournament, which will take place on Tuesday and Wednesday, Oct. 29 and 30. Samuel Lyons, of the North Side Gun Club, was elected Chairman, and H. S Lippack Secretary. A majority of the delegates were opposed to any outside clubs entering in the tournament, and it was decided that none but clubs shooting regularly at Dexter Park be admitted." The rules provide that the teams shall consist of five men, each man firing at 20 birds, entrance $10 per team, birds extra. The cup, presented by H. S. Lippack, will be first prize; the second, third and fourth prizes will be respectively 50, 30 and 20 per cent. of entrance fees; class shooting. Ties for the cup will be shot off at 25 birds to the team, but money ties may be divided. Shooting will commence each day at 10 A. M. prompt. Further particulars can be obtained by writing to the secretary. If the above is correct, the New Utrecht, the Ridgewood and other Long Island clubs that do not shoot at Dexter Park will be ineligible to compete for the cup.

Mr. H. E. Norton, president of the Iron City Gun Club, Ironton, O., under date of Oct. 12 sends us the following in regard to his club's holiday tournament: "The holiday tournament to be given by the Iron City Gun Club, Nov. 27 and 28, will without doubt be one of the best shoots ever given in the State. The grounds are fine ones to shoot on. Five expert traps will be used, known traps, unknown angles, A. S. A. rules to govern. The club house is inclosed and heated, and the management pledge themselves able to give a first-class tournament. From four to six squads will be in attendance, with more to hear from. The programme, so far as is known now, will be as follows: Ten events each day, 15 bluerocks, $1.50 entrance, targets 2 cents, money divided 40, 30, 20, 10 per cent., club to add $50 or $100 to ten highest guns. There will also be a team race of four or six men, 25 targets per man, entrance $2 50, club to add $25 to the purse in case two or more teams enter. All correspondence answered promptly, information cheerfully given, and programmes sent, by addressing H. E. Norton, Box No. 275, Ironton, O."

The Colt Gun Club, of Hartford, Conn., held its annual meeting on Saturday, Oct. 5, the following officers being elected: President, J. A. Pitkin; Vice-President, C. E. Willard; Treasurer, W. R. Hopkins; Secretary, M. F. Cook; Assistant Secretaries, F. Green and Albert Cook; Instructor, Fred Risley; Executive Committee, J. A. Pitkin, C. E. Willard, W. R. Hopkins, M F. Cook and L. C. Grover. The reports of the various officers showed that the treasury was in good shape and that the list of members had been increased by the addition of fourteen new shooters. After the meeting the regular shoot for the medal at 25 targets was held, and the following scores were made: C. Vibberts 22, McGinty 22, E. Goodwin 22, J. Pitkin 21, C. Burbridge 21, C. Willard 20, F. Green 20. A. Cook 19, M. Cook 18, H. Nichols 17, C. Bailey 17, A. Bailey 16, J. Peard 15, L. Thompson 15, W. Johnson 15, J. Alger 14, F. Olmsted 13, C. Olmsted 11, F. Foster 11, E. Hoskins 9, Carver 9, F. Storey 5. Vibberts, Goodwin and McGinty will shoot off their tie for the medal at the next shoot, which will be Oct. 19.

In a letter to the Pittsburg (Pa.) *Times*, under date of Oct. 11, John G. Messner makes the public apology to J. O'H. Denny and to the members of the Pittsburg Gun Club referred to in Drivers and Twisters in our last issue. The letter reads as follows: "In the issue for September 7 you published a note from me, headed 'Messner Challenges Denny,' in which I challenged James O'Hara Denny to shoot at live birds or targets, and, incidentally, made statements which offended that gentleman and displeased members of the Pittsburg Gun Club. In extenuation I wish to say, publicly, that the statements were based upon fault-finding criticisms repeated to me, partly in letters, disparaging me as a 'shot.' Believing that the detraction had been in fact uttered, I dashed off the unparliamentary sentences referred to, my normally cool reason being overmatched by incensed feelings and by a little wounded pride. After investigation I am of the opinion that the stories which exasperated me were exaggerated, and that I owe an apology to the gentlemen named, individually and collectively."

Isn't there room in San Antonio for two tournaments and for two gun clubs to exist without recriminations? The quarrel between the two organizations promoting tournaments in that city is one of long standing and we can hardly think that it will help matters to rake over old scores. The sport of trap-shooting and its ultimate success in any locality depends entirely on harmony between clubs and individuals. Matters have probably gone too far in San Antonio for the tomahawk to be successfully buried; still, both the tournament of the San Antonio Gun Club, which commences on October 27 next, and the midwinter shoot of the Texas State Sportsmen's Association, to be held on Jan. 9-11, 1896, under the management of Joe George and O. C. Guessaz (Texas Field), would have brighter prospects if the batchet was carried in the belt instead of being waved in the air.

Trusting to one's memory is treacherous work, no matter how good that memory may be. In reading over our account of those present at the recent tournament held by the Rochester, N. Y., Rod and Gun Club, we discovered that the name of the only Paul North had been omitted. The omission is all the more extraordinary from the fact that it was due to Paul to a great extent, that those who had the pleasure of being present at the reception given by Mr. W. C. Hadley, on the second evening of the shoot, went to bed with a conviction that they had laughed harder on that night than for many months. When Mr. Hadley and his violin, accompanied by Rolla Heikes on the piano, rattled off the "Arkansas Traveller," Paul North showed that the manufacture of blue rocks and electric pulls was not his sole accomplishment.

H. M. Federhen, Secretary of the Boston Shooting Association, has issued the programme for the Association's annual tournament at Wellington, Mass. The dates chosen are Nov. 7 and 8. On the second day the tie for the class C badge of the Massachusetts State Shooting Association will be shot off; this contest will be an interesting one, as there are no less than nine men tied for the badge: Rogers, of the Marblehead Club; Warren and Pray, of the Boston Shooting Association; Baxter and Weatherbee, of the Lyndhurst Club; Newcomb, of the Lexington Club; Doig, of the Lynn Fish and Game Club; Prescott, of the Hingham Club, and C. W. Walls, of the Worcester Sportsmen's Club. Shooting commences each day on the arrival of the 8:20 train from Boston. The programme for the first day calls for 200 targets with a total entrance fee of $14.50; on the second day, 215 targets and $16.30 entrance money.

Capt. Money, aided by J. T. Mascroft, blossomed into a poet during the Newburgh (N. Y.) tournament last week This is how it happened. Capt. Money was assigned the adjoining room to the one occupied by the "Mayor of Sutton." During the night the New England gentleman's nasal organs got to work in such shape that the Captain could not sleep; he declares that the rhythm of the snores made a capital accompaniment to the tune of "Pull the man down," an old-time song. What with thinking about E. C. powder, the words of the above song running in his head, and Mascroft's bass accompaniment being kept prominently before him, he very soon produced three stanzas and a chorus, all eulogizing E. C. We may shortly look for them in sheet form, with the air attached.

At the annual meeting of the Parkway Rod and Gun Club, of Brooklyn, N. Y., the following officers were elected: President, James Bennett; Vice-President, Henry Bramwell; Secretary, David J. Cummings; Treasurer, Elias Helgans; Field Captain, Henry J. Selover; First Assistant Field Captain, Joseph Wooley; Second Assistant Field Captain, Thomas Short; Steward, H. S. Lippack. Executive Committee: Henry J. Bookman, August Lehman and Archibald Andrews. The team selected to represent the club at Dexter Park on Oct. 29, 30, is as follows: Lee Helgans, James Bennett, Anthony Botty, Henry Bramwell and Henry J. Bookman.

The announcement that J. L. Brewer and T. W. Morfey will shoot a 100 live-bird race at Dexter Park, L I, in the near future (date not fixed at the time of writing) has created a good deal of comment. The conditions are 100 live birds per man, $1,000 a side, Brewer at 33yds., Morfey at 30yds. If the birds are a really fast lot, Morfey should have a very good chance of coming in first. It is reported also that Brewer is after Collie Cockburn, of Toronto, Can., with a view to getting on a match at live birds under the Old Dominion rules.

Louis T. Duryea (Davenport) recently defeated C. M. Chapin in a 100-bird race at the Carteret grounds. The return match is to be shot on the Westminster Kennel Club's grounds, Babylon, L. I., but no date has as yet been set. That Duryea is shooting now as well as ever he did is evidenced by the way he defeated C. Furgueson, Jr., at the New Utrecht grounds last Saturday, the score of which match is given elsewhere.

The Ridgewood Gun Club, of Brooklyn, N. Y., held its regular monthly shoot at live birds in Wissel's Ridgewood Park on Friday afternoon, Oct. 11, 15 members competing for the club badge. The contest is at 7 live birds per man. As the birds were a good lot, Henry J. Wiemann was the only one to go straight, winning the badge without a shoot-off.

The officers of the Harvard Gun Club are: President, C. A. Pierce, '96; Vice-President, W. Byrd, '97; Secretary-Treasurer and Executive Officer, R. D. Sterling, '96; Asst. Executive Officer, G. H. Kinnicut, '98; Directors, S. Hecksher, '96, E. DuPont, Jr., '97, and F. A. Sterling, '98. The club holds shoots every Monday and Thursday in the afternoon.

The Columbia (Pa.) Rod and Gun Club held its annual meeting on Oct. 7, the following officers being elected for the ensuing year: President, John Westerman; Secretary, W. M. Borden; Treasurer, Dr. W. G. Taylor; Quartermaster, Samuel Hoffman; Assistants, Harry Eicherly and John D. Forry; Master Transportation, Charles Baker.

The South Side Gun Club, Newark, N. J., will hold an all-day shoot Nov. 12. This shoot will be held in connection with the extra competition of the New Jersey Trap-Shooters' League for the shotgun donated by the Winchester Repeating Arms Co.

A new gun club has been organized at Easton, Talbot county, Md., under the title of the Easton Gun Club. Its officers are: President, John M. Elliott; Vice-President, Dr. T. J. Smithers; Secretary, J. Harry Covington. The club will hold target shoots at Idlewild Park every week.

In a recent match at Richmond, Me., the Richmond and Portland gun clubs shot for the John P. Lovell badge. Richmond won it again, making its fifth victory for the trophy. Score: Richmond 96, Portland 86.

Atlanta or Baltimore next week? Take your choice; they're both good.

EDWARD BANKS.

Lynchburg Gun Club.

LYNCHBURG, Va., Oct. 10.—The members of the Lynchburg Gun Club held their weekly shoot to-day. Events Nos. 1-4 were at unknown angles, but No. 5 was a 20-target event shot under expert rules, 5 unknown traps. It will be noticed that during this shoot the goose was kept very busy. Scores:

F. M. D.

Detroit.

WHAT SHE IS DOING FOR TRAP-SHOOTING.

Among the many notable products of the city of Detroit there is one that is well known to the trap-shooters of this country. Jack Parker (nobody calls him John, and only a few, such as Paul Weise and Louis Gitschlag, know him as "Shon") at present rightly owns the trap-shooting fraternity of that city. The success of his efforts to keep the Schmeizer Arms Company's trophy in Detroit has increased, if possible, his popularity with the members of the various gun clubs that claim Detroit as their home.

When he and Capt. B. A. Bartlett, the expert representative of the Burgess Gun Company, of Buffalo, N. Y., tied on 92 each in the contest for the trophy at Parker's shoot in the middle of September last, defeating in that contest such men as Heikes, Dickey, McMurchy, Van Dyke, Upson, Worthington, etc., not to mention the late holder, Sexton, the interest taken in the ultimate destination of the trophy was more than doubled, so far as the trap-shooters of Detroit were concerned. The tie was carried over to the last day of the Rochester (N. Y.) Rod and Gun Club's tournament, Sept. 26, and was the last event shot at that tournament. On that day Bartlett made what we believe to have been his best record, finishing the programme events with an unbroken string of 151 straight at unknown angles. Parker's adherents realized that their man had a big contract on hand, but took comfort from the fact that Parker never knew when he was beaten, and also that the contest was not at unknown angles, but at targets thrown from traps pulled in reverse order.

The result, which was chronicled in Forest and Stream of Oct. 5, proved that Parker could manage to break targets at that style of shooting, even if the light was a poor one. His score of 85 might easily have been made 87 had he taken more pains with his last two targets. Capt. Bartlett's score of 80 was not up to his standard, but it should be remembered that the strain imposed on him while making his big run told on him in all probability when he came to shoot his match as above.

On receipt of the news of Parker's victory, told in the Detroit morning papers of Sept. 27, several of his friends got together and decided that he should be made the recipient of some small token of the esteem in which they held him. The matter was brought to a head on Tuesday, Oct. 8, when the River Rouge Gun Club held a little practice shoot on its new grounds. It was a slice of luck that we were in Detroit on that date, *en route* for New York after ten days in the marshes of Michigan, where, as will probably be told in some future issue of Forest and Stream, the snipe and duck, particularly the latter, found no trouble in eluding the 1½ozs. of shot destined for their bodies. We attended that shoot and enjoyed the distinction of being on the losing side in a four-men team race, the defeat being distinctly traceable to three cyphers scored to Jack Parker as the net result of his three first shots. Another member of the team, also a native of Detroit, compiled a score that was chiefly remarkable for the scarcity of the figure 1, where was in a private match immediately afterward he broke 9 out of 10! Was it a throw-down, with the stranger as the under dog? Anyway it was a case of settle, and Joe Cabanaw got the benefit.

After the shoot an adjournment was made to Cabanaw's Hotel, where a round dozen sat down to a supper which, though he knew it not, was gotten up hastily in honor of Jack Parker. At the proper moment W. F. Genicke, as spokesman, arose and addressed Parker on behalf of those who wished him to accept a small token of their regard for him as a man and as a sportsman. The "small token" was a diamond stud, and with it was presented the following:

"We, the undersigned friends of John Parker, in appreciation of his conduct as a shooter, and owing to the fact that he has brought to his State and city the cup representing the world's championship at inanimate targets thrown from traps pulled in reverse order, better known as the Schmelzer Arms Company's trophy, do hereby tender to him our congratulations as brother sportsmen, and do present to him as a token of our friendship and approbation the accompanying diamond stud.

"(Signed) W. F. Genicke, Louis Gitschlag, Paul Weise, Hy. H. Fleischer, Leon Bellaire (Sault Ste. Marie), J. Daniels, Albert Trautz, Henry E. Visger, William A. Ferguson, P. Wood, W. Proctor, J. Klein, J. F. Fox, M. Cicotte, Theodore Cicotte, R. H. Hall, H. Herbert, J. H. Bortie, J. Cabanaw, G. Thurber, J. A. Marks, W. H. Brady, A. Quandt."

Parker was so overcome with surprise at the totally unexpected turn the supper had taken that his efforts as an orator were confined to a brief expression of his thanks. The cup, on a pedestal on which it stands hung with the many medals that Parker has won as a shooter, an oarsman and as an amateur boxer, is on exhibition in the window of Mr. Genicke's store on Michigan avenue. A fruitful topic of conversation in Detroit trap-shooting circles is the next challenge. Who wants the cup?

NEW SHOTS DEVELOPED.

The recent tournament at Detroit developed a lot of young blood. Wood, Parker's mate in the two-men team race, is a new shot. We believe that this was his first tournament of any note. His score in that race shows that he has both skill and nerve. Upson and Worthington, two of the cracks from Cleveland, O., tied with Wood and Parker with a score of 49 out of 50, each man shooting at 25 targets, unknown angles. On the shoot-off, Upson and Worthington (Redwing) broke straight, scoring a clean 50; Wood also went straight, while Parker again missed a single target, a complete reproduction of their previous score. The totals for the match and the tie were: Upson, 25 and 25, total 50; Redwing, 24 and 25, total 49; a grand total of 99. Wood, 25 and 25, total 50; Parker, 24 and 24, total 48, making a grand total of 98. The combined totals show 197 out of 200. Wood is one of the new shots developed under the tutorship of Jack Parker. Henry Herbst is another of the same kind, and there are several more yet to hear from; in fact, Detroit may be said just now to be a veritable nursery of trap-shooters.

The sport has a strong hold on the affections of shooting men of that city, and the various gun clubs are composed of enthusiastic adherents of trap-shooting. The winning of the trophy above referred to by Parker has had a very salutary effect indeed. Of course, just now the shooting men of the city are more absorbed in duck and snipe shooting than in cracking "saucers;" but every dog has his day, and when the ducks and snipe are busily engaged in the operation of increasing their species next spring, guns will crack just as merrily as ever in the vicinity of Detroit, although inanimates, not animates, will be the targets. Edward Banks.

The Reading Tournament.

Reading, Pa., Oct. 9.—The tournament of the Independent Gun Club commenced this morning on the grounds of the club at the Three-Mile House. Among those present were: F. Van Dyke, of the Winchester Repeating Arms Co.; B. A. Bartlett, of the Burgess Gun Co.; Harry Thurman and H. L. David, of the Keystone Shooting League, Philadelphia; S. Glover, of Rochester, N. Y., etc. The best average was made by Van Dyke, who lost but 15 targets out of 195 shot at. Scores:

Events:	1	2	3	4	5	6	7	8	9	10
Glover	17	16	18	17	16	15	16	17	19	13
Van Dyke	16	18	17	18	20	19	20	17	20	15

Weand	..	..	..	..	..	..	..	..	16	11
Sheeler	..	..	..	..	..	..	..	..	..	13

All the above events were at 20 targets, except No. 10, which was a 15-target event.

South Side Gun Club.

Newark, N. J., Oct. 12.—The heavy storm of rain and wind which passed over this section to-day kept most of our shooters away, only a few enthusiasts taking part in the South Side's Saturday shoot. The following were the scores made:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
W Smith	16	7	6	10	9	8	6	9	..	..	..	..	..
Thomas	25	8	9	9	6	9	8	7	7	9	5	..	..
Couch	18	5	5	9	6	8	8	9	6	..	..	..	..
Herrington	..	..	5	7	8	6	9	7	8	6	6	4	7
Folsom	..	..	..	..	..	..	5	9	8	6	8	5	7	5

No. 1 was at 25 targets, everything known; the balance were all 10-target events, unknown angles. Secretary.

Buffalo, N. Y., will be represented in the DuPont handicap at Baltimore by at least a couple of entries from the ranks of the Audubon Gun Club of that city.

The Atlanta Programme.

The programme issued by the Clarke Hardware Co., of Atlanta, Ga., for its tournament on Oct. 23, 24 and 25, is one that will attract the attention of shooters, and catch the fancy of any man who has an average of anything over eighty-five per cent. to his credit. There is "good money" in every event, taking the entrance fees only as a basis and not considering the added money; taking both together the purses will be well worth dividing.

For each of the three days of the shoot the same programme is scheduled: Three 15-target events, Nos. 2, 4 and 7, $2 entrance, $20 added in each event; four 20-target events, Nos. 1, 3, 6 and 8, $3 entrance, $25 added to each purse; a 25 target event, No. 5, $5 entrance, $50 added to the purse. The above events are "open to the world, known traps and unknown angles, A. S. A. rules to govern, black powder and 10-gauge guns barred. All purses divided 30, 25, 20, 12½ and 12½."

The company will add $700, the added money in the above programme footing up $630, the rate being $210 per day. We can find no mention in the programme in regard to average moneys, so conclude that the remaining $70 will be donated in some such form.

There can be very little question as to the probable success of this tournament. To the strong inducements offered in the programme is added the single-fare-rate ticket to Atlanta issued by all railroads on account of the great exposition now in progress in that city. The Kimball House, one of the best hotels in the South, about a block from the depot, will be headquarters for shooters during the tournament, special rates having been secured. Guns and shells can be shipped in advance in care of the Clarke Hardware Co., the company guaranteeing that the same will be delivered at the grounds. The traps will be in position on Oct. 22, so that the early birds can get a little practice prior to the opening of the tournament. We must not forget to state that the shoot will be under the management of Jack Parker, who is now in Atlanta getting things in readiness for the above date of Oct. 22.

The DuPont Tournament.

Baltimore, Oct. 14.—*Editor Forest and Stream:* All arrangements for the DuPont Smokeless powder grand championship tournament, to be held here commencing Oct. 22, have been about completed. Carpenters are at work on the grounds, building platforms, erecting gun racks, putting down foundations for traps, etc., etc.

Five thousand birds have been contracted for, with an additional thousand within easy call if needed. Eight hundred small, hard-flying Antwerps have been picked from the lot so far gotten in, with which to open the grand championship handicap event. Mr. Halstead, whose well-known hostelry adjoins the shooting grounds, will be prepared to serve lunches in the club house on grounds or hot meals at hotel at any hour.

If all the shooters enter who have signified to us their intention of so doing the entry list will far exceed anything ever seen in this country. In addition to the club house a number of tents will be erected on the grounds for convenience of shooters, where they can keep their guns, shells, etc., etc., in perfect security.

H. P. COLLINS.

General Agent Du Pont Powder Company.

Shooters desiring to send their shells or guns by express can address them care of DuPont Smokeless Powder Tournament Committee, 22 S. Calvert street, Baltimore, where they will be taken care of and sent to grounds the morning of the opening day, if so desired. All parties desiring to avail of the special rate issued by the Trunk Line Association must secure certificates from railroad agent at the point at which they purchase ticket. This certificate will be signed by the secretary of the tournament committee and be vised by Trunk Line Association agent, and will then entitle party holding same to one-third fare returning.

The handicap committee consists of the following well-known gentlemen: Jacob Pentz, New York, Chairman; John S. Hoey, New Jersey; W. L. Shepard, Chicago, Ill.; T. A. Divine, Memphis, Tenn.; J. R. Kelso, Baltimore, Md.; Dr. S. J. Fort, Ellicott City, Md.; J. H. Gulick, Washington, D. C., and H. P. Collins, general agent DuPont & Co., Baltimore.

We have received replies from all of these gentlemen with the exception of Mr. Hoey, but expect him to serve on same.

DuPont Smokeless Powder Tournament Committee.

[Mr. H. P. Collins, general agent of the DuPont Powder Company, will take charge of the cashier's department during the shoot.]

What is a Championship Contest?

In our issue of Oct. 12 we published a communication signed 48 Grains—. That letter touched upon a point of more than passing interest to the trap-shooting fraternity—that of championships. 48 Grains— took exception to the claim made on behalf of the DuPont Powder Company that the result of its coming handicap would establish who was the live-bird champion of America and of the world. He argued that the fact that contestants were restricted to the use of DuPont powder, and that the affair was also a handicap, placed it outside the pale of championship events.

Dr. Samuel J. Fort, of Ellicott City, Md., replies to 48 Grains—in the following terms:

"Brother 48 Grains— seems in a peck of trouble in regard to the damper put upon his chances to win the DuPont trophy, plus fifty per cent. of the big purse, first, because some other fellow may win because he gets a good handicap; second, because 48 Grains— has never used DuPont nitro and must use it in this race.

"Now I am awfully sorry for our friend of the big charge, but as it is at present we can not change our plans to suit him, and under the circumstances, for his benefit and others who may feel as he does, will give our side in the above matter.

"The handicap race is practically a starter and enables every one competing to get an even start, according to their ability. As 48 Grains— truly says, a 24 or 25yd. man will likely win the trophy and the lion's share of the purse; but if 48 Grains— will read a little further in the programme he will see that the committee thought about him, and said that the winner must defend his title and trophy for one year; so all that 48 Grains— has to do is come in with his forfeit, get his handicap—which may not be as great as he thinks it is—and should he not win the trophy, title and money, challenge the winner at once, when both will shoot at 30yds.

"Now, as to using DuPont nitro. Without discussing its numerous merits it may be said that the plan of compelling its use in the handicap race was simply and solely because it was, and is, and always will be, a pure and simple DuPont tournament; it is DuPont money behind it, and further comment is unnecessary as to the whys and wherefores. No man ought to kick over the possible use of fifty cartridges loaded with any make of powder that gives him a fighting chance to win twenty times his entrance besides title and trophy, and especially when 48 Grains—— or any other man will have twelve months in which to make a winner's life miserable with any other powder, for after this preliminary race the challenger may use any powder; so too may the challenged, but likely he won't want to use anything else but DuPont; and after 48 Grains—— has used 39 grains of DuPont, he won't want to use anything else either, and one great object of this tournament will be fulfilled."

The above reply to 48 Grains—— answers a good many queries. Chief among them is that which relates to the powder to be used in future challenges. Dr. Fort says that "the challenger may use any powder." That point was not settled in the programme, and we ourselves have been in doubt on that question, and possibly 48 Grains—— was also on the fence.

The question of championships in shooting circles is a vexed one. As a matter of fact, we have had so many live-bird champions that the introduction of one more or less would make very little difference. Still, we agree with 48 Grains—— that every championship contest should be open to all, and *no handicap of any kind imposed upon the contestants.* The nearest approach that we have had recently to a championship contest at live birds took place at Watson's Burnside Park, Chicago, Ill., on Nov. 16, 1894, when George Kleinman won the little iron badge by killing 91 birds, defeating Brewer (89), Carver, Elliott, Grimm, Budd, Bingham and Mott. The company was warm enough to pick a champion out of, and, so far as we can see, Kleinman's claim to the championship is a good one. The contest certainly possessed what we believe to be the essential point in any such event—all shot from the same mark and were restricted only in the amount of shot to be used. So much for the championship at live birds.

It is a remarkable fact that, although target shooting is more than a decade old, we have no legitimate champion at that branch of the sport. There has never been a real championship contest at inanimate targets that we can find a trace of. The Schmelzer Arms Company's trophy, now held by Jack Parker, represents only the championship at inanimate targets thrown from traps pulled in reverse order, called for the sake of brevity the championship at reversed order. There is no legal champion shot of America, although there may be a moral one. Were it put to the popular vote, we think there would be little doubt about Heikes getting the majority of the votes cast, notwithstanding the claims of such men as McMurchy, Van Dyke, Dickey, Bartlett, Noel Money, Upson, Glover, Fulford, etc. We could add a dozen more names to the above list, each one of which would denote a man who has *bona fide* claims to a try for the championship.

To obtain the right to the title of champion target shot of America, it would be necessary for a shooter to prove that he excelled generally at the four branches of the sport now commonly in use: unknown angles, expert rules, reversed order and pairs. With a view to ascertaining who is the champion target shot, we would like to see some prominent gun club, or some firm interested in the manufacture of sporting goods, adopt some such plan as the following:

Get up a tournament and offer a valuable cup that shall be emblematic of the championship at targets. Let the conditions be as follows: 100 targets, unknown angles; 100 targets, reversed order; 100 targets, expert system, and 50 pairs. The way to shoot the 400 targets off might be thus: divide each of the three first systems into four 25-target events, and the 50 pairs into four events of 15, 15, 10 and 10 pairs respectively. Make each 25 or each set of pairs a separate event with a solid entrance fee; deduct 5 or 10 per cent. from each purse to form a fund to be divided between the four highest averages made out of the 400 targets. Let the man making the highest average take the cup, title and 40 per cent. of the fund created as above; the three next highest would take 30, 20 and 10 per cent. of the same fund respectively. In a four days' tournament, a 25 at each style of shooting and one of the sets of pairs might be shot off without interfering with a distinct programme, as the contestants in the championship events would be formed into squads and could shoot right along in all events without disturbing the routine of the tournament. The idea of dividing up the 400 targets into sixteen separate events would, we think, serve to keep the entries from falling off.

Our claim is that the man who made the best general average on the string of 400 targets at the four different styles of shooting would be fairly entitled to championship honors. The conditions governing future challenges could be easily formulated.

A tournament that included in its programme any such championship event would surely draw a large crowd of shooters, and we think the entry list in the championship sweeps would be highly satisfactory. There, why wouldn't such a scheme as the above work? What are its weak points, and where does it fall short? Let us have an all-round champion at targets.

New Jersey Trap-Shooters' League.

CLOSING SHOOT OF THE SEASON.

Owing to the scores given below being addressed to the trap editor personally instead of to Forest and Stream Publishing Company, a delay of one week in publishing the same was unavoidable.

The shoot took place on Thursday, Oct. 3, at Red Bank, N. J., under the auspices of the Riverside Gun Club, of that place. Being the closing shoot of the 1895 series of the New Jersey Trap-Shooters' League, a good attendance was the result, seven teams putting in an appearance. The Union Gun Club, of Springfield, led with 110 out of 125, the Climax being a close second with 109. The Riverside club put up a score of 105, taking third place from the Maplewoods by a single break. The highest individual score of the day was a 24 made by E. A. Geoffroy, for the Boiling Springs. Seven men made 23: E. D. Miller, N. E. Money, T. H. Keller, D. Darby, A. L. Ivins, J. Cooper, Jr., and Warren Smith. The scores in detail were:

Union.

Counting the five best scores, the clubs composing the league finished in the following order:

	Shot at.	Broke.	Per. cent.		Shot at.	Broke.	Per. cent.
Maplewood	625	540	86.4	Elizabeth	625	513	82
Union	625	529	84.6	Endeavor	625	474	75.8
Climax	625	524	83.8	Riverside	625	460	73.6
South Side	625	523	83.6	Union Hill	625	340	53.7
Boiling Springs	625	514	82.2				

Twenty-five shooters made averages of 80 per cent. or better for five completed scores, the following being the list in order of merit:

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
Van Dyke	125	120	96	Hoffman	125	108	86.4
Drake	125	115	92	Keller	125	108	86.4

Whitehead	125	109	87.2				

The Newburgh Tournament.

THE West Newburgh Gun and Rifle Association, of Newburgh, N. Y., held its annual fall tournament on Oct. 9-11. The shoot was held on the club's grounds at Gidney's Hotel, some three miles from Newburgh, J. P. Gidney, proprietor of the hotel, acting in his usual satisfactory manner as caterer for the occasion. As the grounds themselves the club has made some alterations which may be classed as decided improvements, chief among them is the leveling of the ground between the score and the traps (both live-bird and inanimate).

The club was favored with three days of very good tournament weather. The first day it was perhaps a trifle too cold for absolute comfort while shooting targets, but the second day was all that could be desired. The third day, live-bird day, was made to order, a strong wind aiding the birds in their flight. The number of entries in the target events was not up to the Newburgh club's usual mark. Several reasons may be cited for the comparatively small attendance: the Reading shoot, the open season on game, etc.

Among those present from a distance were: Capt. A. W. Money, of the American E. C. Powder Company; G. E. Grieff, of New York, representing Von Lengerke & Detmold and Schultze powder; Neaf Apgar, of Evona, N. Y., shooting Walsrode powder to the front on the second day; E. D. Fulford, of Utica, N. Y., who carried off the $20 premium offered for the best general average by scoring 295 out of 340 with his Greener hammer gun, U. M. C. factory-loaded ammunition and Schultze powder; J. T. Mascroft, the "Mayor of Sutton," Mass., who is just now shooting a great gait; V. D. Kenerson and F. N. Hoyle, of Worcester, Mass.; W. P. Rayland (Rags), of Rome, N. Y.; Dr. Mosher and M. F. Roberts, of Rupert, Vt.; Cramer, of Saugerties, N. Y., etc. As the club was using empire targets and traps, Charlie Hebbard, of the Empire Target Company was, of course, on hand to see that things were running smoothly.

The cashier's department was run by the Newburgh expert, the president of the club, David Brown, who sees to it that the boys get all the money that is coming to them and that the newspapers get their score sheets in good shape. W. C. Gibb, who has occupied the position of secretary to the club ever since its organization on March 1, 1891, was squad hustler; on the third day he was working hard all the time, taking entries for the live-bird events. H. C. Higginson, vice-president of the club; John A. Wood, captain and treasurer, and ex-Captain George Taggart, all aided in keeping things going. Twenty-one events on the first day (10 programme events and 11 extras) and 17 events on the second day (10 events regularly scheduled and 7 extras) show that no time was lost between whiles and that everybody had all the shooting they wanted.

The club donated $50 in gold as premiums for the best general averages made in all the target events on the programme, the $50 being divided into five moneys, $20, $15, $5, $5 and $5. Fulford won first, the others falling as shown in the following table:

	Shot at.	Broke.	Average.	Premium.
Fulford	340	295	86.7	$20
Taylor	340	291	85.5	15
Mascroft	340	288	84.7	5
Kenerson	340	288	84.7	5
Stansbrough	340	277	81.4	5

Apgar led in the averages for the second day, losing only 17 targets out of 170 in the programme events and a total of 24 out of 225 shot at during the day, making his average for the day a fraction under 90 per cent. In comparing the averages made at this shoot with others of recent date, cognizance must be taken of the varied nature of the programme. Jimmie Taylor's average is a good one, considering how little practice he gets and that his long suit is live birds.

The tables given below show the scores made in every target event shot during the tournament:

First Day.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21

Money	..	..	..	..	..	..	..	..	..	..	..	..	..	13	13	12	13	9	7		

Nos. 1-10 were the programme events, Nos. 11-21 being extras. Of the programme events, Nos. 1, 8 and 10 were at known angles; Nos. 2, 5 and 6 at unknown angles; No. 4 at traps in reversed order; Nos. 3 and 7 were both 25 target races, divided into 10 known and 15 unknown angles; No. 9 was at 9 singles, unknown angles, and 3 pairs; No. 18 (extra No. 8) was at traps in reversed order.

Second Day.

Among the new arrivals on this day were M. Herrington, the representative of the W-A powder; J. B. Halstead and P. H. Mason, of Peekskill, and C. F. Lenone, of Passaic, N. J. The scores were:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
Targets:	15	15	25	15	10	20	25	15	15	15	15	15	15	10	10	10	10

Leicht	..	..	..	..	..	..	..	..	..	5	..	..	..	..	3	..	..

The programme for this day was identical with that for the first day. Nos. 1-10 are the programme events, Nos. 11-17 being the extras. All the extras were at unknown angles with the exception of Extra No. 1 (No. 11 in the above table).

Third Day.

The third day was given up to live-bird events, the programme calling for three events: No. 1, 5 birds, $5; No. 2, 7 birds, $7.50; No. 3, 10 birds, $10.

Among the newcomers were several members of the New Utrecht Gun Club, of Brooklyn, N. Y.: W. Shields, L. T. Duryea, C. Furgueson, Jr., A. Eddy, Chris. Meyer, J. N. Meyer and W. F. Sykes; F. L. Train, a member of the Cobweb Gun Club, New York city, was also present. The above delegation, added to the shooters already at Newburgh, made a good entry list. The birds were only a moderate lot, a fact that annoyed the management exceedingly, as it had taken pains to have good birds on hand for this tournament. A strong wind helped at times to make those birds that wanted to fly really hard ones to find. The scores show that James Taylor, a member of the local club, and E. D. Fulford shot consistently well throughout the day.

A start was made in the morning with an extra event—5 birds, $3—nine entries being secured. Of this number four went straight, while second money went to one man who had the good fortune to lose his last bird dead out of bounds. Scores: Apgar, Wood, Money and Fulford 5; Hoyle 4, Kenerson and Stanbrough 3, Mascroft and Dickson 2.

A second extra, same as above, had ten entries. Scores: Roberts, Mosher, Arnold and Money 5; Dickson, Wood, Hoyle, Taylor, Fulford and Kenerson 4. Although there were three moneys, there was no dropping for place, each one of the men killing four birds, scoring their last pigeon; thus there was no claimant for third money.

The first programme event was then commenced, sixteen entries being obtained. In both this and the second event the moneys were cut up so that straights were worth less than the amount of the entrance fee. In event No. 3 Fulford had the luck to be the only straight, while those with nine were so numerous that they each received less than 50% of the amount they had paid in. The full scores are as follows:

Trap score type—Copyright 1895, by Forest and Stream Publishing Co.

	No. 1.	No. 2.	No. 3.

Davenport	.....	1 1 1 2 1 2 1—7	2 2 0 1 1 2 2 1 1 1—9
Train	.....	1 1 1 2 1 2 1—7	1 2 1 2 2 2 2 1 2 0—9
C Meyer	.....	.....	2 2 2 2 2 2 0 0 1 2—8
Marantette	.....	.....	1 1 1 2 2 1 2 • 1 0—8

No. 1 was at 5 birds, $5 entrance; there were nine with straight scores, six with 4 each and one with 2. No. 2 was 7 birds, $7.50 entrance; ten men killed straight, Moshier and Arnold withdrawing their share of the purse. The remaining eight shot off miss-and-out until only the following four remained, having killed 3 straight: Taylor, Fulford, Davenport and Train; these four divided the balance of first money.

The tournament was brought to a close with a miss-and-out, Train and Roberts dividing the purse after killing 7 straight, the event having seventeen entries. Scores: Train and Roberts 7; Rohr, Taggart and Marantette 6; Taylor and Hoyle 5, Mosher 4, Fulford, Stanbrough and Greiff 2; Lenone, H. C. H. and Arnold 1; Wood, Dickson and Meyer 0.

EDWARD BANKS.

Prize Winners at Rochester.

ROCHESTER, N. Y., Oct. 12.—Below are the scores made in the last shoot of the Rochester Rod and Gun Club's summer prize contest, which opened in April and was brought to a close this week. At the start there were thirty-three shooters doing their level best to land in first place, but as the shoots rolled by one after another dropped out until the contest was narrowed down to ten game sportsmen. As there were sixteen prizes donated each one of those who finished is assured of one prize. The results of these contests are as follows:

Position.	Name.	Shot at.	Broke.	Average.
1	T R Griffith	953	748	78.4
2	W C Hadley	879	747	84.9
	J F Norton	914	747	81.7
3	John Lowden	892	746	83.6
	E D Hicks	867	746	86
4	L V Byer	914	745	81.5
5	George Wride	949	743	78.2
	A Rickman	1015	743	73.2
6	Wm Foley	1017	741	72.8
	George Borst	1007	741	73.5

It may be of interest to know that Griffith, Hadley and Rickman use E. C.; Lowden, Schultze; Norton and Borst, Walsrode; Hicks, "Blue Ribbon"; Byer, DuPont; Wride, Am. Wood; and Foley, both E. C. and Walsrode.

The scores above referred to are as follows:

* Meyer did not shoot out his last string, thus throwing him out of the race. E. D. HICKS.

Trap at Waco.

WACO, Tex., Sept. 26.—A few of our shooters got together to-day and shot off several events, both live birds and bluerocks being used. The following are the scores made:

	No. 1.	No. 2.	No. 3	No. 4.
Lippincott	11111—5	11111—5	11101—4	11110—4
Turner	11110—4	11110—4	11011—4	11111—5
Hubby	11101—4	10111—4	11111—5	11011—4
Speight	11111—5	11111—5	01111—4	11111—5
Reece	11110—4	01101—3	11101—4	11110—4
Cargill	01110—3	.....	.....	.....
Garland	.....	11101—4	01111—4	.....
Puckett	.....	.....	10011—3	11011—4
Fosgard	.....	.....	.....	11111—5

The above were all $2 50 entrance, two moneys

No. 5, miss-and-out, $1: Hubby and Reece 3 (divided), Henderson and Fosgard 2, Lippincott, Threadgill, Speight and Turner 0.

No. 6, 7 live birds, $3, two moneys: Hubby and Coke 7, Speight 6, Lippincott 5, Earle and Reece 3.

Three 10-target events, $1 entrance in each, were also shot off, the results being:

No 1: Hubby and Fosgard 10, Speight 7, Reece and Turner 4, Threadgill 3.

No. 2: Hubby and Henderson 10, Threadgill, Speight and Turner 8, Williams 6, Coke and Downs 4.

No. 3: Henderson 10, Massey 9, Reece, Hubby and Williams 8, Threadgill 7, Speight and Turner 6, Jones 5. F. E. HUBBY.

Trap Around Buffalo.

THE AUDUBONS PREPARE FOR NEXT YEAR'S STATE SHOOT.

It may seem somewhat premature at this early date to say anything in regard to the preparations now being made by the members of the Audubon Gun Club, of Buffalo, N. Y., with a view to the successful carrying out of the New York State shoot. On the other hand, the fact that the club is already getting things in shape is a guarantee that it will leave nothing undone to make the shoot one of the greatest successes ever held in this State, and as such it is well worth noting.

On our way from the West on Wednesday, Oct. 9, we were fortunate in being able to stop off at Buffalo long enough to make the acquaintance of Mr. E. W. Smith, the energetic secretary of the club, and of several of his fellow-members. The Audubons, by the way, number about 125 members in good standing, many of them being very prominent residents of the city of Buffalo.

The plan for next year's shoot was outlined to us, and without giving anything away it is safe to say that those who attend will find that their pleasure and comfort have been carefully considered in all the preparations. Three sets of traps will be used, each set being housed in a manner similar to those at Rochester, N. Y. It is proposed to have a separate cashier's office for each set of traps, to do away with any chance of confusion in that all-important department. The distance between each set of traps will be 30ft., thus avoiding the trouble that is bound to ensue when No. 5 of one set overlaps, or very nearly overlaps, No. 1 of the other set. Two of the new trap houses were in use at the second annual club merchandise shoot held on Saturday last; the third will be ready any time.

The shoot itself will take place on the club's old grounds, but the location of the trap houses is somewhat more to the northeast of the grounds than the original site of the traps heretofore used by the club. The old club house, too, will be relegated to the background, and will be used as a storehouse, its place being taken by a newer and far more commodious building, which will, like the trap houses, be modeled in all probability somewhat after the home of the Rochester Rod and Gun Club. Some attention will also be paid to the grounds themselves; bumps will be cut off, and holes will be filled up.

All the above preparations will cost money, and plenty of it, but we are assured on capital authority that nobody need worry about the money being expended by the Audubon Gun Club upon the improvements it is now making to its grounds and building. The club's all right.

A LITTLE LIVE-BIRD SHOOT.

On the above date, Oct. 9, a small live-bird shoot was gotten up by B. F. Smith, 2865 Main street, all those who took part in it being members of the Audubon club. Mr. Smith's grounds adjoin those of the above club, so that the alterations now being made were easy to be seen.

The main event was a 20-bird sweep, $10 entrance, birds extra. Six entered, the score showing two straights, two 18s, a 16 and a 15. A 10-bird sweep, $5 entrance, birds extra, was also shot; Kirkover, who divided first in the above sweep, winning first all alone in this event with 9 out of 10, his 6th bird dropping dead out of bounds. Smith was remarkably unlucky, losing no less than 5 of his birds dead out of bounds; this was due without a doubt to his load being unsuited to his gun; it sounded poor and the result is manifest in the score below. Edward shot well and in good time, but drew a goodly share of easy birds, Bennett appearing to have the hardest luck in drawing a succession of corkers out of a lot of birds which were only ordinary. Heinold is one of the old-time shooters, gun below the elbow almost, still he held his own very creditably, and had a good show for first money alone up to the eighth round in the 10-bird sweep. Storey is another of the older generation of shooters; the puller seemed to have it in for him, as he got Nos. 4 and 5 traps pretty nearly all the time, more than a slight handicap on this occasion, as the wind was blowing briskly from No. 1 across the traps. Charles killed 16 straight in good shape, but fell to pieces on his 17th and 19th birds, the latter falling dead out of bounds when it should have been pulverized. Dr. Daniels, a popular member of the club, shot a strange gun and suffered in consequence. The best features of the afternoon's sport were the many good second barrel kills made by Heinold and Kirkover, and the retrieving of Blinky.

Blinky deserves a little paragraph all to himself. He is not, as might be supposed, a dog; he is simply one of Buffalo's rising generation who has the love of sport very deeply imbedded in his slender body. His nickname is derived from the fact that he has but one eye, his right eye having been destroyed by a stray shot corn which found its way through the screen behind which Blinky was performing his duty as trapper boy. Notwithstanding this handicap Blinky can hold his own and no boy attempts to make off with a bird that had fallen dead out of bounds if Blinky is in pursuit. He is an institution, and a paying one, when Philadelphia squabs are so much apiece.

The scores made were as follows:

Twenty live birds, $10, birds extra, 30yds. rise:

Kirkover	22222222222212121212—20
Edward	21111212221221111222—20
Charles	22212112221122202*1—18
C Heinold	22101112102211111112—18
L Bennett	21221222*0222211012*2—16
Storey	*12210*21122112110*—15

No. 2, 10 live birds, $5; birds extra:

Kirkover	2122221222—9
Edward	2112221202—8
Bennett	2101111*111—8
Heinold	11112120**—7
Dr Daniels	2212*10120—7
Storey	*1*221*220—6
Charles	110*201021—6
B F Smith	**1*221*0*—4

EDWARD BANKS.

European Shooters at the Bosnia Tournament.

CINCINNATI, O., Oct. 7.—The first international pigeon tournament, held at Bosnia, in Austria-Hungary, beginning Sept. 9, is now over. It was in every way successful, there were forty-five subscribers in the Grand Prix event. The prize of 25,000 francs, together with the added entrance money, was divided into four parts, each of which would make a delightful surplus in one's pocket. First prize, 16,920 francs, with *objet d'art*, was won by Signor Guidicini with 17 pigeons; second prize, 6,200 francs, won by Count Gazoli, who grassed 16 birds; third prize, 3,960 francs, won by Signor Riva with 12 birds; fourth prize, 2,720 francs, was divided between Signors Galletti and Calari, each of whom had 11 birds to their credit.

The weather was exceptionally fine, and the birds were a grand lot. The arrangements were all that could be desired and a fine time was had. At the close of the tournament a shooting expedition was made into the marshes, the sport including hawking parties. The town was handsomely decorated and illuminated. There was only one American, Mr. Binder, but he unfortunately did not carry off any of the honors.

There seems to be plenty of room in Europe for our shotgun shooters next year. The list of important and desirable tournaments is quite extensive. Some of the most important are: Monte Carlo, beginning in December; Cairo, Egypt, under the auspices of the Khedive, beginning about Jan. 10, full details will be found in this paper in a few weeks. Then come along in succession tournaments at Spa, England; Rome, Berlin, Paris and, closing the circuit, at Bosnia in September.

Here are the winners in the several events, many of whom no doubt your readers are acquainted with:

Sept. 9, Prix d'Ouverture: First, Count Daukelmann; second and third, Toureuiet and Gajoti; fourth, S. A. T. du Braganice.

Sept. 11, Prix des Baines: First, Count de Rolinano; second, Count Daukelmann; third, Count Bernstorff; fourth, Baron de Lunden.

Sept. 14, Prix de Sarajero: First, Tourun; second, Baron de Lunden; third, Count Bernstorff; fourth, Yall de Poizal.

Sept. 16, Grand Prix: First, Guidicini; second, Count Gajoli; third, Count Riva; fourth, Galetti and Calari.

Sept. 19, Prix le Champion: First, Count Gajoli; second, Count Daukelmann; third, Baron de Lunden; fourth, Count de Sibrick.

Sept. 23, Prix de Bosnia: First, Duke de Bruneel; second, Boolr beg Kapetanovio; third, Comte Voss; fourth; Comte de Maseuges.

Sept. 18, Prix Mostar: First, Count Daukelmann; second, Mainetto Ghido; third, Comte de Poizat; fourth, Ibrahim beg Kapetanovio.

Sept. 21, Prix Herzgovina: First, Comte Bernstorff; second, Riva; third, Col. Holder; fourth, Marconcini.

Sept. 22, Prix de National: First, Comte Gajoli; second, Journu; third and fourth, Dalwick and Marconcini.

PETER GIBSON, Lieut.

Shooting at Pelhamville.

MOUNT VERNON, N. Y., Oct. 10.—Below are the scores made to-day on the Wauregan shooting grounds at Pelhamville, N. Y.:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

D. F. KELLY.

Muskegon vs. Grand Rapids.

GRAND RAPIDS, Mich., Sept. 28.—The elements seemed to have conspired to-day to prevent the meeting between the above-named teams and did actually succeed in holding down the scores somewhat. Yet we had an enjoyable time. The promptness with which the participants stepped up to the score, and the uniform cheerfulness each one displayed made the affair one pleasant to remember. While the singles were shot from under cover the wind was raw and made things uncomfortable; but when it came to standing out in the rain to shoot the doubles, with a man's teeth chattering and the water dripping down his back, it was a test of good nature that only a true sportsman could endure. The only regret was that the visitors could not stay over to take part in the annual supper shoot and enjoy the hospitality of the Valley City Club.

Strange as it may seem, Muskegon, a city of 25,000 inhabitants, and one of the liveliest cities in the State, with deep-water navigation, has no railroad communication with Grand Rapids and the outside world between 6 P. M. on Saturday and early on Monday morning. During the summer excursion trains are run between these sister cities every Sunday at a handsome profit to the railroad companies; a Sunday train the year round, while it might not always pay in dollars, would be greatly appreciated by the people.

The Muskegon Fish and Game Protective Association challenged the Valley City Gun Club, not so much with the hope of defeating it, but as a preliminary test of the strength of its own team, preparatory to making an earnest effort next season to carry home the trophy. While it was a comparatively easy victory for the home club, there is material in the visiting team which with practice will give it need of all its skill when next the two teams meet.

Just at the close of this event, while the sides for the supper shoot were being arranged, the sun broke through the clouds and a magnificent rainbow flashed in the foreground, a perfect semi-circle, one end springing from the water of the lake, the other from the grass of an orchard scarcely a hundred yards away. Some excellent scores were made in the side shoot, Ben. O. Bush leading with 24, he shooting a Winchester, as did Karstens, Elkerton and Coleman.

The annual supper, served at the Lakeside Club immediately after the shoot, was an elaborate banquet, and when the dishes came on the table piping hot one not experienced with shooters' appetites would have been dismayed, but caterer Swetland knew by experience for whom he provided.

The scores in the two events are as follows:

Trophy team race: Five-men teams, 50 targets per man (30 singles, one man up, 5 unknown traps and 10 pairs):

Grand Rapids	
Wharton	1111111101111101110111111111 10 10 10 10 10 11 11 11 11 11—42

C. F. ROOD, Sec'y.

Shenandoah Junction.

SHENANDOAH JUNCTION, W. Va., Oct. 5.—Shooters from Berkeley and Jefferson counties gathered together at this point to-day to try their skill at the traps. The weather was at its best for the sport, and the way good scores were piled up shows that the shooters meant business. The main attraction of the day was event No. 4, which was shot for a beautiful silver cup, representing the championship of Jefferson county, at 25 targets. The cup was given by Mr. C. E. Drawbaugh, who managed the shoot.

The race for this trophy was a hotly contested one, Capt. Billmyer and Robt. Gibson, both of Shepherdstown, tieing on 21 out of 25, which was shot out at 10 targets, resulting in the Captain's favor. Capt. Billmyer used DuPont smokeless powder and an L. C. Smith gun. The three highest averages for the day were as follows: Billmyer 86, Gibson 82, Bishop 80 per cent. All shooting known traps and angles. Scores:

Events:	1	2	3	5	6	7	8	9	10	11
Targets:	15	15	15	10	10	10	10	10	10	10

Duryea Defeats Furgueson.

L. T. DURYEA and C. Furgueson, Jr., both members of the New Utrecht Gun Club, of Brooklyn, N. Y., shot a 100-bird race on Saturday last, Oct. 12, on the grounds of the above-named club at Woodlawn, L. I. Duryea shot in great form, killing 96 out of his 100, his opponent withdrawing at the end of the 60th round when he was 5 birds to the bad, having dropped 8 to Duryea's 3, the score standing 57–52. Duryea lost three of his birds dead out of bounds. The weather was wet and squally. Score:

L T Duryea	2221212212211121222012222—24 2122212222112211021121112—24 1021212112221211112121011—23 2122111222211212121211111—25—96

Western Trap Matters.

THE BALTIMORE PARTY.

CHICAGO, Ill., Oct. 12.—Mr. E. S. Rice, general agent for the DuPont powder, is making every effort to have a goodly Western party go to the big Baltimore tournament, Oct. 22–25. He writes that he intends getting together a couple of dozen of good shots of the West, the party to go East on an excursion basis, which will make the cost of the trip going and coming less than $30. It is hoped that enough will go to fill a special car, and in any event arrangements will be made for the comfort of all who go. The party will start Sunday afternoon, the 20th, arriving in Baltimore, in all probability, the afternoon of Monday, 21st. Accommodations for the Western party will be secured in advance, and everything possible done to secure comfort of one and all. Mr. W. L. Shepard, president of the Illinois State Sportsmen's Association, has been selected to act on the handicap committee. In view of the able efforts making, there should be a good time at Baltimore.

This is a great big country, and full of good shooters. Not all of them can be at any one tournament. Some shooters will be disappointed at not being able to attend the big Atlanta tournament, on account of the conflict of dates with Baltimore; but none the less both shoots can and will be great and successful affairs. The Clarke Hardware Co., of Atlanta, are making such efforts as will secure a representative gathering at the exposition city.

GENERAL TROLLEY MANICURE.

"Mr. T. A. Divine, general trolley manicure, Yahoo line," is the irreverent way in which Messrs. Joe George and Oscar Guessaz, of San Antonio, address Mr. T. A. Divine, of Memphis, claim agent of the Yazoo & Mississippi Valley line; it being their intention to invite him to the January Santone shoot. "Wait for the Big Shoot," is the way these two put it. "This shoot has no connection with any other shoot. It is the State shoot, the good shoot, the big shoot, the only shoot."

There will be a big gathering of shooters at San Antonio this season, and for those shooters who have never traded Northern snow for Texas sunshine a most pleasant experience is in store. "We won't do a thing to you Memphis fellows when we get you in Texas," write these exuberant young men, "because we don't like the way you treated us at Memphis. And we ain't after that Englishman, Noel Money! It's his brother Isaac we want. We won't do anything to him." On the whole, it seems safe to predict that there will be something heard to fall with far from down-like softness when Greek meets Greek in the winter time at the San Pedro Springs of the Rio San Antonio.

EXTREMELY GOOD SHOOTING PREDICTED.

In comment on the proposed visit of Western shooters to the Baltimore DuPont tournament, the *Tribune* of this city says: "J. G. Messner, of Pittsburg, Pa., won the last Grand American Handicap with a score of 35 straight. This score will without doubt be beaten in the coming championship race by one of the Westerners, as all the Chicagoans that have signified their willingness to take part in the affair will be in fine condition." At first thought it would seem hard to beat a straight, but maybe this is all right.

SAD ACCIDENT.

It was a sad accident which deprived Mrs. Dr. S. Shaw, of this city, of her life last Saturday. Dr. Shaw is a member of the Garfield Club, and Mrs. Shaw had gone out on her bicycle to see the regular club shoot. Returning from the shoot, she was run down by a runaway horse, thrown from her bicycle and so injured about the head by the hoofs of the horse that she never regained consciousness, and died a few moments later.

WESTERN SHOOTS.

Oct. 8 a pleasant shoot was given by the Sheffield, Ill., Gun Club, Sheffield men taking most of the money. A town team contest was held at 15 targets, unknown angles, with the following result: Sheffield 76, Neponset 73, Anawa 62.

At Ottumwa, Ia., Oct. 8 and 9, a very spirited tournament was held. Dr. Douthett, of Osceola, Ia., ran 25 straight a couple of times. Dr. Webster, of Ottumwa, also made 25 straight in one event, and 49 out of 50 in another. Three men, Van Emmon, Gammott and Crismun, scored 47 out of 50. Webster was fortunate throughout, Van Emmon following close.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Altoona Trap Notes.

ALTOONA, Pa., Oct. 12.—Trap-shooting matters have been decidedly dull in Altoona and vicinity within the last two weeks. The grouse and deer season opened in Pennsylvania on the first of the month, and the shooting fraternity almost to a man has taken to the woods. The variegated hues which the hills and fields are now assuming; the recollections of camp-fire flickerings; the whir of ruffed grouse and the excitement of the chase—have charms to entice the lover of dog and gun from his daily vocation such as nothing else can. Living here, as we do, within a half hour's ride of the wilds of the Alleghenies, one can spend the few leisure hours that were in summer devoted to trap-shooting with dog and gun to great advantage.

J. G. Low, of the Country Club, Pittsburg, was in the city a few days this week. Besides taking a grouse hunt he, in company with a few of the local shooters, shot a few sweeps at the driving park grounds on Tuesday afternoon. Purses were divided in two moneys. The scores follow:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	10	10	10	10	Targets:	10	10	10	10
Clover	6	9	7	6	Forney	5	7	7	7
Hoover	5	3	8	5	Low	..	4	4	7

The Huntingdon Gun Club's last week's medal shoot was held on Friday afternoon. It was, as usual, well attended. The day was a delightful one and the sport was witnessed by a large crowd of interested spectators. Scores:

Events:	1	2	3	Events:	1	2	3
Targets:	10	10	10	Targets:	10	10	10
W S Houck	8	7	9	Crites	..	3	6
W A DeForrest	7	6	..	McCahan	..	6	..
Chas Kline	5	6	..	Fleming	..	6	6
H Greenberg	1	..	..	Leister	..	2	..
Fred Mobus	4	8	..	W Simpson	..	4	..
Stewart	..	8	..	Steinberg	..	0	..
Simpson	..	3	5				

No. 3 was a walking match. No. 4, the medal contest, follows in detail:

Fred Mobus	0001001111—5	Adams	0000000000—0
DeForrest	1001110011—6	Greenberg	0100000001—2
Crites	0001000000—1	McCahan	0101111110—7
Houck	1110010111—7	Simpson	1110100100—5
Kline	0101101011—6	E W Stewart	1111011110—8
Leister	0001001001—3	G S Williams	0110011101—6

E. W. Stewart won the gold and Crites the leather medals. Adams was not a member of the club.

I have just received a letter from Secretary Horace Johnson, of the Huntingdon club, in which he states that they will hold a one day's tournament in the near future, on a date that will best suit the Altoona boys to pay them a visit. This means a big day's shooting. The two clubs can turn out in the neighborhood of thirty shooters who will shoot through the programme, and if the weather is at all favorable there will undoubtedly be a large attendance. Captain Williams, who kindly furnishes me with the scores, writes that they have remodeled their building and changed the position of their traps, as suggested in a former letter to FOREST AND STREAM, and that their grounds are now as good as any in the State.

GRANT.

Holland Defeats Zeeland.

HOLLAND, Mich., Oct. 4.—The Blue Rock Gun Club held to-day its second medal contest since it was organized last June. The first time we were badly beaten, but to-day we won by a small margin. To-day's contest was with the Zeeland, Mich., Rod and Gun Club, at the Fair Grounds. The prize was a solid silver medal, given by the S. O. and W. A. Agricultural Society to the club making the highest score The society also offered a purse of $6 to be shot for. Score:

Medal contest, 6 men to a team, 25 bluerocks per man, unknown angles:

Holland.

No. 2 shot for purse of $6; 20 bluerocks, entrance price of targets, purse divided—$3, $2 and $1: A. Ferguson and J. Kamps 17; F. Johnson, H. Harman, J. Kraus, A. Kamps and A. Smits 16; R. Mackey, G. Bender, A. Ending and H. Karstens 15; H. Van Eyck, A. G. Baumgartel, C. Harman and S. Arleth 14; W. Thomas, J. H. Smith, C. J. de Roo and H. Holley 13.

A. G. BAUMGARTEL, Sec'y.

The Audubon's Annual Shoot.

SATURDAY, Oct. 12, was the day set for the Audubon Gun Club's annual merchandise shoot. The weather, after being about as perfect for trap-shooting as possible during several weeks past, broke down and gave the Audubons a taste of the pleasures of trap-shooting in a storm of wind and rain.

Yet despite the bad weather conditions, 46 shooters took part in the big event (50 targets), for which there were just 50 prizes offered. Thus it was a case of "All prizes, no blanks," a state of affairs which rendered it somewhat easier to withstand the wet and cold than might otherwise have been the case. Under such conditions as stated above, the score of 44 out of 50, unknown angles, put together by Alex. Forrester was a good piece of work, while Dan Lefever's 43 was not far behind. The latter scored 24 out of his last 25, the highest individual score made in any one string of 25. The prizes, which had been on view in the windows of Dingen Bros.' store, on Main street, Buffalo, for some days, were a capital lot and as varied as could well be imagined. The scores made were as follows:

	First String.	Second String.	Total.		First String.	Second String.	Total.
A Forrester	22	22	44	Gifford	13	16	29
D M Lefever	19	24	43	Reid	10	19	29
Tolsma	20	21	41	L Erb	10	19	29
J P Fisher	20	19	39	Zoller	11	17	28
Kirkover	17	21	38	Coombs	12	15	27
F D Kelsey	19	19	38	Willitt	9	16	25
Northrup	18	18	36	Poole	13	11	24
B F Smith	17	18	35	W E Storey	10	14	24
Oehmig	16	19	35	O'Brien	11	13	22
Jaeger	17	18	35	Sauer	9	13	22
C S Burkhardt	17	18	35	Wilson	13	9	22
E C Burkhardt	18	17	35	Kobler	11	10	21
L W Bennett	20	14	34	Dingens	10	11	21
L Fries	19	15	34	H Erb	10	11	21
P S Myers	17	16	33	T Howell	10	10	20
Dr Daniels	17	16	33	Reynolds	7	13	20
E W Smith	14	19	33	J E Lodge	14	6	20
G McArthur	15	18	33	Dr Smith (unfinished)	12	7	19
Dr Fisher	15	16	31	C J Haigh	7	12	19
Swartz	15	16	31	D C Sweet	8	10	18
H McMichael	16	15	31	B Jones	3	12	15
Le Beau	16	14	30	Whitbeck	4	4	8
Losson	15	15	30				

The weather necessitated the postponement of an attractive programme of sweeps, but there was a final shoot at live birds, in which seven men competed. B. F. Smith refereed. The entrance fee was $5, with two moneys. Harry Kirkover had the best of it, winning out with 7 straight, leaving a host of 6 men to settle second place. The scores were as follows: H. D. Kirkover 7, E. C. Burkhardt 6, L. Zoeller 5, D. Lefever 6, McArthur 6, L. W. Bennett 6, Kelsey 6.

Trap at Elkwood Park.

LONG BRANCH, N. J., Oct. 9.—There was a good day's sport to-day at Elkwood Park, the main event being a sweep at 10 live birds, which was known as the "hotel-keeper's handicap." One of the conditions of the event was that winner should pay for dinners for all the contestants out of the purse. 'Lisha Price, of Pleasure Bay, N. J., was first with 9, thus securing both the purse and the honor of acting as host at the clambake which was provided at the Elkwood Inn on the conclusion of the event. The following were the scores in this event:

H Davis (30)	2001201101—6	J Little (21)	2021000022—4
E Megee (30)	2022102022—7	Stearns (21)	2101010012—6
J Atkinson (30)	0022121020—6	W Perrine (32)	0112120002—6
L Stoddard (30)	2012022110—7	E W Price (32)	1222022221—9
J Carroll (25)	1000022000—3	Sutphin (25)	0010222002—5
T Johnson (21)	0111010020—5		

A 10-bird sweep at blackbirds, $1 entrance, was also shot, the following being the scores made: A. L. Ivins 8, J. L. Brewer, Wm Perrine, E. W. Price and W. C. Price 7; L. Stoddard and Considine 6; H. White 4, H. Carroll and Sutphin 3.

As an opener for the day, H. Davis, J. Atkinson and J. Danser shot a 5-bird sweep, $5 entrance, Davis scoring 4, Danser 3 and Atkinson 2. A 3-bird sweep, $5 entrance, was won by Stearns, who killed 2, his opponents, Johnson and Little, scoring 1 and 0 respectively.

J. V. EMMONS.

Perth Amboy Shooters.

PERTH AMBOY, N. J., Oct. 5.—The Central Gun Club held its regular club shoot this afternoon. Conditions: 10 live birds per man, $3 entrance. Score:

Wm Dayton	0222110010—6	Wm F Hartman	1101121001—7
H Dayton	2202202122—8	G Eggert	0021111111—8
J Glenn	0101110120—6	S Dayton	1101222122—9

H. J. MASON, Sec'y.

PUBLISHERS' DEPARTMENT.

A Suggestion.

THE very low rates to Atlanta offer a rare opportunity to visit the South at little cost. There are a number of points *en route* well worthy in themselves of making the trip to see. Among them are Luray Caverns, the Great Natural Bridge of Virginia, Lookout Mountain and the Chickamauga-Chattanooga National Military Park. Luray Caverns and National Bridge are too well known to need extended mention, and the recent dedication by the National Government of the new military park has brought it prominently to public notice. Through this vast park the United States Government has built the finest roads in the United States, no other park offering the opportunity in area and topography and available material for road building. Almost every State in the Union has erected monuments there to its heroes who fell in "the late unpleasantness." Chattanooga and Atlanta are easily reached now and the trip is really a delightful treat. The famous Shenandoah Valley Route runs a solid train from New York to Chattanooga, passing through the interesting and historic points just mentioned. The dining car service is the best out of New York. Address L. J. Ellis, 317A Broadway, New York, for any desired information.

Mannocitin.

MANNOCITIN is a rust preventive that has attained a great vogue on the Continent, and which is now being introduced to the manufacturers and sportsmen in America by Mr. Otto Goetze, 23 Whitehall st., New York.

In Germany it is used by the government railways, telegraph systems, gun factories, etc., as well as manufacturers in all departments of trade.

It is highly recommended by such men as Frederick Krupp, the great gun manufacturer, and Julius Pintsch, of gas burner fame.

"Mannocitin," according to the manufacturers, "is a composition of greases and oils. A few hours after application the oils evaporate, leaving a thin, slightly soft film, which adheres to the metal and absolutely protects it against all influences of the atmosphere, salt and fresh water, and against the vapors of ammonia and muriatic acid."

Special Notice.

WE inform our patrons and friends that on or about Oct. 8, 1895, we remove our entire manufacturing business to Ogdensburg, N. Y. Our reason for making this change is because of the superior manufacturing and shipping facilities afforded by that city.

Also after Oct. 8 our firm will be known as The Spalding St. Lawrence Boat Co., as successors of the St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, N. Y. The business will be under the same principals and management as formerly. After Oct. 8, 1895, kindly address all communications to The Spalding St. Lawrence Boat Co., Ogdensburg, St. Lawrence Co., N. Y. A. G. Spalding, President; J. W. Curtiss, Secretary; J. G. Fraser, Treasurer and General Manager.

Big Game Hunting.

The [illegible] & Aroostook Railroad opens up some of the best hunting country in the United States. There is probably no section of wilderness untraversed by railroads of so great extent east of the Mississippi as that tapped by the line of the "B. & A.," and there is certainly no moose country so easy of access by Eastern sportsmen. Last year, during the months of October, November and December, a thousand deer, besides moose and caribou, were shipped out over this road by visiting sportsmen. A 2-cent stamp sent F. W. Cram, Vice-President, or Geo. M. Houghton, G. P. A., Bangor, Me., will bring a little book giving particulars as to guides, camps, fares, etc.

ANSWERS TO CORRESPONDENTS.

P. L. B., Dresden, O.—Which would give the best satisfaction, a .50-cal. Winchester Repeating Express Rifle with 26 or 28in. barrel? Ans. For hunting we should choose the shorter barrel.

H. D. C., Cincinnatti.—The "one design" canoe is built by the Spalding St. Lawrence Co., of Ogdensburg, N. Y., who will quote prices. We can furnish back numbers in most cases at ten cents each.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

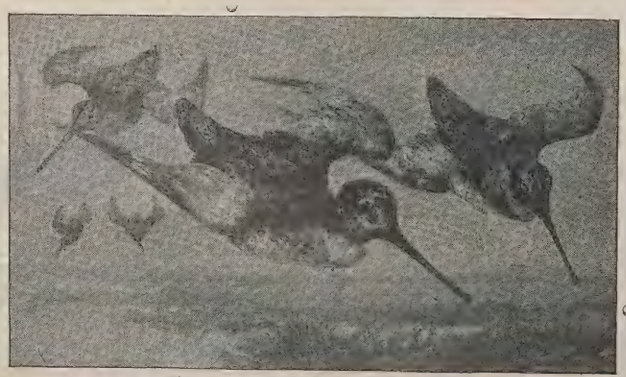
AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, $5.
Forest and Stream *6 months and any two pictures*, $3.

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.



Copies of them may be seen at this office, and inspection is invited.

QUAIL AND TRAPS.

AMONG civilized people at the present age, it would seem that the practice of field sports should have reached such a stage of refinement and advancement, and be so firmly established, that there would be no analogy near or remote between their methods and those of savagery. It would furthermore seem that in his field sports the higher intelligence, more delicate sensibilities and more fastidious tastes of the civilized man would impel him to entirely eliminate all barbaric methods, or that such methods would have drifted into the past naturally with the wreckage, rubbish and unsuitable material which mark the progress of life and civilization throughout the ages.

Great progress in this respect has been made. In a great measure the methods of the savage in the pursuit of game have been abandoned for the refined and intellectual methods of civilization, yet there are parts here and there in the lower forms of game pursuit which are very similar to the methods of the savage, although concerning the latter it should be mentioned as excusing him that his daily necessities for food require that it be obtained in the most direct manner with the least expenditure of time and effort, while the civilized man who captures his birds by irregular means cannot plead necessity in justification of such methods.

Of all the improper means employed for the capture of upland game birds or waterfowl, none more justly meets the condemnation of all sportsmen, and even the condemnation of those who are not sportsmen in the strict sense of the term, than the netting of birds. This manner of capture is so coldly calculating in it workings, so devoid of any element of sportsmanship—it taking the birds at such a treacherous and fatal disadvantage, bagging whole bevies at a time without even alarming them—that it is universally denounced by all sportsmen and also by those whose claims to sportsmanship are but modest. However much States may differ in their ideas of game protection and in their game laws, on the matter of prohibiting netting they are a unit. It is a practice odious to the people. It is a direct connecting link with barbaric methods, for it is a perfect pattern of the Indian's use of the valleys, whose ranges of hills on either side formed the wings of the net—the valleys, fitted by nature for a trap, terminating abruptly, forming a pocket in which the fleeing herd was brought to a stand and slaughtered by the pitiless pursuers; or the more artificial method of the Indian, where strong fences were built out, forming wings whose center was a precipice. To this the herd was driven, the wings on each side deflected the fleeing animals to the common center, the precipice, over which the animals plunged to their destruction.

Netting is quite quick and sweeping in its destruction and its consequent extermination. The trapping of the prairie chicken and the snaring of the ruffed grouse are rapid exterminators, although such methods differ from netting in that they are passive; for their success they depend on the voluntary coming of the birds, and as the birds may wander about a long time without finding the snares, the latter are very uncertain in their action. So fatal are they, however, that if permitted to remain in a section the extermination of the game there is a certainty. Nearly all States strictly and wisely declare them illegal.

The passiveness of the snares, however, are in striking contrast to the active working of the nets, and the destruction of the latter is correspondingly rapid. With the net the conditions are widely different. There is no passive state. Man's intelligence and action leave but little to chance. He manipulates the birds by driving them; the net is simply a receptacle. The haunts of each bevy are learned betimes during the summer, and favorable places for driving them and setting the nets are noted. On some cloudy, damp day, or in the times between showers of a rainy day, the netter sallies forth, sets his net across a favorite runway of the birds, locates them either by riding about or with a dog, then they being loth to take wing in such weather he drives them toward the net Should they endeavor to run in a direction other than that desired, the netter quietly and gently turns their course as he desires, never pressing them so close as to alarm them. They flee unsuspectingly toward the real danger, the treacherous net, whose broad wings at length turn them toward the center, where an opening seemingly offers escape. They all enter and all are caught. A whole bevy of game and beautiful birds, cunning in their devices to avoid man's pursuit, strong of wing and resourceful in swift flight, a delight to the heart of the true sportsman who pits his skill against the swiftness and natural environment of the bird, meets thus an ignominious death at the hands of the netter, in like manner to the frightened herd driven over a precipice and destroyed at the hands of the Indian and without the just excuse of the latter.

There is probably one lower depth of degradation than that of netting, and that is the slaughter of game birds at the trap—a practice, it is a pleasure to say, which never was common, but existed as a diversion of a few individuals. To net the birds was a crime against sportsmanship and against the statutes in many States; to shoot them from the trap after they were caught was pandering to a cruel taste for slaughter.

And yet, it is not many decades ago when netting was not considered improper. "The Sportsman's Dictionary, or the Gentleman's Companion," which aspired to be an encyclopedia on "riding, hunting, fowling, netting, fishing, racing, farriery, cocking, hawking," etc., and which bears the date 1792, in its quaint style gives quite full directions for the making of nets and the netting of birds. The manner of coloring and the value of colors blending harmoniously with the colors of nature are dwelt upon, and all being ready the netter is cautioned to observe the haunts of the birds and their morning and evening feeding places, where he should station himself about two hours before their feeding time and prepare his nets. After describing the manner of working the net, the "fowler" is advised to "continue your sport till the sun be near an hour high, and no longer, for then their feeding is over for that time; but you may go again in the evening, from about sunset till twilight." Minute directions were given for the netting of wildfowl on rivers, and for smaller birds, as plover, etc., some of the devices commended being like the trammel nets now in use by fishermen.

Before firearms were brought to a useful state of perfection for wing shooting the art of netting apparently was in a state of perfection. The netter for water fowl set his net or a series of nets in parts of the river where ducks frequented, then drove the ducks from adjacent outlying points, and again set other nets in those haunts, so that whether in search of food or rest they were in constant danger of being caught.

But there is nothing to condone the use of the net at the present day, except to capture birds where they are plentiful for removal to stock other places where there is a dearth. It belongs to a past age, when firearms were imperfect and owned by but few, when game was more abundant and the population much less than now, when the necessities of existence were more pressing, and when the people at large were little interested in the problem of game preservation, or rather, when such problem did not exist.

ALASKAN REINDEER.

This is the time of year when we are accustomed to read in the press dispatches the annually recurring account of starvation among the natives of Labrador. The resources of that barren land are at the best so meager that it needs only a falling off in the fisheries or in the fur trapping to bring distress upon the people. The British Government would do well to follow the example of the United States, which in Alaska has undertaken to solve the problem of native subsistence by the introduction of reindeer.

What the final result of the Alaskan reindeer enterprise will prove cannot now be known, although good reason exists for believing in its complete success, if the animals can be protected from the savage dogs of the Eskimo. The natives of Alaska have been called upon to face the problem, so often discussed nearer home, of maintaining in the same country and at the same time a deer supply and a dog supply. The question is one much more serious with the Eskimo than with us; for while they are concerned to support life, we are making provision only for sport. The reports from Alaska are that the imported reindeer have failed to increase because of relentless pursuit and decimating raids by the sledge dogs. Only at Fort Clarence, where the deer are protected from the dogs, is a herd keeping up its numbers. The Mohonk Indian Conference adopted a resolution the other day recommending that Congress should increase the annual appropriation for introducing reindeer into Alaska from $7,500 to $20,000 for the coming year. If such a sum shall be appropriated, a sufficient share of it should be devoted to the protection of the deer after they have been brought into the country. Spending Government funds to import reindeer for Eskimo dogs to devour is altogether too much like the familiar spending of other Government money for planting fish to be cleaned out by greedy and lawless fishermen.

THE UNITED STATES FISH COMMISSION.

THE place left vacant by the death of United States Fish Commissioner McDonald remains to be filled, and the choice of a successor is awaited with some concern by those who appreciate the magnitude of the interests involved and the qualities demanded of an incumbent fitted to administer the affairs of the Commission. We are confident that in his selection of a new head for the Commission, President Cleveland will not depart from the wise rule which has prevailed in the past of the exclusion of politics from its affairs, and of securing for it the highest ability at command, without reference to other considerations than the real interests of the Commision itself.

The one man who is pre-eminently adapted beyond all others to the place is Dr. Tarleton H. Bean, who was for years identified with the practical work of the Commission, and was long Commissioner McDonald's assistant in charge of the Division of Fishculture. Dr. Bean is well equipped for the position both by native endowment and by special training. He possesses high attainments in knowledge of fish, fishing and fishculture in all their scientific and commercial relations, and has shown an ability to make use of this knowledge for the securing of practical results.

He has been identified with the Commission from 1874, when he was invited to join in the work on the coast of Connecticut, until the present year, when after having passed a competitive examination, he was chosen by the New York Board of Parks to take charge of the city aquarium.

Dr. Bean years ago gave up the special scientific work to which he had been assigned by his chief, in order to take charge of the Division of Fishculture, a position long held by Col. McDonald before he was promoted to the head of the Commission. The appointment of Dr. Bean by Commissioner McDonald as his successor in the Division was regarded as a reward of merit; and that the Commissioner was entirely satisfied with the selection is evidenced by the strong letter of recommendation which he sent to Dr. Bean when accepting his resignation from the Government service.

Dr. Bean has studied fishcultural apparatus and methods in Europe as well as in the United States, and he has probably as large a circle of friends among State Fish Commissioners and other fishculturists at home and abroad as any other man. His acquaintance with fishermen and anglers is also very extensive, his correspondents being scattered over nearly all civilized countries.

The practical results of his field studies are found in his reports on the Salmon Industry of Alaska, the Cod Fishery and Shore Fisheries of the same territory, the Alewife in Lake Ontario, the Burbot, the Fishes of the Caribbean Sea and the Gulf of Mexico, the Fishes of Great Egg Harbor Bay, the Fishes of Great South Bay, the Fishes of Pennsylvania (an illustrated book) and the Mackerel Fishery in Southern Waters.

He has always looked upon the fishcultural work of the Commission as of the very first importance to the people, and has aimed to bring the resources of his early training to bear in securing results which would appeal to the public. His efforts won the commendation of his superior and of the friends of fishculture everywhere. Those who are most familiar with the character of his services as a fishculturist are convinced that the public interest would be served by putting him at the head of the Commission. In his hands its affairs would be administered intelligently, honestly and efficiently.

The Sportsman Tourist.

IN JONES'S BAYOU.—II.

CHATTANOOGA, Tenn.—I left the reader of my story of Bolivar county, Miss., life at the termination of my first fishing expedition with Uncle John Randolph Martin. Suffice it to say that Uncle Martin and I had several more of these expeditions to Snake River during the spring and summer months. Uncle John was bent upon turning to advantage the resources of nature, and as he enjoyed the sport also he made several trips to the river every week, and always "ketched as much as his mule could tote," to use his own expression. Uncle Martin did not fool away his time with perch, however. He usually speared three or four large buffalo fish, and then caught a sackful of black bass and brought them invariably straight to the railroad camps. He would nearly always leave three or four nice bass at Mrs. Beaver's house for me, as he never bought or made any more hooks or fishing apparatus after he made my acquaintance. When he wanted anything he invariably sent to me for it, and I nearly always had it for him.

There were others of the residents of Jones's Bayou who also fished at Snake River and sold their catch to the railroad camps. Uncle Zack Jones, for whom the bayou was named, and who had all the sandy-haired girls, and also the finest pack of bearhounds in Bolivar county, used to go fishing sometimes, but none were as persistent and tireless as Uncle Martin. All, however, could catch fish out of Snake River, as I never in all my life saw a place that was as near alive with fish as this was. The market fishermen there did not have to use fish traps and baskets and nets and set out lines, but in a few hours could catch with a hook and line all they could carry home. They all seemed to have an understanding about telling the railroad men where the place was, because as many times as I visited the river alone and in the company of some of the natives, I never saw a railroad man upon its banks. If it had become known to the men at work upon the road, there would have been squads of them there fishing all the time, and this would have entirely destroyed the very lucrative business of selling fish by the natives. Snake River is just such a place as Reel-Foot Lake, near Memphis, only the fishing at Snake River is just twice as good as it is at Reel-Foot Lake on account of there being not so much of it done. Reel-Foot Lake is a place of national reputation, and people go there for fishing and duck shooting from all over the United States. Now, if some of my readers will step off of the Memphis & New Orleans Railroad at Jones's Bayou and hunt up some of my old friends there and find Snake River, if they don't catch fish I will pay for their trip. If any of the old residents still live there and the railroad has not made them emigrate to a new country (as some of them threatened to do), one will find a hearty welcome and a jolly companion to accompany him to the river and pilot the way.

Being busy with my work, and also finding an occasional day for a fishing trip, the spring and summer soon slipped away and frost announced the coming of cold weather. Just as soon as the season opened I got out my rifles and hunting paraphernalia and would combine business with pleasure. My work or length of grading and trestling was twenty miles, and as I had to go to one end or the other once or twice every week, I had ample opportunities for hunting. I would take one of my rifles, and mounting a horse or mule strike into a cattle trail that led in the direction I wished to travel. In this way I would hunt to my destination and also on the return trip. I did not usually follow the right of way or cleared path of the railroad, as I knew the country perfectly by this time, and was not afraid of getting lost.

One day in September I was making one of my trips down the line and had my small .32-20 Winchester with me. I was walking, following a trail, and came suddenly out into the bed of a bayou from the switch cane. All the bayou and stream beds are open and clear of both cane and brush. Not 40yds. from me on the other side of the bayou stood a large doe, and at her side a fawn. The fawn was almost grown and had the spots off of it. The doe was pawing the ground in a very uneasy manner, and I could tell by her actions that she apprehended the presence of danger. The fawn was lying perfectly still with its face toward me. I stopped, cocked my rifle and thought a moment about as follows: "If I shoot the doe the chances are that this small-bored rifle will only wound her, and she is sure to get away from me in the cane." I raised my rifle and tried to draw a bead on her head, but she was standing broadside to me and the motion made by her pawing rendered it almost impossible for me to get a good sight. I took down my gun and thought again to see what I should do. I hated to shoot her in the side and have her run off and decay in the woods. I made up my mind this time to shoot the fawn and let the doe go. I raised my gun again and taking deliberate aim fired at the sticking place in the fawn's throat. The poor little thing gave a struggle or two to rise, but tumbled over and died. The ball had struck it square in the throat and gone clear through it lengthways. I walked up to where the fawn lay and after cutting its throat to let it bleed, sat down near by in the switch-cane. I had heard people say that if you killed a fawn with its mother, and would only keep out of sight a few moments, you could always kill the mother, and I wanted to satisfy myself on this point. I had no idea of killing the doe, as the weather was warm and the meat would have spoiled before I could possibly have used it up, and I knew from the sign and the "white flags" that I had seen all summer that I could kill a deer any time I wanted one.

I had not taken my seat more than five minutes before I heard the bushes cracking and heard the doe bleat for her fawn.

The mother had returned facing danger to look for her young. She had sprung into the cane at one leap at the crack of the rifle. But her motherly love had brought her back again. She made straight for the body of the fawn, smelled it and then bleated the most pitiable bleat that I ever heard. I sat there looking on and could have killed her a dozen times, but would not do so. I was ashamed of myself already and had no desire to kill the poor animal. I pitied her from the bottom of my heart. When a doe or any animal jumps up in front of me and has a chance for its life, I will always shoot, I cannot help it, but it would have seemed like murder to have killed that poor mother, who was bewailing the death of her child. After looking on for several minutes I rose up and the doe sprang into the cane and was gone. I picked up my fawn after cutting off its head and feet and taking out the entrails, and throwing it across my shoulder started for home. It was not more than a mile to the house and the fawn did not weigh over 35 or 40lbs.; but I tell you I was hot and tired when I threw it down on the front porch of Mrs. Beaver's house. I then got a horse and went down the line and attended to my business. This was the first of many a deer that fell before my rifle during the next fifteen months. But let me say, however, that I never slaughtered. When I had no use for it and my friends did not want fresh meat I never killed, as I have yet my first piece of game of any kind to sell. I never have sold even a quail in my life, and I have killed my share, I guess. Mrs. Beaver used to offer to pay me for a deer when I brought one in, but I never would take a cent. It always seemed to me that it would spoil some of the keen sense of sportsmanship or the love of the chase if I sold my game, and at that time I had never read FOREST AND STREAM either. This aversion to pot and market hunting was born in me and not cultivated.

Two or three days after I killed the fawn I passed by Uncle Andrew Jackson Taylor's house, and as I always stopped to see my old friends when I was not in a hurry, I told him of killing the fawn. Uncle Taylor told me that he would go hunting with me some time. That he knew every water hole and salting ground in Bolivar county and could insure me a bear or deer every time I went with him. He said that all you had to do was to take your stand at the water hole and you were sure to get a shot at a bear or deer about sunrise or sunset. In the swamp everything is dry and dusty during the months of July, August, September and October, and all the lagoons and bayous dry up into water holes. The game as well as cattle know where these water holes are, and make regular trails through the cane to them. I asked Uncle Taylor if he did not think it a very unsportsmanlike trick to sit in the fork of a tree and blow a deer's brains out while it was taking a drink. He only laughed and said, "I kaint see for the life of me whar is the difference, jist so you get the deer." I said, "Why, Uncle Taylor, would not you rather kill a deer running with the rifle barrel of your gun than to blow its brains out with the shotgun barrel standing still?" "Narry a bit of it," said Uncle Taylor, "jist so I got the deer."

"Well!" I said, "you are all strange hunters to me."

Uncle Taylor had a combination rifle and shotgun that was a terribly effective weapon for the kind of hunting he indulged in—that is, watching water holes. It was a muzzleloader; the rifle shot a half ounce ball, and the shotgun barrel was No. 8 bore and chambered four big blue whistler buckshot. What chance on earth had a deer, bear or anything else with this cannon turned loose on him while he was peacefully slaking his thirst?

Uncle Taylor now informed me that there was a large drove of nearly grown wild turkeys that were using the back part of his cornfield, and that if I could hit them flying I could kill as many as I wanted. He said, "Me an' Storkey hes ben out thar fur a week tryin' to kill one of the durn critters, but they air tu slick fur us." Storkey was Uncle Taylor's nephew, and was a grown man of family and lived with Uncle Taylor. Neither he nor Uncle Taylor could shoot on the wing, and the turkeys were too sly to be shot on the ground. I thought to myself, how glad I am that these people cannot shoot on the wing. To flush a drove of wild turkeys and knock one or two down as they sail off is no mean sport. It is almost equal to knocking down a deer on the run. I lost no time, but made tracks for home. Now John Beaver, son of my landlady, had as fine a muzzleloading shotgun as I ever put to my face. It was of some English make, and was formerly owned by a rich cotton planter near Greeneville. The planter took the breechloader craze, and brought a new breechloader from Memphis; so he sold the muzzleloader to John for $10. It was a good one, however, and must have cost $100 when it was new. I borrowed the gun and went back to Uncle Taylor's as fast as a horse could carry me. I arrived just about sundown, and Uncle Taylor told me that the turkeys were in the field now, as he always found them there at sunrise and sundown. He said that he and Storkey would go with me and drive them for me.

We all started. I had loaded my gun carefully with a reliable turkey load of No. 4 shot. Uncle Taylor and Storkey went straight to the turkeys and I went around and took my stand at the back of a field near an old tree, where they said the turkeys always flew into the swamp. I had not been there long, and was crouching with both barrels cocked looking up in the air for the turkeys to come sailing over. I thought they would fly as usual as soon as Uncle Taylor or Storkey came in sight, and that I would get one as they came over. Imagine my surprise then when I heard a gentle *put, put, put*, coming down the corn row. I knew what it meant. The turkeys were running out of the field instead of flying, and they were going to cross the fence just about where I stooped. I watched and soon saw them. The old hen was in the lead, and about a dozen nearly grown birds were following her call, all in the same corn row. I honestly believe I could have stooped down on an elevation with their heads and scooped the whole drove. I did not want to do this, however, as I never shoot a bird on the ground. It makes no difference if it is nothing but a woodpecker; I throw a rock at him and make him fly. So I at once straightened up and the turkeys rose at sight of me. The first one that got up I knocked down, and then as the drove rose I got another. They were beauties, both gobblers and almost as large as the old hen. In about a minute here came Uncle Taylor. He saw me rise and shoot on the wing and he thought I did it because I was excited. He never dreamed that I had done such a trick on purpose. He commenced on me, as I knew he would, about as follows: "Well, Wingfield, you done dad blasted good to git two on 'em; but ef you hadn't a ben sich a durn fool to git up outer that ar fence corner you mout a bagged the whole gang."

When I told Uncle Taylor that I saw the turkeys coming single file down the corn row and had flushed them intentionally, he fairly made the atmosphere smell of sulphur. "Well! durn your heart," he said, "ef you hed jist shot into them turkeys, I could a tuck about six over to the camps an' sold 'em, and then give you plenty too." "Well," said I, "then I would not have had any more turkeys to shoot at; as it is, they will be back here again to-morrow or next day, and we will have the same fun over again."

"Durn the fun!" said Uncle Taylor, "I want them turkeys to sell."

"Well! you will have to pot them on the ground yourself then, for I will never do it—not I."

"Confound it! that air 'xactly what Storkey an' me hes ben tryin' to do fur two weeks, an' the blasted turkeys will sail over us like buzzards and gobble at us as they go! This air the fust time they ever run out o' the field, an' you, blamed fool, went an' spiled it all."

"Well, well! Uncle Taylor, don't get so mad; you can have both of the turkeys I killed if you want them."

Now the old man commenced to come back to himself, and turning around in a sorrowful way he said: "No, it hain't no use to row at ye, ye al'us talk to one so nice; ye take one turkey an' I'll take t'other." So shouldering a turkey each we started back to the house. Thus ended my first turkey hunt.

It was a week or more before I picked up a gun again. This time it was early in the morning near the latter part of September. The squirrels were abundant and as I was fond of shooting them as well as eating them, I filled my belt with cartridges and started out to kill a mess. There was a ridge or belt of high timber about a mile and a half in rear of Mrs. Beaver's house, and upon this ridge grew a great many hickory nut and pecan trees. I had been there before and knew that the squirrels were there by the hundreds. So picking my way along a cattle trail, I was soon on the ground. I found an abundance of the game I was looking for, and soon had a dozen or more fine gray and fox squirrels. I was sitting down by the side of a small holly tree watching two squirrels eating the berries, and debating to myself whether I would kill any more or not, when I was startled by the sound of something walking behind me. I had been shooting all morning, but had not fired a shot for probably thirty minutes, as I had stopped and breakfasted on the lunch I had with me. I had no idea that there was any large game within three miles of me, as I naturally supposed the constant crack of my rifle would have scared it away. Imagine my surprise, I say, when a fine six-prong buck walked leisurely by me, almost close enough for me to touch him with the end of my gun. Why that deer did not smell or see me has always been a mystery to me. But it did not. The buck grazed on the tender shoots of the switch cane, which was about waist high, for several minutes before I could compose myself enough to even point my rifle at him. This is one time in my life, reader, when I had the "buck ague" or "fever," whichever you mind to call it. I shook like a leaf and I honestly imagined I could hear my knee joints rattle. I was never in my life more taken by surprise, and then the old fellow was such a fine one too! None of your little old "slink does" or "spike bucks" was he. He was one of the granddaddies of his race, and had a pair of horns on his head that any man would be proud of. I surveyed him from head to foot, almost rooted to the ground as I was. Every now and then the buck would stop feeding a moment and knock at a fly, and when he turned his head to hook a fly or rub it off with his horn he would actually look me square in the face. I kept wondering to myself "why don't he see me and run." I knew if he ever started to run that I would be on my feet and pumping lead into him at the rate of twenty to the minute, but as it was I was paralyzed. The conditions were different from those surrounding the doe and the fawn. In the doe and fawn case, the blue cane was thick as the hair on a dog's back within 5ft. of them, and when once a deer or anything is lost in that it is almost as if a wave of the ocean had rolled over them, and left no impression or sign by which to follow. In the case of the buck, both myself and the buck were on the top of what they call in the swamp a ridge. There was no blue cane within a quarter mile of us, and the ridge was covered only with switch cane about waist high. So I had an excellent chance to kill the buck even with my small rifle, and if I had not done so, I would not deserve the name even of a hunter. Finally, after sitting like a knot on a log for five minutes debating with myself about where was the best place to shoot that buck, I summed up courage enough to raise my rifle and try to take aim. I tried to get sight at his ear or the base of his skull, but he kept on bobbing his head in reaching for fresh bites of cane, and my nerves were in such a shattered condition that I gave it up, and dropping the muzzle down aimed as best I could just behind his foreleg. My rifle was shaking like an aspen leaf, and the muzzle was describing a circle that would have taken a step-ladder to draw on a schoolboy's blackboard. But finally I decided that I had "dead aim" at a buck not 20ft. distant, and I sitting flat on the ground with my elbow resting on my knees, so with an uncertain and almost sinking heart I fired. At the "ping" of the little .32-20 the buck jumped high into the air and tucked his tail. Whenever you see the "white flag" go down, reader, you may know you have drawn blood. They will never do it unless the bullet or shot strikes them. I was like Rip Van Winkle awakened from his twenty years' dream. The "ping" of the .32 had about as much electricity in it for me as it had for the buck. It brought me to my senses, it reassured me and told me that I was an old, experienced hunter, instead of a schoolboy. Before the deer had made three bounds, I was on my feet, a new cartridge in the barrel, and then as he ran or tore away, "ping, ping, ping, ping" spoke the little .32-20. As the sound of the fifth shot rang out in the clear frosty air, I saw the deer take a double header and come down all in a heap. The .32-20s had done the work and laid low one of the kings of the forest.

Strange to say, I was now as cool as if I had shot a rabbit instead of a magnificent buck, and walking deliberately up to the old fellow put a ball in his head to stop his suffering. I now went home, and securing the help of my negro axeman and the two Beaver boys, Lem and John, and Jim Pyron, we all went back to the scene of the tragedy and put the buck, whole, upon a mule and tied him fast. We returned home and skinned and dressed him and nailed the head of horns up over the door. That was the sweetest meat I ever ate, and I had lots of fun telling my old hunting friends of how I had had the "buck ague." They all laughed at me, but said, "You got the deer just the same." That was all on earth those old honest fellows cared about hunting. Getting the meat was their idea of hunting, first, foremost and all the time.

In the mountains of East Tennessee we hunt deer with hounds and run them by driving with a pack of dogs

through regular stands or places where they always run when pursued. The hunter takes his stand at these places and if he is a good shot and quick about it he kills his deer; if not, he misses him. As the deer is always on the run with a pack of good hounds at his heels, you can readily see that it takes a good shot with a rifle to kill one. What a vast difference between this mode of hunting and pot-hunting or bushwhacking the poor creatures at a water hole, as they do in the swamp country. I will give a description of one or two water-hole "murders" in my next. Also of a canebrake bear fight, which is sport right. But when it comes to hunting with dogs and giving any kind of game a chance, I am in for it heart and soul. Now, until we have a heavy frost that will make bear hunting a pleasure instead of a burden, I will leave you.

A. B. WINGFIELD.

TWO OCEAN PASS.

"WHAT is the name of this creek, Woody?" asked the Boss. "I don't know," replied the old guide, and then got off his horse and studied the country for several minutes through the field glass. We had left our camp on the Buffalo Fork of the Snake River this same Friday morning after three days spent unsuccessfully hunting elk and deer. The game had not yet come down this far; the weather had been rainy and stormy, and we had not even found any fresh signs.

It was as unlucky a trip as ever was made on a Friday's start. Early in the day one of the pack horses was taken sick and had to be left to his fate, while his owner, Phillips, had been obliged to return to where old Beaver Dick, a squaw man, was camped with his family, to purchase another animal. Then Woody, our chief guide, in trying to make a short cut from the Buffalo Fork to the Yellowstone, had got lost. Not that we did not know where we were, but we certainly were not where we should have been, and when during the afternoon our party, consisting of three sportsmen, three guides, a packer, a cook, twenty-two saddle and pack horses, and a dog, came suddenly upon a stream flowing through a

WOODY'S CAMP.

cañon some hundreds of feet deep and quite impassable even for Western horses, the conversation above related took place.

It was a beautiful day; the air, clear and transparent, as is usual in the West after such a storm as we had experienced at Buffalo Fork, felt invigorating, and neither man nor beast seemed to mind the fatigue of climbing one pine-clad rocky ridge after the other. The scenery in the valleys was park-like in character, while from the higher points, where an unobstructed view could be had toward the west, the Alps of the United States, the Teton range, formed a picture once seen never to be forgotten.

Late in the evening we went into camp, "Woody's Camp," we called it, and as we killed some grouse during the afternoon, supper was rather more enjoyable than it had been of late.

It was almost dark, yet when we were on our way again the following morning and in an hour or so passed Ennis Lake or Spotted Lake, the country was once more familiar to Woody. We crossed Pacific Creek several times during the morning, the trail—an old elk trail—following the easy places. At noon we reached Two Ocean Pass. It is so called because on the northern side of the pass a stream of snow water, in numerous cascades, rushes down the precipitous side of a mountain, to divide at its base, which is a level valley or pass, and here quite swampy, sending part of its water to the Pacific Ocean by way of Pacific Creek and the Snake River, while the other part, forming Atlantic Creek, is discharged into the Yellowstone, and by way of the Missouri and Mississippi finally into the Atlantic Ocean. So level is the valley here that for a couple of hundred yards there does not appear to be any fall or current to either stream, but the water looks stagnant.

TWO OCEAN PASS.

While we were admiring the scenery and taking photographs the men were tightening the lash ropes of the pack horses, and all too soon we were on our way again, following Atlantic Creek to the Yellowstone, upon the banks of which we pitched our camp in the evening, near the picturesque cliff known as Hawks' Rest. One more day brought us to our objective point, the headwaters of Bridgers' Creek. There, in the Sierra Shoshone, we enjoyed for two weeks such sport with the rifle among the most magnificent mountain scenery as does not often fall to the lot of the sportsman at the end of the nineteenth century.

P. F.

UNCLE LISHA'S OUTING.

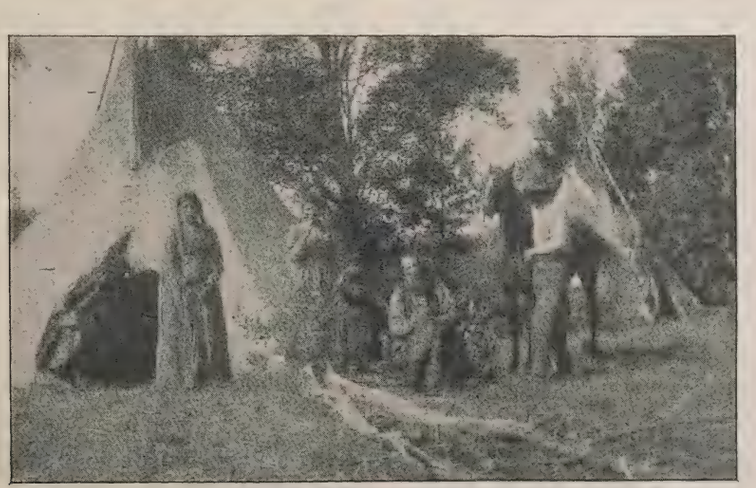
II.—A Relighted Camp-Fire.

SAM drove away to the nearest farmhouse to find keeping for the horses, and after a while came stumbling out of the gathering gloom into the light of the camp-fire, to which his nose guided him as well as his eyes, for Antoine's cookery diffused a far-reaching savory odor to direct and hasten the steps of a hungry man.

The camp had already taken on the cheerful aspect of an established abiding place, blankets and boxes having been stowed inside the tent. In front of it Uncle Lisha and Joseph sat, comfortably smoking their pipes as they quietly watched Antoine prancing around the frying-pan and potato kettle, while his shadow sprawled along the ground and leaped from trunk to branch in ever-varying grotesqueness of form and motion.

"Git a put-uppance fer the hosses, did ye, Samwil?" Uncle Lisha asked, making room for Sam on the fireside log.

"Yes, I got 'em turned aout tu paster arter some coaxin'," Sam answered, seating himself in the proffered place with a sigh of satisfaction. "But I du hope we c'n keep Antwine away f'm there, fer I'm afeared if he hears much o' the ol' feller's talk 'at owns the place he'll larn tu lie. Why, he tol' me, a lookin' as honest as the coop-er's caow, haow 'at he was a patchin' the ruff of his barn, to-day, an' somehaow er nother he begin tu slip, an' kep' a slippin', an' couldn't stop himself no way, till jest as he went over the eaves, feet fust an' face daown, he ketched a holt o' the aidge o' the shingles with his teeth, an' there he hung till they fetched a ladder, an' he clumb daown."



"What ye think o' that, Antwine?" Uncle Lisha asked the Canadian, who was cocking an alert ear while his eyes were intent upon the sputtering frying-pan.

Antoine blew away the smoke with a contemptuous "Pooh, dat an't noting. Ah'll gat brudder-law in Canada was more strong of his jaw as dat. One tam he run away wid hees hoss an' it broke loose of hees woggin, an' he touch hol' of de line wid hees toof an' hang on de woggin wid bose hees han' of it, an' seh, dat hoss run more as mile 'fore he stop it up. Come, gat ready for heat you suppy. Fetch de bread an' de onion, Sam," and he whisked the frying-pan from the fire to the flat rock that served as table, then poured the water from the potato kettle and set it beside the pan.

"I ruther guess, Samwil," said Uncle Lisha, as he arose and moved toward the supper, "'at you might let Antwine g'wup there if you hain't feared for t'other feller."

As they smoked their after-supper pipes and planned the morrow's campaign, in every lull of conversation they could hear the quacking and splashing of the host of ducks feeding in the marsh, and now and then the pulsing whistle of swift wings as a belated flock came in from the lake, and then the restful sounding splash as the newcomers settled upon the water to join the feasting horde. And when the tired campers fell asleep on the bed of cedar, these sounds still ran through their dreams, a thread of reality woven into the misty fabric.

ROWLAND E. ROBINSON.

BEAVER DICK AND FAMILY.

ON A GRAY DAY.

CHICAGO on a rainy day! Is there any place on earth that is more dismal?

Perched up here in Hough's den, away above the tops of the buildings that stretch toward the gray distance in uneven ranks that conjure up memories of the Bad Lands for me, though Hough says they remind him of the Yellowstone Park in winter when he sees the steam jets come puffing out of the roofs. Hough is built that way anyhow, and can see more that is romantic in the commonplace than I can.

The whole business, the weather and light maybe more than anything else, remind me of another scene and another day that are past and gone to the shadows.

There is a lake in the other scene, and there are great pine trees that the wind whispers and talks to. There are ranks and ranks of the pines, green in the foreground, blue in the background, and purple where they bank up against the snows of the white-blanketed mountains.

They all whisper and tell of good things that they hide in their depths. They tell of the streams that hold the biggest trout, pools that are shaded by great banks of dainty maidenhair ferns and overhung with great water-worn rocks, and which reflect the tree trunks until they seem to be a hundred feet long and all upside down. Other things, too, the pines tell if you listen, for they always talk to the lake in rainy weather.

The rushes that grow between the pines and the lake tell tales too, but their talk is not the talk of the pines, but of the waters and the birds that come to the waters and rustle among the reeds and the lily-pads. The rushes know all about how the muskrats build their houses and how the mink dives after fish and how they pull a young duck down and cut its throat. The rushes on this lake have seen this done many times and they know all about it, and they whisper of it too.

Then there is the stream that comes bawling down through the woods on the other side; it talks too, and tells of the doings of the mountains away up where it is born.

The stream knows how the mountains cover their heads with a white blanket and sit in council, and how the white goat stalks over the upland parks. It can tell how the fearless bighorn climbs the slippery cliff and has seen his flying leap across the glacier's crevasse.

I made friends with the pines and the rushes and the stream a long time ago, and they have told me nearly all of the things that they know.

When I came to the stream to fish it told me where the trout hide, and I can always find them there. It whispered and gurgled as it went along to the lake, and sometimes it laughed or sung a wild war song as it came to the rocks that try to bar the way. Sometimes it was sleepy and rested in a quiet pool for a little while, then hurried on, but it always whispered to me and I learned its secrets.

When my canoe parted the rushes they whispered too, and told me where the ducks were feeding and how to get around to them, while the wind danced along and made music on the dry stems so the ducks could not hear me come.

They pointed with waving fingers to the drifting lily roots that the water rats dig up and told me where they lived, and sometimes they caught a floating beaver stick and held it so I could tell where to look for the fur I should need when winter came.

The lake don't tell many tales, for it is still and deep, and only hides things that come to it, and it is always gray like the sky is to-day. Sometimes it talks of the bass and the trout that hide in its deep shadows, and sometimes it gets angry and roars so I cannot tell what it says, but it is always gray like the sky.

Yet, with all its grayness it is a nice lake and better by far than this big city, where the air is gray too.

Some day, and something tells me it will not be long, I will come up to Hough's den, away up near the clouds here in Chicago, and say to him: "Klook-wah tillicum, I am going back again to the lake of the pines and the stream and the rushes, where one may live a life and not be always in the fog of this big town of the white men."

Hough knows of these things too, and he will say, "Good," and some time he will come and camp in my lodge that is waiting by the shore of the lake, and will go with me to hear the talking pines and the rushes that whisper, and the stream that knows of the doings of the mountains, for my latch string is always out to those who love the woods and the lake, and there is always room in my canoe for one more. EL COMANCHO.

BUCK FEVER.

II.—Old Pat's Story.

"SAY, Joe, do you remember the time you had buck fever?" asked Pat.

"Humph! it's a wonder you wouldn't give that story a rest; it's so old it has whiskers on it," said Joe, turning away.

"I never laughed so much in my life," said Old Pat, in answer to the inquiring looks after Joe had gone, "as I did that day. You see, we had sent him down to the mouth of a little ravine and I had started across to get him, intending to go to another stand about a mile away. I was walking down the hill to him, when a buck jumped up and started right for his stand. He was in line with the deer and me, so I had to stand and watch the proceedings, and it was the funniest thing you ever saw.

"Joe had his back turned to me and never saw the deer until it was right on him, and then he never took any aim, but just brought his gun to his shoulder and fired. The deer gave a jump or two and dropped, and Joe just stood and stared at him. The deer began to kick, and with a yell that would have shamed an Indian he slammed his gun down and piled on to that deer. He grabbed him by the horns and began to yell for help and —well, I didn't get there for a few minutes. I couldn't walk.

"When I did manage to get down there the deer was dead, but Joe was hanging on for dear life and still yelling for help; and when I told him the deer was dead and asked him why he didn't bleed him he just stared at me a moment, and then the sickest smile spread over his face you ever saw.

"He never said a word until I asked him where his gun was. Well, sir, his jaw sorter dropped down and he began to hunt around for his gun. I let him hunt a while, and when I showed him where it lay he picked it up and slowly worked the lever.

"He had broken that deer's neck slick and clean the first shot, but when I told the boys about it he didn't seem very well pleased. Of course, he heard nothing else but about how he killed that deer while we stayed in camp, and the boys told all about it when they got home, so if any man's life was a burden his was."

"That reminds me of Reagan's first deer," said Duke.

Natural History.

OCTOBER BIRD NOTES.

Editor Forest and Stream:

I have always been interested in the study of bird life, and in fact anything relating to outdoor nature. I do not have much time to devote to it, only Saturday afternoon and Sundays, which I always improve by hitching up Prince in the buggy, when my wife gets in and away we go for a long ride out on the beautiful country roads that we have in this vicinity. If it should happen to be stormy on these days, which it often is, why, I stay at home and read FOREST AND STREAM. I thought that some of my observations might be of interest to some of your readers.

In twenty-five years' observation of birds and their habits I never saw them so scarce as they have been this year. I have seen only two bluebirds, not a single humming bird, only now and then a straggling catbird or brown thrasher, and very few migratory birds. All our most common birds have been here in few numbers, except in a few instances as follows: Robins, red-winged blackbirds, cherry birds, kingbirds, phœbes and several varieties of vireos. Cuckoos have been more than plentiful, also scarlet tanagers.

One of our most beautiful birds in song as well as plumage, the rose-breasted grosbeak, I never saw so plentiful. It seemed as though you could hear his rich song from almost every shade tree in the village. A pair built a nest in on apple tree within 25ft. of my house. A pair of robins that had nested in the same tree for several years tried to drive them away, but the grosbeaks held the fort, and in due time the young were hatched. On the 17th of June one fell out of the nest. I caught it and carried it into the house to save it from the cats. It proved to be a male, which I knew by the rose color under the wings. I thought I would try and raise it, and watch the changing plumage to maturity. The striped appearance of the head has turned nearly to black, and the rose color just begins to show through the dark brown on the breast. He is perfectly contented in his cage, although he is out of it half of the time, and is the pet of the family. He must come to the table to eat with us every time, or he makes a great fuss. He sits on my hand and picks at a piece of bread; and knows which side is buttered and tries to get at it. I suppose he likes the salt taste, but I let him only taste it. He began to sing when only two weeks old, and took his first bath at that age, and wants it regularly every day. He is an expert fly catcher, will catch a fly on the wing or pick one off of the ceiling like a flash. We hope to winter him, and to have a beautiful bird in the spring.

I must tell you of a beautiful ride that we took Sunday, Oct. 6, and some of the things we saw. I only wish that everybody could see the country at this time. I never saw the foliage show off to better advantage than it does this season. I have one view in particular in mind that we saw on that day which will remain in memory a long time. Imagine a broad meadow, with a background of dark pines, bordered with a mixture of oak and maples; then imagine the maples to be of all shades of red from the most vivid to almost a silvery white, and the oaks from a deep mahogany color to all shades of brown, with here and there a true mixed among them all that still retains a rich green color. Out in the middle of the meadow stands like a sentinel a large maple, every leaf a vivid red, with the afternoon sun shining brightly on it, making it almost dazzling to the eye to look upon it. A brook crosses the meadow, bordered by shrubbery varied in color, with here and there a cow at rest chewing her cud. Who could not enjoy such a sight? A little further along we come to an old mill, long since past doing duty. What a sight for a snap shot with a camera. I do not possess one. Now we come to a piece of woods; none of your fishpole woods, but trees that tower away up toward the heaven, 2 and 3ft. in diameter. I told my wife I would get out and stretch my legs, but to stay back just far enough to keep in sight. I had not walked a great way before I heard a rustling in the leaves, then I saw a partridge; it ran along a few steps and flew, then another, another, until five had risen and sailed away. I walked on a few minutes and up went three more. They were all of large size. We saw lots of quail through the summer, but have seen more this fall. Gray squirrels are quite plenty. We arrived home from our long ride by the light of the full moon, tired and hungry.

We have had many such rides and hope to take many more, always seeing something new to interest us. This was all seen within twelve miles of the gilded dome, in the City of Baked Beans, and we were as much secluded as though we had been hundreds of miles away.

HYDE PARK, Mass., Oct. 11.

NOTES ON BEARS AND MOOSE.

THERE is only one kind of bear in New England—the black bear. Bears do not pass any excrements while in their dens, although they hibernate for many months in winter. The female bears never leave their dens without first dropping their young, if disturbed ever so suddenly.

They never enter their dens when hunted or followed.

Bears subsist mostly on berries in midsummer, and therefore they are frequently found on mountains or plains where berries occur.

When first leaving their dens in springtime they follow brooks and water courses to obtain frogs and fish, of which they are very fond. They are also fond of anything sweet and insects, such as bees, ants, etc.

When food is scarce in late autumn the bears gradually taper off eating and, I think, lose their appetite by degrees, until finally they have no desire for food and stop eating altogether, and then soon go to their dens.

If they go into their dens fat, they come out fat in the spring, and their condition depends on the abundance or scarcity of wild berries. They tear the bark from fir trees in springtime, being impelled by their savage nature. All feline animals often try their foreclaws on some substance.

It is thought that the antlers of the moose were intended to prevent the male from harassing the female, as she can easily run away from him in the thick bushes when she does not desire his company.

One noise of a bull moose, supposed to be a call to his mate, sounds very much like striking the flat of an axe on a rotten log—a short, dull, heavy sound, repeated five or six times at intervals of perhaps five minutes.

The antlers of moose commence the second year and receive an additional prong for each year of his life after. I never knew a cow moose to have antlers.

The cows almost always drop two calves, which are generally male and female, but not always, and they follow the mother a year.

The moose always make two beds in the snow each night in their yards; sometimes during the night they get up and sniff the air in every direction to see if they can discover any danger, lying down in a new place; thus hunters can tell the number of moose in a drove when they come to where they spent the night.

One time I was with a party on a moose hunt and on a fresh trail in the snow, when we came to where they had lain the night before, when one of our party ran and felt in a moose bed, and in excitement remarked, "They have just gone, the snow is warm in his bed!"

J. G. RICH.

BETHEL, Maine.

Experience with a Rattler.

EAST RADFORD, Va., Oct. 11.—*Editor Forest and Stream:* About three months ago I obtained a fine specimen of the mountain rattlesnake (*Crotatus adamanteus*), caught on Fort Lewis Mountain, ten miles west of Roanoke, Va. It had twenty-one rattles and the usual button, and measured even 4ft. A short while after caging it, it seemed very savage and would rattle and strike on sight, but by daily attention it seemed to get over this and would neither rattle nor attempt to strike at me. Carefully protecting myself, I could feed it (what little it did eat) from a spoon, and I was especially proud of it.

On Wednesday evening, the 2d inst., some friends called and wished to see my pet, and as the snake had concealed itself under the grass covering in the cage, and in order to see it better I pulled back a little slide door to remove the covering that they might get a better view of it—a space of not more than 2in. was moved back—when without warning it struck me, the fangs going well in on each side of the second joint of the forefinger on left hand. This of course stopped the show. It was very painful, going through my arm like an electric shock. Knowing life depended upon instant action, I at once bit out the piece where the fangs entered, and sucked out all the poison possible, at the same time binding my finger tightly below the joint to prevent circulation, and was soon in the charge of Drs. Farmer and Black, who brought me around all right, although it was a close call.

During my illness I had the snake killed preparatory to mounting (which I will do myself). On close examination I find on the left side of the upper jaw two perfectly formed fangs (close together) and on the other side only one. The fangs measure ½in. Though I have been a reader of FOREST AND STREAM for over fifteen years and a close observer of natural history, I have never read or noticed anything on snake-ology similar to this (two fangs on one side). Will not some good reader of FOREST AND STREAM give views as to whether this is or is not a freak in snake nature? J. W. SCHOOLEY.

Capt. Dick's Rattlesnakes.

WHEN I was located in Florida some years ago I numbered among my acquaintances Capt. Dick Munday of Choctawhatchee Bay. Dick's hailing port was a town in Michigan, and he was one of the Federal soldiers whom the fortunes of war had left stranded in the sunny South.

He had located a claim on the sandy shores of Choctawhatchee Bay, and managed to wrest a living from the sandy soil of his claim and the waters of the bay. Choctawhatchee Bay is a famous place for red-fish, mullet, tarpon, Spanish mackerel and many other varieties of fish. When the Captain with his small sloop made a fair catch he would hoist sail and bear away for Pensacola, eighteen miles to the west. There his catch would be purchased, carefully iced and forwarded by fast express to the great cities of the country. New Yorkers have often eaten Spanish mackerel that a few days before cleaved the clear waters before the Captain's cabin.

One bright morning in late autumn the Captain's sloop poked her nose through the tangle of shipping and shot up to the dock in fine style. The Captain was the sole occupant, barring two husky rattlesnakes that he had in a slat-covered box just forward of the cockpit.

I was invited aboard to inspect his pets and did so. They were the largest and most venomous-looking rattlers it has ever been my lot to behold, fully 5ft. in length, and the bodies in the largest part seemed as large as the forearm of a middle-weight pugilist. Unfortunate would be the lot of him who would chance to step on one of these reptiles in the palmetto scrub of a Florida forest.

The Captain gave me the details of the capture. He had trailed them to their den beneath the roots of an upturned pine, and a few passes of a shovel had brought them to light. They were in a torpid condition and it was but the work of a moment to place them in a soap box that he had provided. Nailing down the top, he wended his way to his cabin, listening all the while to the merry music the now thoroughly aroused rattlers were making.

We allowed the Captain to place his snakes in our warehouse and undertook to sell them for him.

After correspondence with several of the zoölogical gardens of the country, I found that rattlers just then were a drug on the market, so one fine morning the Captain again tied up at the dock, loaded the box on board, hoisted sail and shaped his course for home. He no doubt liberated the snakes upon his arrival. IVANHOE.

CHICAGO.

Fluctuations of the Bluebird Stock.

GLENDALE, O.—*Editor Forest and Stream:* I notice in recent issue of your paper a note from a correspondent at Paschal, Ga., to the effect that the bluebirds had been exterminated in Georgia by the cold weather of last winter.

That the extreme cold of last winter did destroy many birds is undoubtedly true, and no one can regret it more than I, but the effect was not quite so bad as your correspondent infers. I have seen a considerable number of bluebirds since last February and am confident that by next spring they will have become at least not rare.

In fact, I think the complete disappearance of the species from Georgia localities must have been due not to extermination by the cold, but to migration in search of either food or more congenial climate, for I have several times known the same birds to survive much colder weather.

Once I took bluebirds during a week when the thermometer reached 5°, and it was below 10° when the specimens were shot, and I have frequently observed the species in this locality in February and March when the thermometer has gone below 10° at night during their presence. JOHN BONSALL PORTER.

The Bluebirds.

SPRINGFIELD, Ill., Oct. 16.—*Editor Forest and Stream:* In the last (Oct. 12) issue of FOREST AND STREAM I read a communication on "Extinction of the Bluebird," by W. R. Gorman, of Paschal, Ga., in which the writer inquires for facts regarding the presence of bluebirds in any of the Northern States. I observed my first bluebird here March 10, and noticed a few specimens a week later, and again during June. August and the greater part of September were spent at Dansville, N. Y., and during the first week of the latter month I saw two or three specimens. Since coming back here I have been on the alert for the presence of our little feathered friend, and to-day, while taking a walk in the suburbs, was happily rewarded by seeing a small flock fly by high overhead uttering their fall notes. THEO. M. SCHLICK.

P. S.—The beginning of another series in FOREST AND STREAM of the doings of the Danvis folks, by Rowland E. Robinson, is an event to be thankful for. I have read the opening chapter, and am exceedingly gratified and delighted. T. M. S.

Scarcity of Small Birds.

GRAND VIEW, Tenn., Oct. 10.—I notice some reports of the scarcity of small birds in many localities. It is the same here. The absence of bird life during the past summer has been unprecedented. The robins, which were always plenty here in February while migrating North, failed to show up this year. The bluebirds, which remain with us summer and winter, have wholly disappeared; so have the yellow-hammer or high-hole, the meadowlark, catbird, chewink, and several other kinds of small birds; even the bluejay has become scarce. The estimate here is that fully 80 per cent. of the usual amount of quail are missing, and it is said that all the late broods of wild turkeys were starved or frozen during the unusually cold weather last winter. ANTLER.

The Moulting of Birds.

PHILADELPHIA, Oct. 17.—*Editor Forest and Stream:* I am preparing a paper on the moulting of our Eastern birds, more especially the land birds, and I would be glad of any correspondence relative to the subject or any descriptions of curious plumages. If you could put a note to this effect in your valuable paper you would confer a great favor. I propose to treat each species separately where I can obtain sufficient data to do so, and I find there are many points of interest about which we are still in the dark. WITMER STONE,

Conservator Ornith. Section Acad. Nat. Sciences, Phila.

Grouse in Town.

ITHACA, N. Y.—One evening recently, Mr. Stroud Bush, of this city, on the way home was startled by the whir of swift-beating pinions, and the next instant there was a resounding thud as the bird collided with the side of a nearby house. The ruffed grouse was dead when Mr. Bush picked it up. This incident affords some insight to the question relative to the grouse's swiftness of flight.

Two or three years ago a ruffed grouse flew into the north end of the Lehigh Valley Railroad paint shop, passed the entire length of the shop—some 260 odd feet—and flew against and through a south window, falling dead in the gutter outside the shop.

A number of grouse during the past few years have been found bruised and stunned from flying against the windows in the Cornell mansion on East Hill. M. CHILL.

Reversion in Cereal Development.

THE New Berne *Journal* of Oct. 11 mentions having received an ear of Indian corn (maize) which is normal in every respect, except that each kernel as it grows on the cob is inclosed with several thicknesses of shuck (husk) instead of the envelope covering the whole ear. In addition several grains of corn similarly inclosed grew on the tassel. The grains on the tassel are round; on the cob flat. What is this but a reversion to the original grain, of which millet is perhaps the intermediate between it and maize? *Quien sabe?* C. H.

Game Bag and Gun.

RAPID TRANSIT AND SQUIRRELS.

STARTING from the Rapid Transit Railroad station at West New Brighton, Staten Island, is a one-horse street car line ("one-horse" figuratively, actually I believe there are two). This line must not be confused with the road that up to a few weeks ago ran along the shore of the island and incidentally passed the West Brighton station. That road in its palmy days ran cars on a twenty-four-hour schedule, and has recently, so I am informed, owing to competition of pedestrians, gone out of business altogether.

The road I refer to is much more enterprising, and runs cars regularly at varying intervals from 6 A. M. to 7 P. M., day in and day out. Perhaps I made a misstatement when I said cars, for as the pay roll of the company is limited to one driver, it is hardly reasonable to suppose that that individual would take the trouble to change cars for his ordinary trips.

The rolling stock of the company may therefore without doubt correctly be described in the singular—and singular it is in more senses than one. In fact, the model is more adapted to be on the shelves of the Patent Office at Washington than on the rails at Staten Island.

The car is designed for all seasons of the year, in order, no doubt, that people who have grown accustomed to it may not be shocked by finding other cars substituted for it as the weather changes, and if a sudden blizzard springs up between West Brighton and the Brewery a few simple combinations are all that are necessary to change it from open to close—so close in fact that most people prefer to ride outside on the platform.

Well, as I said, the car runs from West Brighton to the Brewery, part of the time on the rails and part of the time off. The young man who drives never minds, and of course nobody else does. Doctors have been known to prescribe a ride on that car for people with sluggish livers. The company makes no extra charge for such people.

It is said that some people get as far as the Brewery and never come back again.

The driver is a very enterprising young man. When not chasing small boys from the rear steps, he is inside talking to his passengers. He embarrassed one young lady the other night so much that she pushed her leg through the side of the car. "Take your foot in," said the gallant driver, "or you'll catch cold."

But I am straying from my subject. Out beyond the Brewery is quite a stretch of wild country along the backbone of the island, and in this neighborhood this year there are quite a number of gray squirrels.

I left West Brighton by the 1:30 car one Saturday afternoon, and after an eventful journey reached the Brewery at a little after 2 o'clock.

The entire ride had been up hill, and at the terminus of the line the traveler finds himself at a considerable elevation. A little further is Tode Hill, the highest land on Staten Island.

Twenty minutes' walk from the car brought me to a piece of woodland bordering the road, and as there were no trespass signs in sight, I turned aside through an open gate, filling the magazine of my .22 Marlin as I walked. Meanwhile I kept my eyes open, for there were hickory and other nut trees in evidence and things had a suggestive appearance. It made me think of old days hunting the grays in New England, and I began to feel the keen, care-free enjoyment that only a hunter knows.

Just as I pushed my tenth cartridge through the magazine slide I saw with my physical eye what my mental vision had been busy with, as a gray gave a bound and whisked around on the far side of a pin oak tree some 50yds. ahead right at the edge of the road I was following. The next instant a second squirrel ran a few feet over the ground in plain sight and nearer still and up a knotty maple.

As the sun was directly in my eyes I walked on down the wood road without changing my pace till I reached a point of vantage a little beyond the hiding places of the squirrels. Here I selected the softest looking place for a seat and squatted down comfortably to await the squirrel's good time. After ten minutes or so I saw a slight motion up the pin oak at a point where four branches started, taking nearly all the volume of the tree and practically ending its aspirations skyward. The squirrel was stretching himself, utterly unmindful of his enemy below. A squirrel has to be pretty badly scared to remember for a longer period than ten minutes—unless he is a squirrel of years and experience.

Unfortunately the mass of limbs effectually protected him from my rifle, and I watched him scratch himself and recover his self-respect and grow in his own estimation, utterly unmindful of the fact that he had been frightened half out of his wits a few minutes before. Presently he began coming down the tree, hardly able to contain himself for conceit, his mental attitude shown by the convulsive jerking of his body.

Several leafy branches intervened, however; and though I could follow his course, it was impossible to get a clear shot. Reaching a point opposite one of the branches of the maple, he made a graceful spring to that, and ran down it and then into the next tree.

I waited patiently for a sure shot, following him with the rifle, but no good opportunity offered. The leaves were very thick, and though I could have easily dropped him with a shotgun I did not take the chance with the rifle. And so he eventually disappeared among the tree-tops.

I waited a long while for No. 2, but No. 2 never materialized. He had folded his tent and stolen away unobtrusively.

With a companion I think I could have gotten both squirrels—at least if the other fellow could shoot—but as it was, I decided to move on to new fields of endeavor.

I crossed into another piece of woods and followed down the nearly dry bed of a stream that ran between high knolls thickly covered with nut trees, including many butternuts.

At the first muddy place I came upon the visible tracks of a squirrel made since the rain the day before, and also some older tracks that looked like a coon's. A little further I found the fresh tracks of a man—a hunter, for I heard him shoot several times.

Realizing that the chances of success while hunting the ground this man had just gone over were very meager, I struck across to another piece of woods, east of the "Richmond road."

Scarcely had I entered this woods when a crash in the tree tops attracted my attention to a squirrel making good time toward a neighboring swamp. I ran till I got beneath him and then, just as he reached a large tree, I took a snap shot at him. It was a clean miss, and the squirrel dodged around the tree and was out of sight.

Instinct told me that he would not hide long, so I stood rooted to the spot, scarcely moving an eyelid.

A moment later, as I expected, I saw a slight motion near the top of the tree and the next instant a squirrel came into sight, slowly descending.

No one could have asked for a better shot, but finger and eye were at odds and the bullet went wild. Again the squirrel hid and I knew this time it would be a tedious job to wait, so I walked over to the tree and scanned its topmost limb carefully to see if I could get a sight of Mr. Gray.

The leaves were too thick and the tree too high, however, and for a time it looked as though the squirrel was again master of the situation.

However, before long, I hit upon a plan that started him. I could see a long straight branch clear of leaves just above the spot where I thought the squirrel lay, and selecting a good position near the base of the tree, I aimed at this and fired. As a result a good-sized piece of outer bark was stripped from the limb and fell almost on top of the squirrel, which precipitously deserted its hiding place and crossed into a neighboring tree. I stepped out to get a clear view of it, and the same instant saw it hide at the base of one of the lower branches, hardly 50ft. away. Its tail hung over in plain view, but its body was protected by 10in. of solid wood.

It required an unusually constrained position to keep that tail in view, and my neck already was very tired from constant looking upward, but I endured the pain for several minutes. Finally, when my head was about ready to drop off, I made a slight motion to secure an easier position, which resulted in a broken stick and a noise that sent the squirrel to the other side of the tree.

Well, to cut a long story of egregiously bad marksmanship short, I got the squirrel out of the tree by the same tactics adopted before, and missed him repeatedly as he ran for his life toward the swamp. Kindly night drew a curtain over the scene, and I was glad to have an excuse for leaving that poor abused squirrel. I have come to the conclusion that the rifle is not my weapon for killing squirrels.

Since writing the above I have been out again. This time I took a shotgun. Walking along an old road, I noticed a gray on a fence a long distance ahead. As the squirrel was making good time and would soon be out of sight, I quickened my pace to a run, and was soon near the spot where I had seen him last. I waited for a few minutes, and when the old gun spoke there was one live squirrel less in that corner of the woods. A few hundred yards further on I saw a squirrel in the top of a chestnut tree about a foot above a nest.

It was a good long distance off, but I was afraid of it going into the nest if I tried to get closer; so I took the shot and dropped the squirrel fairly on top of the nest, where, it may be as well to state, he stayed, as the tree was too big to climb.

At the sound of my gun another squirrel, 50yds. from the first, began running away through the trees, and I dropped him from where I stood. Walking over to pick him up, I paused and a little fool gray ran out on a limb and began barking. I added him to my bag, and after making sure that I could not get the fourth, went home feeling a little mean to have potted three squirrels so easily, but not a little relieved to find some kind of a gun I could shoot with. J.

NEW YORK, Oct. 17.

Jackson's Hole and Beyond.

MR. JOHN G. HECKSCHER writes: "I inclose an extract from a letter just received from my nephew, Philip M. Lydig, and as you were kind enough to give him some hints before his departure, I thought the extract might be of some interest to you."

The paragraphs of the letter home, written from forty miles above Jackson's Hole, in Idaho, under date of Oct. 5, read as follows:

"I have been out now nine days from the Hole and in camp five days. The first day out I killed two elk, one for food and the other for bear bait. The next two days were given up to fixing bait for bear and to skinning the elk. Day before yesterday we walked some sixteen miles at a height of 9,000 to 10,000ft., and as luck would have it I killed a very large elk with a very fine head of horns. Redmond tells me it is the best of the year. He is a very nice fellow, easy to get on with, and knows his business as guide thoroughly. I find it rather hard to walk at this height, the air is so rarified.

"Yesterday I killed a brown bear, not a large one, but still a bear. There are signs of more about here, and I hope to get some larger ones. Tell Uncle John that his .40 65 rifle shoots to perfection, and that I have not tried his larger one yet. We are shooting in a little basin in the hills, not far from the Continental Divide. We have found no traces of previous camps, and the game seems plentiful. I hope that my good luck will keep up. On the 14th we move camp and go up the other side near Idaho, at the foot of the Teton peaks, 14,000ft., and there try for a moose and a sheep and also bear. I shall try to kill one more fine elk head. Redmond goes down to-day after some things and returns here the 9th. I shall be alone with the guide, who seems a good fellow and fair cook. I therefore have a chance to write you these lines. I shall move out Nov. 1, and will get to Chicago Nov. 5. I am in good health and enjoying everything. We have had some snow, but it has left the south side of hills."

PINTAIL GROUSE OF THE PACIFIC COAST.

THIS bird is the prairie chicken of the Northwest and is commonly known as the sharptailed grouse. Scientists call it *Pediocœtes phasianellus columbianus*. It is regarded as a different variety from the very similar bird found on the plains east of the Rocky Mountains. Hunters would probably make no distinction.

It differs very much in appearance from the pinnated grouse or prairie chicken of the Middle States. It is much lighter in color. The upper parts are grayish buff and tan, with spots and bars of black. Underneath it is almost white, but having V-shaped black markings. The throat is a shade of buff.

The head is crested and the legs are covered with hairy feathers down to the toes. It has from fourteen to eighteen tail feathers, the middle two being a ½in. or more longer than the rest, and from this it gets its name.

Its average weight is 1½lbs., one weighing a ¾lb. more would be a large bird.

It is found in many parts of Oregon, Nevada, Washington and the country farther north, and generally during the summer lives in the foothills and on the grassy uplands, where it builds its nest underneath a tuft of grass, a sagebrush, or beside a sheltered rock. Its food consists of insects and seeds.

As winter approaches and the snows cover the hillsides it comes down to the river and creek bottoms, where the scarlet hawthorn berries grow, upon which it feeds. Still later, when the berries of different kinds have all fallen and are covered out of sight, its season of plenty being over, it feeds on willow buds and even deigns to eat the bitter resinous needles of the black pine.

This grouse is a fine game bird. Its flesh is dark colored, tender, juicy and delicious, and when well seasoned and nicely fried the hunter's appetite can be appeased with nothing better.

It is in the wild days of early autumn that we are wont to hasten to the hunting grounds. The hills are brown from the drought of summer, the tall rye grass stands in tufts on the level bottoms, the heat is reflected in shimmering waves from the bare rocks and the dry earth. The whole landscape is bathed in the mellow light of the Indian summer. During the warmer part of the day the birds have been resting quietly on the hillsides under the shade of some shrub or bunch of grass, but as the cool of evening comes on they fly to the feeding grounds. All nature is now in that active, restless period just preceding the quiet of night. Now is the time to hunt. It is on the Okanagan River in northern Washington. Our companion is a gentleman from Virginia. He has shot partridges and woodcock on the hillsides and along the streams of his native State, but this is a new experience to him. The sudden flutter and the peculiar kluk-kluk-kluk which the bird makes as he rises from the grass almost beneath your feet is liable to rattle one and he will shoot too quick.

We had better not take Jack along, for, while he retrieves nicely, he is liable to undertake to run down the first bird that rises. We know the birds are here and are feeding, for we see their footprints in the dry earth under the low hawthorn bushes; and yonder is a hawk circling just over the bunches of dead rye grass. Experience has taught us that he is looking for a supper, and that the grouse are lying low and trying to hide. We will move down that way. If the birds are not through feeding they will rise singly and only fly a short distance, and thus give us fine shooting. But, on the other hand, if they have finished their meal they will rise together and fly far away to their roosting grounds up in the foothills, where it is useless to follow them.

Now move cautiously, and be ready. They do not sound an alarm before they rise. There! we have two birds for our guns, but you shot too quick. Give them time to get some distance away. Why, you missed again. There is something wrong with your gun or else your shells are not properly loaded.

Oh, I see! You have a 10-bore, 9½lbs. gun, 32in. barrels; your paper shells are loaded with 4drs. of fine-grain powder and 1¼oz. of No. 2 shot. This might do for some kinds of game, but for grouse a 12-gauge, 7½lbs. gun is better. It should have 28in. barrels, the right modified and the left full choke. You should use brass shells loaded with 3drs. of FFG powder and 1oz. of No. 8 shot. Try my gun on the next bird that rises. There! that was a nice double.

Thus the evening passes and the sport continues. But now the shadows are growing deeper; only on yonder mountain top is there the light of day. Most of the birds have flown to their roosting places and only occasionally can we catch through the gloom a faint outline of those whose departure has been somewhat delayed. But our game bags are well filled, and we wend our way home, stimulated and refreshed in body and mind, and with just enough fatigue to insure a good night's sleep.

For some of us those days of pleasure may be past, but the remembrance of them adds to us joys which are not known to those who have not had like experiences.

SYLVAN DELL.

MR. R. B. HEATH, of Cove, told us Tuesday of a curious occurrence that came under his observation. Four weeks ago walking in newly cleared near his home he came across a newly hatched chicken, without knowing at first how to account for it. Investigating, a partridge nest was discovered close by with the shells of a nest full of partridge eggs and one hen egg. The hen had evidently laid in the partridge's nest and the bird had hatched the egg along with her own. Young partridges are strong, lively and of a rambling disposition from the first, and the brood had doubtless strayed off and left the more helpless chicken to get along as he could. Mr. Heath took the chicken in charge. He is now four weeks old and thriving.—*New Berne (N. C.) Journal.*

CHICAGO AND THE WEST.

Invitation Season.

CHICAGO, Oct. 19.—FOREST AND STREAM certainly owes its thanks to the gentlemen who have been good enough to invite its Chicago representative to quit working and go shooting for the rest of the fall and winter. Dr. W. D. Taylor, of Brownsville, Tenn., thinks about Nov. 1 would be a good time for me to start South to live with him for a few months and shoot quail. Tom Divine, at Memphis, is threatening awful things for the man who does not materialize at Bobo, Miss., for the big bear *fiesta* with Capt. Bobo in camp on the Sunflower. Mr. T. H. Glover, of San Marcos, Tex.—and I reckon I might as well begin calling him Tom Glover, though I have never met him yet—sends word that deer, turkeys and quail are waiting in numbers for us in the prettiest country in the world, and thinks about a month in the mountains would be about the right thing. I am invited also to a ranch near the Chisos Mountains (the fantail country). Col. Pickett's invitation to go with him and his friends to Texas I have already had to decline. I have promised a man to go chicken shooting in Illinois with him next week—and have also arranged to go to Wisconsin on business the same week. There are the usual number of invitations to shoot in other parts of the South. Meantime I arranged away last summer to go in October to New Mexico after my long-lost bear—my large, fat, cinnamon bear which I have been looking for for many years. I have had my rifle cleaned for this bear, and am in receipt from the U. M. C. Co. of a big box full of several kinds of bullets of a sort well calculated to muss up a bear a whole lot. I have got me a spur and a hat and am all ready to go after my bear, which is patiently waiting for me where I can go right to him. And now does not come the friend who was going with me, but says he can't go, so the hunt is off. This is enough to disgust any well-meaning cinnamon bear of decent character and industrious habits. (I shall get him in May, though, when the raspberries bloom again.) Between now and May I have about invitations enough to keep me busy, provided I also do a little work occasionally. All of which shows what thoughtful and intelligent labor will do for one starting out in life.

What the Newspaper Said of Capt. Anson.

"Anson's aim is deadly. Kills hundreds of wild ducks and geese. Returns from his hunting trip and tells of the number of birds he bagged in one day. Captain of the Colts breaks all records as a slayer of wildfowls. Brings home a wagonload of game.

"Capt. Anson is a keen Nimrod. He turned up yesterday from the wilds of North Dakota. His trophies of the chase required a full-sized express wagon to hold them.

"The only reason why Anson did not require two express wagons was that the slaughter grew monotonous. He was sportsman enough to quit and come home.

"'I left Chicago Monday, Sept. 30,' he said, 'and stopped over at St. Paul. There I saw Mr. Hoyt, who is writing a play, "The Runaway Colt," for me. I begin to star in this Nov. 11, at Syracuse, N. Y. From St. Paul I went to Minot, N. D. I stayed there two days hunting. W. B. Bickel, a St. Paul banker, was with me. We bagged 65 ducks. Then Mr. Bickel was called home by business matters. I went on to Knox and hunted at Pleasant Lake for a day. My bag was 50 grouse and duck. Next day I went to Island Lake and stayed three days. I killed 125 geese, 25 cranes and 35 prairie hens, besides some ducks. Then I quit shooting, the slaughter grew monotonous. I was hunting for sport and not hunting for the pot. The last day I hunted I killed 47 birds. I have been hunting in that district for the last three years. I never shot a crane there before this year. Prairie chickens are scarce this season. The rains drowned all the young birds.'"—*Chicago Tribune.*

What the Game Laws Say to Capt. Anson.

"Only twenty-five birds of any variety may be killed in a day or possessed at one time. Export of game forbidden."—*The Game Laws in Brief.*

An Odd Old Relic.

The local paper of Chinook, Mont., has the following brief notice regarding an Indian relic of much local fame:

"The celebrated Hunk-Cha-ogo-unga (chief's chair), once owned by Womba-dee-Kitan (Kills the Eagle), we regret to say was yesterday sent East, B. G. Olson presenting same to his Chicago friend."

This Chicago friend is Mr. Claus Blomgren, of 175 Monroe street, this city. To-day Mr. Blomgren said that the celebrated Indian chair had arrived safely and was at his residence. It is a most curious piece of Indian workmanship, meant to be a masterpiece in its way. It is made of the horns of buffalo and oxen, the legs and arms or back being all of horns, the seat of wood. Mr. Olson, in sending the odd bit of Indian upholstery, says that Womba-dee-Kitan, the chief who made the chair, was a Gros Ventre. He made the regal divan as a sort of throne or chair of state for his third and youngest wife on the occasion of their marriage, it being used in the ceremony of their bridal evening. The next day old Womba presented the chair to an old Indian fighter by the name of Slippery Ann as a token of his undying friendship. Both Slippery Ann and Womba-dee have cashed in their checks, but the curious old bridal seat remains to commemorate what may perhaps once have been an old but is now an obscure custom among the tribes.

Poet, but not Hunter.

Discussion has been inaugurated in the columns of the Memphis *Social Graphic* whether Sir Walter Scott, in his "Lady of the Lake," was right in calling his hounds bloodhounds, they being the ones depicted as having run the great stag practically to a finish and at a high speed. Mr. W. A. Wheatley, a well-known Memphis sportsman, at some length proves Sir Walter to have been perhaps poet, but not hunter, and cites thereto authorities like Col. James Gordon and John Davidson, both of whom know hounds and also know Scotland, who agree that Sir Walter's "bloodhounds" were staghounds.

Another Fox Lake 'Lunge.

Fox Lake, Illinois, is only 55 miles from Chicago, and has been fished the hardest sorts of ways, summer and winter, for 75 years or so. One would hardly expect to find muscallonge in such waters, nor have they often been taken there in the last 25 years. Yet I have from time to time mentioned in the past six years instances where great muscallonge have been captured in these old waters—I believe not over 7 fish in 15 years. In each case the fish was very large. Two years ago the last Fox Lake 'lunge was found by some duck hunters after the ice broke up in the spring. It was in shallow water, and nearly exhausted with a hook, line and tilt-up stick which it had dragged away from some ice-fisher's line of sets in the winter. Still another great 'lunge was found ashore, choked to death by the last of a number of spoon hooks it had broken off and carried away in its mouth. There has not been but one 'lunge caught there in straight angling probably in 12 years, though the waters are fished continually. In every case there has been something odd or unusual connected with the capture. Stories have become traditions about a monster 'lunge which has often been seen and hooked in these waters, but these have been mostly set down as fish stories. This last week an event happened which proves that these stories were no doubt true. In short, Fox Lake, Illinois, has broken the record for the entire region on muscallonge for this year and many years past. Mr. John Bysen, of 146 Sedgwick street, Chicago, was the lucky angler. On Oct. 11, in Pistaqua Bay, Fox Lake waters, he was trolling for pickerel, and hooked and landed a muscallonge weighing 47½lbs. (attested and sworn weight). The fight lasted over two hours. Mr. Bysen thinks he could not have landed the fish at all had it not had in its mouth, fastened crosswise by its projecting horns, a 2lbs. bullhead which it had been unable to swallow. He thought this choked the fish down, though, oddly enough, it had not prevented it from striking at the spoon. That muscallonge was out of luck in its choice of food. The bullhead was removed before the fish was weighed. Including the weight of the bullhead, the 'lunge would have gone just next to 50lbs. At 47½lbs. I have never personally known it equaled in the Wisconsin waters, though guides there told me of one 52lbs. and one 55lbs. 'lunge taken some years ago in Eagle chain. It seems most singular that the record should be thus damaged by a fish from waters which for so long have been fished apparently almost to death.

Fox Lake is in the Fox River, naturally one of the most wonderful fishing streams in the country. Fox River is tributary to the Mississippi chain. There are no muscallonge in any of the waters not connected with the Mississippi River.

"Fetch and Carry."

There are some facts about bookmaking not known to everybody. I know a man who is the author of over a dozen books and he frankly admits that his publishers have never sent him a check big enough to pay a year's coal bill. That is how it pays to write poetry and things of that sort. On the other hand, Mr. B. Waters, who wrote "Modern Training, Handling and Kennel Management," struck a field of usefulness and he sold several thousands of that work, and would have a farm to-day if he had not preferred newspaper life to farming. It pays to write a book—if you write one that has a useful field and if you write a good book.

Mr. Waters has written not only one, but two good books. His last one, "Fetch and Carry," has to do with the matter of retrieving. There are a great many men who think that field trial methods and field trial dogs do not represent the end of the world for the amateur sportsman, who likes to own a dog and gun. There are thousands of men who think that a shooting dog ought to retrieve, and hundreds of men who lose half the pleasure of a day's shoot if they cannot see the game brought to them by the dog. Be that as it may, in regard to the shooting dog being also the retriever, the mission of Mr. Waters's book is none the less clear. It teaches how any man, amateur or professional, can best teach any breed of dog to retrieve. It discusses impartially the different breeds and tells of their peculiarities. In short, it covers, in Mr. Waters's lucid and able style, the whole field of retrieving—a field on which no other book has been written by anybody, and on which nobody will ever write a better.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

They Claim the Time Record.

CAMP ARBO, Ebeme Pond, Me.—Just after coming from our successful hunt, and thinking that our time for killing deer was never beaten, I write you the facts. We were late in rising this morning, and by the time we had finished breakfast it was going on 9:30. Chas. McLaughlin, of Mt. Vernon, and myself, accompanied by our guide, C. K. Arbo, left in the canoe at that time, and when we arrived at the opposite shore and had put the boat up it was just 10 o'clock. Slinging our rifles over our backs and making for the woods, we had just taken about two hundred steps when three does loomed up before us, and each picking his deer we let drive at them. The three fell dead as if with one bullet. We had shot and killed them by 10:10, mind you, all in ten minutes, for which we claim the record for Maine and would like to hear if the time was ever beaten. Of course we have no witnesses of the shooting but ourselves, but believe that our word will not be doubted when we can refer you to C. Arbo, our guide.

We have also shot since last Tuesday thirty-two partridges and have also drying four fox skins, one quite large, which we intend having put in the form of a rug.

The country is wonderfully wild and full of game, and our two weeks in Maine have been spent, we think, better than ever before.

P. P. WIGAND.
C. MCLAUGHLIN.

Woodchucks in the Nutmeg State.

SHELTON, Conn., Oct. 17.—I have read your paper for several years, but don't remember seeing any woodchuck records. Following is a record made this summer by one of Connecticut's greatest lawyers—Wm. H. Williams—in less than two weeks: 105 woodchucks shot with a .32 rifle (I believe), telescope sights; seventeen was his best record for one day. He drives anywhere from ten to thirty miles per day and spends his vacation in this manner. Can any of your readers beat this?

Sept. 29 (two days before open season) a full-grown partridge flew into our finishing room and was killed. There is no place within one-half mile where he could have come from, but when picked up his breast was badly shot. This is the way our game laws are working here, although two or three parties have found out how much it costs to snare partridges.

F. C. W.

IN NEW ENGLAND FIELDS.

BOSTON, Mass., Oct. 19.—Massachusetts sportsmen penetrate to all parts of the world in search of pleasure, but it is not often that Nicaragua is selected as a desirable place to visit. H. J. Maynard, of Worcester, and his friend E. M. Johnson leave in a few days for that country, intending to devote the next six months principally to shooting and fishing. They take letters of introduction to several notables there, and expect to have a great time. A camera forms an important part of their equipment, and no doubt they will get many interesting pictures of native life in the tropics. They go first to Managua, the capital city, where they will stay some weeks, leaving there to make a general tour of the country in search of sport.

The genuine and true specimen of an American sportsman is nowhere better represented than in the person of F. A. Larkin, of New York city, the Eastern manager of the great Allis Machine Works, of Milwaukee, Wis. He delights in nature as found in the woods, and on lake and stream, and rarely loses an opportunity that is consistent with business engagements to get there. Milwaukee was formerly his home, and when living in that city he numbered among his friends many kindred spirits who were glad to accompany him to the woods of northern Wisconsin in search of fish and game. Since coming East to live he has always managed to get back to the old haunts once or twice a year, and one of these periodical visits has just been completed. With a party of eight he left Milwaukee, going direct to Lake Winnebago, 124 miles from that city. Taking there a small steamer they went up Wolf River about 160 miles, coming then to their camps, which they have visited many years in succession. Duck and jacksnipe furnished most of their sport, and they had the best kind of shooting with this game. The same party usually make a fishing trip to these waters in the spring or early summer. Bait-casting for bass is the method of fishing generally practiced, and there are some wonderfully skillful casters among them. It is a rare treat to listen to the accounts of their different trips, and I doubt if a more fun-loving crowd enters the woods from any section than the party in which Mr. Larkin forms an important part.

A. G. Mooney and William Clegg left Boston on Thursday last for a two weeks' trip into the Schoodic and Sebois Lake region. They will make their headquarters principally at Hodgkins's camps, and will spend the time in an effort to secure a full legal allowance of large game. Mr. Mooney has visited this country for three successive years, and has always had good luck in the past. He calls it an excellent section for moose, and quotes in evidence the fact that a moose of nearly 1,000lbs. weight was killed near the shore of Schoodic Lake but a few days ago. He is in hopes to find the brother of this big fellow for a victim, and I trust his desire will be realized.

Results on big game shooting in Maine are now beginning to reach Boston in rapid order. Of course the deer far outnumber all other game that has been killed, but I have heard of several parties who have been fortunate in getting their moose.

A party from Lowell, Mass., consisting of Jas. S. Hanson, L. H. Morton and one other whose name I failed to get, have just returned from Sourdahunk, northwest of Katahdin. Quite a formidable list of game—one moose, two deer, two foxes and a large number of partridges—made up their record for the trip of ten days. The hunting grounds were reached by going in from Norcross, and they are convinced that no better place can be found in the State. Judging from results obtained I incline to the same belief.

Another Lowell party who have done well are Ethan A. Smith and W. H. Hawes. The glory obtained by these gentlemen was found around Umcolcus Lake. They went into the woods from Crystal, Me., and spent ten days in the vicinity of this lake with the "Rider Haggard" name, with the result of getting one moose of 1,100lbs. weight and a fine buck deer. To say they were pleased with their trip is putting it in the mildest manner possible.

Dr. William A. Browne, of Boston, has just returned from a trip into the woods forty or fifty miles north of Kineo, Maine. His desire to get a moose, expressed before leaving, has been gratified, and when he told me that he had brought back the head and hide of an immense big bull, killed by himself, it was easy to see that the achievement gave him much gratification. He will have the head mounted and the skin made into a rug, and with these reminding trophies about him it will not be an easy matter to forget the pleasant and exciting incidents of the trip.

One of the most prominent and genial sportsmen in the towns and cities about Boston is W. P. Whitman, of Campello, Mass. He is strongly attached to both fishing and shooting, and much of his leisure time is devoted to these pastimes. In a few days he starts for Maine, going first to Machiasport on the eastern coast. From there he goes into the woods, driving twenty miles to Wesley. Some distance further in are three camps belonging to a friend, and these are the final abiding places of Mr. Whitman for the trip. His friend has always enjoyed good shooting there, and he therefore has strong hopes of doing as well with the big game. It is reported to be a fine country for birds, and a Maynard rifle of small caliber with which he delights to shoot partridges formed not the least part of his equipment. He had great enjoyment last year in western Maine in using this gun on foxes, and has made so many long and successful shots with it that he has an abiding faith in its accuracy.

It is getting to be a favorite trip with many Boston sportsmen to go first to the Megantic club house, then down through the preserve, out via Eustis, and then to one of the many sporting camps in that region for a pleasant ending to the trip. E. E. Bennett and wife, and James M. Burr and wife, of Boston, have just arrived home from a trip of this kind and express themselves as delighted with it all. After leaving the Megantic preserve they went to I. W. Greene's farm on the Eustis stage road, and while staying there had good shooting, killing one deer and a good many partridges. From Greene's they made a four or five days' trip to King and Bartlett, unable, I presume, to resist the temptation of repeating their visit of last year to this delightful place. It was while on the return journey near Spencer Stream that one of the ladies of this party saw the big cow moose, an account of which was mentioned in FOREST AND STREAM of recent date.

An English gentleman has lately returned home after spending two or three weeks in the Aroostook region in

Maine, in a vain effort to get a moose or deer. Although provided with the best guides and equipped with everything to insure success, he did not even get a shot, seeing nothing in the shape of large game except those killed by more fortunate hunters. Quite different was the experience of Fred F. Higgins, of Somerville, Mass. This young man, who had never before been hunting in the Maine woods, and lays no special claim to skill with the rifle, went down to Greenville with John Hunnewell, of the same city, and from there to camp at Lower Wilson Pond. The whole trip occupied but eight days, and during that time Mr. Higgins killed a magnificent buck deer. His only shot fired caused instant death to the animal. He declares that he did not feel a single tremor of buck fever, and knowing him to be a cool-headed young man, I believe his statement. Of course, he is now a thorough convert to the Maine woods, and I am afraid if all the tenderfeet could do as well Maine would be filled beyond her capacity. HACKLE.

THE ST. JEROME CLUB'S NEW HOUSE.

NORTHERN QUEBEC, one of the most beautiful and picturesque portions of the great Dominion, has for years been almost a *terra incognita*, except by a few keen sportsmen who have penetrated its solitudes and returned with stories of its wonderful natural scenery. The day is coming when this portion of the Province will be better known and more appreciated by those possessed of a love of nature and of sport. It is due to the foresight and labors of Lieut.-Gov. Chapleau, the late Curé Labelle and Mr. Nantel, the present commissioner of public works, that this district has been opened up. Mr. Chapleau, when premier of the Province, took a deep interest in the North, and it was due to his efforts that the work of railway communication so essential to the opening up of a country was commenced. Curé Labelle was the veritable father of the North, and his memory is cherished with loving regard throughout the whole district. He was the apostle of colonization, and he labored in and out of season to draw attention to the beauties of the region. His name has been given to one of the largest and most beautiful lakes in the district, and the statue of the devoted priest may be seen at many points. The Colonization Society, of which Dr. Brisson is the indefatigable chief, has taken up the work and is carrying on the patriotic labor of colonization most successfully.

But it is as a sportsmen's paradise that the North will become famous. It has for years been the favorite resort of a few sportsmen, but owing to ignorance as to its rare advantages and the absence of easy communication, it has been visited by but a few. The opening of the Montreal and Western Colonization Railway, now operated by the Canadian Pacific Railway Company, marked a new era for the region. When it became known that within a few hours' ride of Montreal there existed a veritable fairy land of beauty, the region was bound to attract attention. St. Agathe, on the beautiful Lac des Sables, has already become a popular resort for Montrealers. The possibilities of the region as a field for sport early attracted attention, but to render them effective organization became necessary. This has now been accomplished. In 1892 the St. Jerome Fish and Game Club was established and chartered. The club started in a modest way, but it has made great progress. His Honor, the Lieutenant-Governor, took great interest in the club and became the honorary president. Hon. Mr. Nantel is the president, Mr. L. J. Lachaine the vice-president, and Mr. E. Rodier the zealous secretary. The club's capital is $10,000, in $100 shares, and the membership is limited to one hundred. The annual subscription is from $15 to $20. The membership includes many prominent Montrealers as well as leading residents of the district, and there is no doubt that it is destined to play an important part in the future of the North. To assure the club's success, suitable headquarters became absolutely necessary, and they are now an accomplished fact. In August last, the work of constructing a club house was commenced, and although the building is still in an unfinished condition, wonderful progress has been made, and the club house premises, when completed, will be one of the finest structures of its kind in the Dominion. The club house is built on Ile Chapleau, a beautiful island, comprising nearly 300 acres of land, situated on Lac Chapleau, sixteen miles from Labelle station. The lake and island have been called after the Lieutenant-Governor, who is proprietor of the island as well as honorary president of the club.

It was to attend the inauguration of the new club house and to enjoy the hospitality of the officers and members that a distinguished party left Montreal on Thursday morning for Labelle. A special of three cars, including the Lieutenant-Governor's private car, had been placed at the disposition of the party by Mr. Shaughnessy, of the Canadian Pacific Railway. A stop was made at St. Agathe, where the visitors were treated to a drive around Lac des Sables. The railway from this point winds through a mountainous district of picturesque grandeur, dotted with large and small lakes, such as Lake Mercier, a favorite resort of the late Liberal leader, Lake La Fouche and numerous others. The railway line is on a continuously ascending grade, the highest point of the district being over 2,000ft. above the St. Lawrence. Cascades and rapids are numerous, and a most beautiful panorama was presented from the car windows. The party reached Labelle early in the afternoon, and a drive of sixteen miles brought the visitors to the club house in Ile Chapleau at nightfall. On the way a chain of beautiful lakes, including lakes Labelle, Belanger, Dansereau, Alphonse, Lachapelle and Desert, which will hereafter be known as Lac Ouimet, in honor of the Minister of Public Works, were passed. All these lakes, with a number of others, sixteen in all, are now under the control of the club, which possesses the exclusive fishing and shooting privileges. The lakes abound in trout and other fish, and the surrounding woods in game. A warm welcome awaited the visitors at the club house.

After a good night's rest many of the visitors started out early in the morning to fish and hunt. The Lieutenant-Governor is a keen disciple of Izaak Walton, and he was off among the first with his rod, returning at lunch time with a splendid string of fine trout. Other members of the party brought back many braces of partridges. The most exciting incident of the trip happened in the afternoon. While some of the guests were sitting on the veranda quietly smoking and enjoying the beautiful view, several deer were noticed some distance down the lake. At once everybody was on the alert. Several of the most ardent huntsmen, including Mr. Ouimet, Mr. Drolet and Dr. Lachapelle, took boats and started out in pursuit. The others watched the chase with eager interest from the club house. Shot after shot was heard, and in a short while the huntsmen returned, bringing with them a splendid specimen of a young deer, which they presented to the club as the first trophy of the chase captured since the opening of the club house. There was some friendly rivalry between Mr. Ouimet and Mr. Drolet as to who really fired the fatal shot, both having struck the deer; but finally the president, Mr. Nantel, decided that honors were even. The incident was regarded as an auspicious inauguration of the club.

In the evening the club house was formally inaugurated by a banquet, presided over by the Lieutenant-Governor. The fish and game captured during the day provided succulent dishes, and the appetites of the visitors played havoc with the eatables. The banquet was followed by a general illumination of the club house and a display of fireworks, and the balance of the evening was passed in recreation and goodfellowship.—*Montreal Gazette.*

IN MEMORY OF A DAY.

"COME, hunters!" were the words that caused me to open my eyes on the morn of this day.

They were spoken by one of my companions. I very quickly complied with the command by getting in readiness as soon as possible, and we were on the way to our happy hunting ground of great expectations. It was an ideal New England October morning, calm, cool and gray, with hardly a breath of air stirring; time, 5 A. M. We passed on our way three slumbering farmhouses, the only signs of life being the crowing of cocks and the barking of dogs. We at last gained the woods in all their beauty of October garments, and their fallen leaves, slippery and damp from the white frost, made a good carpet, that one could walk over with hardly any noise.

This piece of woods was gray squirrel cover, or, as all hunters know, this means oak, beech, pine, hemlock, poplar and birch. Gaining a point of vantage, we await the pleasure of the gray coats, and while waiting have time to take in the scenery. In this same grove two years ago, with the help of old Nero, I captured four fine gray squirrels in a short time.

Down in the valley to the right, where you see the mist arising, is the woodcock ground or cover; but as we have no dog, shall leave them to go South for some one else to derive pleasure from, and all I have to say is this: if they fall may they not go into the bag of the man that shoots for the market, or the one for numbers, but rather to the one that takes pleasure in shooting no more than he needs.

To the left, where you see that line of mist, is the trout brook, which, when overflowed upon the meadows, makes a resort for the beautiful wood duck. But hark! what was that? Ah! *Quck! quck! quck-k-r-r-r!* the bark of the gray squirrel, meaning good morning, I suppose, in squirrel language. Now I forget my surroundings, only thinking of gaining sight of game; I am in another, the hunter's world, where all is joy, and where no sorrow or dull care can come, for the latter belong with the common money-making world. It is not the taking of innocent blood, as all we hunters know, that causes us pleasure, but rather the pursuit and capture of our game. I never shoot any game, but if I had the power, I would cause another of the same kind as good or better, to take its place.

But as we cannot have our cake and eat it too, it stands us in hand to be saving of our supply. I would like to see the days of our grandfathers renewed, when the wood, water and air teemed with life of all kinds. And if every one that shoots would take only what they needed and no more, I think it would be very near it, even at this late day. My "creed," as our great Nessmuk used to say, is this: "Never shoot more than you need to eat at the present. Never shoot in the spring or summer. And last, but not least, never sell game. If you do not care for it yourself, give to the sick or poor. And remember that we are not the only ones that are living or will live on this earth, so let us not take more than our share, but leave enough to keep up the stock, that the rising generations shall call us blessed; let us not be selfish." Excuse the digression.

I go along as quietly as possible, but the game is too cunning for me. I am glad of it, because if I had seen him I should have shot him, but as I did not I have the satisfaction of knowing that there was a live squirrel in those woods if we did not see him, and that is worth more to me than a dead one, although I like to hunt them very much. By this time the sun was up over the mountains in all his glory, and I hear a whistle from Al and answer. We meet, and conclude that, by the time we get into the house, breakfast and the folks will be awaiting us.

On our way we call and get old Nero of Mr. F. Nero is delighted to meet me again, and he wags his tail so vigorously that it seems to be shaking the dog, instead of the dog his tail; and he looked at me with such loving eyes, "bless his old heart," that it made me feel bad that he had so few years to live, for he is very old; but I hope that he may live to enjoy a few more pleasant hunts with me. After getting Nero we started up a partridge, and I took a snap shot at long range, but failed to kill. Then went to breakfast.

After the morning meal our friend Non went with us, he and Al working one side of the brook, I the other. I expect to start a grouse at any minute, when bang! bang! goes the gun of Al's. Then of course I have to go over and see what had taken place. He had shot at a muskrat, he thought, but as I had handled them before I knew at once it was a mink by the odor, but he got away from us by getting under the bank.

We started again, coming out on some ridges covered with second growth hemlock, where Nero began to work up a trail, when up went a ruffed grouse, with a hemlock tree between it and me of course—trust a grouse for that. Next we came out to a pasture with mountains around it—a very pleasant sight. Here I started two more grouse, with a pine tree between them and me this time; but I stepped one side and let one of them have the contents of my right barrel, but as it had got a very good start I failed to stop it. We marked them down in a little swamp across the road, and very soon we had one of them up again, but failed to get in a shot. Then Nero started a rabbit, and I fired at him by guess, as he was running through the bushes; but failed to hit. Very well, that don't bother me much, as he is not wounded, I reflect, and I am out for sport and do not expect to hit every time; if more of us shot that way they would have all the excitement of hunting and shooting at the game and there would be more game left in the woods, and no bags for count, to be thrown away afterward. While going into the swamp to see if I had hit the rabbit, the other grouse got up directly behind me, and in my cramped position I got no shot in; so followed up the hill slowly, and keeping a sharp lookout I at last spy the little jade, and she is mine.

We next come to an oak grove, near the summit of a mountain, where we run into a colony of gray squirrels; but all we see of them is their nests, which we bombard with rocks and guns. Non succeeds in driving one out, and trying to shoot him loses the cap off the nipple of his muzzleloader, and Al shoots the squirrel for him.

It being now near noon we go to dinner. After dinner we send poor old Nero home, as he has become very tired and lame; and skirt around by the meadows, where you can see the muskrat houses; and as it is too rough water for ducks, the wind blowing quite hard, we keep to the thick woods at the base of the mountain. Later in the day I become separated from my companions; and as the wind has subsided I climb the mountain, where, as I enter the hemlocks which skirt the edge of the oak and beech growth very thickly, I hear what I take for a gray squirrel jumping on the ground. I go by the hemlocks very carefully, scanning every part of them, so that I had given up the idea that there was anything there, when I turn to start off out goes by far the best grouse I have seen this season. I watched him and saw him pitch into another bunch of hemlocks, and thought it would pay to follow him up, so go on very carefully and enter the hemlocks and stop, take a good look around on the ground; I fail to see him, take a few more steps and out he comes as fast as he can run, and as he flies I let him have the contents of my right barrel, but he goes just the same, and I think I have lost him sure, when he changes after going straight up for 50ft. or so, describes a half-circle and strikes the ground with a thud, sending the leaves in a shower around. I pick up the best grouse of the season, a regular old grandfather, and as the sun is setting in the west and the boys are calling the cows, *coe! coe! coemoltie! coemiltie! c-o-l*, which is answered by their subdued lowing, and the bell upon the cattle seems to say, "We come, we are coming, we come," I start for our friends with a light heart at peace with all the world.

As my friend Non had shot nothing but a red squirrel for his cat during the day I gave him the grandfather grouse, and the other grouse I kept until I got home, dressed it and sent it to a friend of mine who was getting slowly over a hard case of typhoid fever. So ended this great day of pleasure for me, and I did not know but some one might derive a little pleasure from the reading of the same. PANGUS.

LANDOWNERS AND GAME REVENUE.

Editor Forest and Stream:

No country is better adapted by nature to support immense quantities of game—a dozen times the present population would not render it too crowded for that purpose—yet the history of game in North America is one of the gradual extermination of one of the most valuable elements of the material wealth of the country, the actual money value of which every sportsman will agree is the least part of the loss which will thereby be incurred. In short, unless some law can be devised and brought into operation more effectual than any which has hitherto been enacted, it must inevitably come to pass that if any game is left in a generation or two it will have become a luxury beyond the reach of any but the very rich—a result which, if I am not mistaken, the wealthiest sportsmen would be among the first to deplore.

Whatever the remedy for this condition of affairs may be, two facts stare us in the face: one is the total failure of the system hitherto adopted upon this continent, and the other is the tremendous contrast presented in England, where, amid a crowded population, upon highly cultivated lands, producing under scientific methods of fertilization far more abundant crops than even the virgin soil of the Northwestern States and Manitoba, game exists in such quantity as to form one of the largest items in the commerce of the country for home consumption and for export, while the restrictions as to the times and methods of its capture are less severe than in some parts of this country.

Let me here disclaim in the most absolute manner any desire to introduce upon this side of the Atlantic any laws which could arouse such bitter feeling as have certain provisions of the game laws of Great Britain.

No one, however, can object to an examination of the state of affairs in that country in order to see if we can not, upon this continent, find some method of producing similar results without resorting to methods inconsistent with the institutions of the country.

What is the radical distinction between the two countries? Clearly it lies in this, that in England the owner of the land takes an interest in the preservation of the game, and not only for sporting purposes, but as a considerable part of the value of his land, because he can obtain almost if not quite as large a rent for the sporting privileges as for agricultural purposes. Here, on the other hand, the right to shoot over cultivated lands is not worth a dollar to the owner, and a farmer would laugh at an Englishman who might ask him what proportion of the value of his land be calculated for its capacity to support game. Here an absurd and erroneous notion prevails that game is common property, with the result that the owner of the land, supposing that he has no interest in its preservation (or, if he knows better, taking none), is only concerned to take part in the general scramble to get as much as possible while it lasts.

The difference in method between the two countries is precisely the difference between the miser who hoards up his gold, and as his store grows smaller and smaller starves himself with a smaller allowance each year to live upon, while the inevitable day approaches when he shall have consumed it all; while his neighbor, with a much smaller capital, engages in business and not only lives well, but becomes rich.

It follows that the only real remedy for the unfortunate state of affairs at present existing is such legislation as will encourage every owner of land and particularly every farmer to breed and preserve game, and will protect him in so doing.

Statistics also should be collected and published prov-

ing the profits to be derived from the preservation of game and the fact that agricultural interests will not thereby suffer, but will rather benefit by the destruction of insects, etc.

It would be possible to fill columns with arguments in favor of such legislation as I have indicated, but I have already exceeded the limits of such a communication as this, and in conclusion will only point out that not only is it unnecessary to carry into effect the policy here suggested by unpopular laws, but many of the inconveniences which arise from the preservation of game in England would not be felt here, because of the enormously greater extent of the country, and still more because land is in general occupied and worked by the owner and not leased to tenant farmers.

"Sport," properly so called, would be within the reach of all, and farmers would be anxious to sell shooting privileges to city men who could afford to pay a good price, and then save one-half the present cost of a trip to the distant localities where alone game is now to be found; and that this would not be a mere artificial condition, only to be kept up by stringent laws, is insured by the fact that game and the profit to be derived from it would be in the hands of one of the most hard-working and least wealthy classes of the community, and not as in England, where all game is controlled by the wealthy and aristocratic.

As a signature, permit me to append the name of this province, for every word of this letter applies with equal force to ONTARIO.

BOSTON AND MAINE.

BOSTON, Oct. 18.—Some of the deer shooters are returning, and considerable luck is reported. Wm. H. Coggin and S. Matherson, Jr., have returned from their camp in Maine, and they had good success. They were accompanied by Mr. W. H. Doane, of somewhere near Bangor, an owner in the camp. Mr. Coggin and Mr. Matherson brought home a couple of deer. They hunted fairly and got their game by watching at the runways and near the water. The weather was very windy a good part of the time; decidedly against still-hunting. Besides the leaves were falling and ready to make a good deal of sound at every footfall. But they stuck to the hunt for several days, getting one or two days that were still. On one of these days Mr. Coggin made a splendid shot at a doe on the jump, she having been alarmed by sight or sound of some hunters a short distance away. He had the good fortune to strike her in exactly the right spot. On dressing her off, it was found that the bullet had passed directly through the heart. The hunter is very proud of this achievement, and justly too. Partridge shooting they found to be very satisfactory indeed. They were able to get all they wanted for camp use without very severe hunting.

The most successful hunting party of the season thus far returned from the Maine woods on Tuesday. Mr. D. J. Flanders, general passenger and ticket agent of the Boston & Maine Railroad, was the head of the party, with his brother, J. A. Flanders, New England agent for the Clyde Line of steamers; Phin. Sprague, of Malden, and Dr. Libby, of Boston. They were in camp for two weeks about thirty miles from Blaine, Aroostock county, and had for guides Arthur Winslow, Arthur Whitcomb, J. M. Viles and A. N. Jones. The first day out Mr. D. J. Flanders shot a buck caribou with a beautiful set of antlers. The weather was all that could be asked for during the camping out. They got a plenty of small game, and brought home with them four caribou and one deer. Partridges, Mr. Flanders says, they shot till they were tired. This meant enough for camp use.

Mr. D. J. Flanders thinks that his party has found the ideal hunting spot. He is charmed with the Maine woods and game. In his opinion there are a good many caribou left in that vicinity. He was put on to the locality through the courtesy of his friend Mr. Cram, General Manager of the Bangor & Aroostook Railroad. The guides were of the best. Mr. Cram told them that the party desired a location alone, meaning one not overrun by other hunters. The guides took the order literally and furnished the party with a new log camp and a big field bed, while their own quarters were a little distance away. Among the caribou taken was one female with horns. The head is now being mounted at Bangor, and when it arrives I shall obtain a photo for reproduction. The guides were a good deal surprised when they found the female with horns equal to those of a two-year-old buck. One of them remarked that "The other caribous all probably called her a woman suffragist."

It seems that General Manager Cram is alive to the fish and game interests of Maine. He is aware that the very life of the Bangor & Aroostook Railroad is linked with the protection of fish and game along its line. He was in company with one of the guides last summer, not very far in the woods, when they came to a dead deer, from which the poachers had cut nothing but some steaks. A little further on they found the carcass of a fine caribou festering in the sun. Only a few steaks had been cut from this noble game. The hunters evidently dared not attempt to bring it out to the settlement. Some of the best guides tell him that they are going to decline guiding for illegal hunting, and that they shall try hereafter to prevent shooting out of season. They begin to see that the preservation of the game is of great consequence to them. Mr. Cram is trying to impress them with the idea that a live moose or caribou in the woods is likely to bring them several jobs of guiding, while a dead one is done forever, and illegally killed makes the guide himself liable to fine and imprisonment. Mr. Cram believes that the guides are beginning to watch each other.

In the Boston dry goods trade many sportsmen are much saddened by the untimely drowning of Kenneth M. Taylor, a salesman of the house of Bradford, Thomas & Co. With his guide, Michael Collins, Mr. Taylor was out on Moosehead Lake, near Kineo, on Monday, when the canoe was overturned, it is supposed, and both were drowned. Mr. Taylor was 27 years of age, a Harvard (1890) graduate. His trip to Moosehead was for a brief vacation and considerable hunting was to be done. He had long counted on the trip. Collins is said to have been one of the most trustworthy guides in the Moosehead region, and one that will be greatly missed by the many sportsmen he has worked for during the increasing popularity of that part of the country for fishing and shooting.

That partridges have been very plenty in Maine one would not question could he see the number of boxes of these birds being opened almost every day in the Boston markets. Already there is a glut and prices are off. The law against shipping them out of that State is evidently being sadly evaded. Marketmen frankly admit that they are getting ten times as many partridges from New Hampshire (?) as last year. As for Maine, they stop there. But many of these boxes come from the Portland and Bangor steamers, and hence could not come from New Hampshire unless first shipped to Maine or picked up off shore on the ocean, and in the night time at that.

Coot shooting offshore has been better since the big storm of Sunday last. The wind blew a gale, and shooting on that day was next to an impossibility. At Scituate thirty or forty gunners were out nearly all day in the rain. The coot were flying, but the sea ran so high that not a bird could be got. Mr. A. Irvin McLauthlin, with a friend, drove through the rain to Scituate, over twenty miles, to attend a "coot supper or stew." They describe the storm as most remarkable all along the shore, with many birds flying. They drove back to Boston in the evening, with the rain falling in torrents. Shooting they did not try. The rain was enough.

Mr. George T. Freeman was at Anisquam over the storm. He used a number of plates in his camera and probably has some magnificent pictures of the waves. He had some very good shooting on Monday, after the storm had subsided. Coot and other ducks were flying in good numbers.

Oct. 19.—In a single issue of a Maine daily paper that I read to-day there were accounts of over twenty deer taken by citizens of that State, besides a number by Boston and New York hunters and sportsmen from other States. A gentleman who has just returned remarked that fully two-thirds of these deer are shot by the guides. They are employed by the sportsman, and the deer taken belong to him, and nothing is to be said. The average city sport does not like tramping; it is too hard work; so he stays in camp and sends out his guide. Some of them even employ more than one guide, with special rewards offered for success. My friend believes that he is sure whereof he speaks, for he has it from some of the best guides in the vicinity of Bangor, who have told him how it is done. One fellow, an Englishman, hunting at a camp in the Moosehead region, kept his guide out all the time after deer, while he lay in camp. Every time the guide approached the camp he was in danger of being shot, only the fellow could not hit the bigness of a barn door a few feet away. But he was liable to blaze away into the empty woods, declaring that he was shooting at a "blawsted buck." Finally the guide had to take refuge behind a tree, into which the Englishman put a couple of bullets out of a whole magazine full that he fired in that direction. The guide, who is a quiet and good-natured fellow till thoroughly aroused, then told the make-believe hunter that if he fired that rifle in his direction again he would give him such a thrashing as he never dreamed of, besides deserting him in the woods. There is really great danger in the woods when such fools are out.

Mr. George Lanphier and his party have captured a couple of moose. I shall get an account of his hunting for the FOREST AND STREAM next week. To-day it can only be said that he has good luck almost always. SPECIAL.

FROM A MOOSILAUKE POINT OF VIEW.

THE Moosilauke Union Fish and Game League send us their club book, which has this bit of Moosilaukian philosophizing on game and fish and the relations to them of the men who go out with gun and rod, in season or out of season:

"It has long been evident to those who have given the matter any thought, that unless some method could be found for securing the better protection of our fish and game, the day was not far distant when good sport with the rod and gun would be a thing of the past. This would mean not alone personal deprivation to those who look to our crystal trout streams, our numerous lakes and noble forests for needed rest and recreation, but serious loss to the State at large, and particularly to that large portion of its population whose income is largely or entirely derived from our summer guests and visiting sportsmen. It is estimated that over $8,000,000 are left annually by these visitors to our mountain and summer resorts. To a great many of them, good fishing and hunting are attractions of paramount importance; hence we cannot afford to look on quietly at the wanton destruction of so important a source of revenue, so valuable a property of the commonwealth.

"The fish and game laws already enacted, if properly observed, are adequate not alone for preserving the fish and game we have, but for so increasing the same as to make our State, in a few years, but little less than a sportsmen's paradise. The difficulty, however, lies in impressing upon a majority of our citizens the importance of enforcing these laws. There is no better way to accomplish this than for those interested to organize local fish and game leagues, thereby securing the co-operation of all or as many as possible of the people in a community. Without hearty co-operation, very little good work of a public nature can be accomplished. Realizing this, a number of the citizens of Haverhill, Warren, Piermont, Orford and neighboring towns met at Haverhill last autumn, and organized the Moosilauke Union Fish and Game League. These towns contain many of the best trout streams in the State, as well as numerous spring-fed ponds and heavily timbered forests, and as a result of the protection and efforts of the league will be able in a short time to offer as fine fishing and hunting as can be found anywhere in New England.

"About 150,000 young fish, including brook trout, lake trout, land-locked or fresh-water salmon, or rainbow trout, have been placed in the streams and ponds of the section covered by the league this season, and it is expected that another year a much larger quantity will be distributed. It is also the purpose of the league to introduce, from time to time, such new fish and game as may be thought advisable.

"It is a mistaken idea to suppose that the efforts of a fish and game league are for the benefit of any particular class, or that its members shall be allowed any special privileges denied to others. By reference to the constitution and by-laws, it will be seen that every member promises on his word of honor to carefully observe the laws. This is the fundamental principle of all similar leagues, and a violation by a member of the league will be prosecuted as thoroughly as that of a non-member. A large number of the members of our league neither hunt nor fish, but understanding the object of the organization, are anxious to give it their support.

"All who are interested in the success of this work, whether residents of the State or visitors, are cordially invited to join our league, and lend us the benefit of their influence, if unable to do more."

We have also received the programme and rules for the Moosilauke's first annual side-hunt, which follow:

1. All members of the league, and all who join prior to Oct. 23, are cordially invited to take part in this hunt and the supper following.
2. The hunt will commence at 12:01 A. M., and close at 11.59 P. M., Wednesday, Oct. 23. No game killed before or after that date will be counted in the competition for the prizes.
3. All game must be delivered to the nearest member of the following committee before noon of the 24th: Dr. E. C. Chase, Orford; E. E. Grimes, Piermont; C. J. Ayer, Pike Station; G. H. L. Head, Warren; Dr. O. D. Eastman, Woodsville.
4. All skins of value, also all game not needed for the supper, will be returned to the owner, after being counted.
5. A member unable to hunt can send a substitute into the field by furnishing a satisfactory excuse to the committee.
6. Any member violating these rules or practising fraud in any manner will be recommended for expulsion from the league, by the committee, and his score not entered.

Those members winning the five highest scores will be awarded the following prizes:

First, double-barrel, breechloading shotgun, value $20.
Second, breechloading rifle or a single-barrel shotgun, value $15.
Third, jointed fish-rod, value $5.
Fourth, hunter's knife, value $2.
Fifth, brierwood pipe, value $1.

The following score will be used in counting all game killed in accordance with these rules and the fish and game laws. No difference will be made where dogs are used.

Bear	1000	Gray squirrel	50
Deer	800	Mink	50
Fox	200	Duck	50
Coon	200	Blue heron	50
Fisher cat (lynx)	200	Muskrat	25
Partridge	75	Skunk	10
Woodcock	75	Red squirrel	5
Rabbit	75	Chipmunk	1

Fresh-water fish, per pound, dressed weight. (Except perch.)

Any game killed not found in the above list will be scored by the committee.

PIKE COUNTY DEER COUNTRY.

Editor Forest and Stream:

Frank A. Cutting in FOREST AND STREAM of Oct. 12 issues a friendly challenge for any one to beat his record of two deer in three days on a journey of about 750 miles. We will accept his challenge, not in a spirit of rivalry, but to convince, if possible, the local readers of FOREST AND STREAM that large game may be had within a much more reasonable distance of New York city, at little loss of time, and at nominal expense. To many sportsmen cost is quite a consideration, and not all of them can easily afford a trip to Maine or the Adirondacks. Mr. Cutting does not inform us as to the cost of his trip, but it is safe to assume from his description of the trip and the distance and modes of travel that his venison was an expensive luxury, although we do not wish to be inferred as suggesting that the meat was any important element of the sport or pleasures of his outing.

I regret that the instance I am about to relate was so spontaneous in the inception and execution that we were deprived of all the pleasures of anticipation, which are in many cases, in deer hunting, the only mental satisfaction realized. I am therefore unable (unless by imagination and fiction) to add interest and zest to the plain statement of facts by leading the reader over the route and making him in imagination one of the party, as so neatly done by Mr. Cutting.

Last fall, near the close of the season, I met my hunting companion in the evening and suggested, as we had been having rather indifferent success during the earlier season (having killed but one deer), that we make a final effort the following morning. It was decided at once that "the two of us" set out in the morning at our usual time, 5 o'clock, and our destination was unanimously agreed upon.

Agreeably to arrangements we left our own homes at the appointed time, and after an hour's walk separated for business. The first drive—with us always short ones—a deer was started, but avoided us, only giving me a sight of it on an opposite ridge some half mile away. Our dog was soon back, however—for be it remembered, we have no use for a "stayer," and will have no "hanging" hounds in our woods if we can prevent it—and we were soon again on trail. Presently two white flags were in the air, and by judicious maneuvering I had them coming my way before they had been fifteen minutes on foot. Two reports within five seconds, and the two fine specimens lay dead in their tracks without a struggle. By 1 o'clock they were hung up and dressed. A walk of six miles brought my companion to town for a conveyance to carry in the bag, and that night we slept in our respective beds at home, well satisfied with our wind up of the hunting season of 1894.

This is not the first time a member of our little party of from two to four—we do not favor large parties, and will not help to make them—has killed his two as quickly as he could swing from one to the other; and during the fall of 1892 one of our party killed his two and reloaded his breechloader in time to wound the third (which was subsequently found dead), that had been driven to him in one batch. The same fall ('92) I killed two in one day, but not at the same time, and our party are not at all astonished at getting two in a day's hunt.

Our record for '92 was seven deer in about ten days' hunting; '93, five in about two weeks. Our lack of success last season was mainly due to the fact that our favorite grounds, most accessible to our homes, had been almost entirely burned over, and the deer had sought more distant and unburnt shelter. This season our woods are in fine shape both for shack and shelter, and exploring trips have revealed quite plentiful signs. The weather, however, has been so hot and excessively dry and the leaves so thick that we have not given them a trial yet, but anticipate during the season to have some "more fun."

These successes of the past and anticipations for the future are not credited to the distant, expensive hunting regions of Maine and the Adirondacks, but are realized within one hundred miles of New York city and within six miles of direct rail by unsurpassed wagon road, in little Pike county, Pa. Instead of days and nights of travel, and the loss of time and expenses incident thereto, the sportsman can leave his city business (in New York we mean and not Boston) at three or four o'clock in the afternoon and be on a runway by daylight the next morning, with fair prospects of having a deer to carry back to his home in New York the same night. All things considered, will Mr. Cutting submit to the inevitable? PIKO.

MY FIRST WILD TURKEY.

To look back and think of how I killed my first wild turkey, or rather turkeys, has always been a source of delight to me, and though I have shot many turkeys since I think I never experienced the same feeling of exultation.

I was a boy going to school. I lived in central Pennsylvania, and in our neighborhood the wild turkeys were about the largest game found, and even they were not found in very large numbers. I had graduated from the use of the single-barrel gun, and was now, in my own mind, at the top of the pile, being the possessor of a muzzle-loading, double-barrel shotgun, the praise of which I could never cease singing; and I honestly believed at that time that another gun to shoot like that one had never been made and never would be, although there was not the least thing about it to indicate its pedigree. I had killed the wary black duck, shot four gray squirrels in one forenoon once, which gave me a passing recognition by the older local gunners, who scorned me on their hunting excursions because I "had not the age on me." And once I had shot a ruffed grouse on the wing, but how I did it I have not the remotest idea; anyway, it got up in a thicket of cedars, I pointed the gun and fired, and picked up the dead grouse. For a long time this was my greatest exploit, and although I told every person I knew how I had shot it flying, it has always appeared to me that they did not put the most solid confidence in me, and although no one said outright that they believed I had shot it off a tree or old log, still I could see a tinge of disbelief.

My ambition was to receive recognition by the "old hunters" of the town, to take part in their discussions in the store, and I even built my hopes so high as that I might some day be asked to accompany them on some of their hunting excursions; but my age didn't merit it and I saw that I would have to do something to distinguish myself, and I came to the conclusion that the proper thing to do would be to kill a wild turkey. If I could only do that my fondest hopes would be realized, for among all these "hunters" the ones who had killed their turkey were very scarce, and could I succeed in my object I could take a seat among those of the front rank and would be asked time and again during the long winter nights to tell the story of how I did it. And so I made up my mind to try.

Saturday was the only day in the week I had to hunt, being compelled to go to school; and I can assure you that rain or shine on every Saturday morning during the the open season when the sun came up it found me on the mountain waiting to hear a gobbler. But all to no advantage, although I could see where the turkeys had scratched among the leaves for chestnuts, apparently the night before. Things went on in this way for some time. Now and then I would meet an older hunter, and owing to my extremely youthful appearance and the isolated locality in which I was hunting he would invariably ask me if I wasn't lost, and would offer to tell me the direction home, but never, ah, never, condescended to ask me to accompany him.

My plan of hunting was go where I saw the most "scratching" or where I thought the turkeys were most likely to come; and to secrete myself in a hollow tree or some other convenient shelter and there stay from sun-up to sundown. One day, late in the afternoon, I had become tired waiting and got out of my place of concealment, disgusted and out of humor generally. Of course, during these excursions I would not take any account of the occasional hare that jumped past me or the grouse that boomed off through the trees, disturbed from his meal of wild grapes, or the covey of quail that I saw while crossing the fields going to my home in the evening. In fact, nothing could tempt me. The two loads I had in my gun were for turkeys, nothing else, and could I get a shot at one anywhere inside of 50yds. not a doubt entered my mind that he was my meat. But just at this particular moment I was in a humor to have revenge on anything, and seeing a gray squirrel go into a hole in a hollow chestnut tree I resolved to sit down, wait till he came out and kill him.

It had rained in the forenoon and the leaves were so damp that I could walk without making much noise. Taking a position where I would have a good shot at the squirrel when he came out I sat down on a log. I had waited about a quarter of an hour and the squirrel had failed to come out, and I was thinking of going home, when the breaking of a twig to my right startled me. Looking in that direction I saw a sight that caused a feeling to come over me that I had never before had and have never since experienced. Within 25yds. of me was a flock of between fifteen and twenty turkeys, walking along and here and there picking up some nut or choice morsel as unconcerned as if they were the only live things in the neighborhood. For a moment I didn't know what to do, in fact I couldn't have done anything had I wished to, for I was trembling and shaking like a leaf with excitement, but I finally braced up myself enough to raise my gun to shoulder very, very slowly, for I knew any quick movement would attract their attention, and as yet they had failed to see me; and when my gun was in position I picked out two close together that I knew I could kill at one shot, and had my eye on another that I would shoot with my left barrel. Pen can not describe the feeling of victory that passed through me while I was pressing the trigger—the long-wished-for opportunity was at hand. Well, I shot and I got off the second barrel at one that run past me not ten steps away, never touching it. When I went to pick up the two young gobblers I had singled out for my "trusty" right barrel, not a feather was there to greet me, and it has always been a mystery to me what became of that charge of shot; not a mark could be found on a tree or bush in the direction I had fired; it could not have all gone into the turkey, or he would have stayed there. Some unkind person afterward suggested that it went straight up in the air, and as I can prove nothing to the contrary I suppose I will have to accept that solution, but I do it very reluctantly.

Now I was worse off than ever; to let people hear of my failure would be disgrace of the worst kind. The eyes whom a moment before I was sure would look on me as a hero would now laugh at me and say I had got "rattled," had the "fever," and a dozen and one other uncomplimentary remarks that I thought I could never stand. However, by this time I had loaded up and was going to start home, when about 300yds. away I heard a faint peep, peep! and although I had never heard the sound before, I knew it was a turkey calling. Whistling so as to imitate it as nearly as possible, I had hardly time to conceal myself behind a tree when the turkey, a young hen, answered me, and I could tell by the sound that she was coming toward me. I gave one more call, and it wasn't many minutes until I saw her walk out into an open space hardly 30yds. away, anxiously looking for the rest of her companions. Now I had a chance to redeem myself, and carefully resting the said "trusty" over my knee I took what I supposed to be deliberate aim and fired. She sailed off through the treetops unhurt.

Slowly and wearily I gathered myself up and started for home. The only thing I could find satisfaction in was in vehement expressions against the worthlessness of my up to the present time phenomenal gun. This same gun that I had so confidently declared not long before was the best in the section I now disdained from having anything to do with. It was my only avenue of escape, and the poor gun had to stand it all.

But I didn't give it up. Oh, no. At home was an old army musket, so old and rickety that it had been laid aside from use, and furthermore it was so heavy that it was only with the greatest effort that I could hold it out without a rest. But I had resolved to do something, and I cleaned it up as best I could and loaded it. And what a load! Four charges of powder from an old tin flask such as was used in those days, and a whole handful of No. 4. And how carefully I selected the softest paper for wadding! how I made the long steel ramrod jingle when I rammed the powder! how careful I was that the wad on the shot should be firm, so there should be no danger of it starting and letting the shot run out, and when I was through I put the ramrod in the barrel and the load just registered nine fingers!

Armed with this relic of barbarism, the next Saturday found me at my old battlefield. Late in the afternoon I heard the turkeys scratching among the leaves in search of chestnuts. It was a dry, calm day, and I could hear them a long way off. I listened until I was sure which way they were going, and by taking a circuitous route succeeded in getting ahead of them. Taking position behind a log, I rested the old musket over it and patiently waited. How can I describe the alternate feelings of hope and despair that came over me during that ten minutes' wait, as the sound of their movements in the leaves would appear to be coming closer and then gradually die away? I was soon rewarded, however, by seeing one turkey coming directly toward me, then another and another, until I found that I had succeeded in my object and was right in their path.

Hardly daring to breathe for fear they would detect me I waited, and when they were within 30yds. two stopped close together and I pulled. There was a terrific report that echoed from mountain to mountain, the old musket flew out of my hands and landed fully 10ft. from me, and although unhurt I was somewhat stunned by the awful recoil of the piece, but through the smoke I had caught a glimpse of a turkey trying to stand on its head and going through other antics. I had killed two. The old musket had done its work faithfully, and for a long time I could not get done singing its praises and condemning my former favorite piece.

Carefully hanging the two birds over my gun I marched home, and I can truthfully say that it was the proudest moment of my life, either before or since, when I exhibited those turkeys.

Brother sportsmen, did you ever have the "fever?" Of course we are slow to admit it, but after we have achieved greater deeds in after years what's the difference if we look back some years, weigh the evidence and acknowledge the truth, and as I look at my Lefever hammerless now I can truthfully say that had I it instead of my cheap Belgian muzzleloader at the time I had such a golden opportunity, I believe the result would have been just the same. C. C. R.

NOTES FROM THE GAME FIELDS.

St. Paul, Minn., Oct. 14.—Prairie chickens in Minnesota this year have been scarce as compared with other years. Partridges are plentiful in most sections. Ducks, especially local, are not nearly so plentiful as they were in other seasons. A very noticeable thing is the absence of wood duck, which is pretty hard to account for, as we always have lots of them. Deer are reported to be very plentiful all through the northern part of the State, and I think the new clause in our game law passed during the last session, prohibiting the shipment of venison to any commission merchant or sale market, will do more to stop the wholesale slaughter than all the wardens we could possibly appoint.

I believe that Forest and Stream has done and is doing a great work for the preservation of our game and fish all over the United States.

Sam. F. Fullerton, Ex. Agt.

Petty, Tex., Oct. 14.—The quail in this part of northern Texas were never so plentiful. From every section come the reports of large bevies, and as the time is near approaching for my annual outing (being one of the chained), I look forward to the 1st of November with great interest and much pleasure, as Jim C. (my friend) has signified his intention to make it Nov. 1. I will give the readers of Forest and Stream an account of our outing. Prore.

Pike Station, N. H., Oct. 8.—Two deer have been shot within three miles of this place within a few days, and a number of others seen in our immediate vicinity. Ruffed grouse are very plentiful indeed throughout northern New Hampshire this fall. It is not unusal to scare up half a dozen flocks in the course of two or three hours' tramp through the woods surrounding any of our villages. A few mornings ago on visiting my henyards I found that one had committed suicide by hanging himself in the wire netting that fences in the yards. E. B. P.

Deer Numerous, but Antlers Poor.

Westerly, R. I., Oct. 17.—I have just returned from a very successful hunting trip in the region about Lake Chesuncook, where I killed a very fine bull moose and what deer I wished to bring out. Deer seemed to be unusually plenty, easily seeing half a dozen each day, and impossible to take a walk of half a mile without starting one. One thing that surprised me much was that I did not see a single well-antlered buck, and this peculiarity was commented upon by several from different sections of this Chesuncook region. Partridges were unusually abundant. Edwin R. Lewis.

Foreigners in Manitoba.

We have heard a good deal lately about "true sportsmen," "sportsmanlike feeling," "instincts of a sportsman," etc., etc., until one feels as if a halt should be called. Verily, they protest too much. One rather doubts the honesty of the lawyer who is always talking about the honor of his profession, his noble calling, his professional honor, etc. True sportsmen, men who unselfishly love sport for sport's sake alone, are inclined to be rare. There is no finer fellow than the true sportsman, and unselfishness, good-fellowship and generosity are his distinctive qualities. The sportsman who is not a sportsman is generally found wanting in all these qualities. He has one distinctive quality. There is only one word that seems to convey the idea—hoggishness. I refer especially to sports afield. When a sportsman is not a sportsman he is a hog. And in a dozen different ways. He wants the shadiest pool for bass and the best side of the bluff for partridge. He kicks until he gets the best "runway" to the lake and then growls when the deer heads for the least likely. His only real joy seems to be in counting the catch or the birds that have fallen to his own gun. When in what he calls luck he lets the game spoil on his hands, and is sulky if he has had a bad day. Like all good qualities when perverted, sport, when it is not sport, is a most objectionable quality. Like a woman who is bad, it is very bad.

But this hoggishness has taken what some may consider a broad and others a narrow phase in Manitoba. Broad in the sense that they seem to want the whole Province of Manitoba kept as a sort of game preserve. And narrow, because they don't want outsiders to come into the Province and shoot chickens. They want the chickens. Now Manitoba is, unfortunately, situated so far from the rest of the world that good Winnipeg dollars will hardly tempt a second-rate troupe of barn-stormers; and it requires a considerable lot of literature to capture even the nimble immigrant. The immigration caused by the chickens that we can produce will not materially affect the population of Manitoba to any material extent during the season. Western Americans who are fond of shooting chickens patronize the home market. The Eastern Yankees that are after blood and chickens are unfortunately as few and far between as the teeth of the aforesaid chickens. We would like another half dozen of these Americans to come up every autumn. It costs them about $100 a chicken, I should judge, by the bags they make. George Gould and the other five Americans that pursued the guileless chicken to her lair this fall didn't appreciably spoil the chicken crop, but they spent a good deal of money and enjoyed themselves. This is where the hoggishness of these men who have been writing to the papers about preventing Americans from chicken shooting without numerous restrictions comes in. Here were half a dozen millionaires who sought the illimitable prairies of the West to knock around a bit, see the country, talk dog and gun a lot, and bowl over a few fiery, untamed chickens that blew up against them; and some people want this country, which is like a girl at her first ball, longing to be known—these people seemingly want it locked up as a game preserve. These men needn't be alarmed. The devastation that they fear Mr. Gould and the other millionaires will create among the feathered game of Manitoba, and which they have traveled over half a continent to devastate, will not blight its prospects to an extent that the personal inspection of the marvelous grain fields of the West by men who are themselves interested, or are in touch with those who are interested in half the railway schemes of the continent, will not compensate for. We can permit them to slaughter a few dozen sturdy Canadian birds, if the stooks and stacks of grain around which they stalked the toothsome but guileless prairie chicken convinced them that Manitoba was the greatest wheat-growing country in the world. If men will be hoggish don't let them be also ridiculous.—*Winnipeg Saturday Night.*

The Lone Star is Hospitable.

I am much pleased to see an article in Forest and Stream of Sept. 5 from Mr. E. A. Wingo, of Texas, also to see a lot of news in a previous number from Texas Field. Our grand Lone Star State is entitled to a better representation than it has had heretofore, and then I am certain there are a great many sportsmen in the Lone Star State who are able to chronicle their experience afield in a manner that would be interesting. And why is it we hear no more from the brother sportsmen of our beloved State? Is it because they are selfish and want to keep the outside world in ignorance in regard to the resources of the game supply? I really think not. Well, then, why don't some of our brother sportsmen write up their experiences and send it to the "good and dear old Forest and Stream" (I should have said more of them), that others may profit thereby?

I see that Texas is beginning to be looked upon as a land of game in season. There is plenty of small game and some large game yet to be found in a great portion of the State. Mr. Hough's articles, published in serials in Forest and Stream last winter, are sufficient proof of the fact.

And now the Memphis party is coming down next month to try their luck, and I hope they may have as good success as Mr. Hough's party did. Am sorry Mr. Hough will be unable to accompany them, as his "Sunny South" serial stories were so interesting. Hope the Memphis party may take their "scribe" along with them, and we may hear something from them through Forest and Stream.

Bidding them a hearty welcome to the hospitable citizens of the coast country and also to the game covers and retreats, and wishing the entire party much success.

Provo.

Petty, Tex.

A Florida Game Country.

New York, Oct. 13.—*Editor Forest and Stream:* If you happen to know of a party of hunters who want a good time in the wilds of Florida, but who do not know where to go, I shall be glad to furnish them with the name of a thoroughly reliable guide, who, for a small sum, will show them all the sport they want, unless they are game hogs, the game including deer and turkeys. As I have hunted with this guide myself for several winters past, I know whereof I speak. It is my misfortune not to be able to avail myself of his services this winter, but the ties of business keep me "chained," etc. W. H. B.

The Litchfield Park Fence.

THE fence around Litchfield Park, Tupper Lake, Franklin county, N. Y. (Adirondacks), was completed about Sept. 10. It was built under contract by the Page Woven Wire Fence Company, of Adrian, Mich., and is proving eminently satisfactory for a game preserve fence.

It is of galvanized coiled elastic steel wire, with twenty horizontal strands tied together by vertical strands every 12in. The spaces between the horizontal wires are 3in. wide for the first foot, beginning at the bottom of the fence, and gradually widen toward the top.

It has no barbs and is strung from tree to tree, being fastened by staples. Posts are used only in the absence of trees.

All irregularities in the soil underneath are filled with green logs, stones, or other suitable material.

The fence is about 8ft. high and is over eighteen miles in length. It is absolutely dog and deer tight. No dog can get through unless he digs a passage underneath.

The Page people put on two large gangs of men and drove the work with great rapidity, closing it out a month ahead of the contract time.

The fence runs through the roughest Adirondack country, through swamps and over mountains. At one place it crosses the bay of a lake, a distance of 150yds.; at another it runs over the crest of a mountain nearly 1,000ft. above the level of the surrounding country.

The wire is, as it were, corrugated before using, and its elasticity is so great that if a tree falls upon the fence, when the tree is cut away the fence springs back into place and only requires re-stapling.

The area inclosed is about two and a quarter miles wide by six and one-half long, amounting to between 8,000 and 9,000 acres.

The owner now has a small band of elk or wapiti in the park, in addition to the deer native to the Adirondacks. He is negotiating for more elk, also for mountain sheep, blacktail deer, moose, and for some European game, such as roebuck, fallow deer, etc.

The First Moose.

BOSTON.—The notice in your valuable and instructive paper, notifying all your readers to report their luck of rod and gun, was observed by the writer, who has been a reader of your paper for a great many years. I inclose these paragraphs from the *Globe* relating to my deer of this year: "It was the good fortune of the correspondent of the *Globe* to reach here last night just as the lucky hunter who captured the first moose of the season arrived with his prize. The lucky sportsman was also a Boston man, Benjamin Taft, well known in insurance circles. With his guide, John Powers, of Millinocket, he has been encamped at Soudnehunk Falls since Sept. 20. He located his quarry Monday night, Sept. 30, by the familiar moose call with the birchen horn, and early Tuesday morning went for him and brought him down. Sitting upon a log in the chill of the morning, he is undoubtedly truthful in saying that it was the cold and not 'buck fever' that caused his legs to tremble beneath him, and as the majestic monarch of the forest approached him, sitting concealed behind a bush, it is to his credit that his bullet, aimed at the skull, struck full in the face. The moose is said to have stood fully 6ft. high at his haunches, and guides who saw him estimated his weight at 1,200lbs. His antlers, though not so large as some, and indicating an age of 6 years, showed a spread of 40in., depth of blades 22in., spread of ears from tip to tip 30in., length of head from ears to tip of nose 28in. and length of felt, a very fine one, 16in." NORCROSS.

New Hampshire Game Seasons.

CENTRE BARNSTEAD, N. H., Oct. 14.—*Editor Forest and Stream:* A few words in regard to our game laws. The open season on gray squirrels and rabbits in New Hampshire begins Sept. 1, on partridges and woodcock Sept. 15. Here is where we find a great mistake in the law, for there is a chance for a man to go hunting for squirrels and rabbits and at the same time to shoot every partridge that he comes across as long as he does not get caught in the act. This gives that kind of a sportsman fifteen days' advance of a true sportsman. I believe that the law on squirrels, rabbits, partridges and woodcock should be of the same date.

Another reason why we do not have more partridge shooting in this State is that there is so much snaring; but we are pleased by the steps which one of our Fish and Game Commissions has taken in regard to bringing the violators to justice, and hope that this good work will continue. If it does, we feel that we will have more partridge gunning in years to come. F. S. E.

About Nitro Powders.

AURORA, Mo., Oct. 13.—*Editor Forest and Stream:* In reply to P. H. D., while I am not rich so I can shoot all the time, few amateurs shoot more in the field or at the trap than I do. I always use 3¼drs. when hunting chickens or ducks, and have yet the first time to have the head of shell pull off or firing pin burst through. I have never seen an accident on our club grounds with nitro powder. I do not think P. H. D. would meet with good success at the trap with 2½drs. of any nitro made in America except the W. A., and that would be too large a load; it would equal about 4drs. of nearly all the nitros now on the market. A. E. GIBSON.

Next!

PERSIA, Ia.—I have seen a gun broken while using nitro powder. The frame was broken in two just in front of the trigger guard. The shooter was not injured, as the breech did not open. I think too large a charge was fired, and the same thing might happen with an overcharge of any powder. We have been shooting nitro here for two years, and no accident has occurred except the above. DROP.

California Game Abundant.

STOCKTON, Cal., Oct. 8.—The hunting season promises to be fine this fall, with more quail than for a number of seasons past, owing to the abundance of good cover, which has not been destroyed by sheep or cattle as in former years. The ducks are very plenty and good shooting is expected. Geese are always plenty and are not much hunted. S. N. C.

Clipping Partridge Heads.

MR. DICK OF CONNECTICUT seems to discredit the stories about clipping off the heads of grouse with single bullets. That was the way that I potted grouse after I laid down the old scatter gun, which was in my early youth. I never thought that it was a very great feat of sharp-shooting, however. I sometimes scored misses, but they were exceptions, not the rule. I had frequently seen it done by shooters with the old flintlock rifle before I carried a gun.

I have noticed some remrks of your correspondents in reference to Tiam's moose shooting. It may be rather late in the day to bring up that subject again, but I have this to say, that Tiam may be a good shooter, but if he had been a model hunter and sportsman he would have let up after killing one moose, and that one likely to spoil on his hands before he could get it out of the woods. ANTLER.

GRAND VIEW, Tenn.

Graveyard Rabbits.

Editor Forest and Stream:

I read Mr. Chas. Hallock's "Words for Buncombe" with more than passing interest, and as I am cutting some capers in the way of an obstructionist, I thought it a good opportunity to add to my already copious honors. He says, in FOREST AND STREAM of Oct. 12: "The left hind foot of one of these graveyard rabbits, carried in the trousers pocket, will always bring good luck. The country negroes affirm it and stand prepared to prove it." It will, it will, but it must be more than a simple killing in a graveyard if the foot is to have its mystic potency. The rabbit must be killed at midnight, the moon full (and it is easy for the moon to get full in a moonshine country), and if the rabbit is killed with a silver bullet its left Trilby is a thousand times more potent in bringing good luck and warding off evil. DICK OF CONNECTICUT.

A Stray Deer.

A LARGE deer was shot by George Palmer' who resides about four miles north of this village, on Thursday morning of this week. On going to the pasture for his cows in the early morning he discovered the deer among the herd of cows and from the animal's antics he came to the conclusion that the deer was wild game; so in company with his neighbor, John Johnson, he started in pursuit of the venison. They followed the deer for about three hours through several pieces of woods and finally a well directed shot from Johnson's rifle, in the hands of Palmer, brought down the buck. Those of our townspeople who saw the carcass say it was a very large one. Whether or no it was a wild deer strayed form the Adirondacks, or one escaped from some private park, we are as yet unable to say.—*Sherbune (N. Y.) News, Oct. 12.*

Ducks on the Ithaca Marshes.

ITHACA, N. Y.—The Ithaca marshes have afforded, and are still affording, some pretty interesting snipe and duck shooting. A number of really good bags of ducks have been recorded within the week. We haven't, of course, the number of birds on which to score big bags that many more favored localities can boast of. At the same time, the local gunners have become reconciled to the existing conditions, and the shooting of half a dozen birds, here considered an exceptionally good morning's work, now arouses all the ardor and enthusiasm which the bagging of twice or three times that many formerly did. This being the case, why draw invidious comparisons between the pleasure of present and past shooting experiences? M. CHILL.

Wet Matches.

BETHLEHEM, Pa., Oct. 13.—*Editor Forest and Stream:* Seeing in your last issue how Jock Darling had to dry his matches to make a fire, reminds me of something that may be of value to somebody in the same predicament.

Take a wet match by the stem, rub the head in your hair a few moments, and it will light as good as a dry one. Try it. JOHN F. RAUCH.

[This receipt is a good one as far as it goes, but it fails when the matches are thoroughly soaked, and would not have answered in Darling's case. Try it for yourself and see. When the phosphorus becomes thoroughly soaked a rub or two will clean it off the match stem and leave you nothing to strike.]

The Credit for Eheu.

Editor Forest and Stream:

I don't want any credit that belongs to another. Your sprightly contributor A. B. Wingfield says he's much obliged to me for suggesting the adaptability of Eheu as an exhaust for great mental excitement. I didn't discover the word; O. O. S. brought it out of the misty eras, and Mount Tom borrowed it from O. O. S. when he couldn't give expression to his feelings in any other way. It's a good word, and I would be proud of having discovered it; but I wouldn't rob O. O. S. of the credit that's his due. DICK OF CONNECTICUT.

Camp-Fire Flickerings.

An Off-Hand Shot.

MY neighbor Miles is descended from truth-loving Puritan ancestors. But rumor saith he hath departed from the ways of his forefathers and likewise from the paths of rectitude—yea, that he often getteth miles from the truth.

It is a reprehensible act to deceive a common, every-day, twenty-five-dollars-a-month-and-found citizen; but it is "deceitful above all things, and desperately wicked," to lie to a deacon and a magistrate.

Besides holding both these offices, another of our neighbors, George C. Esq, is a farmer of some avoirdupois and worldly substance, and was once a prominent member of the N. B. Board of Agriculture. He is a very nice man, but some of the boys can teach him a thing or two about guns.

A few days since the herein before-mentioned backslider from Puritan principles traded a superannuated farm horse for a fine muzzleloading shotgun. He didn't particularly need the gun, but he did wish to get rid of the horse. Deacon George saw the gun and was interested. He knows little, and cares less, about firearms; but this particular gun represented the price of a horse, and he must find out about it as much as possible.

"Ah! a very nice gun," said he, with the air of a connoisseur, "what is it worth?"

"Well," said Miles evasively, "I would take $100 for her."

Somewhat hesitatingly came the next question: "Is it a breechloader?"

"Yes," lied its owner, anxious to make it appear to his brother farmer that he had marketed the horse to extra good advantage.

Again the Deacon returned to the charge. "How do you load her?"

This would have nonplussed most of us. We would have pleaded absent-mindedness, taken back water and corrected our former misstatement. But Miles fixed his eye, with an air of abstraction, on that of Will Smith and felt in one and another of his pockets. At last he said, as if to Will, "I believe I must have left that breech key home, but," added he, his countenance brightening a little, "I guess I can explain the operation to the Squire without it."

Turning the gun over he drew the Deacon's attention to a screw in the center of the horn cap on the end of the pistol grip. "Now," said he, "you take the breech key, press down on that little button" ("and the gun does the rest," interrupted Will), "give a turn and swing that little horn magazine cover right around. You can then push six cartridges into the magazine. The first pair goes into the barrels, the rest lie in pairs behind. Working the hammers causes the cartridges to feed into the barrels automatically. You can fire six shots without recharging, and," added he meekly, "that is about as many as you want for a day's shooting now."

The Squire looked at Will. "Declare, great invention, isn't it?" "Yes, sir," said Will, enthusiastically, but he wasn't thinking of the same invention as was the Squire. And when the latter says, "Declare, no mistake, boys, Miles got a great gun for that old horse—fires six shots without reloadin'," the uninitiated think he refers to a Winchester repeater. But a select few, of whom the writer is one, knew better. And while we acknowledge and even take off our hats to the ability, the presence of mind and the non-indentable adamantine cheek that enable our friend to make so good an off-hand shot with the weapon of Ananias, we tremble lest some day he be killed by the recoil. L. I. FLOWER.

TRENTON, N. J.—In looking through my FOREST AND STREAM I often see where some writer tells us how eagerly he opens his paper as soon as he gets it, to see the good things he knows it contains. Now I go at it a little differently. My paper is delivered in the afternoon and it is safely laid to one side until after business hours, and after I get home and my family is safely to bed, then with the old briar root in mouth and easy chair drawn up to the light, slippered feet gently resting in another chair, I can safely say that nothing outside of quietly sculling down on a bunch of mallard ducks gives me more enjoyment. Speaking of ducks, I want to tell you what befell my companion of many a gunning and fishing trip. I can only relate as he tells it, as he was the only witness. One morning, last week, he decided to go up the creek and look for ducks, and as I could not go, he went it alone. I can imagine him on the creek in his duck boat, low of free-board, narrow of beam, bending low as he quietly sculls along, fingers on triggers and every nerve vibrating with the excitement of expectation, when suddenly he hears the whir and up jumps a bunch of six fine mallards. Up jumps our gunner and bang goes the first barrel; bang goes the second, and as a rule that would be all; but there is another bang as my friend strikes the water and finds himself floundering around in about 10ft. of water.

He tries to explain it to me by telling how, while not wholly recovered from the recoil of his first barrel, his foot slipped as he discharged his second. But the only sympathy he gets from me is an injunction not stand up in your boat when shooting ducks; it is something he will never let me do when out gunning with him. Did he get his ducks? He says he saw six get up, and after he had got the water out of his eyes and his boat righted up he could only see three flying around. We have had considerable sport. JERSEY.

Sea and River Fishing.

CAPE BRETON FISHERMEN.

AT Louisbourg one may study the Cape Breton fishermen at his leisure in the little villages on the right hand and the left—Big Lorraine, Little Lorraine, Baleine, Main-à-dieu (bread of God—pronounced manadoo), Gabarus (called Gabberoose)—that have been his home for generations.

In nationality he is usually Scotch or Irish, a descendant of those emigrants whom the policy of Pitt sent to these shores to fill the places of the deported Acadians. In religion he is the most uncompromising of dissenters. The Presbyterian churches flourish here, while the English and Roman churches languish. Fishing is his vocation; he is also a good seaman, but has little faculty for anything else; therefore, when the salmon, cod, mackerel and herring, on which he mainly depends, seek other shores or the deep sea for their summer outing, he, with the "missus" and the "bairns" in the little one-story, unpainted cabins picturesquely nestled in nooks and coves of the coast, are put on short commons. There has been but half a catch this summer. I asked a wrinkled veteran with a skin like a sea cusk's the reason why.

"It's them cussed Americans," he growled, "p'isenin' the fish."

"Poisoning the fish?" echoed I.

"Aw, p'isenin' 'em. S'posin' I leave a dead critter in my pasture yon. The other beastes ain't a-comin' there to feed, be they? Naw, they smell bluid. An' cod an' mack'rel an' herrin' 'll smell bluid too, an' if ye dress fish an' heave the heads and innards an' tails overboard on to their feedin' groun's as the seiners do, they ain't a-comin' ther' to feed, be they? An' without fish men can't live here. We've got to leave the country."

"Well," said I, hopefully, "taxes are less here than in the old countries,"

"Taxes," he rejoined, "not a bit of it. In the auld country the crofters pay the landlord £1 the acre, an' he finds the parson, the doctor and the schoolmaster. But here we pays nigh £1 the acre an' finds the parson, the doctor an' schoolmaster ourselves."

I gave him up as an incorrigible.

In a rustic lane, defined by two winding, straggling lines of fence formed by driving fir poles into the ground side by side, I one day met a perfect specimen of the Cape Breton fisherman. His face under his black tarpaulin was round, ruddy and tanned, and he was clad in the regulation costume of his class—brown jumper or blouse, homespun pants, and heavy sea boots, oiled till they glistened. We met in the middle of the street and were soon talking like old comrades. I found that he was much prouder of his beats as a pilot than as a fisherman.

"I piloted in the Pouyer-quertier, the steamer that laid the French Atlantic cable," he began, "anchored her in McLean's Cove yon, an' they got the cable ashore in three hours. Then I told the Cap'n he must cut an' run, fer a

A LONG ISLAND STRIPED BASS.

See page 364.

big storm was brewin'. We made a good offin' before it hit us, but the Pouyer-quertier danced aroun' all night like a cork. Soon after sun-up the Cap'n comes to me, an' says he, 'Mon Dieu, pilot, can't ye make some harbor an' out of this.' 'Cap'n,' says I, 'at noon this gale 'll drop as sudden as it cum, an' I'll put ye in a harbor the like of which ye never see in yer born days.' Sure enough it did. an' I anchored him afore sunset in Louisbourg Harbor, off Old Town, where the frigates lie in eight fathoms. 'By gar, pilot,' says he, 'you're a man of your word; here's sea room. I shall sleep to-night.'"

The old fellow went his way and I mine—to Alex. McLean's Cove, where the French cable was landed. It is a romantic spot, under the lee of a huge cliff, with deep water off shore, so that the Pouyer-quertier was able to come close in and land the American end of the cable without difficulty. Now a fish house occupies the spot, and the buoys of a salmon net float where the Pouyer-quertier lay. After a year or two, for some reason unknown to the fishermen, the line was removed to Canso, on the mainland of Nova Scotia—probably to avoid crossing the Straits of Canso by a second cable.

Near by I met a character in the person of an old Scotchman, a dissenter to the backbone, a democrat, a Red, a constitutional kicker at the powers that be. He came from Scotland sixty years ago at the age of 12, he told me, and had never ceased to bewail his native country, and berate his adopted one.

"Aye, dinna I wish I were back yon," he said. "An' perhaps I will lay me old bones there yet. A laborin' man can't get a livin' here honestly. There's too many thieves an' robbers in office. Aye, I know. I've tried it sixty years on sea and land: fisherman, boat builder, net maker, carpenter, logger, farmer, shoemaker—everything but mining undergroun'. An' I'm poor as a spring herrin' to-day The Cable Company put me in care taker, and I thought I had a sure thing for my old days. But they sent some thieves of Englishmen here to work the tickers, an' they drew my pay along with theirs, but never handed it over to me, the blackguards. Then the cable went off to Canso, an' I lost my place, an' never a penny to show for my year's work."

"And have you never been paid?" I asked.

"Not a groat," he replied.

One day in a chasm of the cliffs, where it had been thrown by the waves, I found a water beaker with a rude flagstaff thrust through the bung and also through and beyond the other side. A flag had been tied on the longer end, and as there had been a heavy swell on for three days, caused, the men said, by a great storm at sea, I reasoned that there might have been a wreck, and that this beaker thrown overboard with a flag to attract attention might contain a message from the sea; so, throwing it on my shoulder, I carried it to the village, where on a certain sunny bank (it being 3 P. M. and the catch for the day being brought in, dressed, salted and packed) I knew I should find the fishermen smoking and telling stories. "What is it?" I asked, throwing it down before them.

"A trawl buoy," they replied in tones of deep commiseration for my ignorance.

I gave it to Sandy McPherson, and in return he invited me to go out with him to the lifting of the nets—a concession I appreciated because the men dislike having a landsman in the boats; he is apt to get seasick and muss things up so.

At 3 A. M. we were down at Sandy's fish house on the ragged water front. The dawn was just breaking, making a glory in the east, cutting the dark foliage of the spruce forests in intaglio, sifting in among masts and spars, jutting piers and weatherbeaten shops and fish houses of the water front. Sandy and his partner, Alcck O'Rourke, were busy stowing nets, rope, a beaker of water and one of cider into the little dory alongside, which was to convey them to the Sally Maria, then pulling at her cable a stone's throw in the harbor.

They tried to dissuade us from going. The sky had a dirty look and there was a "lumpy" sea outside, they said. But we told of our many voyages with never a thought of seasickness, and they subsided. Soon we are in the Sally Maria and under way, preceded and followed by a fleet of graceful, purple-sailed craft, all making for the narrow harbor entrance between frowning headlands.

The fishing boats of Cape Breton differ from any I have ever seen. They are undecked two-masters of about five tons burden, carrying schooner-rigged sails—jib, foresail and mainsail. The hull is divided into three compartments—one amidships filled with cobblestone ballast, one in the stern, and one forward for the fish, nets, etc. The men call them "whalers," some say, because of their size as compared to some dories; others, because they possess some of the characteristics of a whale boat. They are admirable sea craft, and in the hands of such consummate seamen as these men are rarely meet with disaster. Although they sail eight or ten miles out on a stormy coast abounding in dangerous reefs and currents, but one instance was related to us of a fishing boat having been lost. The Sally Maria flies out to sea like a yacht, O'Rourke at the helm, with Sandy in the foresheets, boat hook beside him.

"Reed's out," remarks the former, with a look behind. "McDonald too," he added a moment later.

"They'll all be follerin' soon like a flock o' mosquitoes," says Sandy, with a chuckle at his own wit.

Very soon the Sally made the bar and began climbing the long swells of the open Atlantic. They were very heavy to-day, liquid mountains, pellucid, pea green, their silent movement rendering them the more majestic. But when they met the mighty cliff on our right what impact, what thundering and leaping of foaming masses. In the trough we saw only blank walls, in the crest we looked out on one of the most irregular, rocky and dangerous coasts in the world, ribbed with fang-like reefs and ledges, foaming and smoking far out to sea.

"Do you often have such a sea on in summer?" we asked. "Never in my day; must a had a big gale up the gulf."

"Outer float net first, sir?" asked Sandy a half hour later, the Sally being then five miles to sea.

"Aye, aye, sir," responded O'Rourke in the slow, not unmusical tones of his guild.

The men have ten nets out, we learn, set in a line by compass from some prominent object on shore, that they may readily find them in a fog—the normal weather condition here in May and June. Three are "sunk" nets, the rest "float" nets; the former denoted by a white buoy, the latter by one unpainted.

"What is a 'sunk net?'" the reader is no doubt ready to ask. To explain will require a brief dissertation on the Cape Breton net. That almost universally used here is the "gill net," *i. e.*, one with meshes sufficiently large to allow a marketable herring or mackerel to pass through beyond the gills, but not large enough to admit the passage of the whole body, so that the fish is caught by the gills and held there. The nets are from twenty-five to thirty fathoms long and about three fathoms deep. On a "float" net the upper rope, called the "swing line," is thickly studded with oblong pieces of cork which keep it on the surface, while the lower or "mooring" line, being weighted with lead, sinks, and the net is held upright in the water. The trap is not yet complete, however; it must be anchored to the bottom and must be indicated so that it can readily be found. To anchor it the fishermen use an ingenious contrivance called a "killick," and peculiar to the coast, I think. The young spruce sends up a circle branches from the root. They cut it off below these, and the branches also about 3ft. above, and drawing the latter together at the tips form a cradle in which a stone of from 300 to 400lbs. weight is placed. This is sunken on the bottom and one end of the swing line fastened to it, the net being thus left free to swing with wind or tide. The mackerel feeds on a minute fish called by the fishermen "britt" or "bait," the herring on a small shell-fish called sea shrimp, in appearance like a tiny crab. The schools coursing along in pursuit of prey dash into the nets and becoming entangled in the meshes are held. In early summer, as it happens, their food is found near the surface, and to capture them the float net is used. Later it is near the bottom, and then the sunk net is brought into play. To change the floating net to the sunken the fishermen simply remove the corks on the swing line until enough only are left to hold it upright in the water, and then add weight enough to the mooring line to sink it to the bottom or near it. The nets are indicated by wooden buoys tied to the swing line.

Meantime the Colleen has run several miles out to sea.

"There she is," says Sandy, who stands at the bow ready to lower sail. "There's the outer float net, sir," and as the Colleen luffs, down came foresail and jib, the mainsail alone being left standing. Sandy catches the buoy with his boat hook, and O'Rourke leaving the helm to itself comes forward to help lift the net; one takes the swing line, one the mooring line; slowly the black meshes rise, now there is a silver gleam far down in the depths and a mackerel breaks the surface with his sharp cutwater, forked tail, and generally rakish air, a pirate of the seas. Another follows and that is all. The men heave a little sigh of disappointment and return the net to the water.

All this time the Colleen had been wallowing in the trough of the sea and the landsman felt an increasing uneasiness. Instinctively he moved to the gunwale and leaned over the side, where the deadly smell of bilge water and stale fish was less powerful.

"Feel sick, sir?" asked Sandy with an air of great concern; he had been asking it ever since we reached rough water.

"A little nausea from that vile bilge water," we replied. The next moment there was a paroxysm and all was over. It was the worst case of *mal de mer* ever developed. We heard a slight chuckle from Sandy, and looking up caught him in the act of darting a wink at O'Rourke, whose broad countenance about expanding in a grin suddenly changed to the impassiveness of a stoic's. The men were very kind in their way, letting the sufferer down easy.

"I heard McLean was sick out here yesterday, an' he's been going to sea these forty year," said Sandy.

"Faith, I was a little dizzy myself then," added O'Rourke, and he offered to pass the cider keg.

"Don't worry about me, my good fellows," said the landsman, "I'm not complaining. Go on with the lifting."

The second, third, fourth and fifth nets had very few, but in the sixth and seventh what a draught of fishes.

"Here's a mess," cried Sandy exultingly as we came up to the buoy. "Mackerel too, an' a barrel, or I'm a liar." They proved to be herring mostly, mackerel being woefully scarce this season. The net was fairly loaded with them. The men coiled fish and net together in a heap 'neath the bowsprit until the net was in, then uncoiled the pile, throwing the fish into the compartment and allowing the net to pay out into the sea.

The seventh was just as fruitful, and by the time the tenth was raised the men estimated there were three barrels, chiefly herring, in the compartments.

After the nets comes the line fishing for cod and haddock. The shoals where these fish feed are near by—they are marked on the fishermen's charts and by objects fixed on shore; the Sally is anchored over them, and the great cod hooks baited with "grill" (entrails of the herring) are thrown overboard. For some time they are not disturbed.

"Time was," growls Sandy, "when a cod would bite most anything, but he's grown so delicate now grill 'll hardly tempt him." With the last word he gives a jerk, begins to haul in hand over hand, and soon lands a fine cod of some 20lbs. weight. Line fishing has been very poor this season, however, and after an hour's trial the men up anchor, hoist sail and the Sally flies over the water at a pace that in an hour puts her alongside the fish house dock. There the fish are thrown on the wharf, dressed, washed and packed away in huge hogsheads, tiers of which are ranged around the sides of the room.

CHARLES BURR TODD.

Potomac Notes.

WASHINGTON, Oct. 19.—On the beginning of the present week Mr. Otterback caught a bass in the Potomac, near the Anglers' Club house, of 5lbs. 7oz. He ought-er (Otter) be de boss fisherman. We have been informed confidentially that a small catfish was the successful bait, and now every member of the club is out running down small catties.

Mr. H. C. Coburn, the well-known merchant-angler, was out on Monday last and took five good bass, and again on Thursday, when he took four. On or about Oct. 5 Dr. Glazebrook and E. E. Whiting carried their angling outfits to the Great Falls by bicycles and had a fair day's sport. The temperature of the water having dropped, the bass are to be found in deep water.

Messrs. Frank Curtis and J. W. Wellborn spent the first week of October at Edward's Ferry and took about one hundred bass, averaging 1½lbs. each. The largest fish weighed 3½lbs. down weight. Minnows of various kinds, catfish, crawfish and helgramites were used as bait. Fly-fishing, usually very good, was not accessible owing to the low stage of the water.

Edward's Ferry is a very desirable place for angling, being as it is so far removed from railroads. The nearest station is six or seven miles away, another ten miles, and

CANANDAIGUA'S UNIQUE MENU.

one other about eleven miles distant, making it quite impossible for the crowds of Sunday anglers to reach the place and get back to the city in time for work Monday morning.

Mr. E. E. Jarboe is the Poobah of Edward's Ferry, being farmer, storekeeper, postmaster, ferryman, news and express agent, as well as agent for fertilizers, etc., etc. The farm contains between three and four hundred acres, and this in connection with the store enables Mr. Jarboe to relieve or cater to the wants of the inner man of his numerous guests.

Among the anglers at present raiding Mr. Jarboe's larder, or contemplating such a raid, are: Messrs. Billy Stith, Chas. S. Wheeler, C. C. Stouffer, E. N. Reid, C. P. Mays, Dr. T. B. Hood and M. L. A. Brandebury. If this strong combination does not get out of bait there won't be many bass around Edward's Ferry to go into winter quarters this season.

The Potomac is so low that the condition of things is singular. Anglers with whom we have conversed think that as the water above the Monocacy is so low and discolored the bass are driven down stream and that there is

an unusual number now in the river between the Little Falls and where the Monocacy empties into the river. At Cumberland the water was low and much discolored, so much so that it was necessary to stop its use for drinking purposes. The canal up stream has been blockaded with boats, as the water was too low in the river to supply the canal. The problem as to whether the bass actually do make long migrations to get away from bad water is an interesting one. The experience here seems to point that way; however, from Cumberland to the Monocacy is a long distance. BART.

Gar Pike on Hook.

FERRISBURGH, Vt., Oct. 15.—*Editor Forest and Stream:* The catching of a gar pike on a hook is spoken of in a recent number as almost phenomenal. It sometimes occurs here, though not so often as one might think it would from the numbers of these ugly fish that infest the lower reaches of the tributaries of Lake Champlain during summer. My only experience of the kind was about the middle of last August while trolling with a friend and my boy in Little Otter Creek, half a mile below the lower falls. I was using a small fluted spoon, with 50 or 60ft. of line out. When the fish took the spoon he went out of water, and I thought it was a bass, but he made very little fight, which was not bass-like, though at times he ran in faster than I hauled, which was bass-like. When within a few feet of the boat he went out of water again and gave himself away; while my friend did not rise up and call him blessed, but sat still and called him quite another kind of billfish. The fish was about 2½ft. in length and was hooked near the end of the bill. I am inclined to think that they frequently bite at trolling baits, though seldom hooked because of the hardness and narrowness of the bill. The bite is a jerky nibble. AWAHSOOSE.

Canandaigua Rod and Gun Club.

THE annual meeting and banquet of the Canandaigua, N. Y., Rod and Gun Club was held Oct. 16. The following officers were elected: President, W. H. Fox; vice-president, Lewis H. Adams; secretary and treasurer, A. B. Sackett; shooting master, Louis Sugre; assistant shooting master, H. J. Reed; chief angler, F. A Christain; assistant chief angler, W. E. Thomas; attorney, E. W. Gardner. The fishing in the lake this season, it was reported, especially for black bass, had been excellent. There have been some very good catches. It was decided to purchase some Mongolian pheasants for breeding purposes. It was unanimously voted to favor the increase of the limit of black bass from 8 to 10inches.

Fish Commissioner C. H. Babcock, and H. H. Layman and James Annin, Jr., were elected honorary members. The club then sat down to a banquet of half a dozen courses, served in fine style by caterer Hennesy. Toasts and speeches then followed. Frank J. Amsden, president of the State association, was present and stated that the outlook for protection was very bright. Dr. C. T. Mitchell read a poem on Canandaigua Lake which was well received.

Fishculture Notes.

AT the Neosho (Mo.) Station of the U. S. Fish Commission brook trout 8 months old are yielding well-developed eggs. The fish are the result of eggs taken at Leadville last year and hatched at Neosho, so that there is no question as to their age.

The work on the Pacific coast this year with salmon is the best for ten years. About 8,000,000 eggs have been taken at the Baird Station.

The work of gathering lake trout eggs has commenced at the Alpena and Northville stations, and those of the brook trout at several stations.

The Cape Vincent Station is practically completed, and it is expected that eggs will be taken about the 20th or 25th of the present month with which to stock this station. This hatchery has a capacity for 500 hatching jars and about 8,000,000 lake trout eggs. Besides these, 80,000,000 whitefish or 250,000,000 pike-perch eggs can be accommodated.

This station was established for the special purpose of stocking Lake Ontario, and it is hoped that the fisheries of this lake will be greatly benefited. B. A. BEAN.

The Wisconsin River.

STEVENS POINT, Wis.—Stevens point is a picturesque city of 10,000, in the center of the State, on the banks of the Wisconsin River. The law prohibiting the sawmills from dumping sawdust into the stream has had the desired effect, and has developed one of the finest fishing streams in the State. Over 200,000 bass fry were received from the State hatchery this season and placed in the river.

But the sawdust nuisance does not seem to be entirely abated, especially in our sister city, Wausau. The mill-owners there do not pretend to abide by the law, and up to date have been using with impunity the beautiful stream as a depository for garbage. No one has ever been prosecuted for this, and to undertake to put a stop to the practice means a task the presiding authority does not care to shoulder. I hope the State game warden will look into the matter and bring the guilty parties to justice.

J. B.

No Place Like Home.

RHINEBECK, N. Y., Oct. 17.—*Editor Forest and Stream:* I noticed a few lines in your last issue from my friend J. Spencer Van Cleef, of Poughkeepsie, concerning black bass fishing in the Bay of Quinte. It is too far away this raw weather, so we content ourselves with nearby waters.

On Oct. 15 C. E. McCarty and myself caught in Stoutenbergh's Pond here nine black bass, small-mouthed, weighing 21¼lbs.; largest 3lbs. 2oz., smallest 1lb. 8oz. Tell Brother Van Cleef that the better maxim for this season is, "There is no place like home." A. LEE WAGER.

The Susquehanna.

SAFE HARBOR, Pa., Oct. 8.—Messrs. Scot Derriddinger and Christ Bird caught ten salmon (pike-perch) and three bass; aggregate weight, 30lbs.

River still very low, lower than for a period of ninety years.

The Atlanta Exposition Aquarium.

THE aquarium here in the U. S. Government Building, being a part of the U. S. Fish Commission exhibit, is proving a great attraction to the visitors. Now as the crowd increases this part of the building is packed with people.

The aquarium is not yet at its best, as the high temperature of the water continues, making it impossible to show the beautiful game fishes such as trout and salmon. Black bass, sunfishes and their allies are exhibited. Just as soon as the temperature of the water is lowered sufficiently a fine display of fresh-water fishes is intended.

In the salt-water tanks an exceptionally fine exhibit of red snappers, from the Gulf of Mexico, is made. The fish shown run in weight from 3 to 8lbs. A tank of pompano, ranging in weight from ¾ to 4lbs. each, is very attractive. The pompano are sensitive to changes in temperature, the recent cold seriously affecting them. Damage in the future will be prevented by placing a small heater so as to keep the temperature of these tanks at a point to suit the fish.

While the pompano are more or less difficult to keep, the crevallé (sort of a forty-second cousin) is kept without trouble. Several kinds of groupers and snappers, from the gulf, are doing nicely. The common file or fool-fish does exceedingly well, and proves quite a curiosity. Channel bass do well, but most extraordinary are the mullets, a large school of which were received in a rather battered up condition. Since confinement these fish have much improved, the bruised and torn parts healing up nicely, which is quite the reverse in most kinds after being placed in tanks.

An interesting collection of the rather homely blackfish or tautog, obtained at Morehead City, do well. Harron, in charge of the aquarium, says you can't kill them.

Horseshoe or king crabs, blue crabs, lobsters, sea anemone, and grasses, are in good shape and add to what is perhaps one of the best exhibits of the kind ever made in America. The grotto is 150ft. long, and contains twenty-eight aquariums, in addition to which there is a large pool. The tanks are from 5 to 14ft. in length, 5ft. wide and 3ft. deep. They are equally divided between fresh and salt water. The large pool contains about 8,000 gallons and is made attractive by plants and a cascade falling into it. It is used as a receiving reservoir.

In a later letter we will have more to say of the Government exhibit at Atlanta. The Smithsonian and U. S. National Museum exhibit, as well as that of the Fish Commission, is one of the most attractive and interesting, as well as instructive, of the many exhibits these departments of the general Government have made; though not so large as that at Chicago in 1893, the arrangement of the exhibits is much better. B. A. BEAN.

Tide Runners, but no School Fish.

NEW YORK, Oct. 18.—*Editor Forest and Stream:* Has any one called your attention to the fact that this year, while weakfishing has been excellent for tide runners, the "school fish" have not appeared? I have made many inquiries, even among the marketmen, and find that this has been general all around New York harbor. Is there any reason for this, and has it ever happened before?

It seems to me that this is an important matter, since it naturally follows that the school fish of this year grow into the tide runners of the next, and therefore if the schools of this season have disappeared, that tide runners next year will be very scarce. I should like to hear further on this subject. Will you be so kind as to inform me in what issue you start this ball running (if acceptable) so I may get the paper, as I am not a subscriber.

GONZALO POEY.

Some Angling Maxims.

MR. J. S. VAN CLEEF, of Poughkeepsie, sends some more score cards from Mr. George H. Christy, of Pittsburg, Pa., who has been having great luck with the black bass up in the Bay of Quinte. Mr. Van Cleef usually makes an excursion to those waters himself, but this year he is chained and his brother angler sends him the bass scores to make him happy and contented. Here follow the addenda to the several days' scores:

1. Golden rule: When thou tellest thy score, let not thy conscience know what thy tongue sayeth; then Yahoos will call thee great, and liars will be silent in thy presence.

2. Let me fill the bait bottle and I care not who handles the landing-net.

3. Toast: *Inter pisces leges silent.*

A Long Island Bass of Note.

We illustrate to-day the 31lb. striped bass whose capture in Long Island Sound off Rye, N. Y., was recorded in our last issue. The fish was found to be full of roe. The gentleman who is seated, and regards the fish with a pleased expression, is the proud and happy angler who captured the bass. Mr. S. Julian Held, also with a pleased expression, stands by the fish and expounds the points of the prize.

Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

COON HUNTING.

BUFFALO, N. Y.—*Editor Forest and Stream:* The "chores" are done, supper is eaten and we go out to view the prospects for a coon hunt. As we stand on the back steps in the still September evening we decide that it is "just the night." There is no moon, for our crafty game prefers darkness to moonlight. A heavy dew is falling, which is essential, as Brer Coon leaves a cold scent, which will not lie on dry earth or leaves. The old dog, a cur, feeling that there is something in the wind, has also come out, and stands by our side looking into our faces with a wag of his tail, as much as to say: "Come on." A neighbor drops around and we sit down for a chat. The old dog lies down with a sigh.

After a talk about crops, etc., "Bob," the neighbor, says: "Let's go cooning." The dog immediately sits up, intensely interested.

"We were thinking of that," said I, "and I guess we will go."

The dog is walking up and down, with an occasional whine. We go into the house, don our old coats—at which the dog nearly has a fit—go out and get our "coon stick," without which we could not hunt, and off we go, the dog by this time nearly crazy. We pass up through the lane, across the pasture to the hill farms about a mile distant, which are there backed by heavy woods on top of the ridge. Nature indeed is resting. No sound disturbs the stillness except the chirp of crickets and an occasional quavering note from a screech owl.

We pass a farmhouse and one of the boys wants to go along. He procures an unlighted lantern and we make for the nearest cornfield, flanked by woods that rise on one side like a huge wall. The dog has been out of sight and sound for some time. He knows his business and his first act will be to go to that cornfield and circle around it to learn if any venturesome coon has intruded for a meal.

Still now! no noise, as Brer Coon's ears are sharp and he must have no warning if we are to catch him before he reaches some forest monarch, hollow perhaps, and his home.

We come to the fence and sit on the top rail and listen. Hark! was that the yip of the dog? Dead silence and we strain our ears for further developments.

Ah-ha! that was he, and we hear a short, sharp bark, as much as to say, "I'm coming." Everyone now is on the top notch of expectancy and we can hardly keep quiet. We can hear the dog as he threshes around in the corn, sticking to the trail with a dogged persistence that is bound to succeed.

Yip! yip! ki-yi-yi—down the hollow he goes, fairly mowing down the weeds and briers on the way. He must have been very close to Brer Coon to raise such a commotion. We can only follow his course by an occasional yip; but away we go, falling over hills of cornstalks, slapping one another in the face, in a mud-hole, over a stump; only one who has tried it knows how the ground will rise up and hit him in the face and how he fancies he sees obstructions that are but shadows, and shadows turn into realities in the way of stumps, etc., when he has run into them and barked his shins. But it's fun, and away we go.

Now we are at the wood's edge and we stop to listen and wait for the man with the lantern, for he has been at a discount thus far. Up he comes, and lights up.

"Hurry up," some one says, "I hear him over the ridge to the left. Come on now! lantern ahead."

"I'm afraid he's up a big tree," says Bob.

"No, he isn't," says Fred, who owns the land adjoining, "I can climb any tree in these woods."

"There he is," says J., who is ahead. "He tried to get up that chestnut there, but the dog rushed him too hard."

We gather around the tree, a maple about 1ft. in diameter, Fred meanwhile sitting down and pulling off his boots.

"Here we go, now—spread out, boys, and be ready for him," says he, and up he goes, slowly but steadily.

The dog had stopped his barking when we arrived, and now sits a few feet from the tree gazing steadily upward, and giving an occasional whine. He knows the coon will come down soon and he means to be ready. Fred has now reached the limbs and he stops to rest. Soon up he goes, and we watch and wait in silence below, sticks firmly grasped, for who knows he may land right in front of you and be off before you can gather your wits.

"I see him," cries Fred. "He's a good one, too. Look out! He's on the north side."

We shift lantern and dog quickly, and sing out "All right." We hear the branches shake violently above, and at the same time Fred shouts, "There he comes," and through the leafy screen above our heads comes an object that looks like a foot ball, striking the ground just in the edge of the circle of light made by the lantern. He bounces about 2ft. off the earth, and comes down on all fours and stretches out for a run; but too late. The old dog has seen the object fall and has made it his business to be as near under it as possible, and before Brer Coon can take his first jump he has nailed him.

"Look out! He'll get away!" "Bring the light!" "Hit him with a club!" and various other exclamations are uttered as we dance around the struggling mass of coon and dog; for he is an old one and knows how to fight. Bob makes a vicious blow at his head, but misses it, as a matter of course, and takes J. on the foot. Emphatic ejaculations on J.'s part, with a blow at the coon a moment later that takes Bob on the shin, and they are even. But the old dog has been biding his time, and soon seizes the coon by the throat, whose growls of defiance soon turn to gurgles of despair, and he soon is no more. The old dog stands over him, giving him an extra shake now and then, as if in revenge for the hard tussle he had given him, and we sit in a circle around and take breath.

Fred has descended from the tree, and now joins in discussing the event.

"What a fight he made!"

"How quick he sprang away after striking the ground."

"He's an old fellow," etc.

A coon will jump from the tallest tree in the woods, land on his back, bound up 2ft. or more and come down squarely on his feet prepared to fight or run. It is a wonder he does not break every bone in his body. With his jacket in our capacious pockets we start on, for the time is very propitious and the night all that could be desired. We trudge along through the woods into a clearing, and across a gully down which runs a brawling brook.

See! The dog is running in and out of the brush, over

the stones and in the water as though he was mad; nose to the ground and sniffing furiously.

"Can't you find him, old fellow?" and we wait breathlessly for him to straighten the tangled web of the trail made by the coon while fishing or washing his food, for he is scrupulously neat and washes everything he eats. Down the creek he goes and we follow slowly.

"Hi! hi! Sic him! Sic him!" and we all make a dash at a grayish object that flits into the circle of light and on up the creek.

"Hi! watch! Here he is!" But the old dog needs no urging, for he is close behind him, going like a steam engine. And then comes the maddest race up that old gully you ever dreamed of. We tumbled over logs and over each other; slipped on stones; into the water, and fell all over the gully in general; but we kept going, for the spirit of the hunter was in us, and our quarry was ahead.

At last, away up on the ridge, the dog gives tongue, his baying coming as regularly as a clock ticks; and we knew he had treed the coon. We went a little slower now, and one of the boys says: "We shall have a hard tussle after this one. The trees are all large up here."

"We're bound to have him," says Fred, "if we have to get an axe and chop the tree down."

When we arrived on the spot, sure enough he was up a very tall and large hemlock, easily enough climbed when the limbs are reached, but 20ft. to limbs and too large around to clasp with the arms. But, nothing daunted, we went for a brush fence near by and secured a sapling used for the top of it, about 15ft. long and thick as a man's leg, and by means of this, all hands hoisting, we finally landed Fred among the limbs. Up he went, and we disposed ourselves at the edge of the cleared space always found under hemlock trees. The tree was fully 100ft. high, and we waited fully five minutes in anxious expectancy before we heard from Fred. At last he sung out:

"I see him, boys, and he's a whopper," and a moment after, "Look out! he's going to jump," and jump he did, clear from the top of the tree, and landed with a dull thud 50ft. away, out in the brush. We've lost him, thinks I, and I looked for the dog, but he knew as much about it as I did, and in a moment we heard him going back down the hollow. *Yow-ow-ow! yip-yip-yip!*

"Hurry up, boys! He's hot after him!" yelled I, and away we went down the hollow at breakneck speed, leaving Fred in the tree. He said afterward he climbed down about half-way and fell the rest, but it didn't hurt him any, he was so excited.

We raced down the gully fully half a mile when we heard the dog give tongue in a way that showed he had treed him again. When we got there we found him in a clearing up a small dead hemlock stub about 30ft. high, with its resinous branches sticking out against the sky-like arms. Clear at the top sat Brer Coon, a monster, and very uneasy, as we could see. Under the tree ran a rail fence, not much of an impediment to the dog, but seconds were valuable, and when our game struck the ground, which side would he jump was the question. I posted the boys in a circle around the tree and got upon the fence myself, with the lantern in one hand and the dog held by the other, intending to push him off the side of the fence the coon jumped. Brer Coon was very uneasy now. When all was ready Fred started up the tree. When scarcely started, we all saw the coon was going to jump. "Watch out!" says I, and away he sprang, landing 20ft. from the tree and so near one of the boys that he started back with a shout. This scared the coon so he hesitated before making his run, and that moment sealed his fate, for the old dog was upon him, and of all the coon fighting ever done I think the greatest was done on that grassy plot that night. The dog grabbed him by the back, by the hams, by the neck, and it was like trying to shake a broomstick wrapped in a feather bed. He couldn't budge him an inch. We whacked and pounded him on the back, and it had no effect at all. At one time I stood upon him and he actually got on his feet with me. He tried to climb a tree and the dog got him by the hind leg and tried to pull him off, but could not. While in this position I got a crack at his head which rather stunned him, and eventually we killed him, but it took us half an hour to do it. It was the first time the old dog had ever found his match in a coon.

We gave three rousing cheers and started for home, coon and all, well content with our glory, for we had killed the biggest coon ever killed in that section (Chautauqua county, N. Y.). He weighed next morning 32½lbs. and the fat on his back was 3in. thick. When he curled himself up it was absolutely impossible for the dog to get at a vital part to kill him, and a blow from a club amounted to nothing, for had he not jumped from an altitude of 100ft. and come out whole? We gloried in his spunk (and ours).

Tim vowed he would kill his dog, but thought better of it, as it was conceded the one he tackled was a fighter from way back. B. H. W.

Canadian Kennel Club.

By order of the President, a meeting of the executive committee will be held at the Queen's Hotel, Toronto, on Friday, Nov. 8th, at 8 P.M. The following business will come before the meeting:—Consideration of Field Trial Regulations. Revision of Constitution, By-Laws, etc., and Printing of same. Incorporation. Consideration of the Cropping of Dogs. Consideration of case of Industrial Exhibition Association *vs.* Fred Kirby. Consideration of taking votes by mail of the Executive. Consideration of the recognition of Suspensions, Disqualifications, etc., by similar organizations. H. B. Donovan,
Secretary-Treasurer.

New England Field Trial Club's Trials.

Taunton, Mass., Oct. 20.—*Editor Forest and Stream:* The N. E. F. T. Club's fourth annual field trials will be run off on the club grounds, Assonet Neck, Mass., Tuesday, Oct. 29, beginning at 8 o'clock A. M.

The club and its friends will meet at the City Hotel, Monday evening, Oct. 28, at 7 o'clock, where the drawing will take place after dinner. All lovers of field dogs are welcome here as well as at the trials next day. All desiring rooms at the City Hotel should engage them ahead by addressing D. F. Sehan, Taunton, Mass.

Arthur R. Sharp, Sec'y.

Mr. Lorillard's Auction Sale.

The Rancocas Kennels' sale of dogs at the American Horse Exchange, Broadway and Fiftieth street, was well attended and proved a success. It took place on Oct. 17, beginning at 11 o'clock, as advertised. The bidding was quite spirited and the dogs were disposed of quite quickly.

Mr. Lorillard will hold yearly sales if this method of securing shooting dogs meets the further approval of sportsmen. Following is the list of dogs sold, prices, etc.

Leona, black, white and tan (Eugene T.—Bess of Hatchie), $130. Mr. J. L. Breese, purchaser.

Eugenie, black, white and tan (Eugene T.—Delel Rivers), $160. Mr. Sydney Dillon Ripley, purchaser.

Adversity, black, white and tan (Eugene T.—Delel Rivers), $85. Dr. E. E. Cody, purchaser.

Lilly, black and white (Eugene T.—Valley), $50. Daniel Bacon, purchaser.

Irwin, black, white and tan (Eugene T.—Kite), $110. A. H. Porter, Jr., purchaser.

Fonda, black, white and tan (Eugene T.—Velma), $30. Mr. Cameron, purchaser.

Cody, black, white and tan (Eugene T.—Annie), $35. Dr. E. E. Cody, purchaser.

Beulah, black and white (Eugene T.—Annie), $25. J. C. Vail, purchaser.

Grace, black and white (Eugene T.—Annie), $20. Mr. Osgood, purchaser.

Stella, black, white and tan (Gladstone's Boy—Buena Vista), $30. Mr. J. C. Vail, purchaser.

Guy, white and lemon (Antonio—Maiden Mine), $100. Morey Kennels, purchasers.

Bianca, black, white and tan (Eugene T.—Patsy), $30. Mr. W. H. Force, purchaser.

Clifton, black and tan (Eugene T.—Annie), $30. Mr. J. P. Browning, purchaser.

Vernon, black and white (Eugene T.—Annie), $30, and Helen ($30) and Primrose ($25), both black, white and tan (Eugene T.—Ophelia), and Hazel Dell, black, white and tan (Eugene T.—Maiden Mine), $40. Mr. J. C. Vail, purchaser.

Luray, black, white and tan (Bellevue—Spike). Mr. W. J. Simpson, purchaser.

Fred, black and white (Eugene T.—Ightfield Rosalie), $110. Mr. Sydney Dillon Ripley, purchaser.

Colona, black, white and tan (Gladstone's Boy—Buena Vista), $60. E. Beadel, purchaser.

The total received for twenty dogs was $1,175. Each was described in the catalogue in respect to his field qualities.

N. E. B. C.'s Trials.

Editor Forest and Stream:

The following special prizes have been donated to be competed for at the N. E. B. C. field trials: The *American Stock-keeper* offers the American Stock-keeper Cup for best beagle in the field. Mr. A. Parry offers triple-plated pudding dish for best beagle in the field. Mr. H. B. Tallman offers oil painting of a beagle for best bench show beagle that gets placed in the field. Mr. H. S. Joslin offers a silver-mounted meerschaum pipe for best combination of speed and nose. *Turf, Field and Farm* offers one year's subscription for best brace owned by one exhibitor or kennel. Mr. A. D. Fisk offers framed picture for best 13in. Derby entry. Mr. George F. Reed offers beagle pup (female) for the truest-tongued dog or bitch in the Derby. Mr. Henry Hanson offers assorted package of Spratts dog medicines, also stud service of Olaf of Denmark, for best bitch in 13in. All-Age class. Mr. F. W. Chapman offers stud service of Bannerman or Fitzhugh Lee for best bitch in 13in. Derby. Awashonk Kennels offer hunting coat for best working beagle in the Derby, 15 or 13in. Mr. Paul C. F. Hoffman offers pair hunting shoes for best 13in. beagle owned by a non-member of the N. E. B. C. Mr. Howard Almy offers 100 hand-loaded Schultze shells for beagle under best control. Mr. W. S. Clark offers .32-cal. revolver for best 15in. beagle owned by a non-member of the N. E. B. C. The *American Field* offers one year's subscription to the breeder of the best beagle (in the field) at the N. E. B. C. trials.

Mr. W. E. Deane makes a change in his entry, Francis, from Class A to Class B.

The breeding and names of Mr. F. W. Chapman's entries to the N. E. B. C. field trials, omitted last week, are as follows: Class A, dogs and bitches, all-age, 15 to 13in.: Marguerite, black, white and tan bitch (Fitzhugh Lee—Dido). Class D, Derby for dogs and bitches, 13in. and under, whelped on or after Jan. 1, '94: Fury, black, white and tan bitch (Little Lee—Parthenia); Thora, black, white and tan bitch (Fitzhugh Lee—Butterfly); Thor, black, white and tan dog (Fitzhugh Lee—Butterfly).

The annual meeting of the N. E. B. C. will be held at Bacon's Hotel, Oxford, Mass., Nov. 5, at 8 P. M.

W. S. Clark, Sec'y-Treas.

Dog Poisoners.

Port Jefferson, N. Y.—*Editor Forest and Stream:* I am worked up to such a pitch that I must relieve my mind. And what is the matter? There is matter enough when a man has good dogs poisoned by some unknown rascal who has been doing such mean acts for the past seven years, and we, the people of Long Island, can not detect the criminal; but if he is ever caught he will suffer for what he has done in the past. In the earlier part of the infliction, there were found small bits of meat with a small cut in each piece into which the poison was placed, and the dogs eating them died from the effects. But now there is a more serious feature; that is, not only meat is thrown about the place, but cake and crullers also, with poison in them. I think that when any human being goes so far as to endanger the lives of small children, which has been done by throwing poisoned cake around, it outdoes the ordinary fiendishness of the dog poisoner. Many children know no better than to pick up a piece of cake. I know of one who did so and came very near losing its life, but was taken care of in time. Now if that child had died, would not the inhuman wretch who threw that poisoned cake around be as much a murderer as any murderer? I think as a great many others do, and that is the sooner such people depart from the face of the earth the better the world will be without them. The people of this place have put up with this affliction long enough. They will use every effort to find out who it is that is making everyone afraid to buy a dog of any value lest it should be poisoned. There have been at least 100 valuable dogs poisoned in this place, besides the common mongrels not counted. I hope to see some reply from you and your readers. F. B. Robinson.

[There are no words in the language sufficiently explicit to express the cowardice, malevolence and degradation of the dog poisoner and reckless distributor of poisoned food. No argument is necessary to show the sodden cowardice of the man who will injure his neighbor by stealth, injuring him in his affections and property, and destroying an innocent life all at the same time. As for the black malevolence and degraded mind, they are necessarily accompaniments of the poison fiend.]

The Champion Stake.

Mr. W. W. Titus, Waverly, Miss., has been industriously striving for many weeks to establish a champion stake, and to that end has given the matter much thought in all its bearings near and remote, and has obtained many opinions and much advice from experienced field trial men. He has in the matter received encouraging support from sportsmen.

It is generally conceded that a champion stake, which depends on its support from first prize winners, cannot be a success financially, for the reason that of the first prize winners but a small percentage will compete, a few owners seemingly preferring to establish their dog's claims to champion honors by clamorous assertion rather than the more decisive means of actual competition, while other owners seem to be satisfied with the honors or profits which come from winning an all-age stake, and care not for the honors and perils of a champion stake.

To solve this difficulty, Mr. Titus has proposed that all field trial winners of any place be eligible, which is perfectly sound reasoning, for everyone knows that a win of one dog over another at a field trial is not forever decisive, since in times past the same dogs in different trials have been placed relatively different, and decisions in all-age stakes moreover are necessarily made many times on very small margins.

Mr. Titus, to give the stake the financial vitality which is absolutely essential to its success—a matter which he wisely deemed essentially important—has advocated an auxiliary stake, from which the judges are to select by actual competition such dogs as they deem fit to run in the champion stake, the fees of this stake to be turned over to the champion stake and to become a part of its proceeds. These dogs thus will have gone through a formal competition, and they will have the standing of winners. In fact, the stakes being run on formal and regular conditions, there is no reason why they should not formally be declared winners before competing in the greater stake, the champion.

A Western contemporary asserts that a stake run on such lines will be an all-age or free-for-all stake, "of which we have one now at every field trial meeting," in which assertion there is error, inasmuch as in the all-age stake at field trials first prize winners are barred, and these and other winners are the very dogs for which Mr. Titus is striving to arrange competition; thus the all-age stake at every meeting does not resemble at all what Mr. Titus advocates and attempts, and, moreover, there is no free-for-all stake at every field trial meeting. Furthermore, the fourth or fifth prize winner at one trial in one section might be a better dog than the first prize winner in another, a pertinent consideration in arranging a champion stake.

Our contemporary further declares that admitting every dog irrespective of its having shown that it has the right to compete with dogs that have won their honors in a regular contest does not convey the idea of a champion stake, and is not just to those dogs that "have won their spurs," nor is it the reward of merit, says our contemporary, that a champion stake should be. Here the esteemed contemporary wanders entirely away from the subject and discusses something that is irrelevant. Mr. Titus's last proposition did not admit dogs irrespective of their having shown a right to compete; quite the contrary, as that very point was specifically provided for by the auxiliary stake.

But then, what is a champion? Presumably one which so excels that he can conquer in his specialty all of his fellows. He is one which can meet all comers under certain conditions and formalities which give the contest authenticity and dignity, so that the proper value is established and the record recognized by the world at large. But the title of champion is not necessarily a title for life when once won, although in the dog world, for reasons not essential for discussion in this connection, champions have so multiplied that the title has in a measure lost its meaning and some value.

The title of champion when properly recognized is held so long as its possessor can hold it. If beaten in a championship contest, he loses the title. It goes to the victor. The vanquished champion is a champion no longer. In this manner the title perpetuates its distinguishing marks of superiority and its intrinsic value of honors won.

Webster, who was an excellent lexicographer, but who unfortunately lived at an age when the dog was not so fully appreciated as at present, leaves out the dog in his definition of champion, but still it is clear enough in conveying the general principle. He says of a champion: "One who has the acknowledged superiority as a prize fighter, waterman, etc.; one ready to fight all who offer against him."

This is not the definition of a champion who shouts loudly from afar off that he can defeat all comers with 15,000 conditions attached.

But this definition by Webster is the theoretical champion, taking present usage as a standard. In the canine world the champions are not a very precise quantity as champions. Many winners are guarded assiduously from competition; all sorts of conditions and pretexts are advanced to avoid competition; the unworthiness of applicants which seek competition is strenuously and loudly proclaimed, and their motives denounced so that in good truth the champion, after he once has a colorable pretext to the title, seldom competes further, but incidentally gathers in such stud fees as the title and good will of the public may produce. It was not wise in a general way to inquire too minutely into titles of dog championships any more than it was to insist on more definite competition for the title, for if the matter came to a formal conclusion several titles and several stud cards might all vanish in company.

Still, it is asserted that it is not fair to a dog which has won his spurs to ask him to defend them, although winning the spurs originally implied that the winner was ready to meet man or goblin; so that the figure of speech is unhappily selected by our contemporary. If a man were asked which of the claimants is *the* champion dog to-day, it would be more a matter of personal preference than a matter of record, for the champions have never had an opportunity of late years excepting the recent test on chickens; but work on quail as yet is considered the standard test.

There is one dog, however, which *en passant* never asked any sanctified protection from competition nor pleaded technical evasion—that is Rip Rap; and there are others which came to the fore, but none, we believe, that competed so freely from puppyhood to mature years in any event that came to hand.

The champions in their champion forms came out under different circumstances of competition—some easy, some difficult. Mr. Titus has been sensibly striving to open a stake that in its results would have definite conclusions and confer a title which meant more than a pretext for avoiding a competition forever afterward, combined with using the title as a commercial means of scooping stud fees. In short, it would come near to establishing a champion. Mr. Titus plainly has a correct idea of what a champion should be, but he being ahead of his time should abandon it and evolve some scheme whereby everybody can have a champion by easy means and advertise a champion for what it may profit.

The utility of Mr. Titus's proposition was recognized after some weeks' effort on his part, and others were ready and even took action to promote a similar stake. However the matter may result, to Mr. Titus belongs the credit. Yet, what is undoubtedly a good move, sound in its conception and perfectly feasible in execution, may be marred or spoiled by envy, bad advice or selfish interests.

In the canine world the existing circumstances must be considered and properly manipulated to attain the legitimate results desired. Without broadening the scope of the champion stake, if the past is a just criterion, it cannot be made self-supporting, and if it cannot be made self-supporting, it cannot have any permanent existence.

E. F. T. C. Trials.

Brooklyn, N. Y., Oct. 18.—*Editor Forest and Stream:* I shall leave Brooklyn Tuesday, Nov. 12, for Newton, N. C., making my headquarters and the E. F. T. Club's at St. Hubert Inn, so that all letters and telegrams should be addressed there after the above date. This will give me two days before the Members' Stake and four days before the opening of the public stakes with the Derby contestants. Please remember, the final filling and drawing of the Derby takes place Sunday at 8 P. M. All interested and having entries are requested to be promptly on hand to fill and know places assigned their braces by the draw; also where the start will be made Monday morning, Nov. 18. To the members and public entries: Bear the above in mind, so that all shall have ample notification and time to make final arrangements, and none be left at the post.

The annual meeting of the E. F. T. Club will be held on Thursday evening, Nov. 21, to settle all plans for 1896. Pierre Lorillard, Jr., president. In conclusion would say, any member or patron of the club wishing me to hire a horse or engage a room, or anything else in which I can be of service to them on the grounds, if they will write or wire me I shall cheerfully carry out their desires to the best of my ability.

Eastern Field Trial Club's All-Age entries: English setters 19, Irish setters 1, Pointers 9.

ENGLISH SETTERS.

Papillion—S. M. Mitchell's or. and w. dog (Antonio—Lilly Burgess), May, 1893.

Tony Boy—N. T. Harris's b., w. and t. dog (Antonio—Laundress), January, 1893.

Cynosure—N. T. Harris's b., w. and t. bitch (Roderigo—Norah II.), May, 1893.

Dixie's Flag—N. T. Harris's b., w. and t. dog (Wun Lung—White Wings), February, 1893.

Beatrix—R. S. Smith's l. and w. bitch (Antonio—Maud Noble), 2yrs.

Brighton Tobe—Eldred Kennels' b. b. dog (Canadian Locksley—Liddesdale II.), 6yrs.

Tory Dotlet—F. R. Hitchcock's b., w. and t. bitch (Count Gladstone IV.—Tory Della), 1893.

Joyful—W. B. Meares, Jr.'s, l. and w. dog (Dion C.—Nathalie), 3yrs.

Black Rock—F. P. Lewis's —— dog (Ray o' Hope—Lulie), August, 1893.

Harrold Skimpole—W. H. Beazell's b., w. and t. dog (Whyte B.—Nettie Bevan), 2½yrs.

Anto-Vista—L. D. Hargrave's l. and w. bitch (Antonio—Buena Vista), 2½yrs.

Lady Mildred—Hobart Ames's b., w. and t. bitch (Antonio—Ruby's Girl), March, 1893.

Minnie T.—W. W. Titus's b., w. and t. bitch (Dick Bondhu—Bettie B) 4 years.

Revenue—W. W. Titus's (agent) b., w. and t. dog (Antonio—Nelly Hope).

Rod's Top—Phil. M. Essig's b., w. and t. dog (Roderigo—Topsy Avent), December, 1893.

Paloma—Rancocas Kennels' b., w. and t. bitch (Eugene T—Lou), February, 1893.

Gleam's Pink—Manchester Kennels' b., w. and t. dog (Vanguard—Georgia Belle), January 8, 1891.

Soubrette—E. J. Meyers's b., w. and t. bitch (Rowdy Rod—Prima Donna), July 24, 1892.

Mecca—T. E. Shreve's b., w. and t. dog (Paul Gladstone—Latonia), 5 yrs.

IRISH SETTERS.

Dakin—F. E. White's red dog (Finglas—Ruby Glenmore), June, 1892.

POINTERS.

Sandford Druid—Westminster Kennel Club's liv. and w. dog (Don Exon—Sandford Quince), April, 1891.

Jingo—N. T. De Pauw's liv. and w. dog (Mainspring—Queen II.).

Tippoo—Charlottesville Kennels' liv. and w. dog (Rip Rap—Monterey), March, 1893.

Elgin's Dash—F. W. Dunham's l. and w. dog (Kent Elgin—Mack's Juno), June, 1893.

Tick Boy—Kidwell & Stoddard's b., w. and tic. dog (King of Kent—Bloom), December, 1892.

Springside Nell—Springside Kennels' bitch (Duke of Hessen—Woolton Game).

Tamarack, Jr.—H. K. Devereux's liv. and w. dog (Tamarack—Maud Graphic), March, 1893.

Rancocas Belle—Rancocas Kennels' liv. and w. bitch (Rip Rap—Maud), June, 1893.

Faustina—T. G. Davey's liv. and w. bitch (Ridgeview Faust—Peggie), 23mos.

SUBSCRIPTION STAKE.

There are eight nominations for the Subscription Stake, viz., one each by N. T. DePauw, Charlottesville Kennels, Eldred Kennels, W. W. Titus, N. T. Harris, Rancocas Kennels, Avent & Thayer Kennels, Manchester Kennels.

Washington A. Coster, Sec'y.

POINTS AND FLUSHES.

Bloodhound breeders can now be cheerful and hopeful. The following is from the daily press: "So many sheriffs in the West and South have lately added bloodhounds to their forces of criminal trackers that the price of the animals is increasing, and the raising of them is becoming quite a business, notably, perhaps, in Kentucky. One hundred dollars is said to be an average price for a good bloodhound pup now."

From a correspondent we learn that birds are scarce about the field trials grounds at Chatham, Ont., which may lessen the success of the trials more or less.

Mr. W. Brailsford is now at Chatham, Ont., where he will remain till after the field trials.

Mr. Joseph W. Irwin, of Little Rock, Ark., writes us that he has purchased a Chesapeake Bay dog puppy, 12 months old, which he has in training for a retriever from land and water. At a recent live-bird shoot he retrieved twenty-five pigeons nicely. Three wood ducks, of which two were killed and one wounded, he retrieved nicely. This hardy, intelligent breed of dogs has been most unaccountably neglected by the American sportsmen at large. They are worthy of general adoption for retrieving wherever waterfowl abound.

The Greyhound Stud Book (England), Vol. XIV., contains the names, colors, ages and pedigrees of greyhounds registered therein up to July 1, 1895, the year's total of registrations being 3,445 greyhounds, of which 677 are re-registrations. A notable feature of the work is a "Review of Coursing Season, 1894–95," containing portraits of noted coursing men, and most interesting and instructive in the text. The Constitution, By-Laws and Code of Rules of the National Coursing Club, proceedings of 1894 and 1895, addresses of gentlemen who have registered dogs in that volume, in short, everything in the way of matter of public interest is embodied in the work. The whole is neatly bound and the typographical work is excellent. Everyone who is interested in greyhounds will find it an invaluable addition to his library and a most useful work both of information and reference. Forest and Stream Publishing Co., 318 Broadway, New York.

The United States Field Trials Club and the Continental Field Trials Club announce their respective All-Age stakes in our business columns this week. Entries close Nov. 1.

Bedford & Beaumont Kennels, New York, offer setters. Mr. K. McDougall, Brooklyn, N. Y., wants collie bitch. Rockland Beagle Kennels, Nanuet, N. Y., offer beagles. Mizpah Kennels, Bellport, L. I., offer beagles. Mr. J. H. Parrott, care of Forest and Stream, offers bulldog. Mr. C. A. Young, Newark, N. J., offers field spaniels. Elliott, New York, offers St. Bernard.

At the American Coursing Club's meeting, held on Thursday, Oct. 10, the officers elected were: President, Dr. N. Rowe; Vice-President, A. P. Slocum; Secretary, F. B. Coyne; Treasurer, J. Longstaff; Executive Committee: John Charlton, M. Allen, J. H. Rewe, A. Melrose, A. Coyne. The club decided to hold its next meeting at Huron. The cup conditions of this year will govern the cup next year, excepting that no one can make more than two nominations.

The premium list of the first annual stock and farm show of horses, cattle, sheep, swine, poultry, flowers, fruits, vegetables, dairy products and fat stock, under the auspices of the Live Stock Society of America, can be obtained of the Assistant Secretary and Superintendent, Mr. James Mortimer, 30 Pine street, New York. The show will be held in Madison Square Garden, Thanksgiving week (Nov. 25 to 30). Entries close on Saturday, Nov. 9.

In a pleasant letter this week Mr. Titus mentions that he will start Minnie T. in all the Age-Age stakes and also the Subscription stake at Newton, N. C. He mentions that Mr. Geo. Richards arrived in the South on Wednesday (16th inst.) and has a good string with him. He adds that the weather is very dry and that to get work for his dogs he is in the field at daylight.

Messrs. Edm. H. Osthaus and G. Muss-Arnolt, both well-known artists at the head of their profession, will attend the field trials at Newton, N. C.

In a letter dated Oct. 18, Mr. W. E. Warner, manager of Mr. Gould's canine interests, writes us as follows: "I bought the pointer bitch Ightfield Diana, a litter sister of Musa. You will remember that she ran last year. I think she will make a good brood bitch. I am sending Armstrong South Nov. 1 with some nice puppies of our breeding. Miss Rumor's litter are beauties, and doing splendidly. I am very much pleased with her litter. I have some very nice puppies by Devonshire Pearl and Chancellor, and some from Josie Brackett and Comet."

Mr. Warner is developing the kennel interests in his charge on very sensible lines.

Game Laws in Brief.

The *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Meeting of the American Spaniel Club.

A meeting of the executive committee of the above club was held at the residence of the treasurer, Dr. S. J. Bradbury, 110 East Twenty-second street, New York, on Thursday evening, the 17th inst. Present: E. M. Oldham, R. P. Keasbey, M. A. Viti, James Watson and Dr. S. J. Bradbury. Mr. Oldham in the chair. The minutes of previous meeting were read and approved. It was resolved that two additional sweepstakes be opened to be decided at the Westminster Kennel Club show of 1896, and to be known as the Novice Sweepstakes, for all American-bred spaniels never having won a first prize in the open class at any show prior to the date of entry. Entries to close Jan. 15, 1896, and to be $2 for each entry. The American Spaniel Club to add to each of the stakes. The said stakes to consist of (first) all breeds of spaniels over 28lbs., (second) cocker spaniels. 70 per cent. of stakes and added money to winners of first prize and 30 per cent. to winners of second prize.

Railroad Rates to U. S. Trials.

Trenton, Tenn, Oct. 18.—*Editor Forest and Stream:* Reduced rates on the railroads have been secured to persons visiting the United States Field Trials at Newton, N. C., in November next. Full fare will have to be paid from starting point, and a certificate from the agent at that point will secure a return rate of one cent per mile, when properly signed by the secretary of the club and the railroad representative there. Tickets on sale Nov. 1, good to return till Dec. 10 next. All roads in the Southern Passenger Association will sell such tickets, also the Louisville & Nashville R. R. from Cincinnati, Louisville and St. Louis. Free dog transportation can be secured by applying to me for the necessary certificates to present to train baggage men.

W. B. Stafford,
Sec'y U. S. F. T. Club.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

NAMES CLAIMED.

Mr. A. E. Davis claims the name Kent's Brake for English setter dog, whelped May 2, 1895, by Kent III.—Queen Roy.

Glenwood Beagle Kennels claim the name Glenwood for beagle dog, whelped March 29, 1895, by Little Corporal—Frances.

Rochester Pittsburg Bull-Terrier Kennels claim the name
Queen Monarch for bull-terrier bitch, whelped Aug. 31, 1894, by champion Streatham Monarch—Lady Dinah.
Iron Queen for Manchester terrier bitch, whelped April 2, 1893, by Rochelle Rush—Mizpah.

BRED.

Mr. Barry's Beauty, English setter bitch, Sept. 20, to Kent III.
Rochester-Pittsburg Bull-Terrier Kennels'
Queen Monarch, bull-terrier bitch, Sept. 6, to Duke of Rochester.
Iron Queen, Manchester terrier bitch, Sept. 8, to Rochelle Rush.

SALES.

Mr. Arthur E. Davis has sold
Trilby, English setter bitch, to Mr. Benjamin Cushion.
——, English setter dog, to Mr. Oscar R. England.
——, English setter dog, to Miss Clara E. Holland.

Yachting.

Though defeated in yachting, in athletic sports and even in cricket it did appear up to last week that Britain could fairly claim first place in one international competition this season. The work of the experts in international mud slinging, as displayed in the recent issue of the *Field*, left but few opportunities for outdoing them in this particular line. In the Sunday issue of the Boston *Herald*, however, and in its New York namesake, America comes proudly to the front in this as in all other contests. The long article on Mr. Watson, signed by A. G. McVey, must certainly be conceded by all impartial judges as far ahead of the best efforts of the British writers in malignity, misrepresentation, vituperation and personal abuse.

The present tone of the comment on both sides is discouraging enough to those who love sport for its own sake and believe in living up to fair rules and recognized usages. As matters now stand the ill-feeling existing on both sides must increase rather than diminish, and it must be a long time before the two nations can come together on such terms as are fitting to the dignity and position of yacht racing as a sport.

For ourselves we cannot share either of the extreme views held by the opposing sides on Mr. Rose and his challenge: on the one hand, that it is inspired by the Prince of Wales and is intended as an open rebuke to Lord Dunraven; on the other, that Mr. Rose is an American, and consequently not a representative of British yachting. To us the main point is that, as admitted by him in a recent letter to the London *Times*, Mr. Rose knows nothing whatever about the deed of gift or the special conditions of the recent races; he has had no experience in yachting, and is in no way qualified for the very difficult task which he has rashly and hastily undertaken.

The experience of Lord Dunraven proves that ignorance is no excuse in the game of the America's Cup. Several years ago, in an article specially written for an American magazine, Lord Dunraven confessed himself unable to understand or to discuss the then vital question of the alteration of the true deed of gift, and from that time down to the present he has repeatedly confessed his ignorance on simple and very important points, as in the fruitless negotiations of 1889, the misunderstanding on which the races of 1893 were based, and many details of the recent contest. The only hope of satisfactory racing for the Cup lies, in our opinion, in a challenge from some representative British yachtsman of accepted standing and large experience; and though the new deed is now practically a dead letter, we doubt very much whether any such yachtsman will challenge so long as it remains even nominally in force.

At last, long after the matter has ceased to be of importance, the British papers have taken up the new deed of gift, the London *Times* and other papers as well being now busy in discussing the legality and other points of the deed of 1887. Had this been done three years ago, or even last fall, when Lord Dunraven was so bent on forcing from the Royal Yacht Squadron a recognition of the deed and an indorsement of the acts of the New York Y. C., some permanent good might have resulted; but after the squadron has retracted its first bold condemnation and accepted the new deed as it stands, letter for letter, there is no use in any further agitation of the matter. With Lord Dunraven's challenge of 1893 held back for a few months, the

new deed would long since have been a thing of the past; but his hard and earnest work since 1889 in behalf of the New York Y. C. and against the interests of British yachtsmen has at last accomplished its end and made futile all future objections on the score of legality or fairness.

It is quite evident that neither British yachtsmen nor the British papers have any appreciation of the change in the New York Y. C. within the past year; but from all that we have seen and heard this season we believe that the club is at last fully awake to all the conditions of the case. Nothing more is heard of the blustering assertions that the new deed is fair and legal, or that the dimension clause will be enforced; but, on the other hand, the club has made every possible effort this season to give fair terms to the last challenger. There are no longer excuses and justifications for the new deed, but the club has come to a full realization of not only the wrong, but the mistake of its act of 1887; of the poor position which it has held in the opinions of American as well as British yachtsmen; and the very narrow escape from an ignominious back-down which it has had through the good offices of Lord Dunraven. While it has thus been spared the painful necessity of an open repudiation of the new deed, we believe that the club now appreciates the fact and is desirous in the future of placing the racing for the America's Cup on that h'gh plane which it should have occupied from the first.

As far as the conduct of the present series of races is concerned, we believe that the action of the club and its committees has been fair, equitable, and strictly in accordance with yachting rules and usage; and that, unlike the changing of the terms of the deed of trust—an action that will look even worse ten years hence than it does to-day—the action of the club in the Valkyrie-Defender races will be endorsed by both British and American yachtsmen in a few years.

It is useless to deny that, with our long and deep-rooted opposition to the new deed, it is a disappointment to us that our fight against it has not been rewarded by its nominal as well as its practical nullification; but Lord Dunraven and the Squadron have willed otherwise, and we can only accept the inevitable. If, as we believe, the new deed is now a dead letter, it is only a waste of time for British yachtsmen to discuss it; much more good will come from a cessation of all abuse, a dignified acceptance of Lord Dunraven's defeat, and an effort to secure a challenge from some British yachtsman whose standing and ability are beyond question.

ON LONG ISLAND SOUND IN AN 18-FOOTER.

It was nearly 5 P. M. on July 7, 1885. Heavy masses of clouds were scurrying across the sky, driven before the wind, which came out of the N.E. in blustering squalls, making many an old seafaring man shake his head ominously as he watched the maneuvers of the fleet of the New Haven Y. C. as the graceful racers worked back and forth, each striving to outgeneral the other by gaining the most advantageous position, so as to be the first to cross the line when the gun on the judges' boat should give the signal to send them on their journey of 160 miles or more around Block Island and return. Presently a flash and a cloud of white smoke breaks from the side of the judge's boat, when—bang! Away they go, one after another over the line, each graceful fabric staggering under all the sail she can carry, heeling to the spiteful puffs until lee rails are under, decks are awash. The keen bows cut the waves, and each craft is striving her best to capture the prizes offered by the club: $100 to the yacht which first succeeds in passing Long Wharf after rounding the island, and $75 to the second.

My object in writing an account of this race is not to give the experiences of the different yachts and their crews, but an account of what we saw and did ourselves, as we of the little keel cutter Roamer were not favored by getting a glimpse near enough to recognize the yachts of any of the fleet after darkness set in that night until we anchored off the club house again on the morning of July 10.

After crossing the line we laid a course so as to pass to the west of the new light. It wasn't the nicest sort of a night to start on such a trip by any manner of means, especially in a boat only 18ft. on the waterline. The sky had a very dirty look that threatened trouble to any one on the water. There was every indication of a storm, but the enthusiasm of the moment wouldn't let that dampen the ardor of our spirits, for hadn't Sam and Tom and myself sailed, hunted, fished and eaten alligator together in the wilds of Florida? Then there was Lock, the bold man-o'-warsman. Who would think of danger in such company?

We passed the new light at three bells. By this time the wind had decreased in force materially, and there was every indication of a shift, besides the sky began to lighten up to such an extent that we ventured to entertain hopes of good weather for our trip after all.

At six bells the wind had shifted to S.E. and a heavy fog set in, which made objects indistinguishable a little more than the length of the Roamer; we sailed slowly along under mainsail, topsail, jibtopsail and jib through this heavy curtain of mist, expecting every minute to see the huge hull of a Sound steamboat or schooner loom up through the mist as she bore down on us, but luckily nothing of the kind happened, although the hoarse whistles of the steamer and tin horns of the sailing craft kept blowing on every side of us all night long. We kept our horn going till morning.

I met with quite a scare about 1 A. M. which fairly made my hair stand on end. We were about off Faulkner's Island at this hour, Sam was at the tiller and I was standing by him when suddenly right out of the mist to starboard, as it seemed, there came a number of half suppressed, choking, smothered sounds, like those which a person would make in drowning. I called Sam's attention to it, but listen as he would he could hear nothing; I had about made up my mind that one of the yachts had met with an accident and that the crew were calling for help when, bending over to hear more distinctly, the sounds were very soon explained, the mystery was suddenly dispelled, as I found that the smothered yells issued from a pipe in the cockpit rail that connected with and was used to fill our water tank; as the Roamer rose and fell on the waves the air would be forced out of the tank through this pipe in a succession of smothered groans.

Soon after this incident we were startled by hearing the regular s-w-i-s-h, s-w-i-s-h, s-w-i-s-h of breakers all around us; we got out the lead line and sounded, but there was plenty of water, and as we soon passed out of hearing of the sound we decided that it was but the noise made by a tide rip. Nothing more eventful occurred through the night.

The morning broke with the Sound still covered with fog; at four bells the wind had shifted to the S.W. and we seemed to be sailing through a reddish sort of cloud, as the sun's rays were beginning to get the upper hand, in nature's struggle between light and mist.

At eight bells the fog had melted away, and we were making good headway under mainsail, topsail, jib and jibtopsail through the bright sparkling waters; at this time we were directly off the mouth of the Connecticut River.

We passed Little and Big Gull Islands at four bells; soon after we were treated to a sight of one of the large Cup defenders as she came through the Race bound for New York, we took her to be the Priscilla.

It didn't take us long to pass through the Race, as the wind and tide were in our favor. Soon after dinner we noticed a long line of breakers, that seemed to extend for two or three miles on either side and directly ahead of us; we examined the chart, but it showed 20 and 30 fathoms all through where the breakers were, and we were greatly puzzled to account for them; we finally decided to pick out the smoothest looking place we could, and go through them, rather than sail three or four miles off our course to avoid them.

We had the spinaker, with some bedding and other articles, spread out on top of the cabin; Lock was taking a quiet snooze in the cabin when we entered the first breaker; the little Roamer, generally speaking, fairly reared up on her hind legs; then, descending, she buried all her forward part as far aft as the skylight, completely under water as she dove into a huge coamer which swept everything, spinaker and all, overboard. We saved nearly everything, as Sam with great presence of mind caught the sail and bed clothes before they got out of reach.

It was wonderful to see the agility displayed by Lock, who bounced up through the companion way (which had been left open, thereby letting a good tubful of water into the cabin and all over him) as though he had been propelled from a catapult; it didn't take long to get through, but we decided that we would rather suffer a little inconvenience in the future than to take such a risk again.

On examining our chart afterward, we found at the bottom mention of these breakers, which were described as "dangerous tide rips, to be avoided, especially by small boats."

We enjoyed a most delightful sail that afternoon; the soft, balmy, summer breeze blew steadily, filling our sails perfectly, so as to get the most possible speed out of the little Roamer, as she rode the undulating bosom of the glittering ocean and swung in rhythmic time from swell to swell, parting each oncoming crest in soft billows of foam on each side of her shapely stem. Montauk rising out of the bosom of old ocean to starboard in the sleepy, dreamy, summer haze looked more like a misty cloud than like land. Fishing schooners, with the queer looking pulpits perched on the very tip end of their bowsprits, from which the fisherman with the long harpoon balanced in his hands scans the surface far and near for the sleepy swordfish, as he rests in fancied security, and other fishing vessels by the score dotted the face of the waters, all bent on gaining a livelihood, lawfully filched from Neptune's bountiful stores which hide among rocks and reefs and sands. Every now and then a porpoise would roll his rounded back above the surface, or, leaping entirely out of the waves, would show his full shape; then standing on the very end of his tail would shake the pearly jewels from his form, and with a mighty splash would seek his ocean home once more.

The regular smooth rise and fall of the boat as she glided from wave to wave gradually began to cause a very suspicious feeling to steal through my frame, and I began to fear that I would have to contribute to old Neptune, but the feeling finally wore off.

It was nearly five bells when we sighted Block Island through the haze, and in two hours thereafter we were off the southeast end of the island, directly under the United States Life Saving Station, which is perched on top of the towering cliffs which rise out of the ocean to the height of 200ft. or more.

Just before we reached this point our ears were greeted by the doleful tolling of the bell buoy, which is located on a reef of rocks called Southeast Ledge; the chart showed 30ft. of water on this ledge at low tide, and yet in heavy storms from seaward the waves break on this reef, even in water of that depth, which will give some idea of the tremendous seas that dash and roar against the shores of this solitary storm beaten island. Before five bells we had rounded the island and our bowsprit was pointed toward home again.

After rounding the island the wind increased in strength to such an extent that we had all we could stagger under with mainsail, topsail and jib set. There was also quite a heavy sea running by this time, which made the little Roamer pitch and toss in the most uncomfortable manner. The increase soon reached its height, and the wind grew less, however, and as the sun neared the end of his day's journey it had died out almost altogether.

We were favored by a most glorious sight as the sun sank to rest in his ocean bed (as it seemed); the atmosphere was perfectly clear; the sea and sky seemed to vie with each other in their depth of indigo blue; the wind had died to a mere lingering zephyr, and as the lower edge of the sun touched the world of glistening waters it cast a broad pathway of shimmering, glittering, golden light, in which the waves sparkled and scintillated in thousands of dazzling prisms and brilliant flashes; then with one last warm, lingering kiss on a world of waters, he disappeared, leaving the evening sky one glow of golden yellow, purple, indigo and red.

After the sun had set the Roamer lay rolling on the smooth, oily swell about midway between (to the north) the island and Montauk Point. The wind had died out completely, and the prospects of getting through the race that night were very dubious, to say the least.

When darkness set in we were still tossing about in the same spot. The night was very clear, however, and the sparkling constellations as they sent their searching rays through infinite space were reflected in the water, making it seem as though we were sailing through a sea strewn with diamonds.

Sam stayed at the tiller all night, Tom and Lock got very little sleep, while I, whom Neptune finally succeeded in bringing to terms, after a most stubborn contest, crawled below without any supper. At the earnest urging of the rest of the crew, I got into one of the berths, and after falling asleep I knew nothing more until I awoke and found the morning beams streaming through the cabin windows.

There had been almost no wind all night long, and when I emerged from the cabin we were four or five miles from Little and Big Gull Islands, but there was promise of a breeze from the south, and as the tide was with us we entertained hopes of getting through the Race before it turned.

We passed through the Race at 5:30 A. M. with a fair breeze from the south, and by the time we had breakfast we were fairly in the Sound once more.

It was eight bells M. when we reached the mouth of the Connecticut River, and the wind was very light and came out of the south in fitful zephyrs which scarcely filled our sails; besides the tide was running strong against us, and the sun sending his hot rays straight down on us out of a cloudless sky made us wish for cooler weather.

Sam, Tom and Lock took advantage of the lack of wind to snatch a much needed rest.

By four bells, or 2 P. M., we were nearly up with Bartlett's Reef Lightship—between the ship and the Connecticut shore. The wind, which had shifted and was beginning to come out strong from the S.W., was kicking up a very nasty sea, which the Roamer was butting into in a very determined manner.

The chart showed 8 and 10ft. at low water between the ship and the shore, so we were very much surprised and somewhat alarmed when, happening to look over the side, what should meet our gaze but the bottom, within a foot of the keel of the Roamer, as it seemed. After sounding with the lead-line, our fears were set at rest by finding that the water was as deep as the chart indicated, but being very clear it looked much shallower than it really was.

As the afternoon advanced the wind increased, and came out of the smoky southwest in snappy, spiteful squalls, which heeled the Roamer down to such an angle that the water would be almost up to her cabin windows. About this time we took in our topsail (we had taken in the jibtopsail some time before), and seemed to make better headway.

By four bells the wind was blowing so hard that we were compelled to take two reefs in the mainsail, and even under double-reefed mainsail and jib we had more sail than we needed; at this time we were within one or two miles of Faulkner's Island, and the wind and sea were so heavy that large schooners could be seen reducing sail; and to make matters worse, heavy masses of dark thunderheads began to climb out of the west and southwest across the sky, from which issued, every now and then, gleaming flashes of lightning.

At six bells our situation was really alarming; the Sound was covered with white-caps and the sea was running so high that we could make no headway whatever; we had given up all idea of reaching New Haven, and were trying to get to the Thimble Islands before darkness and the storm which was rolling out of the west should overtake us.

We were just beginning to congratulate each other on being able to reach the Thimbles when, happening to look to the southwest, we were appalled by the sight that met our gaze, as the whole Sound in that direction had become completely obscured by the storm, which seemed to settle right down on the water, vivid flashes of lightning seemed to leap up out of the waves and seeming determined to rend the very firmament would be followed by such heavy roars of thunder that it appeared as though the mighty gods of mythology were at war among the black and heavy clouds which covered the sky; while the wind and rain were bearing down upon us with express train speed.

Lock crawled forward to lower the jib, but found everything in such a tangle that it was impossible to do so; just then, with a flash and roar, the storm was on us, and as it struck the little Roamer went over so far that her sails actually dragged through the water, and if it hadn't been for the 2,500lbs. of lead that was bolted to her keel I probably never would have written this account. As she gradually righted it seemed as though the wind would tear her mast out.

There was only one course for us to pursue, and that was to head her for the shore and trust to luck to find a harbor.

We were tearing along through the angry waves in the wildest manner imaginable, headed for the shore, which, from the sea that was breaking on it, looked like one long line of drifted snow that extended from east to west as far as we could see, when suddenly we spied a red spar buoy directly ahead, which, on hurriedly consulting the chart, we found marked the Goose Rocks; it was too late to try to avoid them now, so trusting entirely to luck we sailed or rather tore right through them without striking.

The rain which had been coming down in torrents gradually ceased, the sky began to lighten somewhat when we made out a large sloop directly ahead of us and sailing the same course that we were; so keeping her in sight we followed in her wake, and it was fortunate for us that we did so, for just as the setting sun with an angry red glare broke for an instant through the heavy masses of sullen black clouds, lighting up the world of green, white crested waves, from the tops of which the wind picked the spume and spray and drove it through the air in smoky clouds, the sloop rounded a point of rocks and disappeared, but we could make out her mast and close-reefed sails behind the land, so heading for the point we soon opened up a sort of bay, which, though it didn't offer a great deal of protection, still was better than the open Sound. This was Leet's Island Harbor, and any one who has ever been there knows what poor protection it offers in a storm, especially from the southwest.

We got both our anchors out, and soon had the sails furled. The sloop which we followed lay within 200 or 300ft. of us, rising and falling on the heavy seas. She hailed us, and although we shouted back and forth to each other at the top of our voices, the waves dashing and roaring on the point completely drowned all other sounds.

The night settled down dark and threatening, and it soon began to rain again. There was no use trying to cook, so after eating a cold supper we made up our beds, and while one took his first two hours on watch, the rest got what sleep they could with the boat rolling her rail under and pitching her bowsprit into every wave.

The next morning broke clear and bright, and although there was a very heavy sea running before the strong S.W. wind, after eating a hasty breakfast we hoisted our double-reefed mainsail, and under that and the jib, after

getting our anchors, we headed out into the Sound, passing between two nasty-looking rocks which we were unable to see the night before on account of the darkness. We left the crew of the sloop, which was a New London fisherman, repairing some very badly torn sails, and after a hard beat to windward in a very rough sea we passed the New Haven Light, and in four hours from the time we left Leet's Island we cast anchor off the club house and were boarded by Mr. James Gallagher, Jr., of the regatta committee, who informed us that Wayward had won the first prize and Stranger second. They got in the morning before, so that they escaped the storm.

Mr. Gallagher seemed as much pleased, though, over the performance of the little 18ft. Roamer, the next smallest boat being 27ft., as I would have been if we had won one of the prizes, which we never expected to do.

W. H. AVIS.

An Experimental Tank and Model Testing.

THE subject of naval design has now reached a point in this country where practical experience can well be supplemented by abstract scientific research and by the most improved appliances of modern science, one of the greatest of which is the experimental tank for the determination of the qualities of the completed ship from experiments on miniature models. As in other things relating to naval matters, the United States is still behind the times in this detail; if it pays a private firm of builders to own and use such a tool, to say nothing of the smaller European powers, it would certainly seem that this Government, with the millions which it is now expending in naval construction, could not afford to go on much longer without one. The mechanical details of the latest experimental tank and its testing appliances were described in the FOREST AND STREAM of April 6, 1893, but the following further particulars are given in the New York *Times:*

A subject that has engaged the attention of naval experts for a number of years is the testing of naval vessels in advance of their construction. Experimental tanks, as they are called, have been established in almost every country in Europe, in which the models of both war and commerce ships are subjected to preliminary trials as to their speed, stability, friction and turning qualities, before the work of actual construction is begun. England, France, Germany and Italy test their models in this manner, and these experiments have been found to be of great value. The Construction Department of the navy of this country has been trying for several years to secure the establishment of such an experimental tank at the navy yard at Washington, where the models of warships could be given a trial to settle the important questions in connection with their construction.

A recommendation was first made by Chief Constructor Wilson, who asked for an appropriation of $60,000 for that purpose. Congress has so far never been induced, however, to consider the question. Chief Constructor Philip Hichborn, however, the successor to Constructor Wilson, has made detail reports to the head of the department, and the next Congress will be asked for an appropriation of $100,000 for the purpose of building an experimental tank at the Washington Navy Yard, in the slip between the old shiphouse and the main branch of the Potomac

Chief Constructor Hichborn in a recent interview said that the bureau desired to renew most earnestly previous recommendations in relation to the establishment of an experimental tank. "One of the greatest obstacles encountered by this bureau in designing vessels is the determination of a reasonably exact speed which can be obtained with a ship of known displacement, horse power and under-water form. At present our only data for such purposes is derived from more or less inaccurate reports of the performance of foreign vessels, and is necessarily very unsatisfactory. The bureau in the past has not even had the benefit of experience gained from thorough and exhaustive speed trials of our own ships, exigencies of the service usually preventing a complete series of progressive speed trials, such as have been found of so much value in other services. The lack of reliable data, which can only be accurately obtained from these two sources, has hampered the bureau in its previous designing work, and placed it at a decided disadvantage in fixing upon the approximate speed to be expected from any given design."

The bureau in no sense desires to depart from the custom of giving premiums for speed in excess of that stipulated in the contract. Past experience proves most conclusively that the inducement of a substantial speed bonus compels a contractor to use his utmost endeavor to allow none but the best material and workmanship to enter into the construction of the propelling machinery, thereby insuring to the navy a high quality of work, such as could not be obtained by any mere system of Government inspection, no matter how rigid.

"The commercial value of an experimental tank has been well demonstrated by the experience of a private establishment on the Clyde, which has had one in full operation for ten years. Aside from the scientific value of the information derived, they claim that it has been the means of saving them thousands of dollars by enabling them to determine accurately the best form of ship to attain a certain speed, the dimensions of the ship being restricted by certain definite considerations."

Experiments to determine the resistance of ships in advance of construction by towing models of the proposed ships were begun by the late Mr. Wm. Froude in 1872, in a tank built by him at Torquay. This tank was 280ft. long, 36ft. wide and 10ft. deep, and in it experiments were carried on for the Admiralty, and in connection with the towing experiments with the Greyhound certain laws and deductions were established beyond question. Since the death of Dr. Froude, in 1879, the work has been carried on by his son, Mr. R. E. Froude, and many useful and valuable results have been obtained, the designs of many proposed ships have been altered after model trials, notably in the case of the Polyphemus and the Medway class of gunboats, the deductions being afterward verified by the performance of the vessels. In 1882 a tank of the same dimensions, and with practically identical appliances, was constructed by Denny Bros., of Dumbarton, in which many thousands of experiments have been conducted with both engineering and commercial success; the tank having enabled them, as the case in point, to successfully construct a high-speed vessel for the Belgian Government under conditions so rigid that under ordinary circumstances surety of fulfilling them would have been impossible.

Mr. William Denny, one of the most progressive and well-informed Scotch ship-builders, in a letter written in 1887 relative to the importance of the assistance that an experimental tank may render to the naval designer, expresses himself thus:

"The truth is that, of all the problems about a steamship, the only one at the present moment incapable of being solved by a priori methods in extreme cases is that of the speed and power. No ability and no training will enable even the most skillful naval architect to overcome the want of an experimental tank in coping with these questions. My partners are so firmly convinced of the value of the tank that every one of them improvements and additions, under the charge of Mr. R. E. Froude. The new tank is 400ft. long, 20ft. wide and 9ft. deep, and commodious offices are attached with a view of entering extensively upon the work of experimental investigation. In 1889 an apparatus was constructed by the Italian Government at Spezzia, which is practically a duplicate of the British plant at Haslar, except that the tank is 500ft. long and 22ft. wide.

The latest apparatus constructed is that installed by the Russian Government at St. Petersburg in 1892. To duplicate such a plant, including cost of all apparatus and the necessary buildings, but exclusive of ground, would cost about $85,000.

The primary object is to obtain the actual resistance of the model at a speed corresponding to the proposed speed of the full-sized ship. The speed at which the model is to be towed is ascertained by Froude's "law of comparison," which is "for similar forms, corresponding speeds are as the square root of the length, and resistance at corresponding speeds is as the cube of the length." The experiment may develop the fact that the intended lines produce an abnormally high resistance, or are in some other way unsuitable, in which case the model is easily altered or a new one made, and the ship saved from probable failure.

In conducting the experiments absolute nicety of observation and measurement is required. The model is carefully ballasted to the exact draft and trimmed to correspond with the proposed displacement. These factors are observed by inserting needles at intervals around the proposed waterline projecting horizontally, and the model is adjusted so that all the needles just break the water. In this condition the weight of the model, plus the ballast, should agree with the calculated displacement. In towing, the change of trim is carefully observed and automatically registered by the machine, and exact observation of the currents, caused by the drafts of air and by the movement of the model, are made, and the general deductions corrected therefor.

ETHELWYNN, SHOWING "WILSON" JIB.

The models are made of paraffine wax, a material which seems well adapted for the purpose, because it does not absorb water to change its weight, is easy to finish and make changes in if necessary, and when the experiments with a given ship are finished the material may be remelted and used for others. They are cast in a clay mold made to cross sections of the proposed lines, allowing about a quarter of an inch around for finishing. They are cored to allow a finished thickness of about 1in. The core is formed of a wooden framework covered with cloth and coated with a solution of clay to make it impervious to the melted paraffine, and is filled with water to prevent its being floated on the liquid wax, which is cast at a temperature of about 160°.

After cooling, the model is placed in a specially devised machine, by which the lines of the half-breadth plan of the proposed ship are automatically copied on both sides of the model at their respective heights above the keel. The model is rigidly held in a frame capable of vertical adjustment, and after being carefully set to the proper height for the line to be cut, the attendant simply passes a tracer around the line on the drawing, which is placed on the attached drawing board. The cutting is accomplished by two rotary cutters, which are run at a high rate of speed, and connected by a pantograph gear with the tracing arm. In this way the successive lines are cut, and the model is then taken from the machine, the material between the lines is removed, and the model faired and smoothed by hand. It is then fitted with suitable interior strengthening and carefully weighed and ballasted, and is then ready to be placed in the dynamometric towing machine. This machine is placed on a truck which moves freely on rails situated on the top of the side walls of the tank, the under side of the machine being about 18in. above the water. The model is so connected that, while rigidly held against lateral deviation, it is free to oscillate vertically and horizontally. The resistance is received on the short arm of the bell crank lever, and automatically traced to an enlarged scale on a sheet of cross-section paper wrapped on the surface of a cylinder. The same cylinder also records the time and distance run. The time pen records half seconds, and the distance pen records intervals of 10ft., both being actuated by electric contacts. There are also cylinders at each end of the model for recording the change of trim, by means of rods free to move vertically, their lower ends resting on the model.

A secondary speed-recording register is also provided as a check, and a carriage is mounted in the rear of that, containing the model dynamometric machine, fitted with another machine on similar principles, for testing the efficiency of model screw propellers, and also their efficiency in different positions relative to the hull of the ship. The truck is attached to an endless wire rope, moving over drums at each end of the tank, to which motion is given by a "tower spherical engine," having a specially devised governor, capable of very delicate adjustment to any desired speed from 50 to 1,000ft. per minute. The models are tested at varying speeds of small interval between certain fixed limits, and also at varying drafts of water and conditions of trim. The results, after being corrected, are plotted and curves drawn, giving in advance full data of just what the completed ship will do in all conditions with smooth water.

Many advantages are realized from the results of these experiments. The most suitable form for a certain speed may be determined and the proper adjustment of power to form arranged. On the other hand, a ship having a given form, the most suitable speed can be selected, at which it can be most economically propelled. The form and position of the waves created by the passage of a ship through the water at any speed may be determined. The settling or subsidence of the ship while running may be measured, this being an important feature in light-draft or low-freeboard vessels. The speed at which models may be run being relatively great, the performance of ships at higher speeds than have been realized may be predicted, and the possibilities of further advancement, so far as the form is concerned, determined. Much power is frequently wasted in driving unsuitable forms at a high rate of speed, and waste of power involves both heavier machinery and boilers, and increased coal consumption, over what would be necessary with the proper form. Displacement is often sacrificed to attain a certain speed, when the same speed might have been realized with largely increased carrying capacity. Many other minor advantages might be specified. The time necessary to prepare a model from a given set of lines and make a complete record of resistance at varying speeds has been found to be about two days.

Lord Dunraven and Mr. Rose.

THE following was cabled to New York late on Monday:

LONDON, Oct. 21.—Dixon Kemp, the well-known yachting authority and editor of the *Yacht Racing Calendar and Review*, has furnished to the United Press exclusively the substance of a second interview with Lord Dunraven. The latter expressed himself as being still strong in the belief that the Valkyrie III. is the superior of the Defender in sailing to the windward in moderate breezes and very much faster than the American boat in running dead before the wind. He admitted, however, that the Defender was the faster boat in reaching.

"What I should particularly like," said Dunraven, "would be to have the Defender fight it out with the Valkyrie in the Mediterranean." If this could be arranged, he added, he would then have the Valkyrie prepared to meet the American boat. He thought that the two yachts would have a fair trial in the Mediterranean regattas, but the Valkyrie would doubtless be greatly handicapped by the French rigging rules, which include measurement of beam and girth besides sail area.

If the Defender should proceed to the Mediteranean it would settle once and for all the question whether the American boat is built and rigged sufficiently strong to cross the Atlantic on her own bottom. Lord Dunraven told Kemp that he believed a decision to bring the Defender over to the Mediterranean lies entirely with W. K. Vanderbilt, who owns eight-tenths of the boat, while Messrs. Iselin and Morgan each own one-tenth.

The prizes in the coming Mediterranean regatta are much more valuable than ever before, and the Earl is convinced that grand races could be sailed with the Britannia, Ailsa, Satanita, Valkyrie III., and Defender.

A representative of the United Press having shown to Mr. Charles D. Rose, the challenger for the America's Cup through the Royal Victoria Yacht Club, a copy of an interview published in yesterday's New York papers, that gentleman said this morning:

"I am very sorry that such things should continue to be published. They do no good and only tend to stir up bad feeling."

Mr. Rose then dictated to the reporter the following:

"I very much regret that the question of my challenge should be construed as in any way having anything to do with the action of the New York Y. C. My challenge was made simply and solely with the object of trying to recover the America's Cup. I shall take the earliest opportunity to see Lord Dunraven, and should I learn that my challenge should not have been made before consulting him I shall at once withdraw it. No one is concerned in this challenge except myself."

Society of Naval Architects and Marine Engineers.

THE third annual meeting of the Society of Naval Architects and Marine Engineers will be held on Nov. 7–8, at the rooms of the society, 12 W. 31st st., New York. Judging from the preceding meetings, the coming one will be very interesting; the gathering is a representative one of the leading men in the shipbuilding and allied industries; a number of important papers will be read, and the discussions are thorough and sometimes exciting. The second volume of the "Transactions," issued last April, is a large quarto of 350 pages and seventy folding plates, containing the fifteen papers read at the meeting last year, with the stenographic reports of the discussion on each. These papers cover a wide range of subjects; the construction of the new navy naturally comes first, the subject of several important papers by Rear-Admiral Meade, vice-president of the society; George W. Melville, Engineer-in-Chief, U. S. Navy; Philip Hichborn, Chief Constructor, U. S. Navy, and others, with papers on cellulose, electricity on shipboard, face-hardened armor, launching, water-tube boilers, etc. The paper on yachting, by Mr. Lewis Nixon, brought out a very animated discussion. The work of the society, and especially the meetings, is well worthy of the attention of yachtsmen; who are eligible as associates, this class of members being defined in the constitution as consisting of "all persons who, by profession, occupation or scientific attainments, are qualified to discuss the qualities of a ship." The membership roll, which is already quite large, though the society is but two years old, includes such representative yachtsmen as Mr. A. Cass Canfield, E. D. Morgan, Henry Bryant and W. Butler Duncan, Jr. The entrance fees of the society are $5, and the annual dues also $5. Applications for membership are made on blanks provided by the Sec'y-Treas., W. L. Capps, U. S. N., 1710 F. st., Wash.

Charles Day Rose.

The following interesting particulars of the latest Cup challenger, Mr. Charles Day Rose, are given by the *Sun*. There is not much of yachting in Mr. Rose's experiences, but all that is yet to come.

Although it had been surmised that the sportsmanlike tone of Charles Day Rose's challenge to race the Distant Shore for the America's Cup was due to his intimate knowledge of the characteristics of Americans, formed during close business and social relations extending over many years, it is not generally known that he was born in Huntingdon county, Province of Quebec, in August, 1847, and had attained early manhood before leaving Canada. The old Rose homestead is located on the Chateaugay River, which has its source within 30 miles of the border in the Adirondack Mountains. Here he passed his boyhood and later attended McGill College at Montreal.

Athletics had a firm standing among the Montreal students long before track events were taken up by American collegians; in fact, in those days the only general sport at Yale or Harvard was rowing. Sprinting, long distance running and snowshoe running were the leading Montreal sports, and Rose was proficient in each. The best Montreal amateur of the old times was the late C. D. Armstrong, who was one of the fleetest men who ever sped on the snow crust, yet Rose could hold his own with him. He was equally good on the ground, especially as a stayer in heat races, when none of the collegians could outrun him.

William Rose, C. D. Rose's grandfather, emigrated to Canada when quite a young man. His son, Sir John Rose, made his first start as a school-teacher in the village of Athelstan, Huntingdon county. He was born in 1820, and in 1843 married Charlotte, the daughter of Robert Emmett Temple, of Rutland, Vt., who died in 1883. The old schoolhouse is still standing, although it has long survived its usefulness. Before his marriage John Rose went to Montreal to study law, and soon after was admitted to the bar. He rose high in the legal profession, and in 1857 was elected a member of the Macdonald Carter administration. He held important cabinet appointments both before and after confederation, being Finance Minister under the Macdonald Government. In 1869 he left Canada for England to become a partner in the London house of Morton, Bliss & Co., the firm name being Morton, Rose & Co. He was knighted for his Canadian services and became in 1883 Receiver-General of the Duchy of Cornwall, which brought him into close personal relations with the Prince of Wales. He died seven years ago, having been created a baronet in 1872, and was succeeded in the title by Sir William Rose, the elder brother of Charles Day Rose. He is a barrister, while C. D. Rose is a banker and the London representative of Morton, Bliss & Co. Sir John Rose left further a younger son and two daughters, and divided a large fortune by will among the five children. Charles Rose is married and has four children, one of them an officer in the Royal Horse Guards.

Hitherto Charles Day Rose has been more prominent as a turfman than in yachting. His colors, blue, black sleeves, and a red cap, have flashed first past the post in many of the great races of the English turf, and he has the reputation of having both luck and sound judgment. He bought Bonavista, the half brother to Sir Visto, from Lord Rosebery, for 1,250 guineas, as a yearling, and won the Two Thousand Guineas with him in 1892. The same year he brought out one of his own breeding, Ravensbury, who, but for Isinglass, would have been the great three-year-old of 1893, running second to him in the Two Thousand Guineas, the Derby, and St. Leger, a trio of the "classic" events. He sold Ravensbury to Capt. Machell for £5,000

Like the late David Dunham Withers, Mr. Rose's ambition has been to win races with horses of his own breeding and representing his own ideas in blood lines. His Cup hunter is named after one of his mares, Distant Shore, bred in 1880 at Queen Victoria's stud farm, and, like Penitent, Ravensbury's dam, she is by the great Hermit, her dam being Land's End, by Trumpeter; second dam Faraway, by Young Melbourne. Distant Shore has been lucky enough in the stud to merit the honor of being godmother to a Cup challenger. Her first foal, by John Davis (1884), is the dam of this year's crack three-year-old Whitley. 1885 Van Dieman's Land, by Robert the Devil, was a good race horse; in 1886 Gulliver, by Galliard, raced well, and is now a promising stallion in France. To follow out the list, Arcadia, by Isonomy, was foaled in 1887; the colt St. Daurien, by St. Simon, in 1889 (having missed in 1888); Liberia, by Galopin, in 1890; St. Hilaire, by St. Simon, 1891; Chimera, by Sheen, sold for £2,000 as a yearling, in 1892; a bay colt by Donovan, 1893; a bay filly by Donovan.

In the Rose Stud now are the following mares: Agnes Court, Hampton—Orphan Agnes; Arcadia, Isonomy—Distant Shore; Distant Shore, Hermit—Land's End; Lorette, Galliard—Penitent; Magdalen, Hermit—Vaga; Monotony, See Saw—Orchestra; Penitent, Hermit—Stray Shot; St. Kynan, Hampton—Land's End.

Mr. Rose owned Lady Abbess, the dam of his good racer Bel Demonio, but sold her in 1891.

Fifteen or Twenty Feet.

Since the certainty of further small class racing was assured by the challenge of the Royal Canadian Y. C., as well as one from Mr. Brand, for the Seawanhaka C. Y. C. International cup, the question has been mooted of abolishing the 15ft. class and transferring the racing, if possible, to the 20ft., arguments on both sides having appeared in some of the daily papers. We do not know what the feeling of the Seawanhaka race committee is in the matter, and this will have an important bearing on the question; but so far as our own observation goes, we are strongly against such a change.

The one great point is that the 15ft. class is now in existence and the subject of general inquiry and approval among yachtsmen in all parts of the country, it is already well known through the late Spruce-Ethelwynn races, two challenges are in hand, the Montreal men are already at work with plans for building and extensive racing prior to the selection of a challenging yacht, and one new yacht has already been ordered for the defense. Coming in without introduction, at a time when the attention of all yachtsmen was riveted on the Defender and Valkyrie III., of a smaller class than ever before known in American yachting, the 15-footers have met with an exceptionally promising reception; and have been most successful this season. With all this in their favor, and with the proverbial fickleness and instability of yachtsmen in regard to new classes, it would be most foolish to discard this class in favor of some other, as yet unknown and not in existence, but which may or may not be better.

As far as the merits of the two classes, 15ft. or 20ft. racing length, are concerned, there is comparatively little choice; the models would probably be identical, of the knife centerboard type, one sailed by two men and the other by three, the dimensions and sail plans being directly proportioned to these weights of live ballast. The difference in size and power would be so little that where the 20-footer would go the 15-footer would follow; neither is dry or comfortable in bad weather, and neither is fit for cruising and seagoing such as the old canoe-yawls do; but, as the races this year have shown, the 15-footer can go to windward in a good breeze and sea; and at Oyster Bay at least a suitable course could be laid on almost any day in summer, barring a heavy gale, in which even much larger yachts would not care to race.

In power and ability, and in room, there would be little to choose between the racing 15-footer sailed by two men and the racing 20-footer sailed by three; but there is a difference which is greatly in favor of the 15-footer. The size is materially less for purposes of transport—some 5ft. less over-all length and 2ft. of beam, with much shorter spars—in fact, the 15-footer is quite as large a boat as can be conveniently shipped by rail without a special flat car, or transported by wagon. Just now this quality is a valuable one. We hope that, in the event of the Royal St. Lawrence challenge being accepted, the trial races of next year will serve to bring together not merely a fleet of a dozen boats from about the Sound, as this year, but a truly representative fleet, such as has never been gathered together before, from all parts of the country; from Minnetonka and the other Western lakes, where there are many fast open boats; from other inland points, where local yachtsmen and designers are anxious to test their skill against the salt-water cracks. To this end it is desirable that the size, the first cost and the crew be kept at the lowest point; in short, that, as opposed to the syndicate yacht of untold expense, or even the modern racing 40 or 50-footer, the trouble and expense be minimized, so as to make the class a popular one, rich in ideas and experiment. The cost of the 20-footer will be about 50 per cent. more than the 15-footer, say $900 instead of $550 as the outside limit for each; the expense and trouble of transportation will be much greater, and the necessity of finding two companions instead of one, as with Mr. Brand this year, will add to the difficulty of bringing a boat from a distance.

As regards the Royal St. Lawrence Y. C., since 1890 it has been the policy of the club to encourage the building and racing of the smallest effective two-man boats under a racing length measurement, and the challenge is therefore the legitimate outcome of this policy. The limits of this class as originally laid down were carefully drawn with the idea of securing a small, cheap and effective craft that could be easily handled by two men, and that would not depend on a ballast crew or hiking for stability. The limit adopted was 18ft. racing length, with a two-man crew, sail being measured by the Seawanhaka rule. The boats were to have either a beam of one-third their l.w.l. length or 30lbs. of fixed ballast per foot of such length, and there were no restrictions on sails. The first boats built under the rule were compromise sloops of about 16ft. l.w.l. and small catboats. Then came Bug, phenomenal except in one or two instances. These conditions became so apparent after the season of 1894 that notice of motion for a reduction of the class limit after the season of 1895 was given. It was the intention at this time to reduce the limit to about 16ft.

During the past summer the good work done by the ½-raters in Great Britain, and the advantages of working on parallel lines with outside clubs, created a strong feeling in favor of transforming a class that has never filled into a 15ft. class, and this movement has found expression in the challenge for the Seawanhaka cup.

A modern 18ft. racing length boat, judging by successful modern boats of this class in other waters, would be a boat of 27ft. over all, 8ft. beam, 16ft. l.w.l. and with 400sq. ft. of sail, and such a boat is a big boat for two men to handle, an expensive boat to build and keep up, and if the work done by Spruce and Ethelwynn in their last two races is any criterion of the serviceability of the ½-raters in a seaway, then it is doubtful whether the 18ft. boat, or the 1-rater, is so much better a boat than the ½-rater as to justify the difference in cost. Another strong point in favor of the ½-rater is the comparative ease with which she can be handled ashore and in transit when compared with the 1-rater.

There is every prospect that as a result of the challenge for the Seawanhaka cup being accepted, there will be a class of seven to ten ½-raters racing on Lake St. Louis next season. Whether the club and Mr. Duggan could be induced to go down with a 1-rater instead of ½-rater is questionable, but it is doubtful in that case whether more than two boats will be built.

Preserving Sails.

The following method of cleaning and preserving sails was given to us by Dr. C. Brewster, of the sloop Maud, Royal St. Lawrence Y. C.: To preserve sails from mildew and to restore the original whiteness spread on a clean grass plot and wet thoroughly, then take pipe clay, which is sold very cheaply at all pipe works (the common "potter's clay" of American potteries) and mix it with water to almost the consistency of milk. Spread over the sail and rub in well with an old broom, then turn the sail and repeat the process on the other side, after which the sail should be hung up to dry. This is best done in the fall before the sails are stored, as it will keep out vermin, and the sails will come out clean and fresh in the spring. The process will make the sail look like new, and as the pipe clay is little affected by rain, the effects of the process will last through the season.

YACHTING NEWS NOTES.

The Spalding St. Lawrence Boat Co. (formerly the St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, N. Y.) have removed their entire business to Ogdensburg, N. Y., their reason for this change in location being their desire to benefit by the superior building and shipping facilities the latter city affords. This company's new plant is probably the largest of its kind in the world, any is equipped throughout with machinery designed and made especially for the business. Although the name of the concern is changed, the principals and management remain the same, and the pick of their force at their old Clayton quarters move to Ogdensburg with them. As heretofore, the Spalding St. Lawrence Co. will make a specialty of the famous St. Lawrence River skiffs, and will build high grade pleasure, racing and cruising craft of all kinds.

The regatta committee of the Atlantic Y. C. announce the following racing fixtures for 1896, subject to ratification by the club at the annual meeting in February next: Saturday, May 30, Decoration Day excursion and regatta of the A. Y. C. fleet; Saturday, June 6, regatta for special classes over courses in Upper Bay; Saturday, June 13, regatta of special classes over club course; Tuesday, June 16, annual regatta over club courses; Saturday, June 27, regatta for special classes over courses in Upper Bay; annual squadron cruise of the club in July, the date to be fixed at the annual meeting. John L. Bliss, chairman regatta committee, 128 Front street, New York.

A prominent steamboat excursion company at Jamestown, N. Y., has closed a contract with the Marine Iron Works, Chicago, for two exceptionally fine, flush-decked steam yachts, for use next season on Chautauqua Lake, each boat to be 51ft. long, and 10ft. beam. The general arrangement, deck plan, engine house, toilet room, etc., is of a character that will render them not only attractive, but very convenient, and yet leaving a surprising amount of deck room. Each yacht will carry 75 passengers comfortably and safely, and in addition there is space arranged for a dozen musicians on the forward upper deck, with neat swinging awning suspended above this "band deck." The contract was given after inspection of a similar steam yacht which the same company recently completed for St Louis parties. Delivery will be made via Chicago & Erie Ry. to Jamestown, N. Y., on special cars, equivalent to six ordinary flat cars, and is the largest single shipment of the kind, height and width considered, to New York State from Chicago by rail.

Messrs. L. Prang & Co. have just added to their yachting series a very spirited picture from a painting by J. G. Tyler, entitled "Flying Defender." The yacht is shown under spinaker and balloon jibtopsail, poised aloft on a wave, disclosing her bronze hull against the green sea, while astern is the following fleet.

A new type of naphtha launch, the invention of Mr. Feodor Hirsh, was successfully launched and tested at Port Morris on Oct. 18 The machinery is below the floor, the casing projecting only 8 to 9in. above, while the engine is controlled by a lever in the pilot house. The yacht, owned by John C. De La Vergne, of Orienta, was christened Mongoose by Miss De La Vergne. After the launch she started for Larchmont, of which club the owner is a member.

The Seawanhaka Cor. Y. C. has secured temporary quarters in the old Jockey Club house, 60 Madison ave., which were opened Oct. 21. Wednesday night will be club night through the winter, and the popular mess dinners will be held as usual.

The many friends of Mr. Arthur Binney will be pleased to learn of his engagement, just announced in Boston, to Miss Daisy Harvey, of that city. Mr. Binney was for some years associated with the late Mr. Burgess, and more recently has carried on the business of yacht designing alone.

The large steel steam yacht designed by Lewis Nixon, the keel of which will be laid this week, is said to be for P. A. B. Widener, of Philadelphia.

Steam Yachts and Launches

Rifle Range and Gallery.

Hudson Rifle Club.

ITS HISTORY AND PROGRAMME FOR ITS ANNUAL SHOOT.

During the winter of 1887-88 some young men in Marion, N. J., talked of organizing a rifle club for the advancement of the sport and sociability in that portion of Jersey City. They found ready listeners, but very few followers. By persistent urging and coaxing they managed to collect together thirteen persons on the night of Feb. 18, 1888, and organized a club to be known as the Hudson Rifle Club of Jersey City Heights, N. J.

The first six months were devoted to getting a headquarters and a range. They found a place suitable for the purpose in an unused cellar; this they transformed into a one-tunnel shooting gallery, and for months the members strove hard to make a success of the new club. They gradually increased in membership and soon had enough in their treasury to warrant changing their headquarters to Schmidt's Hall, Marion. Here they were able to have two tunnels to shoot through.

Nearly two years were spent in this place, when the membership and interests increased so much that they were compelled to look for larger quarters. A joint meeting was called and the proposition of building a club house was heartily endorsed. Subscription lists were started, and in a short time the organization was ready to proceed with a building. One of its original members offered to lease a lot for a term of years; this offer was cheerfully accepted, and a building was erected at 35 Giles ave., Marion. The membership still increased and three tunnels were found to be insufficient for the demand. Two years ago the fourth hole was cut through the club house in order to give the members a chance to improve their marksmanship. It was about this time that the club remodeled its system of books, etc., and a board of officers was elected to take full charge of the club's interests. The new board rooted out all dead wood and offered great inducements to new members. Team matches were indulged in, and individual matches made things lively and instructive.

Still the cry came that more room was wanted, and on Feb. 18, 1893, the club was incorporated under the laws of the State of New Jersey and bonds for several thousand dollars were issued to the members. These found a ready sale, and in May, 1895, ground was broken for a large two-story club house at 21 Marion place, Jersey City, N. J. This building is 22×100, and every inch of space has been fully utilized. A hooting room 19×25 has been fitted up with six channels to shoo through. A macadamized platform for the shooter to stand on insures a steady footing. This also prevents any jarring from persons walking or jumping on the floor of the room. This room is devoted exclusively to shooting. The second floor, consisting of a meeting room same size as the one before mentioned, will be supplied with all the necessary equipments to make it attractive and comfortable for the members. A refreshment room is also on this floor for the exclusive use of members. The main building consists of a hall 22×70, with the best of maple flooring, suitable for dancing and holding entertainments. In the rear of the hall will be the targets, which are operated from the top, and visitors can view the shooting without the slightest annoyance to the markers or shooters. The entire building is finished throughout with the best selected yellow pine, and the decorations will be elaborate.

The annual prize shooting festival and opening takes place Monday, Tuesday and Wednesday, Nov. 18, 19 and 20, and it is hoped that every rifleman will avail himself of the opportunity of visiting the largest and grandest building of its kind in the United States.

The Hudson Rifle Club has started from the bottom of the ladder and climbed up until it is second to none, and a hearty and cordial welcome will be extended to all who visit them in their new home. The programme shows that the boys intend to make their new home attractive to all who come.

The programme includes shooting on the ring target, bullseye target and target of honor. On the first two targets the events are open to all; on the honor target only members can compete. Shooting takes place each evening from 7 o'clock until midnight. The bullseye target closes on Wednesday evening at 8 P. M.; the honor target on Tuesday at 10 P. M. The premium list is a large and attractive one. Shooting committee is composed of Messrs. Charles Hutch, A. W. Stuber and John Rebhan. The new club house is easily reached by Pennsylvania Railroad trains to Marion, or by trolley car to West Side avenue crossing.

The club extends a cordial invitation to all rifle clubs, and states that it will be prepared to accept challenges for matches after Dec. 1, '95. An enjoyable evening will be guaranteed to all who may enter its headquarters.

Any information as to dates, etc., will be cheerfully given by addressing Capt H. Mahlenbrock, Tonnele and Magnolia aves., Jersey City, N. J.; or Chas. E. Bird, Sec'y, 161 Astor st., Newark, N. J

The Eagle.

Revolver Shooting in England.

Owing to a protest having arisen to the last score made in the rifle championship competition of the South London Rifle Club, none of the winning scores of either the revolver or rifle championship of this club have yet been published, although the shooting has now finished for the season.

The only score certain at present is, that Mr. Walter Winans has won the revolver championship for the eighth year with the below scores:

Twenty yards, 42, 42, 41, 41, 40; 50yds., 40, 39, 39; total, 324.

He used Smith & Wesson revolvers, both military and target, and U. M. C. ammunition.

Mr. Rand is second, but his score is not yet given.

He used a Colt revolver and Eley's ammunition.

Capt. T. W. Heath is third with a Colt revolver and Eley's ammunition.

On Oct. 2 there was more than half a gale of wind in London and a full gale on the coast of England, so no good scores were made at the North London Rifle Club in revolver shooting.

Mr. Winans has now practically won the revolver championship of this club also, but as will be seen below there will be a close race still for the remaining prizes:

Oct. 2.—Twenty yards, stationary target:

Walter Winans	775677—39	T Knapp	677347—34
Carter	577676—38	Lieut Richardson	746745—33
Major Palmer	656767—37	Comber	670576—31
A J Comber	456767—35	Lieut Clemence	545755—31
Capt Earle	746666—35	Capt W Evans	446764—31
Lieut Howard	527717—35	Luff	463467—30

Leading scores for revolver championship of club now stand:

	20yds.	Alternate hands.	Disappearing target.	50yds.
Walter Winans	42 42 42 42 42 41	41	42	39 38—411
Major Munday	40 39 39 39 39 39	39	39	37 36—386
Major Palmer	42 39 39 38 37 37	36	38	34 31—369
Knapp	41 40 39 38 38 36	41	36	34 34—377
Comber	40 39 38 37 37 37	38	38	35 33—372
Carter	38 38 37 36 36 36	37	37	35 31—568
Luff	39 39 38 37 36 34	33	29	30 29—350
Capt Earle	36 35 34 33 32 32	32	33	33 31—322

Rifle Notes.

The Miller Rifle Club, of Hoboken, N. J., has enrolled nine new members recently: H. Wolter, J. Schulties, Frederick Boordman, E. Arndt, Duncan Bryan, Otto Dehmcke, Louis Wolter, Henry Bishop and Theo. Buttenbaum.

There is some talk in the cities of Syracuse and Rochester, N. Y., of a meeting between the Syracuse Indoor Shooting Club and the Rochester Revolver and Rifle Club. It is proposed that each club shall shoot on its own range, the scores being telegraphed at the end of each round. The targets will, of course, be also exchanged by mail for the purpose of checking the scores sent by wire.

The Syracuse Indoor Shooting Club holds shoots during the winter every Tuesday and Friday night. Its club rooms are located in the Sabey block, and have been elegantly refitted during the summer.

The proposal to form a revolver club in connection with the New Manhattan Athletic Club, of New York city, seems likely to bring forth good fruit. An international revolver contest would stimulate pistol shooting in this country. Mr. C. T. Adams is chairman of the committee appointed to bring the matter to a head.

The committee appointed by the New Manhattan Athletic Club, with a view to gathering together the best revolver shots in this country, will hold its first meeting within the next week. At that meeting a committee will be appointed to draw up rules and elect officers.

Columbia Rifle and Pistol Club.

San Francisco, Cal., Oct. 13.—Shell Mound Range to-day was crowded with enthusiastic shooters. A fitful wind prevented any very high scores. The following were the scores made:

Rifle, 200yds., re-entry, open to the world:

Target rifle, Kuhnle medal: F. O. Young 90, D. W. McLaughlin 88, A. Gebret 87, Dr. Rodgers 86, H. R. Crane 79, Jacobsen 75, Schultz 72.

For the Siebe all-round medal (pistol, target rifle and military rifle) F. O. Young and Dr. Rodgers are about even.

Rifle, for members only, no re-entry:

Champion class: Dr. L. O. Rodgers 90, F. O. Young 78, D. W. McLaughlin 76.

First class: P. Bohr 80, A. Gebret 79, A. B. Dorrell 78, J. E. Klein 75.

Second class: G. Schultz 80, H. R. Crane 71, G. W. Barley 69, W. T. Unfred 42.

Medals for members only, Pistol, 50yds., no re-entry:

Champion class: A. H. Pape 94, C. M. Daiss 90, F. O. Young 89, E. Hovey 88.

First class: Dr. Rodgers 89, A. B. Dorrell 89, J. E. Gorman 87, D. W. McLaughlin 83, Capt. Klein 82.

Second class: E. Jackson 76, G. W. Barley 74, Unfred 74.

Open to all comers:

Pistol, Blanding medal: Dr. Rodgers 92, J. E. Gorman 91, F. O. Young 90.

Roeel.

Miller Rifle Club.

Hoboken, N. J., Oct. 9.—At the weekly shoot of the Miller Rifle Club, held to-night at 423 Washington street, the following scores were made in preliminary practice:

Miller 239, Meyns 238, Vogel 236, Sohe 231, Scott 230, Wolter 228, Dewey 225, Messenkopf 225, Rogers 224, Dehmcke 222, Nelson 218, Kneisel 218.

A team race was then shot, Meyns and Miller captaining teams of five men. Meyns's men came out ahead by 4 points, as the following scores will show:

Meyns's team: Meyns 119, Dehmcke 112, Miles 111, Nelson 105, Rogers 110; 557.

Miller's team: Miller 117, Dewey 114, Messenkopf 111, Wolter 109, Kneisel 102; 553.

Great Shooting by Walter Winans.

A cable message from London, England, dated Oct. 17, runs as follows:

"The final shoot for the revolver championship of the North London Rifle Club took place yesterday, and was won by Walter Winans, of Baltimore, by a score largely in excess of his previous performances. This is the third year that this club has had a revolver championship shoot, and Mr. Winans has won it each year. Mr. Winans also won the revolver championship of the South London Rifle Club three weeks ago for the eighth year. In six consecutive shoots Mr. Winans made the highest possible score, and in the ten shoots necessary to complete the series he made 418 points out of a possible 420."

Trap-Shooting.

FIXTURES.

Oct. 25-26.—Seattle, Wash.—First annual tournament of the Washington State Sportsman's Association, under the auspices of the Seattle Gun Club; live birds and targets. C. F. Graff, Sec'y.

Oct. 26.—Huntington, Pa.—Fall tournament of the Huntington Gun Club; live birds and targets.

Oct. 27-30.—San Antonio, Texas.—First annual tournament of the San Antonio Gun Club; $1,000 added money. Willard L. Simpson, Sec'y.

Oct. 29-30.—Auburn, N. Y.—Annual fall tournament of the Auburn Gun Club. C. W. Tuttle, chairman of tournament committee.

Oct. 29-30.—Dexter Park, L. I.—Team shoot at live birds, restricted to clubs that hold their shoots at Dexter Park.

Oct. 30.—Elkwood Park, N. J.—Live blackbird shoot; sweepstake shooting at 10 A. M.

Nov. 5-7.—Kewanee, Ill.—Annual tournament of the Kewanee Gun Club; added money and merchandise prizes L. C. Huckins, Sec'y.

Nov. 7-8.—Wellington, Mass.—Annual fall tournament of the Boston Shooting Association. H. M. Federhen, Sec'y.

Nov. 12.—Newark, N. J.—All-day shoot of the South Side Gun Club; New Jersey Trap-Shooters' League contest in the afternoon. W. R. Hobart, Sec'y.

Nov. 27-28.—Ironton, O.—Holiday tournament of the Iron City Gun Club. H. E. Norton, Pres.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

Mr. G. M. Walden, president of the Missouri State Fish and Game Protective Association, writes us under date of Kansas City, Mo., Oct. 16, as follows: "The Mo. S. F. and G. P. Ass'n will hold its nineteenth annual convention and tournament on May 13-16, 1896, under the auspices of the Federation of Gun Clubs of Kansas City, Mo. It is the purpose of the officers of the Association, with the assistance of the Federation of Gun Clubs of Kansas City and all gun clubs of the State, to make it the greatest event ever held in the West. The features of this tournament will be the individual championship of the State; the club team shoot; the interstate championship, which takes in the States of Missouri, Iowa, Nebraska, Kansas, Texas, Oklahoma and Indian Territories. The star event of this tournament will be the championship of the United States. A purse sufficiently large will be hung up to bring together all the crackajacks of the country and to settle the much-mooted question of who is the champion wing shot of America. The next event of more than ordinary importance will be the interstate championship, for which an attractive purse will be added." (We would call Mr. Walden's attention to the fact that both the Memphis, Tenn., Gun Club and the Ohio Trap-Shooters' League have claimed the dates above mentioned.)

The programme of the San Antonio (Tex.) Gun Club's tournament, which commences to-morrow (Oct. 27), and continues until Oct. 30, has been given in a previous issue of Forest and Stream. The copy just at hand states that there will be three sets of traps in use and that shooting will commence at 8:30 each morning. Targets will be charged for at the rate of 3 cents each; live birds at 25 cents each. All target events at unknown angles. The programme is a good one, and the added money ($1,000) is divided up in a manner that is calculated to make the boys shoot. On October 29 a 25-target event, $5 entrance, has $100 added to the purse, while on the following day a 20-live-bird event, $15 entrance, will have $200 added money to the purse that will be divided among the fortunate ones.

Ferd. Van Dyke has been doing some shooting recently that is worth noting. During the second day's shoot (Oct. 10) at Reading, Pa., he dropped 9 targets out of 200 shot at, an average of 95.5. At the tournament of the Worcester, Mass., Sportsmen's Club, held on Oct. 15-16, some very high averages were made. On the first day Van Dyke was first with 156 out of 160, an average of 97.5 per cent.; Fulford was second with 155 out of 160, 96.8; Dickey was third with a percentage of 95.6, scoring 153 out of 160. On the second day Dickey took first with a precisely similar record to that made by Van Dyke the previous day, 97.5. Van Dyke on the other hand made the same average that Dickey did on the first day, 95.6. Thus these two tied for general average with the excellent totals of 309 broken out of 320 shot at, an average of 96.5.

Mr. C. W. Tuttle, of Auburn, N. Y., chairman of the sporting committee of the Auburn Gun Club, writes us under date of Oct. 15 as follows: "The Auburn, N. Y., Gun Club will hold a two day's tournament at targets on Tuesday and Wednesday, Oct. 29 and 30. The programme will consist of ten events, 20 targets each, with alternate entrance fees of $2 and $3, targets included; the whole makes a total of 200 targets per day, with a total entrance fee of $25 for each day's regular events. Nitro powder loaded shells and lunch on the ground." As the Auburn Gun Club's roster contains the names of several shooters who are in evidence at all the shoots that take place anywhere in the vicinity of that city, the club should be supported well by the kindred organizations in its neighborhood.

Louis T. Duryea will be absent during the month of November from all the shooting grounds around New York city. Those forests of Michigan which are controlled by the Turtle Lake Club will be his hunting grounds for the next thirty days. Speaking of ruffed grouse and of the numbers of them that are to be found in those forests, Duryea declares that it is no trick to kill more in one hour than he can carry comfortably. "The ruffed grouse are thicker there this year than I have ever seen quail in North Carolina," said he the other day.

The Kewanee (Ill.) Gun Club will hold a three days' tournament Nov. 5-7, both live birds and inanimates being used. The programme has not been issued as yet, but Mr. Huckins, the secretary, writes that two sets of traps will be used, added money and merchandise prizes, and premiums for high averages. The purses will be divided as follows: 10-bird events, three moneys; 15-bird events, four moneys; 20-bird events, three high guns take 50 per cent., divided 50, 30 and 20 per cent., the next three guns taking the balance in the same proportion. Mr. Huckins adds: "We are doing all that a club can do to make a successful shoot, and as we have always had a large attendance at our shoots, we expect this to be a record breaker." This shoot is open to all.

The Harvard-Yale-Princeton annual shoot will not take place this year. According to our information, the Yale athletic committee will not allow their men to shoot on account of the strained relations between the two colleges. The Harvard Gun Club has, however, sent a challenge to the Princeton Gun Club, naming Nov. 2, the morning of the Harvard-Princeton football match, as the date for the shoot. If this challenge is accepted the shoot will take the place of the annual contest.

The Greensburg, Ind., Gun Club held its first annual tournament Oct. 23 and 24. The chief prize was a diamond badge open only to shooters from Bartholomew, Decatur, Franklin, Fayette, Jennings, Johnson, Jackson, Rush, Ripley and Shelby counties of Indiana, at 50 single targets, entrance $5 and the winner to file a $200 bond to guarantee the security of the trophy.

With entries in four events numbering 94, 103, 103 and 104 respectively, and with a fifth event, a team race with an entry list of ten teams of six men each, the California Inanimate Target Association has started out on its career in splendid shape. The events shot off at its initial tournament are given elsewhere.

The monthly club shoot of the Newark Gun Club for the month of October was shot on Erb's grounds on Oct. 10. The shoot is at 10 live birds per man. There were seven entries, the men finishing in the following order: P. Jay 10, Erb and Johns 7, Geoffrey and Hollis 6, Thomas and Smith 5.

The Central Gun Club, of Long Branch, N. J., held its first fall shoot at its grounds at Branchport on Wednesday afternoon, Oct. 16. The club shoot was at 10 live birds per man, and Postmaster Japhia Van Dyke tied with Charlie Zwirlein for first place by killing 9 out of his 10.

A good many people failed to recognize the portrait we gave last week of H. P. Collins, of the DuPont Powder Company, on account of the absence of a hirsute appendage. Mr. Collins has decided that the Baltimorean breezes shall no longer daily with his whiskers.

The San Antonio, Tex., Gun Club's tournament that commences Oct. 27 and lasts four days will have a good number of entries from among the ranks of those who have been attending the tournament of the Clarke Hardware Company this week.

During the past few days the ducks that are at present sojourning in the vicinity of Mouille Point and the Huron River have been taking it easy. Jack Parker has been busily engaged running the shoot at Atlanta.

The recent club shoot of the Union Gun Club, of Springfield, N. J., held on Oct. 9, resulted as follows: Class A—E. D. Miller 27, Thomas 23 and Jackson 22. Class B—E. Sickley 27, Williams 19.

One of the chief features for next week's programme will be the five-men team race at 20 live birds per man, to be shot at Dexter Park on Tuesday and Wednesday, Oct. 29, 30.

A live-blackbird shoot is announced for Wednesday, Oct. 30, at Elkwood Park, N. J. Phil. Daly, Jr., says that he will have 1,000 birds on hand.

The Huntingdon (Pa.) Gun Club announces that it will hold its fall tournament to-day (Oct. 26); both live birds and targets will be used.

The Kirkpatrick Hardware Company, of Atlanta, Ga., is contemplating holding a target tournament in the near future.

The New York German Gun Club will enter a team in the Dexter Park tournament on Nov. 29-30.

Edward Banks.

The DuPont Tournament.

Baltimore, Md., Oct. 22.—*Special to Forest and Stream:* The DuPont tournament opened to-day at 10 A. M. in brilliant weather. Attendance of shooters not large as yet, but many not present are known to be on their way. Among those on the grounds are A. H. King and Jim Denny, of Pittsburg, Pa.; W. G. Clark, Altoona, Pa.; E. Brown, Burton, Tex.; John L. Brewer, New York; C. C. Burkhart, Buffalo, N. Y.; J. N. Porterfield, Chattanooga, Tenn.; Mr. Gibbs, South Carolina; Messrs. Upson and Bodifield, Cleveland, O.; Billy Wagner, Washington, D. C.; Messrs. Frank Class and James Timmons, Morristown, N. J.; L. A. Gemmitt, Louisville, Ky.; Ed. Fulford, Utica, N. Y.; C. E. Verges, Lowell, O.; Allen Willey, Hadlyme, Conn.; Messrs. Eddie Bingham and W. L. Shepard, Chicago; Charlie Grimm, Clear Lake, Ia.; Fred Gilbert, Spirit Lake, Ia.; R. B. Cook, Davenport, Ia.; J. M. Corning, Auburn, N. Y.; Charles Macalester, Philadelphia, Pa., and others.

The local shooters are showing up well as far as numbers are concerned. The Handicap Committee has decided not to announce the handicap in the DuPont Handicap until to-morrow night. The members of the committee present are: Jacob Pentz, A. L. Shepard, Dr. Fort, H. P. Collins and Edward Banks. Acting on the decision not to announce the handicap until to-morrow night the events on the programme marked as handicaps have been changed, each man shooting from the same mark in those events.

The DuPont Handicap is now the only handicap event of the shoot. This event will probably have in the neighborhood of fifty entries. The grounds and all arrangements are capital. H. A. Penrose is managing the shoot, and has a good lot of birds. Edward Banks.

California's Inanimate Target Shooters.

The initial tournament of the California Inanimate Target Association proved to be an entire success, and the Association is deserving of great credit for the manner in which it ran off the different events on the programme when it had so large an entry list to contend with. The shoot commenced on Oct. 6, and so great was the number of shooters that it was impossible to finish the fifth event before night put an end to the first day's sport. So far as we can learn only two sets of traps were used, which fact would fully explain the small number of events completed.

Event No. 1 was a 10-target affair, everything known, with ninety-four entries. As the following score shows there eight straights and sixteen 9s:

Shiell 10, Wetmore 10, Bolander 10, Barker 10, Webb 10, Coffin 10, Bekeart 10, Burns 10, Gross 9, O'Donnell 9, Robertson 9, Debenham 9, Allison 9, Hass 9, Karney 9, G. Anderson 9, F. Coykendall 9, Lang 9, Rice 9, Fox 9, Baker 9, Quinton 9, Cate 9, Comfort 9, Billington 8, Ricklefson 8, H. Coykendall 8, Ellis 8, Brewington 8, Sensaboy 8, Ingalls 8, Nauman 8, Liddle 8, Franzen 8, Potter 8, Fischer 8, F. Merrill 8, Lake 8, Wieders 8, Balkwill 8, Daniels 7, Crowell 7, Richards 7, Kerrison 7, Dick 7, Larke 7, Summerfield 7, Whitney 7, White 7, Street 7, Jackson 7, Slade 7, Ed Forster 7, Eugene Forster 7, Stewart 7, Andrews 7, Schaefer 7, D. Hall 7, F. Anderson 7, Brown 7, W. Ditz 7, C. Williams 7, G. Lovelace 7, Feudner 7, Haight 7, Swiveler 6, Owens 6, McMahon 6, Flint 6, M. Allen 6, McVeagh 6, Le Long 6, Trombone 6, Fanning 6, A. Allen 6, Le Long 6, W. Smith 6, Peterson 6, Voorheis 6, Blaine 6, Hynes 6, Justins 5, C. Jackson 5, Vernon 5, Shaw 4, Werner 4, Klevesahl 4, Lovelace 3.

No. 2 was at 15 targets, unknown angles. This event had 103 entries, the premiums being three merchandise prizes. Slade, Shiell, Bekeart and Burns tied on 14 for the gun, Shiell winning the shoot-off which was decided in the next event. Merrill, of Stockton, shot out the 13s for the second prize. The scores were as follows:

Slade 14, Shiell 14, Bekeart 14, Burns 14, Webb 13, Fox 13, Karney 13, F. Merrill 13, C. Merrill 13, Dr. Ayres 13, Barker 12, Franzen 12, Eugene Forster 12, A. Lovelace 12, Billington 12, E. Richards 12, G. Anderson 12, Blaine 12, Rice 12, Murdock 12, Ingalls 12, Feudner 12, Nauman 12, Whitney 11, Comfort 11, Hynes 11, Lake 11, Trombone 11, Sensaboy 11, W. Ditz 11, Lang 11, Brown 11, Haas 11, Allison 11, Stewart 11, Owens 11, Shaw 11, Jackson 10, Crowell 10, Robertson 10, Andrus 10, Ricklefson 10, Flint 10, Hall 10, Williams 10, Lovelace 10, Young 10, Coffin 10, Fanning 10, Potter 10, Kerrison 10, Winders 10, Balkwill 10, Dick 10, Cate 10, Trafton 10, Durst 10, Fischer 9, Bolander 9, Summerfield 9, Gross 9, O'Donnell 9, Vernon 9, Holmes 9, Ellis 9, Liddle 9, Wetmore 8, Debenham 8, M. Allen 8, C. Jackson 8, Smith 8, Lehrke 8, Peterson 8, Daniels 7, Quinton 7, Rodriguez 7, G. Ditz 7, Loujers 7, Swiveler 7, White 7, Ed. Forster 7, H. Coykendall 7, Brewington 7, McVeagh 7, Street 6, McMahon 6, F. Anderson 6, Newton 6, Martin 6, Wenzel 6, Thorn 6.

The third event was at 20 targets, everything known, for the Gold Dust diamond medal and nine other prizes. This event had the same number of entries as No. 2, 103. Of all that number only one, Shiell, went straight, thus winning the diamond medal without a shoot-off. Scores: Shiell 20, Lovelace 18, Trombone 18, Feudner 18, Nauman 18, C. Merrill 18, Winders 18, Burns 17, Karney 17, Lake 17, Cate 17, Barker 17, G. Anderson 17, Holmes 17, McVeagh 17, Franzen 16, Daniels 16, F. Merrill 16, Richards 16, Balkwill 16, Dick 16, Blaine 16, Loujers 16, Slade 16, Ed. Forster 16, Webb 16, Stewart 16, Andrus 16, F. Coykendall 16, Lang 16, Brewington 16, Sensaboy 16, Ingalls 16, Fanning 16, A. Allen 15, A. Lovelace 15, Quinton 15, G. Ditz 15, Durst 15, Jackson 15, McMahon 15, Robertson 15, Haas 15, Rice 15, Crowell 14, Potter 14, Summerfield 14, Lehrke 14, Whitney 14, Comfort 14, Blander 14, O'Donnell 14, Wetmore 14, Billington 14, Allison 14, Ellis 14, Fox 14, Baker 14, Haight 14, Fischer 13, Kerrison 13, Murdock 13, Baum 13, Peterson 13, Flint 13, H. Coykendall 13, W. Ditz 13, Williams 13, Young 13, Newton 13, Liddle 13, Shaw 12, Voorheis 12, Justins 12, Swiveler 12, White 12, Schaefer 12, Ricklefson 12, Coffin 12, Debenham 11, Brown 11, Bekeart 11, W. Smith 11, Klevesahl 11, Trafton 11, M. Allen 10, Wenzel 10, Jackson 10, Dr. Ayres 10, Rodriguez 10.

The next event, No. 4, was the 6-men team race, 20 targets per man. Ten teams entered, the Olympic and the Stockton team tieing for the trophy with a score of 95 each. The tie was shot off at a similar number of targets, the Stockton team winning with a score of 94 to 93. The Olympic team thus won second place. Third place was taken by the San Joaquin team, which beat the Oakland team on the shoot-off by the score of 85 to 81. The team scores were:

Stockton Gun Club—Haas 18, Blaine 17, Merrill 16, Richards 16, Ellis 14, Balkwill 14; total 95.

Olympic—Fanning 19, Feudner 18, Haight 16, Liddle 16, Bekeart 14, Nauman and Street 12; total 95.

San Joaquin Valley—Shiell 19, Rice 17, G. Lovelace 17, Fox 14, Sensaboy 14, McVeagh 11; total 92.

Oakland—Ingalls 17, Young 17, Trombone 17, Newton 15, Coffin 14, Baker 12; total 92.

Garden City—G. Anderson 18, F. Coykendall 17, Flint 17, Barker 14, Holmes 13, Hall 12; total 91.

Electric—Durst 18, Forster 17, Wetmore 15, Murdock 14, Slade 13, Lake 11; total 88.

Empire—Webb 17, Stewart 16, Billington 16, Debenham 14, Andrus 13, Allison 12; total 88.

Lincoln—Franzen 19, Karney 17, Burns 16, Daniels 14, Cate 13, Allen 10; total 89.

Nimrod—Winders 14, Ricklefson 13, Lehrke 12, Schaeffer 11, Ayres 11, Le Long 7; total 68.

Watsonville—Brewington 18, Smith 12, Summerfield 11, Trafton 11, Werner 8, Rodriguez 5; total 60.

The last event of the day, No. 5, was unfinished at the close of the day, four squads being left to shoot their scores. This event, which had 104 entries, was at 15 targets, unknown angles, use of both barrels, second barrel breaks counting one-half. The results were as follows:

Nauman 15, E. Foster 14, J. H. Durst 14, Ingalls 14, Daniels 14, Vernon 13½, Webb 13½, Shiell 13½, Haight 13½, C. Merrill 13½, Lake 13½, Billington 13, Brown 13, Burns 13, Swiveler 12½, Barker 12½, Slade 12, Baum 12, J. Coykendall 12, Lang 12, W. Ditz 12, Trombone 12, Coffin 12, Feudner 12, Fischer 12, F. Merrill 12, Richards 12, Quinton 12, McMahon 11½, Wetmore 11½, Debenham 11½, Andrus 11½, Holmes 11½, Kerrison 11½, McVeagh 11, Bekeart 11, Liddle 11, Fanning 11, Franzen 11, Wenzel 11, H. Lovelace 11, E. Foster 10½, Robertson 10½, Ellis 10½, Lovelace 10½, Rice 10½, Karney 10½, Peterson 10, Bolander 10, O'Donnell 10, G. Anderson 10, D. Hall 10, F. Anderson 10, Brewington 10, Baker 10, Jackson 9½, F. Coykendall 9½, Williams 9½, Sensaboy 9½, Stewart 9, Newton 9, Street 8, Whitney 8, Flint 8, A. Allen 8, Le Long 8, Young 7½, P. Jackson 7, Crowell 6½, Dipsett 6½, White 6, Potter 6, Allison 5, Martin 3.

Two protests were made to the tournament committee during the day, both being lodged in regard to the team race. The first was made by the Stockton Club when Street was substituted for Nauman on the Olympic team, Nauman having been overcome at the score and led away in a fainting condition. The protest was afterward withdrawn before it had come up for consideration by the committee. The second was the protest of the Garden City Cyclers' Gun Club against the award of second prize to the Olympic Club, on the ground that the team race was class shooting, like the other events on the programme. The protest was disallowed at a meeting of the tournament committee held the same night.

The best shooting of the day was done by J. W. Shiell, of Traver, one of the San Joaquin Valley Gun Club's team. He broke 50 straight, and during the day broke 78 out of 85 shot at.

Herron Hill Gun Club.

Thirteen shooters took part in a recent live-bird shoot promoted by the Herron Hill Gun Club, of Pittsburg, Pa. The weather was cold and unpleasant, nevertheless some good scores were made. C. A. May scored 28 out of 30 shot at in the regular events; McWhorter made the second best record with 27, and Wall third with 26, out of the same number of birds shot at. All the regular events were, 10 birds, $10, birds extra, three high guns to win. No. 2 was a handicap, the following being the marks each man stood at: Bessemer, A. H. King, May, Shaffer and Wall, 30yds.; McWhorter 29; J. O'H. Denny, Fargo and W. S. King, 28; Cleveland, F. Denny, DuBray and Vandergrift, 27. Nos. 4 and 5 were miss-and-outs, $2 entrance, birds running shot in No. 5. Scores:

Oct. 18.—The practice shoot of the Herron Hill Gun Club held to-day was well attended. Three regular events, two 10 bird events and one 8 bird event, were shot off, in addition to a miss-and-out which brought the proceedings to a close. No. 1 was a handicap, the mark at which each shooter stood being as follows: A. H. King, May, McWhorter, Shaffer, W. G. Clark, T. F. Wall, W. S King and Bessemer, 30yds; F. Denny and Clover, 28; Fargo and McPherson 27. Alex. King made the best record, killing 35 out of 36 shot at. Scores:

Shooting at Watson's Park.

Chicago, Ill., Oct. 17.—The following are the recent scores made at Watson's Park:

Oct. 3.—The Chicago Shooting Club was represented this afternoon by three members. The club shoot at 15 birds, with allowance handicap, was productive of a long struggle, Hamiline and Ehlers shooting at 45 birds each before the question was settled as to which was the winner.

Oct. 16.—The Audubon Club's monthly shoot, held this afternoon, was well attended, 12 members taking part in the club shoot. F. A. Place and F. R. Bissell had a hard fight, Place eventually winning after 40 birds had been shot at by each of them. This event, like the club shoot of the Chicago Shooting Club, is at 15 live birds with an allowance handicap, nobody being entitled to score more than a straight score—15. Four men tied, having scored the limit. In the first round of the ties Dr. Frothingham and Price fell out, leaving Place and Bissell to fight it to a finish. Place won at the end of the 10th round in the next series, Bissell retiring when he had lost all chance of winning. Scores were:

L M Hamiline	1122121220222202—13+3—	limit.*
H Ehlers	2121222211222221— 15+1—	
M J Eich	1021201101111111—12+2—14	
First ties:		
L M Hamiline	2202221212101121—13+3—	limit.
H Ehlers	1122111201111111—14+1—	
Second ties:		
L M Hamiline	1021212111121201—13+3—	limit.
H Ehlers	1020121211112202—12+1—13	

* No shooter can score more than a straight score—15.

Oct. 15.—The following scores were shot this day, the shooting being for practice only:

A P Houston	2211211120111102111121211—21
	0112122102111111121111121—23

*Place	1212222210 — 9	

* Place wins the October shoot. L. M. Hamiline won the tie not shot off at the September shoot. Ravelrigg.

Shooting at Allentown.

Allentown, Pa., Oct. 16.—The scores made in to-day's shoot of the John F. Weiler Gun Club were as follows:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	10	10	10	10	20	15	20
Bell	9	10	7	9	10	8	18	13	16
Ulmer	5	7	6	6	5	10	12	12	16
Acker	6	6	4	5	5	10	13	7	11
Brey	..	..	..	..	9	9	13	15	18
Walker	..	..	..	..	..	..	4	..	..
Wood	..	..	..	..	..	..	..	..	15
Hufford	..	..	..	..	..	..	..	..	10

The following live-bird scores were also shot:

No. 1, 5 live birds: Brey, Acker and Bell 5; Ulmer and Weiler 4; Walker 2.

No. 2, 7 live birds: Brey and Weiler 7; Fehr and Ulmer 6; Bell and Acker 5.

The President's Cup at Carteret.

THE second contest for the president's cup at the Carteret Club took place on Wednesday last, Oct. 16. Six members entered for the cup race, their names being: J. Seaver Page, George Work, J. P. Knapp, L. T. Duryea, W. H. Meade. As Knapp and Duryea each had four wins to their credit, the contest was full of interest to the others, another win on the part of either of the two meaning the ownership of the cup. One of the conditions of the race is that any one having four wins shall shoot thereafter in all cup contests from the 32yds. mark. This condition accounts for Duryea and Knapp giving George Work a yard.

The afternoon was a lovely one, a bright sun making it very pleasant out of doors where the wind didn't strike one. The birds were a good lot, and carried shot in a most remarkable way, while Phil Lumbreyer's "starters" sent the birds off from the trap in a manner that is very seldom seen. Notwithstanding the bright sun, the light at the Carteret grounds, which overlook the waters of Newark Bay, was rather puzzling, especially when a bird rose quickly against the water background. This, together with the good quality of the birds, accounted for the comparatively low scores made. As far as shot-carrying qualities were concerned the birds which were drawn by Page, Duryea and Knapp in the 10th round (the shooters going to the score in that order) were wonders, each bird only just managing to get over the boundary after being centered with both barrels, the wings being untouched.

Work shot well and scored a win after dropping his 4th bird. When Duryea lost his 5th bird, an easy left-quartering incomer, and also his 10th, it looked as if Knapp, who was straight up to that time, had more than a good chance of carrying off the cup. He quickly changed the aspect of affairs, losing his 10th and 12th birds in rapid "suction," as the boys would say. That Work could not afford to drop a bird is shown by the score, Page, Knapp and Duryea being right after him with scores of 18 out of 20. The result of this day's contest gives Work three wins. Duryea will be away when the next two contests, those in November, take place. If he is to have another chance for the cup somebody will have to prevent Work from taking two straight, or Knapp from scoring a single victory.

It is seldom, no matter how hard the birds are, or no matter how poor the light is, that such low scores are made at Carteret. The records show that out of a total of 237 birds shot at, only 186 were scored, an average of a fraction over 78 per cent. In the cup shoot, 168 were shot and 30 of them lost. A feature of that race was the frequency with which Nos. 2 and 3 traps were pulled. No. 2 was pulled 42 times, 12 out of the 42 birds escaping, two-fifths of the lost birds in this race leaving No. 2 trap.

The way the traps fell to each shooter was as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Work	6	3	3	3	5	20
Duryea	2	5	6	3	4	20
Knapp	3	4	5	7	1	20
Page	1	3	8	6	2	20
Stafford	5	5	2	2	4	18
Hart	4	6	2	1	2	15
Chapin	5	2	3	1	3	14
Butler	2	7	2	2	0	13
Edey	2	3	4	2	3	14
Meade	4	4	3	0	3	14
	34	42	38	27	27	168

The scores in detail, which follow, tell the rest of the story.

President's cup race, 20 live birds per man, handicap rise, 50yds. boundary:

Meade (28)		0 1 ● —1	
Butler (28)		1 ● ● —1	
Hart (25)		0 2 2 0 —2	

In the first sweep Work won first money with 5 straight. The ties on three out of four were shot off in the cup shoot, Knapp winning. The second sweep, which followed the shoot for the president's cup, resulted in a very popular win, Stafford shooting out all the cracks and taking first money with a clean score of 5 one-barrel kills. Including his last 7 birds in the cup shoot, this made a record of 11 one-barrel kills out of 12 birds shot at.

The sweep was a peculiar one. Work, Knapp, Duryea and Page had just brought the cup contest to a close with some very good shooting, their respective last runs being: 16, 8, 10 and 10. The first round of the sweep saw six out of the 10 entries score cyphers, the four above named being among the number. At the end of the third round there was but one straight—Stafford. The latter went to the score for his fourth bird with a joke on his lips: "Now watch Stafford fall down!" But he didn't; he drew a good fast driver, which he dropped in good time. There was a lot of chaff going on, and when he went to the score for his last bird he joined in, saying: "Here's where Stafford falls in a fit!" Instead of a fit he scored his bird and won the pot amid generous applause.

In our last issue we gave the score of the Duryea-Furgueson match, shot at Woodlawn Park, L. I., on Oct. 12. It will be remembered that Duryea killed 96 out of his 100, Furgueson retiring at the end of the 60th round with the privilege of shooting up should he have any show of winning; he had dropped 8 out of 60, while Duryea had only dropped 3. This is the way the New York *Sun* of Oct. 13 graphically told the story: "Trap-shooters saw a fine exhibition of skill at New Utrecht Park yesterday in the match for $250 a side between L. T. Davenport and J. S. Furgueson. Although the rain made the sighting poor, the scores were very high, Davenport grassing all but 4 in the first 60, and Furgueson stopping 8 from the same number. Then the New Utrecht shot withdrew, the Larchmont man breaking his gun out to the end, and making the excellent score of 96 killed in the century."

McIlhany Won the Championship.

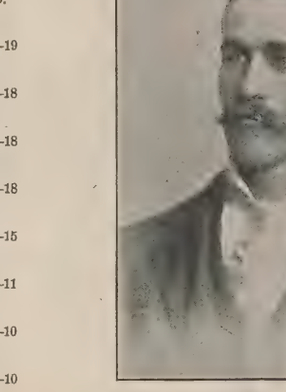
WEIR CITY, Kan., Oct. 17.—The initial contest for the trophy emblematic of the live-bird championship of Kansas, donated by the Business Men's Gun Club of this enterprising little city, was brought to a close to-day.

It was not until the club had received the assurance of nearly all the shooters in the State, pledging themselves to participate in the contest, and urging upon them to hold a shoot of this kind, that the club decided to pull off so important an event. Once having decided to hold the shoot, it set about making preparations for the same. Everything possible was done to make the shoot attractive, so as to bring out as large an attendance as possible.

THE STATE CHAMPIONSHIP.

After having received the assurance of at least thirty entries the club purchased an elegant trophy in the shape of a solid gold watch charm, nearly the size of a half dollar. On one side of it, in the center, is a pigeon embossed in gold; around the edge on a raised gold band are eight diamonds. The other side bears the inscription, "Live Bird Championship, State of Kansas," on the outer rim. In the center is a monogram in raised letters composed of the initials of the Business Men's Gun Club. The trophy is both artistic and unique in design, something that the club as well as the winner may be proud of. Its actual cost was $100 65.

That the birds should be of the best, the club engaged the services of Elliott Bros., of Kansas City, to provide the same. Mr. R. S. Elliott was on the ground with an ample supply of first-class pigeons, the trapping of which he personally supervised. The arrangements were modern, and such as are found only at up-to-date shooting parks. A set of target traps were also running and a programme had been arranged for them, but the entries in these events were very light; once the championship contest had begun all interest centered in it.



LIST OF THE VISITORS.

The attendance was not what the club merited; otherwise the shoot was a success. The weather was perfect, everything being in favor of the birds, which were as fine a lot as ever were trapped. These were charged for at the moderate rate of 18 cents apiece.

The visiting shooters in attendance were J. W. Sexton, Leavenworth, Kan.; B. O. Running, Atchison, Kan.; Geo. Stevenson and G. R. Hall, Waterville, Kan.; E. W. Hoffman, C. M. Sumner, J. L. Horn and H. T. Leeman, Galena, Kan.; J. M. Hershey, Osage City, Kan.; Ben Best, Columbus, Kan.; James Stevenson, Bonita, Kan.; Y. R. Kinmouth and W. G. Sergeant, Joplin, Mo.; W. L. Haskell, Atchison, Kan.

THE BIG EVENT.

The big race did not begin until 3 P. M. on the first day, and it was about that time on the second day before it was finished. There were only thirteen entries, eleven of whom finished. Despite the small number of entries, the race could not have been more interesting if three times that number had participated. Taking the quality of the birds into consideration, and the favorable wind, the shooting was nothing short of remarkable. Only 15 birds was shot by each contestant on the first day. At that time McIlhany and Sexton were the ones who had scored straight, while Hershey and Stevenson had each lost one. At the 25th round McIlhany and Sexton were still straight,

CHAMPION W. W. M'ILHANY.

and it became evident that the race would narrow down to the two, as their nearest competitor, Stevenson, was three birds behind. Not until the 30th round did either of the leaders fail to score. Then McIlhany lost a hard driver from No. 5 trap that quartered a little to the right. This bird was hit hard with both barrels, but flew out of bounds. Sexton had similar luck on his 31st bird and the leaders were tied again; but only for a little while, as Sexton's 33d bird beat him out with the loss of a few feathers. He followed this up by slobbering an easy incomer that got over the dead line. This put McIlhany two ahead. He was shooting in capital form, his time being excellent. His fast birds he was killing close to the trap, while on his slow birds and those which had an incoming tendency he was cool and deliberate. Just when every one expected him to run out without losing any more he lost his 47th bird. The next one was nicely killed, but his 49th, although knocked down in bounds, got out after Mac had expended all his strategy in attempting to retrieve it. When this bird got away a groan went up from the crowd, whose sympathies were all with the home man, as Sexton was again tied with him. After his little bad streak previously mentioned, he settled down and was doing just as brilliant work as McIlhany. Fate was against him, however, for he lost his final bird. This was as hard a bird as ever left a trap and one of the kind that generally escapes.

As Sexton preceded McIlhany, it was only necessary for him to kill his last bird to win the trophy. He drew one from No. 1 trap that was equally as hard as the one that threw Sexton down. This bird towered and then quartered slightly to the right, escaping the first barrel; it was knocked down with the second, falling close to the boundary, being retrieved by Mr. Robert Elliott in a skillful manner. When the suspense was over, a great shout went up from the crowd (among whom were a large number ladies); McIlhany being declared the winner with the fine score of 47.

Sexton of course finished second with 46, which is a very creditable score, for he tells me that altogether he had not shot at as many as 50 pigeons previous to this shoot. Hoffman was third with 45, he missed his 6th, 8th, 9th and 10th birds, and then killed out; his 29th, however, died out of bounds. Hoffman is also a new shooter, who began shooting at the trap less than three months ago. Hershey, the veteran live-bird shot of Kansas, finished fourth with 44. Hall, another new beginner from Waterville, was fifth with 43. Stevenson and Running, also new men at the trap, being next with 42.

Dr. King and Goddard had a hat bet on their respective scores. This was, however, changed to a year's subscription to FOREST AND STREAM when Goddard won, as he had just bought a new hat and was not taking the paper, while the reverse was the case with the Doctor. The latter was not shooting in good form from the fact that he is a very busy man, being twice called away from the score to attend a sick patient.

McIlhany's win was a very popular one and justly so, as it was principally through his efforts that the contest was brought about. He is one of Weir City's representative citizens and has done much to popularize the sport in Kansas. Not only is he a good shot, but he can also write interestingly on the subject. Another reason why the majority wanted him to win was that he virtually managed the shoot and was shooting under a strain all the time.

Sexton shot well through the whole shoot. He made the best average in the target events and on the last day missed but one target.

The following is the score of the championship contest in detail:

Live bird championship of the State of Kansas. Conditions: 50 live birds per man, A. S. A. rules to govern; entrance the price of the birds, optional sweep of $5:

Trap score type—Copyright, 1895, by Forest and Stream Publishing Co.

PAUL R. LITZKE.

The Honest Yeomen Do Up the Rochesters.

NORTH GREECE, N. Y., Oct. 17.—The farmers win again. The last of the three matches between the Monitou Beach Rod and Gun Club and the Rochester Rod and Gun Club was shot yesterday on the latter's grounds, the Manitou Club winning the last two matches. The Rochester Club considered themselves the champions of the State and invincible, but when they buck against the "Honest Yeoman" from the rural districts, they find skill, pluck and endurance as well as superior marksmanship to contend with which is hard to overcome.

Manitou Team.

JOHN M. LOWDEN.

It is stated that the first team of the Emerald Gun Club, of New York city, that will represent that club in the Dexter Park shoot the latter part of this month, will be constituted as follows: L. H. Schortemeier, Dr. G. V. Hudson, R. Phister, C. W. Floyd and Fletcher Walters. This makes a strong team, and the other clubs will have no easy task in defeating it.

The Dayton Team Won.

FREEHOLD, N. J., Oct. 12.—Twelve-men teams from Dayton and New Brunswick, N. J., met a similar number of men from the home club this afternoon. The team races between these three clubs have been very frequent, but the results are usually close enough to warrant any amount of interest in a future contest. The Brunswick Gun Club arrived two men short, so it was agreed that those two men, Randall and Blish, should shoot off their scores at the next meeting of the clubs.

The men from Dayton, "farmers," as they term themselves, made the excellent total of 305 out of 360 shot at, the conditions of the race being 30 targets per man, unknown angles. P. Emmons and F. Van Dyke both made clean scores for the Dayton team, while three other members rolled up totals of 27. Sperling and Voorhees led the Brunswick team with 26 each, Oakley being second with 27, G. S. McAlpin and H. H. Stevens, the secretary of the club, coming next with 26 to their credit. For Freehold, Burtis and Ivins scored 27, Hall and Snyder making 26 each.

The totals show that if the two Brunswick men yet to shoot break straight, their club will win by three targets. The Dayton men, however, do not feel at all nervous. The scores were:

Dayton.

Blish and Randall, two members of the Brunswick Gun Club's team, will shoot their scores in this race at the next shoot.

New York German Gun Club.

THE New York German Gun Club held its regular monthly shoot on Wednesday, Oct. 16. There was a good attendance of members, eighteen putting down their names for the club shoot. The weather was nice and bright, while there was enough air stirring to make the birds lively.

Four months ago the above-named gun club took in as a member L. H. Schortemeier, a gentleman whose name is enrolled on the roster of more gun clubs in the vicinity of New York city than any other two men. Schorty is a good shot at either live birds or targets, and has proved to the members of that club that he can win a badge in about as quick a time as the conditions will permit. The club contest is at 8 live birds; three wins are necessary before the first badge becomes the property of any one shooter. Schorty has shot for it four times and has now recorded the three wins required, winning the badge outright on the above date. The first shoot he took part in was a cinch for Schorty. The rules call for a new member to stand at 21yds.; even with such an advantage, he had to hustle to win from Dr. G. V. Hudson, who was conceding him 9yds., as demanded by the rules, the Doctor having two wins to his credit at that time. The next shoot resulted also in a win for Schorty, who was handicapped at the 25yds. mark. In the third shoot which he took part in his handicap was 30yds.; John Schlicht won this time, Schorty's last bird dropping dead out of bounds.

That brings us up to to-day's match. Schorty, at 30yds., tied with Bondon, who stood at 21yds. Ties are shot off at 3 birds, then miss and out, with increasing handicap. Schorty won by killing his fourth bird from the 33yds mark. The scores were as follows:

L H Schortemeier (30)	12222212—8	J Schlicht (30)	21102202—6
M Bondon (21)	12221111—8	E Weidman (25)	01111102—6
Dr G V Hudson (30)	21121201—7	J Radle (21)	21210110—6
J Wellbrock (30)	11202211—7	J Frazer (30)	11210010—
H Thomford (30)	22220122—7	S C Edwards (30)	22001120—5
P Leibinger (25)	11210221—7	A Busch (25)	00211220—5
J Boesenecker (25)	01112111—7	J F C Elfers (21)	02100022—4
S J Held (25)	11121110—7	F Kronsbery (21)	10100021—4
A Schmitt (30)	22021101—6	J Messmann (21)	00000000—0

Shoot-off of ties:

*L H Schortemeier	1221—4	H Thomford	221w—3
*M Bondon	1110—3	P Leibinger	120 —2
Dr G V Hudson	1220—3	J Boesenecker	0 —0
*J Wellbrock	1221—4	S J Held	w

* Schortemeier wins first medal, Bondon second medal and Wellbrock third medal.

Audubon Park Open to All.

BUFFALO, N. Y., Oct. 16.—Audubon Park open shoot, held every Wednesday.

No. 1, 10 live birds, 2 moneys, 60 and 40 per cent., entry $5, American Association rules:

O Besser	1110l1•111— 8	A Krotz	21121•2101— 8
H Kirkover	2212222111—10	B F Smith	221•212122— 9
E C Edwards	1212020222— 8		

No. 2, 7 live birds, $3 50, 2 moneys, 60 and 40 per cent.:

O Besser	221011•—5	A Krotz	1•0111•—4
H Kirkover	1112122—7	B F Smith	111••01—4
E C Edwards	0211111—6		

No. 3, 5 live birds, $2.50, 2 moneys, 60 and 40 per cent.:

O Besser	01122—4	A Krotz	0•222—3
H Kirkover	21222—5	E C Edwards	10112—4
B F Smith	1112•—4	Meyers	22020—3

No. 4, miss-and-out, 50 cents entry, 25 cents additional for each bird:

H Kirkover	1222•—4	E C Edwards	11122212—8
B F Smith	1121•—4	O Besser	11112220—7

No. 5, 10 bluerocks, known traps, unknown angles; entrance $1; American Association rules; 2 moneys:

O Besser	1110110101—7	H Kirkover	1011101101—7
E C Edwards	0011111111—8	B F Smith	1111111011—9

No. 6, same as No. 5:

O Besser	1111000111—7	H Kirkover	1101110101—7
Edwards	1111001111—8	B F Smith	1111111101—9

No. 7, same as No. 6; 1 money:

O Besser	1111111111—10	B F Smith	1111111110— 9
E C Edwards	1111111110— 9		

No. 8, 5 pairs doubles, entrance $1, 2 moneys:

O Besser	10 10 10 10 11—6	B F Smith	11 01 11 11 10—8
E C Edwards	00 10 10 11 10—5	H Kirkover	11 01 11 01 10—7

The was rather a small attendance on account of the day being raw and cold and threatening rain; but those who did come out enjoyed the afternoon hugely. There is a shoot held here every Wednesday and open to all, so if there chance to be any shooters stopping over in Buffalo that day we would be pleased to have them call.

B. F. SMITH.

Emerald Gun Club.

THE October shoot of the Emerald Gun Club of New York city was held on Tuesday, Oct. 15, 27 members being present. Out of this number 5 scored their 10 birds, while no less than 10 retired with scores of 9 each. The names of the shooters, their handicaps and the score each one made, run as follows:

G E Greiff (30)	10	J H Moore (30)	9
Dr G V Hudson (28)	10	F W Place (28)	9
R Phister (30)	10	L H Shortemeier (30)	9
C Engel (25)	10	J H Voss (30)	9
R Regan (25)	10	E A Vroome (28)	9
B Amend (25)	9	C Wash (28)	9

W Hartye (28)	7		
T Codey (28)	7		
N Maesel (25)	6		
F Hamilton (25)	5		
C Maesel (25)	5		
T Purcell (25)	5		

The Elizabeth Bi-Monthly.

THE Elizabeth, N. J., Gun Club held its fourth bi-monthly shoot on Oct. 16-17. The weather on both days was all that could be asked at this time of the year. The second day, live-bird day, was of the "made-to-order" kind, a brisk wind blowing all day and aiding the birds very materially. The attendance on both days was decidedly encouraging.

Twenty-seven shooters took part in the target events on the first day, 2,160 targets being thrown during the day. The four best averages were as follows:

	Shot at.	Broke.	Average.		Shot at.	Broke.	Average.
Dutchy	135	124	91.8	W Smith	150	130	86.6
E Sickley	140	125	89.2	Wyatt	135	116	85.9

The scores made by all the shooters were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	15	10	20	15	20	15	25	10	10	10	10

Waterbury	..	..	..	..	..	..	..	..	14	4	0	..	4
Trowbridge	..	..	..	..	..	..	..	..	..	4	..	..	..

No. 1 was at known angles; No. 4 was at traps in reversed order; No. 6, expert system, use of both barrels; all the rest were at unknown angles.

Thursday, Oct. 17, was, as stated above, a perfect day for shooting live birds. As a natural result, the turnout of shooters was quite satisfactory, 12 entries being obtained in the 25-bird race. Among those present were A. L. Ivins, Seabright, N. J.; Billy Sigler, Montclair, N. J.; Charlie Zwirlein, Yardville, N. J.; Eddie Hill, Trenton, N. J.; M. Herrington, New York, the representative of the W. A. powder; Compton and Smith, of Roselle, N. J.; Sam Castle, Newark, N. J., etc. The Elizabeth club was represented by Aaron Woodruff, Ross, Batsch, etc. Charlie Heddon, of Newark, acted satisfactorily in the capacity of referee. The scores made were as below:

	No. 1:	No. 2:
Woodruff	2222212—7	1112211211—10
Ivins	1221222—7	2002111221— 8
Conklin	1220110—5	1102110200— 6
Thomas	0211112—6	1202221110— 8
Batsch	2110122—6	2022222211— 9
Herrington		1202102021— 7
Hill		2221122001— 8
Sigler		0211121201— 8
Sisty		2111112111—10
Zwirlein		0102212111— 8
Carman		2221002012— 7
Wyatt		2220111000— 6

No 3, live birds, handicap, $10 entrance, birds extra:

Ivins (30)	2022211212222222222221212—24
Batsch (29)	2211212202022122222222121—23
Compton (29)	2201120222221212121211222—23
Hill (30)	2121122211221222211202121O—23
Ross (28)	1011112211112111211011112—23
Sigler (28)	2111120112 2112211012111—23
Sims (28)	1112210211222120202222112—22
Woodruff (29)	1201221101212111221102112—22
Herrington (28)	1121121221220222102022202—21
Smith (28)	0122112211220121211231O122—21
Zwirlein (29)	1112122020111122221210012—21
Castle (28)	2102012112210021112112110—20

No. 1 was at 7 birds, $5, birds included; No. 2 at 10 birds, $5, birds extra.

From the above scores it will be seen that Ivins did some of the best shooting of the day, apart from winning first money alone in the big event with 24 out of 25. He missed his second bird in that event, but killed his last 23 straight. In all he scored 39 out of 42 shot at. Aaron Woodruff made the same record, going straight in the two first events, but dropping three in the 25-bird race. Eddie Hill went straight in this event up to the close of the 19th round; he then dropped his 20th and 25th birds. The purse was divided into four moneys, class shooting, the scores paying as follows: 24 paid $18, 23 paid $7.20, 22 paid $12 and 21 paid $4. Every shooter but one got money out of the purse.

Lynchburg Gun Club.

LYNCHBURG, Va., Oct. 14.—The regular weekly shoot of the Lynchburg Gun Club was held this afternoon. The club entertained as its guests N. E. Money, of the American E. C. Powder Company; Capt. B. A. Bartlett, of the Burgess Gun Co., of Buffalo, N. Y., and T. H. Keller, of the U. S. Cartridge Co. So far as it could—the notice being short—the club did its best to make things pleasant for the visitors. Members of the brotherhood should remember that it is always a pleasure to the Lynchburg Gun Club to have them pay it a visit, while we endeavor at all times to make their stay among us pleasant and enjoyable. From the following scores it will be noticed that Noel Money broke 115 out of 125. Captain Bartlett being second with 113 breaks out of the same number. Scores:

F. M. D.

Jerseyville Scores.

JERSEYVILLE, Ill., Oct. 15.—Following are the scores made in sweepstake shoots here to-day. The birds were a good, strong lot, a large percentage turning their tails to the score. A strong breeze was blowing across the trap. American Association rules:

No. 1, 10 live birds, $2 entrance:

Edwards	2211202120—8	Potter	2001202210—6
Felter	0222002002—5	Greene	2102202002—6
Hansell	0000212210—5	Pike	0020002220—5
Dundson	1110011110—7	Webb	0122020000—4
Berdun	0210111012—7		

No. 2, 10 live birds, $2 entrance:

Dundson	1002020222— 6	Greene	2222201020— 7
Hansell	2202122212— 9	Pike	2 01 200000— 3
Felter	0212020232— 7	Berdun	2022001220— 6
Webb	2211221132—10	Potter	2021011122— 8

No. 3, 10 live birds, $2 entrance:

Felter	1021100010— 5	Potter	1101001201—6
Dundson	1111010221— 8	Greene	0000121102—5
Webb	1011120221—8	Edwards	0202222012—7

All ties divided. These scores are rather low because the boys have allowed their guns to get rusty of late. However, there is talk of reorganizing the gun club, and then the boys intend to make great scores at the bluerock traps.

L. S. HANSELL.

Cook County Trap-Shooters' League.

LAST SHOOT OF THE SEASON.

CHICAGO, Ill., Oct. 19.—The closing contest of the Cook County Trap-Shooters' League took place to-day on the grounds of the Garfield Gun Club. The weather was cold, chilling a shooter clear through before he had finished his score, the wind too was high, making the targets hard to hit. The shooting of the Eureka team in that high wind was of the championship order, as it broke 134 out of 150 at unknown angles, or an average of 89.3, scoring the highest number broken in a league shoot to date. The Garfield team was second with 122 breaks, an average of 81.3.

The league contests at targets are closed for the season, but it will probably have some live-bird shoots provided for in its constitution.

Scores in to-day's race:

Eureka.

Cobweb Gun Club.

NEW YORK, Oct. 17.—The members of the Cobweb Gun Club held their first monthly medal shoot to-day on their new grounds at Baychester, N. Y. Mr. C. L. Burgess, the veteran pigeon shot of Washington, D. C., acted as referee. The weather was bright and clear, with a high northeast wind. The scores made were as follows:

Class A (30yds.).

G E Greiff	22222—5	J Fay	11200—3
J Loomis	11021—4	P McKeon	21200—3
J Pilkington	10121—4	C Zahn	12100—3

J Brown	02010—2	F Hennessy	00100—1
J Gerhardt	20•02—2	R Hughes	01000—1

In Class A Greiff won the medal and the special prize. The Class B medal and special prize went to F Hendrick on the shoot-off, as he killed 3 straight; Donnelly and Kerker each missed 1 of their 3 tie birds, while Jarvis lost 2 out of his 3. Bannon won the Class C medal from his solitary opponent, while R. Magee won the Class Z medal with 3 out of 5, defeating seven other shooters in his class.

F. A. KERKER, Secretary.

Manitou Wins at Rochester.

ROCHESTER, N. Y., Oct. 16.—The Rochester Rod and Gun Club shot a team race to-day with the Manitou Gun Club. The teams consisted of seven men each, 20 targets per man, unknown angles. Manitou won by 6 breaks, scoring 119 to 113. Rochester was unable to put her best team in the field owing to the absence of several of her best team shots. The scores made were:

Manitou.

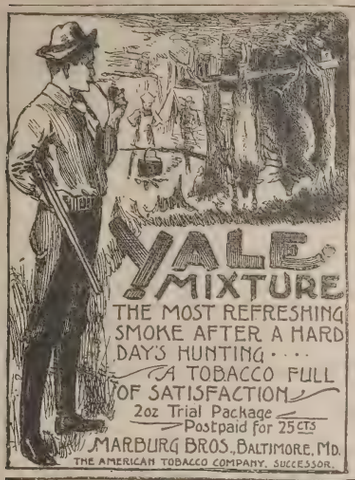
SECRETARY.

PUBLISHERS' DEPARTMENT.

"Among the Ozarks."

"THE LAND OF BIG RED APPLES" is an attractive and interesting book, handsomely illustrated with views of South Missouri scenery, including the famous Olden fruit farm of 3,000 acres in Howell county. It pertains to fruit raising in that great fruit belt of America, the southern slope of the Ozarks, and will prove of great value, not only to fruit-growers, but to every farmer and home-seeker looking for a farm and a home. Mailed free. Address J. E. Lockwood, Kansas City, Mo.—*Adv.*



Godfrey's Catalogue.

SPORTSMEN wishing to buy a shotgun, rifle, or anything connected with shooting, should write Chas J. Godfrey, 11 Warren street, New York, for his catalogue. His prices on all grades of goods are extremely low.

ANSWERS TO CORRESPONDENTS.

"No More Fun," Trenton.—You may hunt until Dec. 15. After that no more fun.

DOE, New York.—Is it legal to sell State partridges in the open season between Aug. 16 and Jan. 1? Ans. No, the law permits only the sale of game which has been shipped from a point at least 300 miles from the State of New York.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at 98c. until all are sold. These Rods are all nickel mounted, solid reel seats, beaded butts, silk wound. Extra tip. Complete in wood form and cloth bag, and will give satisfaction. Lengths and weights of Fly Rods are: 9ft, 6oz.; 9½ft., 6½oz.; 10ft, 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand. Lengths and weights of Bass Rods are: 8½ft, 9oz.; 9ft., 10oz.; 9½ft. 11oz.; 10ft., 12oz.; 10½ft., 14oz; reel seats above hand. Any of the above rods sent by mail on receipt of price and 30c. extra for postage.

No. H.—A special lot of hard rubber and nickel, raised pillar, multiplying reel, with balance handle and side spring click, 40yds., 68c.; 60yds, 78c; 80yds., 88c.; 100yds., 98c. Any of the above reels sent by mail on receipt of price and 10c. extra for postage.

No. E—Special lot of hard rubber and nickel, raised pillar, click reels, 40yds., 48c.; 60yds., 58c. Sent by mail on receipt of price and 5c. extra for postage.

No. C—Special lot of extra fine nickel plated, raised pillar, multiplying reels with click and drag, and screw off oil cup, 40yds., 58c.; 60yds., 68c.; 80yds., 78c; 100yds., 88c.; 150yds., 98c.

Single gut leaders, mist color, 1yd., 20c. per doz.; 2yds., 40c. per doz; 3yds, 60c. per doz. Double gut leaders, mist color, 2yds., 75c. per doz. Hand twisted treble gut leaders, 3ft. long, 10c. each, 90c. per doz

A special lot of Trout Flies at 16c. per doz. Sent by mail, 1c. per doz. extra for postage.

A special lot of Bass and Pickerel Spoons at 5c. each. Sent by mail, 1c. extra for postage.

All kinds of Hollow Point best quality hooks, snelled to single gut, 10c per doz.; double gut, 15c per doz.; treble gut, 20c. per doz.; four-ply, 25c. per doz. Sent by mail, 1c. per doz. extra for postage.

300ft. braided linen reel lines on blocks, 40c.; 300ft. hand made linen reel lines on blocks, 9 thread, 38c Sent by mail, 3c. extra for postage.

Brass box swivels, all sizes, Nos. 1 to 12, 15c. per doz. Sent by mail, 1c. per doz. extra for postage

FOREST AND STREAM'S OUTDOOR SCENES.

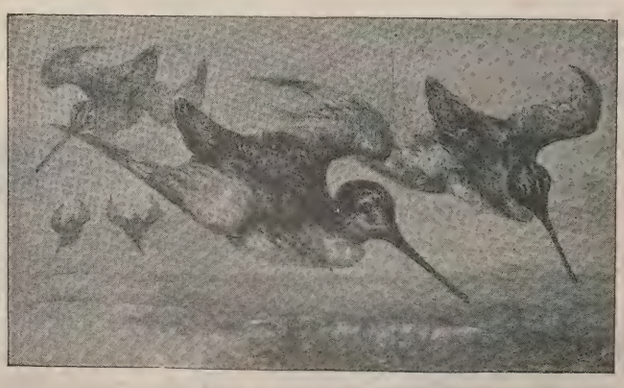
FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

AS PREMIUMS.

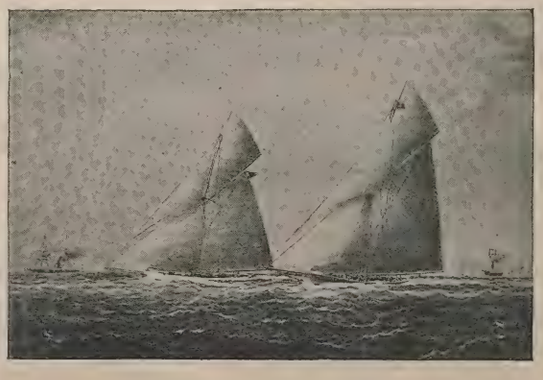
We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19 in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, **$5.**
Forest and Stream *6 months and any two pictures*, **$3.**



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.



Copies of them may be seen at this office, and inspection is invited.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

UNITED STATES FISH COMMISSION.

THE act of Congress, by which the United States Fish Commission was established, provided that its work should consist of two branches: first, investigation into the condition of food fisheries; and second, the multiplication and dissemination of the more important species.

In the beginning it was a matter of course that the inquiry branch of the work should be regarded as of more importance than that of propagation, and it was quite natural too that those who followed Professor Baird in the direction of the affairs of the Commission should develop the work upon the original lines which he had marked out. Without now entering upon any detailed statement, it may be said that the development of the branch of scientific inquiry and research has been carried to an extent which has come to be recognized as disproportionate to the actual work of fish propagation and distribution. The present time when a new Commissioner is about to assume control appears to be opportune for a modification of the activities of the Commission in such a way that the work of practical fishculture shall assume the larger relative importance which it deserves.

We are not among those who carp at science as a scarecrow and all scientific inquiry as a squandering of public funds. The Fish Commission never could have done the important and magnificent work which it has accomplished had the line not been staked and the way cut for it by science, no more than a railroad could be constructed without the preliminary survey. But as after a railroad has been constructed, while the surveyors and engineers may still prosecute their investigations for feeders and branch lines, the main business of the directors of the road is to increase the passenger traffic and the freight tonnage, so the chief business of the Fish Commission to-day is to increase the supply of food fishes. The Division of Fishculture should in effect constitute the Commission itself. The new Commissioner should be a man who, like Dr. Bean, formerly at the head of the Division of Fishculture, has had a wide and practical experience in this special field, and who is known to be in sympathy with the fishcultural work of the Commission and amply qualified to direct and control it.

We are not discussing the utility of scientific inquiry in general nor specifically of that which has been prosecuted by the Fish Commission or is now in progress under its direction. But the funds provided for such work should be appropriated distinctly for scientific inquiry, and should be wholly apart from and in addition to the provision which Congress makes for the Fish Commission. They should be classed under a separate head of expenditures. Investigation by the Fish Commission should be restricted to that which is calculated to produce direct material results for the advantage of the public who pay the taxes. There is an abundant field for work in this direction in the study of the habits, rates of growth, habitats and life histories of our commercial food fishes, their diseases and enemies, and the agencies which affect them.

SNAP SHOTS.

Kelpie has his say as to "true sportsmanship," and to many his profession will be heresy. But is it not true, perhaps, that in our discussions of "sportsmanship" we constantly overlook the existence of that vast army of those who kill game and fish for game and fish, and not in any measure whatever for sport? If a man requires a mess of pickerel for his home table, or a mess of quail, and if he goes out to gather in the one or the other precisely for the purposes and with the utilitarian hunger-appeasing motive that control him in digging potatoes or wringing the neck of a hen that has ceased to lay, why should he be denounced because of his unsportsmanlike conduct? What is sport to him; or what is he to sport? He has a perfect right to the fish and the game, and should have the unquestioned privilege of taking them in any way under heaven that pleases him, provided only that the method he chooses is not unreasonably destructive. The only excuse, for instance, to forbid the trapping of game is found in the practical experience which has demonstrated that trapping so destroys the stock that the supply is depleted to a point where no more birds are left for either shooter or trapper. The gunner may very properly claim that his way of taking game is of a higher grade than the trapper's way; but he can rightly have no quarrel with the trapper because the man of the snare is wanting in sportsmanlike sentiment. As well might the amateur tooler of the tallyho coach berate the unsportsmanlike spirit of the driver of the ash cart. It is well and proper to hold a professed sportsman in the exercise of his sportsmanship strictly to the dictates and limitations of sport; but is it reasonable to require that every person who takes game or fish must do it for sport and after a mode recognized as sportsmanlike?

Now, here is an unreasonable citizen. He lives on Fifth avenue, New York, near the menagerie of the Central Park, and he has been making a fuss because he says he is kept awake nights by the "howling of the wapiti" confined in the deer paddocks. That is a most extraordinary complaint. Many a man would travel long and far into the wilderness to hear once more in the night the whistle of the elk. It is music which the connoisseurs in such things assure us is of the finest in the world, in the real world of the mountains. Sportsmen poets, like the lamented H. P. U., have written prose poems about the elk's whistle; and many another sportsman, without much poetry in his soul, would go on a pilgrimage, even to Central Park, if so it might be that the scrawny elk penned there would deign to whistle for him. And yet this unappreciative and cantankerous Fifth avenue man, with an ear not attuned to the harmonies of nature, demands of the Park Commissioners that they shall abolish the "howling wapiti" as a public nuisance. We protest. Abolish, if needs must be, the whistles of ferryboats, the shrieks of locomotives, the roar of the elevated roads, the clangor of bells, the uproar of milk wagons, the rattle and thunder of fire engines, the barking of dogs and wailing of cats; we could spare them all, yet with the whistle of the elk would still be one grand, sweet song.

Public men are inevitably the subjects of public comment, favorable and adverse, and the more prominent a man's position the more he is talked about and the more ridiculous are the stories told about him. Mr. Theodore Roosevelt, who for some years has been much in the public eye, has not escaped the common fate. People at large regard Mr. Roosevelt as a public man of the highest character, a successful author and a good sportsman. Yet every now and then the public is amused by stories to the effect that Mr. Roosevelt cannot ride, or cannot write, or wears better clothes than he ought to, or has good teeth. The stories told about him are always trivial. So these tales only add somewhat to the amusement of the nation, and especially tickle Mr. Roosevelt's friends. The last extravagances about him originate in Chicago and come from the lips of a man who seems to have been recently taking a primary course in Western outdoor life. If this man had had more experience he would probably be less ready to repeat the stories with which the average Western man delights to impose on the credulity of the pilgrim.

A correspondent, who is so fortunate as to be blessed with a brother living in a fine game country in southern Missouri, has been invited to spend a month or two there in shooting. But, ammunition bought, trunk packed and all preparations made for an immediate start, he is confronted by the Missouri game law, which makes it a misdemeanor for non-residents to kill game anywhere within the State. The question he asks is this: "Is there any way in which I can have a little sport and still respect the law?" The Missouri non-resident law is a dead letter; so far as we can learn it is not observed by any one; such sportsmen as George Kennedy denounce it; multitudes of non-residents invade Missouri and kill game in spite of it. Under these conditions what should be the decision of the Philadelphia man with his brother in a game district in Missouri, ammunition supplied and trunk packed? Should he buy a ticket?

The Maine enterprise of importing game birds from other States and from abroad for propagation in confinement appears to have been a failure. Whether this was due to the inherent difficulties of the undertaking, or to the ignorance and incapacity of those who had the matter in practical charge, we leave for others to determine. When Mr. Ames sent us the communication, which is published to-day, telling of what he had found at Auburn, we wrote at once to President E. C. Farrington, of the Maine Fish and Game Association, who in turn applied to the Augusta parties for particulars to send to us. Up to this date Mr. Farrington's intervention has not been potent to secure for us any new information from Auburn. The money spent on the capercailzie appears to have been expended for experience, with no feathers to show for it.

The Massachusetts Association is considering the merits of the several species of birds which have been imported into this country.

As a rule the effigies of dogs and cats and other brute creatures are out of place in a cemetery and grate harshly upon one's sensibilities; but now and then there is an instance where the memorial of an animal's devotion appears fitting and graceful. One may hardly question the motive which has prompted the placing of a collie dog's statue in one of the cemeteries near New York. The faithful creature was for years a useful member of a Dakota ranchman's "outfit," and between dog and master a warm friendship existed. When the man died the dog was inconsolable, as dogs often are; made daily visits to the tomb of its master; and finally died with every evidence of a broken heart, to have its devotion commemorated by this marble memorial.

Our correspondents from a number of different sections have made mention that this year's crop of birds is of an unusually late hatching, and the reports from some sections indicate an actual scarcity, but whether the latter was caused by excessive shooting or by weather conditions we have not been informed. For two summers, this summer and last, the rainfall has been exceedingly light, thus causing a severe and prolonged drought, which may have affected the bird crop for better or worse, although a dry summer, according to common observation, is favorable. It would be interesting to have the observations of others on these points.

Have you mended your fences for Election day and made every preparation for that important occasion? That is to say, have you staked out the quail or partridge, woodcock or prairie chicken country over which you propose to shoot after you shall have dropped your ballot? The calendar of the year shows many a date printed in red to signify that it is a holiday, but not yet have we so many days of freedom that any one of them may be neglected for improvement to the full measure of what opportunities it gives for carrying a gun behind a dog.

Observers who are speculating about the scarcity of song birds should turn their attention to the feminine headgear now in style. Feathers are a fashion still, and the fashion now is to wear more feathers than ever before. Where one pair of wings sufficed before, two or three or a half dozen are required. Now may we expect to have birds in our fields and orchards and on hats and bonnets too?

Dealer—"What size shot will you have?"

Novice—"Give me No. 1 bird shot; I always want the best."

The Sportsman Tourist.

SOME MAINE NOTES.

BOSTON, Sept. 11.—*Editor Forest and Stream:* The problems of rearing wild birds or animals in captivity, and of introducing into any country any form of plant or animal life not indigenous to it, have always deeply interested me. When, therefore, in June I foresaw that business might take me later in the summer into the vicinity of Auburn, Me., I rejoiced in the opportunity it would give me of seeing something of the attempt being made there to stock the State with prairie chickens, sharp-tailed grouse, blackcock and capercailzie, by means of young birds raised in confinement.

Some time ago a good deal was said in the papers about the experiment. Accounts were given of the formation of an association for the purpose, the raising of funds by subscription, the purchase of birds and the erection of wire cages on a large scale for their accommodation.

I heard for a time some not very definite or encouraging reports of progress, and then came silence.

I have never been able to see how such an experiment could possibly succeed, but I had never seen it tried and I awaited with keen interest the result of the operation at Auburn.

I knew something of the natural habitat of the prairie chicken and sharp-tailed grouse, and had much doubt of either of these birds thriving in Maine. Of the blackcock I knew very little.

The capercailzie, however, did seem to me to be likely to do well in Maine if once it could be given a chance for itself there. I would not want either one of these birds to be introduced if there were any danger to our native ruffed grouse to be feared. The capercailzie is a big strong bird. He would, beyond question, make a noble addition to our avifauna. But I would not take even him if it had to be in exchange for *bonasa umbellus*.

Still, I could not easily suppose the larger bird would harm the smaller one, and I was really hopeful that we should come, by some means or other, to have the capercailzie in our Northern Maine woods, where, so far as I could see, the conditions were favorable for him.

At the hotel at Auburn I fell into conversation with a most genial gentleman, who soon proved to be not only an expert in rods and guns, but a sportsman of rare enthusiasm and of great and varied experience. In addition to all this, or perhaps as a natural concomitant of all this, he proved to be one of the best story-tellers I ever met, and possessed of a seemingly inexhaustible store of the very best and most enjoyable stories. To still further heighten the situation it presently appeared that we two had, though at different times, hunted in the very same sections, and fished the same waters from Maine to Florida, from Texas to Dakota, and among the Rockies, and up and down the Pacific coast. I never saw anything like it.

The proof of each case was abundant. Familiarity with details in the case of either one was instantly matched by similar knowledge on the part of the other. The climax was reached when it was found that we were both occasionally in evidence in the columns of FOREST AND STREAM.

My new friend was waiting for the completion, at the hands of an Auburn maker, of a new rod which was to meet certain transcendental specifications as to quality of material, weight, balance, elasticity and I don't know what else, and was thus to prove the one thing necessary to complete the perfect sportsman's perfect happiness.

I may as well say here that when the rod was tested it was found a trifle too stiff in the third joint, and so perfect happiness was again postponed.

But to return to the bird-raising experiment. Of course my new friend was interested in it and delighted to drive with me to the fish hatchery, near which were the bird cages.

Our way was past beautiful Lake Auburn, which has been so successfully stocked with fish and has afforded much good sport of late, I am told. I had hired what proved to be a spirited and restless horse, and after what I had learned of him it did not surprise me to find that my friend was every whit as expert a manager of such a beast, and as great a lover and good judge of a horse as of a gun or rod.

We first paid attention to the fish hatchery, which seemed well located and fairly flourishing. The attendant then went with us to a grove, or rather the edge of what seemed an extensive forest of not very heavy growth.

On a gentle slope, at the foot of which ran a small rill, were erected by means of wire netting four or five large cages or inclosures. I cannot give their dimensions, which I dare say have been printed in your columns at some time. As I think of them now they seem to have been each two or three rods long by a rod or more wide, and 15 or 20ft. high. They were built among the trees, and they each inclosed trunks and branches, and each cage gave free access to the little rill of running water. The ground in each was picked clean of every green thing. There were inequalities in the ground and enough brush and old boxes, etc., to afford some little cover and concealment for confined birds, but not a great deal.

In the first cage, as I recall it, were seven or eight sharp-tailed grouse. A sleepy and tame-looking group they were, huddled near the center of the cage. As we looked through the wire meshes one or two walked about a bit and eyed us with a little curiosity. We were told that they were fed mainly if not entirely on corn. Noting the absence of grass and leaves, we plucked some handfuls of blackberry and other leaves and threw them into the cage.

Instantly several birds came forward and rapidly picked up and swallowed every leaf.

In the next cage were perhaps as many prairie chickens, and behaving in much the same way. In spite of their dull appearance it gave me a thrill of delight to see a live prairie chicken again, a sight I have not had before in some years. Many and many a memory flashed through my mind of mornings and evenings on the prairies in my boyhood, many haps by field and river, and all associated with the voices and faces of never-to-be-forgotten friends. These were real live prairie chickens and no mistake, but looking and behaving so unlike the free bird of powerful wing that I used to know.

Something of this was inevitable, of course, yet everything seemed to emphasize every theoretical misgiving I had had about this whole experiment.

In the next cage were three or four blackcock. I managed to get a good view of one male and one female somewhere in the center of the inclosure, but they kept themselves as far out of sight as possible. The next cage had been devoted to the capercailzie, but not a single tenant remained.

I was told that of the number shipped to this country for the Auburn experiment—eight, if I remember correctly—only two arrived in Auburn alive and these died in a few days after arrival.

Anxious to see more of the blackcock, I passed around the whole group of inclosures and made my way through the brush and trees to the rear of their inclosure. Something caught my eye near the wire, and going close to the place I saw a sad sight: two birds, a male and female, lying together dead, a sodden mass, and looking as if they had lain there quite a long time. This completed the picture. I did not see the person who is supposed to have charge of these birds. I was told that he was a farmer who lived in the vicinity. How often he inspected the cages or fed the birds I do not know.

I was told that a few young birds had been hatched in the cages, but that nearly all had died. I could discover no young chicks, but was told that there were two or three in one of the cages, I cannot now remember which.

I confess that my information is not of the most accurate sort and that I am not well versed in these matters.

I can only say that I have great interest in them and that I would like to hear from those who are well informed.

But as I stood by these cages the experiment not only seemed to me a dismal failure, but to have been foredoomed to be such from the beginning.

How any one could have ever thought that the way to stock the woods of Maine was to try to rear birds in captivity, and so provide enough young birds to stock the State or any part of it, seems a mystery. How any one could conceive that these wild and shy creatures, taken from their natural environment, and arriving frightened and worn from such a strange and, to them, terrible experience, could settle down to domestic persuits, it is difficult to see.

But what is harder yet to understand is why any one should think that they would do this better in confinement and under human supervision than if turned loose on the mountain side.

I was told that in the case of the prairie chickens and sharp-tailed grouse the cost of the birds was a dollar apiece, and of transportation to Auburn another dollar. According to this the cost of fifty birds delivered at Auburn would be $100. I was further told that nearly $1,000 was raised for the Auburn experiment. However that may be, does it not seem that all expense for wire cages, food and attendance is a clear waste, and that the full sum would be best expended in bringing the birds to Maine and liberating them in the places most likely to prove suitable for them? Of course, if one wishes to experiment with captive birds and can afford the expense, it would be very interesting and commendable, but if the purpose is to introduce new species of game birds into the Maine woods and to secure as speedy multiplication of them as possible, it seems to me that the Auburn plan is the poorest possible. So thought my companion also. If I am all wrong about this, I shall be exceedingly glad to be set right.

My companion so often referred to, and whom I would name if I had his permission, was rejoicing in the belief that he had won the $25 in gold prize of the year for the largest trout taken on a Natchaug line, he having recently taken in Moosehead Lake a laker weighing over 20lbs.

At Farmington I met Mr. C. A. Wheeler, a noted rod-maker and expert fly-caster, who was hoping that by his capture in June last, in Clearwater Pond near Farmington, of a laker weighing 16½lbs. he had secured that very prize. It was my misfortune to be the bearer to him of the story of the larger fish taken at Moosehead.

I did it unwittingly, not knowing of Mr. Wheeler's own hopes in the matter, but he bore it with perfect equanimity. He showed me pictures of his fish, which was in itself a prize any man might be proud of.

Having to go to Phillips, and finding myself greatly in need of a little rest, what better thing could I do than to take the narrow gauge still further to Rangeley, and the next morning to go on by buckboard to Kennebago Lake?

The ride is a rough one, but I hope it will long remain such and that Kennebago may long retain its character.

It is a beautiful lake, four or five miles long and half a mile wide, wooded to the water's edge, surrounded by mountains of fine outline, and swarming with small trout. There are some smaller ponds in the neighborhood which furnish trout of 2 to 4lbs.; but I think Kennebago trout seldom weigh more than ¾lb., and the great majority are smaller.

I wonder what condition governs this matter of size and weight.

If the food supply in Kennebago is scanty, why is it that the trout, though small, are so very numerous? I had not taken a trout in summer for a long time, and was eager for the experience. I caught all I wanted to catch, and as fast as I cared to, and not infrequently two and three at a cast; but all of the small size I have mentioned. They were all long and very slender, not a plump trout among them.

Some five years before I had made a trip to Kennebago, and found that a family of beaver had extensive works around the outlet and in the thoroughfare between it and the stream that comes from Little Kennebago on the north. I determined to see if they were still there, and on the afternoon of my second day on the lake I went over to the outlet, and going out in my canoe alone, just before sunset, floated silently down the stream through the thoroughfare and up the Little Kennebago stream. Soon I was delighted by abundant evidence that the beaver were there and flourishing. Their works were all about me, and the wonderful animals themselves were in sight much of the time. I hardly know what sight more interesting is furnished by the forest. I was able to watch their movements perfectly and at short range. Those who have been startled on some night excursion in a canoe by the resounding slap which the diving beaver gives with his tail will understand with what interest I watched the operation. The noise is so sudden and so amazingly loud that if it comes about a rod from your boat when you are gliding along in the dark and expecting nothing of the sort it will almost scare you out of the canoe. It seems as if a ton of mud had fallen from the sky.

Jock Darling is quoted in the last or a recent number of FOREST AND STREAM as saying that the beaver makes two slops when he dives.

I must believe that this is not always the case, for I remember but one. I paddled close to the houses of the beaver—rude piles of peeled sticks without, but with cosy place within and ample approaches well under water. In one case I could hear the whimpering and squealing of the beaver within.

Everywhere the deer had trodden up the muddy and sandy places on the shore, and by all accounts and signs deer were never so plentiful in the Maine woods. I should judge that to-day the State of Maine is by far the best stocked and largest deer park on earth.

My evening among the beaver did me a world of good.

Around Kennebago the white-throated sparrows abound and I occasionally heard them as far south as Auburn. This also was a keen pleasure and worth going miles for. The silver clear and penetrating whistle, "Old Sam Peabody, Peabody, Peabody," came to me from every copse. Sometimes the song begins on a low note and rises, sometimes the reverse. In the latter case the boys sometimes interpret it as saying, "All day, fiddley, fiddley, fiddley."

Two days were all I could spare. So ended my brief outing.

C. H. AMES.

UP THE OCKLAWAHA ON A POLE.

EARLY one morning in September I found myself in the picturesque little town of Pilatka, Fla., on the eve of embarking for a small town near the center of that State, in a scow. The captain was a friend of mine, and I chose making the trip there in his company rather than waiting for the grimy little steamer, which lay at its dock hard by and did not start until some days later.

Our craft was just from the hands of the builder, 40ft. in length with 12ft. beam, and unloaded drew some 18in. of water. She had a small cabin aft, very much after the pattern of a hen coop, and was painted a bright brick red.

After victualing the ship and getting all hands on board—not without difficulty, for the two negroes who constituted the crew were inclined to desert and leave us to get to our destination as best we might—we cast loose our moorings and set sail. This was no easy matter, for the wind was blowing a gale and our boat, being unloaded, sat so high out of the water that it was all we could do with our combined efforts to get out of the little cove where we lay into open river.

Our means of progression was poling. Each person has a pole some 30ft. in length, made of light, strong wood. One end of this is placed against the bottom and then said person plays steam engine by putting the other end against his shoulder and walking the length of the boat, thus starting her ahead. Then he walks back to the bow, dragging his pole after him, and repeats the dose *ad libitum*.

All hands were green in the management of the pole, which requires skilled handling to become efficient, and consequently we made but slow progress.

There were five of us in all, the Captain, John L., your humble servant and two negroes.

We took turns at steering, and by dint of hard work and perseverance succeeded in getting across the river, but not before the middle of the day. The bottom of the St. John's is not very firm, being sand at best, and in many places we could get no "set" at all; and then our poles would get stuck in the mud whenever we were unlucky enough to find mud, which was pretty nearly all the time, and first one and then another of us would be unceremoniously pulled overboard by his unruly propeller.

The Captain soon came to the conclusion that it was worse than useless for us to keep up the original programme, as we were somewhat like the little boy who, on an icy morning, gave as an excuse for being late at school that when he took one step forward he slipped back two; and unfortunately we could not, as he did, make progress by turning around and going the other way.

A bargain was soon struck with the master of a small tug to tow us to the mouth of the Ocklawaha, and throwing our weary bodies prone upon the deck, we were rapidly pulled along by the small busybody in front of us, which furnished so apt an illustration of the superiority of mind over matter.

We arrived at Welaka, just across the St. John's from the mouth of the Ocklawaha, about dusk, and tied up for the night. After a hearty meal and a pipe, we availed ourselves of the kind offer of the proprietor of a store in the town and turned in in an empty room over his establishment. As John remarked, we slept at the "Widow Sprawl's"—*i. e.*, lay down and sprawled out on the floor. In spite of our wet clothes and the numerous mosquitoes which preyed upon us and made "music in the air" throughout the night, we slept quite well.

The next morning we were up bright and early, and just as the sun rose we entered the mouth of the Ocklawaha.

How dark and solemn its waters looked, even where the sun struck through the dense foliage and glimmered upon its surface.

It is a romantic stream, hemmed in by giant cypress trees which have stood sentry along its banks these hundreds of years and watched the steady march of civilized man. They have seen the light hearted Indian, the native of their soil, slowly retire before his footsteps, as surely and steadily as the waters at their feet flowed onward to the ocean.

These patriarchs have themselves suffered greatly at his hands, numbers having been hewn down every year as the demand for their timber increased, for logging was one of the first industries of the State. How fragile seem the works of man among these grand old trees, as with their hoary locks of dark gray moss—fit emblem of their age—they look calmly on and nod their stern heads to one another, ofttimes sighing and sobbing as if grieving for the loss of their old comrades, or weeping at the fate of the simple inhabitants of their shady nooks, only a remnant of whom now remain. One cannot wonder that the Druids of old worshipped the forests, nor suppress a feeling of awe when in the depths of the backwoods, far from the habitations of men.

We found it no easy task to pole up the Ocklawaha, there being at least a three-mile current, but slowly and

surely we progressed, and by noon had made some ten miles. While off duty I had, by using the troll, caught quite a number of "trout," as the black bass is called in Florida, and with these delicious fish we had quite an enjoyable dinner. We had tied up to an old tree which leaned far out over the water, and were lying around the deck taking a rest before starting again. Jim, one of the crew, was flat on his back directly under the trunk, apparently asleep. Suddenly there was a slight rustle overhead, and a water snake of goodly dimensions slid off the tree and came down plump on to our black friend's stomach. He slowly opened his eyes and looked around to see what had roused him from his slumbers and saw the snake. I think the next instant he was whiter than he will ever be again. All the color seemed to forsake his face, and his eyes started from their sockets. He lay still for one moment, as if deprived of all power, and then with a yell of fear went head over heels overboard and the snake with him.

The rest of us were convulsed with laughter, knowing that if the reptile did bite him it could not harm him, and when we rushed to the side and saw the darky swimming one way and the snake the other, for dear life, it capped the climax, and we rolled on the deck, while the woods re-echoed with our shouts of merriment.

Jim was still shaking with fear when we pulled him aboard, and affirms to this day that it was a rattlesnake as big around as his leg and 6ft. long. "I tell yer I seed hit, en' hit was a rattlesnake. I reckon I aught ter know one when I sees hit," was his constant reply to our assertions as to the harmlessness of the reptile.

During the afternoon we crept slowly up the "Crooked Waters," which is a translation of the Indian name of the river, and as the sun touched the tree tops we reached Simmons's Landing, where we had decided to tie up for the night.

A few palmetto logs forming a rude dock and a road leading out through the cypress swamp were the only evidences of the vicinity of human habitation. While supper was being prepared, John L. and myself, taking our guns, strolled off up the road and soon came out from the swamp into the pine woods. This is the "upland" of the State, and the dominant growth is the long-leafed pine. Little underbrush prevails. The woods are so open that one can drive a wagon anywhere at will.

Soon we arrived at the habitation of the worthy Simmons, which I assure you is not palatial, and were heartily greeted, though not in the most respectful manner, by five or six gaunt deerhounds, which acted very much as if they would be most happy to devour us whole.

Their savage barks soon brought to the door of the cabin a tall, angular, sallow-faced woman, who when she saw us seized a fishing-pole and caressed her pets affectionately with it until they fled howling under the house. In reply to a question as to the whereabouts of her husband she ejaculated, "He's gone ter git some light 'ood knots. He 'lowed 'as how he was a-goin' a-fire-huntin' ter-night—git away, Dave, drat ye!" the latter part of the speech being addressed to one of the dogs which had summoned up courage enough to sneak out from his hiding-place to again growl his defiance. "Come in an' take a cheer, won't ye?" said our kind hostess, but we declined, and started off in quest of her worthy husband.

Guided by the sound of his axe, we soon found him busily engaged in hewing off resinous splinters from a prostrate pine. His gun, a long Kentucky rifle, leaned against the stump, powder horn and bullet pouch beside it on the ground. He ceased his labors on our approach, and greeted us with "Good evening, gentlemen," and a stare from his steel-gray eyes. He was a man of some 50 years of age, tall and broad-shouldered, and as straight as an arrow, with a strongly marked face and high forehead, surmounted with a mass of iron-gray locks. He wore a full beard of the same hue. We told him who we were, and that with his permission we would like to accompany him on his intended hunt.

"Well, gentlemen," said he, "yer see deer they's mighty curious critters, an' when I fire-hunts I'd a leetle ruther go by myself; but I reckon I have to take yer along to-night. Don't reckon we'll kill nothin', though. Hit alwa's gives me bad luck, 'peers like, to go with anybody."

We thanked him for this not very hearty acquiescence to our request, and promising to be back by dark hurried back to camp. An hour later we were again on our way to Simmons's, where we arrived just as he was ready to start. His orange grove was our destination. He had planted cow peas between the rows of trees, and the deer were in the habit of entering almost nightly to feed on them.

Off we went through the dark. All was still as death, save when some lonely owl broke the silence with his unearthly *hoo-hoo-hoo-aaaa*, like the laugh of some veritable demon of the lower regions, to be answered by a chorus of limpkins, equally fiendish in their discord, or the croak of a heron flying overhead. Our guide plodded on in silence, and we following spoke only in whispers.

Leaving the pine woods we plunged into the depths of the hammock on high land next the river, which is covered with a dense growth of hardwood trees.

We followed close to Simmons, by his injunction making as little noise as possible, and soon came to the edge of the clearing in which his grove was located.

Here he paused and kindled the fat pine splinters in the pan he carried. This was a common sheet iron frying-pan fastened to a wooden handle some 6ft. long.

When a good blaze was started we went on again, very slowly now, he looking right and left for our expected game. Suddenly he stopped and said in a hurried whisper, "Look yonder!" We looked in the direction indicated, and saw a huge black mass, with fiery red eyes, not more than 50ft. from us.

"Shoot quick, fellers, that's a b'ar!" said Simmons.

There was a common report, as we both fired, a cry of rage and pain, a crashing and rushing through the brush—and our quarry was gone.

"Dinged if you hain't missed him," from Simmons.

But when we came to investigate we found blood, and from the quantity that was scattered over the ground and bushes we judged bruin was quite badly wounded. Simmons put his lips to the hunting horn which hung by his side, and blew several long and lusty notes.

"Nancy 'll let the pups loose when she hears that, and maybe we'll tree the varmint after all."

Simmons resumed the music, and the cries of the hounds, in answer, proved that Nancy had understood his language.

Soon the dogs came up with a rush, and taking up the fresh trail made off through the darkness with the long, loud cries so musical to a hunter's ears.

We followed as best we might. It was no easy matter to penetrate the dense, luxuriant forest, and bruised shins and rent clothing were a natural sequence, but we little cared for them at that moment. The cry of the dogs suddenly changed into a short, quick, angry bark.

"Treed surer'n shootin'," yelled Simmons. This gave us new impetus, and brambles and saw palmetto were unheeded for the next few moments.

We were filled only with one thought, actuated with one impulse. To get that bear was the only thing worth attaining in life.

I had the good fortune to be first upon the scene. Simmons was close at my heels and still carried his flaming pan. It turned out afterward that John had become hopelessly entangled in a mass of grapevines and briers into which he had run in his impetuosity and the darkness, and from whose meshes he did not escape in time to act in the ending scene of the tragedy.

I shall never forget the picture I saw. The wounded bear backed up against a huge live oak, surrounded by the yelping hounds, too well used to such warfare to risk a close encounter, the wicked firelight illuminating a small circle, and beyond on every side the dense, inky blackness. A shot from my Winchester, and the scene changed like magic.

Down came the bear with a thud, the dogs closed in, and for a moment there was pandemonium.

Simmons rushed up knife in hand, leaving the pan to take care of itself on the ground, and cuffing the dogs right and left, plunged the keen blade deep into the sable throat, and the huge mass that had but lately been a formidable enemy was still, and the dogs could worry it with impunity. This we allowed them to do, for it was the crowning of their victory, and they soon tired of it, finding no resistance was made. John had come up in the meantime with disappointment written on his face and bemoaning his hard fortune. Bruin was soon denuded of his shaggy coat and quartered; and taking a generous hunk and the hide with us we retraced our steps, having previously hung up the remainder out of reach of the "varmints," as S. called them.

By 3 o'clock the next morning we were up and on our way. The moon had risen and shed a light soft and mellow on the sleeping woods, and all was hushed save the swash of the poles and the noise of the ripples about the bows.

I lay on the deck and looked with rapture and wonder on the scene. There is nothing so beautiful as a cypress swamp by moonlight—these gray-bearded giants of the forest in peaceful serenity taking their rest.

But one cannot always dream, and so I found it, for I had to relieve John, who was not troubled by poetic visions and proceeded to turn in in the cabin and indulge in a series of terrific snores.

Daylight came, and with it life. All nature seemed to awake. The birds made the air rich with their music, insects hummed melodiously to and fro, the old cypresses nodded good morning to each other and took up again their burdensome moaning and waving of long arms.

We tied up and prepared our morning meal, bearsteak, bacon, cornbread and coffee, and after a refreshing bath in the black waters proceeded on our way, arriving at our destination a few hours later.

I, for one, shall never regret my trip up the Ocklawaha on a pole. T. E. OERTEL.

"LOBSTERIN'" IN CAPE BRETON.

ONE day at the "lobster factory" watching the process of canning—the boiling of the squirming, crawling mass, the picking of the meat from the shell, the packing and soldering in airtight cans for the London market—we received an invitation from the champion "lobsterer" to make the round of his pots with him next morning.

We started at 6:30 A. M., a less unearthly hour than that chosen by the net and line fishermen for their departure; but the lobster pots are set nearer home, along shore and in the harbor, wherever there is sandy bottom near rocks with patches of algæ growing on it. McIlvaine's partner is away for the day, and he has chosen for his helper a sturdy young fellow from the crew of an American "seiner" lying in the harbor waiting for the fog to lift outside. The wind is fresh from sou'west, raising a choppy sea even in the harbor, with a promise of rollers outside, while beyond the lighthouse cliff and Green Island hangs a dense, ominous-looking bank of fog that has maintained its position since sunrise in the teeth of half a gale.

It was necessary first to visit the seiner that the new hand might get his oilskins, and the crew, crowding to the rail, quickly detected the landsman in the boat, and thought to frighten him.

"Ain't a-goin' outside, I hope, Tom," spoke up one.

"You're boun' to Davy Jones's locker if ye dew," said another.

"Tremendous sea outside, one of our fellers has just cum in," put in a third.

"Don't get lost in the fog, Tommie, boy," said a fourth.

"Goin' to drown him?" with a significant nod at the landsman, but the dory was soon away from them. There are ten of there "seiners" in port. Last week there were sixty in at one time, and a beautiful show they made with their white sails set, alow and aloft, to dry.

The mackerel fleet has had hard lines this year. "We left Portland four weeks ago," says Tom, "an' have made just twenty-five bails."

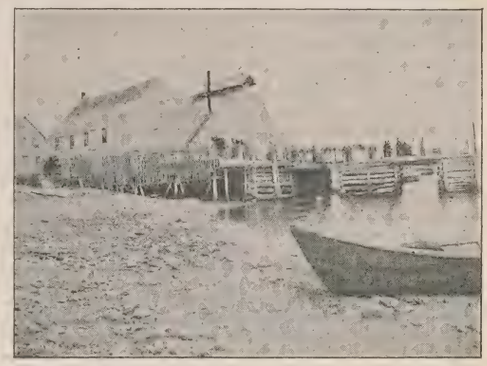
"How many before you are full?" we asked.

"Five hundred," he replied, "and we shall go home near empty."

They sail "on the lay," poor fellows, for a share in the proceeds. Our men pull against wind and wave out to the pots, which are set by compass in a line beginning at the mouth of the harbor and extending for miles along shore.

Inside the bar it is smooth water compared to outside, and McIlvaine remarks to his mate that they will lift the pots inside first, as wind and sea may go down with the sun.

Each pot is marked by a buoy bobbing up and down in the white caps; something else is playing there too—seals—six black heads with almost human countenances riding the rollers with as frolicsome a spirit as a group of schoolboys.



There are black ducks too, and a cloud of sea gulls over the rocky inlets.

"Pull or row?" asks McIlvaine of his mate.

"Row," replies Tom promptly. He takes the middle thwart and the oars. McIlvaine the stern, boat hook in hand. The dory is then let drift stern first upon the buoy which McIlvaine catches with his hook, and then by the rope attached hauls the pot up hand over hand, and rests it on the thwart. This pot is a half cylinder of lath with netting at each end, drawn inward, with a hole in the center so arranged that while the lobster readily enters, attracted by the cods' heads fixed in the center, he never succeeds in finding his way out. Lengthwise of the trap is a hinged door, which McIlvaine opens, displaying five fine crustaceans, two with their claws locked in a battle royal over the cods' heads. The fisherman seizes them, quite indifferent to their claws, which to a landsman seem sufficiently formidable, and transfers them to his boat, inserts a fresh cod's head, closes the door, and lets the pot go by the board, working quickly, for the man with the oars has much to do to hold the boat against wind and wave.

We are in the outer folds here of the great bank of fog which has hung over the spot since morning, neither advancing nor retreating, though half a gale has been blowing.

It is a magician, this Cape Breton fog, forever acting a mystery play, with the ocean, cliffs and somber forests

THE LOBSTER FACTORY AT LOUISBOURG.

as a support. We have seen it lie all day, a gray wall far out at sea, and then toward sunset envelop the land, suddenly without warning. One moment we are in a gray blankness of vapor, while, not a ship's length ahead, it is bright sunshine. Suddenly, as we peer seaward, a spectral form looms up, grows more and more real, and then breaks gloriously into sunshine a ship under full sail, every shroud taut and every rag of canvas drawing.

By and by the pots have all been lifted in harbor and the men debate whether to go outside or not. There is a heavy sea out there—we can hear it boom on the cliffs like distant artillery, and the wind freshens and the fog thickens with the going down of the sun. They decide to go in, and hoisting sail the little craft flies over the water with such hearty good will that in half an hour she is safely moored at the canning factory's dock. Her master has seventy-five lobsters in the boat, for which he receives at the rate of $1.10 a hundred. For the finest lobsters for her table, our landlady pays but 5 cents apiece.

C. B. T.

TRUE SPORTSMANSHIP.

EVERY now and then somebody breaks out with an opinion as to what is sportsmanlike and what isn't. There is a discussion of that sort in progress in these columns at present, and, with leave, I will shy my castor into the ring and turn loose some of my own views on the subject.

In the first place, I wish to say that much that has been written on these points is rubbish. Some one whose experience of fishing and shooting covers perhaps half a dozen years, and twice as many townships, thinks himself entitled to lay down laws for men who have fished and shot over half the United States, and often under conditions of which he, with his limited opportunities, has never dreamed.

My own notion is that the true test of sportsmanlike conduct lies less in the act than in the motive which prompts the man who holds the rod, who pulls the trigger.

If I need a grouse or a duck, and if the bird is sitting, whether on ground or water, I am not unlikely to shoot it without allowing it to fly, because in this region the bird will probably escape me if I do not. The conditions are such that the chances are generally in its favor. If I did not need it I should not shoot at all.

Now, I never shot a quail sitting, but I might under some circumstances, and this reminds me of one of Ross Browne's stories.

He was traveling with a party. All freight and supplies had been "packed" over the Sierra Nevada at the cost of one dollar per pound. In shooting for the pot the captain ordered that no one should kill fewer than four quail at a shot.

One man fired at a bunch and secured but three, but excused himself for this crime by saying that there were but three pellets of shot in the gun.

I believe in giving to the game every reasonable chance, but I wish to reserve a few for myself.

One crank wants everybody to fish with the fly and nothing else. That may be correct, if one fishes solely for sport and does not need the fish. Otherwise it is bosh. Another man despises the shotgun and cuts the heads from his birds with the rifle, which requires much less skill than the cutting down with a charge of shot of a ruffed grouse darting through a tangled brake.

No, gentlemen, the old farmer who, with his muzzle-loader, carefully pots his half dozen of birds sitting, or catches with bait a moderate string of trout, and goes home when he thinks he has enough, is a better sportsman than he—whatever the measure of his success—who wantonly fishes to increase the sum of his "count," and shoots mainly to make a bigger score than his neighbor.

"Them's my sentiments," KELPIE.

Natural History.

HOW THE ENTOMOLOGIST SAVED THE PARTY.

THE season of 18— in New Mexico was wet. The prevalent delusion that the great drought land of the Southwest owes its desert-like facies to the lack of rain was perfectly, if painfully, corrected in the case of a party of hunters and prospectors who suffered repeated losses and narrowly escaped being washed away by an arroyo flood while encamped in a mountain cañon, and who declared that their tent was drenched four days out of every seven from April to September. Every arroyo was alternately the channel of a foaming torrent and a dry line of boulders. But when the rain really ceased in October we discovered the secret of the Western desert. It is simply too well drained. It is a parvenu along lands, and, lacking the culture of a glacial training and the mellowing influence of years upon its soil, is unable to retain or utilize even the prodigal wealth of rainfall. In three days after the rain had ceased the soil was to all appearance dry. In ten days the bright green carpet of "gramma grass," which had clothed the plains like an Eastern meadow, was as sear and brown as if it had passed through an oven, and the long converging cattle trails began to stand out upon the surface—the plainsman's only guide-board to the few permanent springs.

It was in October of this year that our party crossed the San Augustin plains toward the Datil range. To the three of us who had hitherto constituted our party there had recently been joined a quiet little person, who came recommended in such a way that we could not refuse him a place in the mountain wagon. We of the majority, however, secretly resented the intrusion, especially as the tin collecting case and insect net, which indicated his profession, inconveniently cumbered our crowded van. But the "bug sharp" was an adept at the art of minding his own business, and had a quiet way of doing what needed to be done about camp; so that we got on well, especially as he accepted the guying that a tenderfoot may always expect in good part. In fact, he had such an appreciative way of attending to the various bits of woodcraft and plains lore which we now and then dropped with ostentatious carelessness that he became quite the Boswell of the party. We looked upon the insect collecting as a fad betraying a weakness somewhere, but nevertheless an amiable weakness. It perhaps dawned upon us gradually, from remarks dropped by the collector, that a knowledge of insects might have some connection with other kinds of knowledge; but certainly we never dreamed that it could ever stand us in good stead at a moment of dire extremity.

But we were, as I have said, crossing the plain which forms a sort of inland sea, with the Magdalenas to the east, the Gallinas to the north, the San Mattheos to the south, while to the westward it extended nearly to the Gila. We had reached about the middle when one of those dreaded scourges whose coming no one can predict—a sand storm—was upon us. We had experienced many of them and, while we had found them painful and annoying, had not learned to dread them as they deserve. But now the sky was suddenly darkened—every object was instantly obliterated and we could catch only an occasional glimpse of our staunch little Navajoes, who with an instinct truer than our own promptly turned and scampered down the wind. It was useless to attempt to drive, so each swathed his face in blankets and allowed things to drift with the drifting sand, now almost filling the wagon box. It turned bitterly cold and after four hours the strength of the tired ponies seemed nearly gone. Happily we now caught a view of a pine-covered ridge. We had crossed the plains, but whither? Were we in the wood at the base of the Gallinas, or had we drifted into the foothills of the Black range? One thing was certain, we must at once find shelter. The storm had scarcely abated, but we were able to obtain some relief by driving to the lee of a piny ridge and heaving to in the midst of a dense cluster of piñons. A roaring fire was soon burning, with its alternate factors of comfort and peril as it was lashed about by the gale, and a very sorry attempt at supper, seasoned regardless of taste by the ubiquitous sand, prepared us for a dreary night, which soon became painful from thirst. The ponies had been twelve hours without water and now our own supply had given out.

On the following morning the sand was still blowing, but it seemed necessary to move on. Part of us thought that we ought to turn northeast, while others were equally certain that our course lay to the south. It ended in our allowing ourselves to drift with the wind. On through park-like openings among tall pines, then over endless sandy ridges sparsely grown with juniper and piñon; finally, toward nightfall, we reached rocky cañons clothed with oaks, mountain mahogany and a few piñons. Another painful night, our throats were irritated beyond endurance by the sand and our eyes burned as with fire, and it was evident that the ponies were suffering more than we.

Early the next morning Tom climbed an adjacent ridge and announced that we had drifted far to the north of the Magdalenas, and that it would be a good day's drive to town. We hitched up in silence, for speech was becoming difficult, when to our utter dismay the trusty Navajoes balked and refused to stir. It required no long experimentation to discover that they were a match for us in stubbornness at least. What was to be done? It was obvious that water must be found. Doubtless if we knew where to look it might be but a short walk to some spring. Shouldering a pick, Tom set us an energetic example, and we divided into two parties to explore the two cañons which debouched near our camp. It was noon when we reassembled, but no one had the heart to propose dinner. The entomologist alone of the party seemed quite composed, and was busy turning over stones in the arroyo bed when he uttered an exclamation which brought us all eagerly to his side—it was the single word "water." When we assembled about him what was our disgust to see him looking intently at a half dozen glossy oval beetles he had just uncovered. "Yes, water beetles of the genus—" "Water beetles be ——," ejaculated Tom, and I am afraid that we all sympathized with the strong language he used respecting the "bug sharp." But the latter heard him out and resumed placidly: "Nevertheless these beetles never occur at any distance from water. Their hindlegs are essentially natatory; they are of the same genus as our whirligig beetles back in Ohio. There has been a spring here and a few minutes' digging will find water." The quiet conviction of his tone rather than any force we saw in his reasoning induced us to ply the pick diligently for a few minutes. It was not long before we were rewarded by the discovery of an old irrigation trough, and probably no searcher after Spanish doubloons ever had his hopes raised more ardently by the discovery of an ancient oaken coffer. "By hokey, the sand is sure wet!" shouted Tom, and before we had sunk our pit 4ft. there was an abundance of ice cold water. No draught this side of paradise will ever taste so sweet as did that muddy beverage. Our ponies appreciated it no less, and immediately began again to graze—in fact, "the kid began to go," and we were able to resume our journey with success satisfactory to all.

Tom had become instantly converted into an admirer of the entomologist, or, as he said, of the "bug sharp thet ken give pointers to any plainsman livin' on his own ground." Indeed, I recently learned that he had sent his son to Denison University or wherever it is that the entomologist is now lecturing on economic zoölogy.

NEW MEXICO.

Wood Ducks in Confinement.

TOLEDO, O., Oct. 21.—*Editor Forest and Stream:* A farmer living near this place has something of a novelty in the way of a brood of wood ducks.

Last spring he found a wood duck's, nest containing twelve eggs. Securing the eggs he took them home and set them under a hen. All of them hatched, but from one cause and another five of them afterward died.

He now has seven fine full-grown ducks, of which five are drakes. He has them inclosed in a yard, and to prevent flying removed the first joint of one wing when they were very small. B. A. CASE.

The Bluebird Scarcity.

HOLLAND, Mich., Oct. 25.—For the information of your Georgia correspondent, I will state that I have seen but three bluebirds this year: one March 28, one this morning, and a man brought me one two weeks ago. He found it by the roadside, where some one had shot it. I wish I knew who shot it, that I might teach him a lesson. One boy paid $15 for killing a brown thrush and a woodpecker. A. G. B.

Woodcock with White Primaries.

LITCHFIELD CO., Conn.—While hunting to-day I killed a woodcock which had several pure white primary feathers in each wing. In the left wing they were all together, but in the right they were separated by some brown feathers.

The white feathers were the first or outer primaries, and the bird is a beautiful object. H. W. CARTER.

Game Bag and Gun.

A TIGER HUNT IN SOUTH AFRICA.

I WAS spending a few days with a friend, Mr. Morton, on his farm at Klip-Plaats, in June. It was midwinter, but fearfully hot. The sun had just gone down behind the Zwaart Ruggies range of mountains, casting a lurid glare behind them that contrasted vividly with the blackness of shadow and night settling fast over the country. The sky bore that steel gray appearance peculiar to South Africa. Not a breath of air broke the terrible monotony of heat and drought that the country had experienced for the past seven months. Everything thirsted for rain, and not a green thing could be seen as far as the eye could reach over the parched veldt, and yet the brown karoo bushes with their succulent branches afforded food to the thousand or so goats and ostriches that ran over the farm. Despite the heat the evening was a beautiful one. The absence of wind is always welcome in the Cape, where it blows six days out of seven, raising clouds of dust and blowing with such strength as to make it almost an impossibility to stand against it. We had been in the saddle all day, and riding over the African veldt is anything but pleasure, in fact a novice is kept busy sticking to his horse in its erratic bounds to avoid jackal holes or ant hills. At my feet lay a magnificent tiger skin. Mr. Morton told me he had shot this tiger, and in answer to my request he related the following account of the hunt that laid low this monarch of the Zwaartkop Mountains.

"Tigers in this country seldom attack men, but this fellow was an exception, and to my knowledge had killed one Kaffir and two Kaffir children. I heard wonderful accounts of the tiger's ferocity, and after his killing my herd I determined to hunt him down at any cost. The poor herd and another Kaffir were hunting in the mountains when they found themselves face to face with the tiger. They foolishly fired at it, with the result that the infuriated beast rushed upon them, knocking down the unfortunate herd, while his comrade, throwing away his gun, bravely took to his heels, leaving his comrade to the tender mercies of the tiger; nor did he cease his flight till, breathless with terror, he threw himself at my feet and recounted his terrible story. I immediately snatched my rifle to go to the assistance of the herd, but neither threats nor entreaties would move the frightened Kaffir to go with me; and on second thought I knew the herd must be beyond all human aid and his sufferings ended in death long before. So I determined to organize a hunt next day and kill the brute, if I had the good luck to get a shot at him. For this purpose I gathered all the natives I could lay my hands on, and armed them with assagais and knob-kerries. My chief herd, Montsua, a Bechuana, I knew to be a trusty hunter, and I allowed him to carry an old army rifle, in the use of which he was quite proficient. If you had seen him pour powder and ball into that ancient weapon, you would have doubted whether the tiger or the shooter would get the worst of the discharge.

"Well, we started at daybreak next morning, the Kaffirs vaunting their bravery by songs and rushing at imaginary tigers, which they pounded to their intense satisfaction. When we reached the mountains I called them to order and we proceeded to the spot where the herd had met his death. Here, as we found no trace of tiger or herd, I divided my forces and beat up the mountain side to a densely wooded knoll, where we expected to find trace of our game. Leaving the Kaffirs spread out round the mountain side to turn the tiger should he attempt to break away, I took Montsua with me and started in to look for spoor. We struck a bok path, and had not proceeded far when an exclamation from Montsua announced that he had struck the tiger's spoor and he assured me that the beast had passed that morning. Following it we struck a sandy path, and here undoubtedly the tiger had passed within half an hour, as the disturbed sand was still moist where he had trodden. Montsua said by the spoor the tiger was a large one and I began to feel that we were in for business. I had never shot a tiger, and must confess to a certain amount of nervous feeling. I was not afraid, but realized that there was a certain amount of danger.

"Giving a good look to our arms, we pressed on cautiously, Montsua's keen eye following easily on the spoor, which led us to an opening, evidently a favorite resort of the tiger, as the remains of sundry animals testified. But the tiger was alarmed and had gone away. The spoor still leading up the mountain side, we spoored him with renewed caution, till at last Montsua caught my arm and signified that the tiger was very near and to be ready for a shot. We had now reached a small opening near the mountain top and were stopping to pick up the spoor, when a deep growl informed us that the tiger had turned to bay. We could not tell exactly where the beast lay, so waited breathlessly for further demonstrations. With a low, snarling growl the tiger sprang into the open not fifteen paces from me. There the magnificent beast stood grandly defiant, lashing his sides with his tail and growling in a manner anything but pleasant to hear. What little nervousness I had felt vanished at sight of my foe. Taking careful aim at the left shoulder I fired. I heard a frightful roar, and before I could realize the situation the tiger was upon me, dashing me to the ground. Then the mountains echoed with a report like a cannon and the tiger fell lifeless over my body, shot at short range by the trusty Montsua. I scrambled to my feet unhurt, but so shaken up by my narrow escape that I could scarcely stand. I grasped Montsua's hand with a feeling of gratitude only to be understood by one who has been saved from a terrible death. It was well for me that I had taken Montsua with me; most Kaffirs would have run for their lives under the same circumstances. The tiger, as you may judge by this skin, was a very fine one. On examination we found that my bullet had struck too high, and had only served to infuriate the brute. Montsua's collection of balls had created sad havoc in the head, but not a moment too soon to save me from a good mauling or worse. The report of our rifles brought the Kaffirs up on the run, and with shouts of delight our game was borne in triumph home. Of the unlucky herd we never found a trace; the tiger had evidently dragged his body into the bush, and what he did not eat the jackals would make short work of."

LEWIS THACKWELL.

Editor Forest and Stream:

You are perfectly correct in saying that there are no tigers in Africa, although if you were to tell that fact to an Africander he would argue that there are tigers in the country, simply because in South Africa the large mountain leopards are called tigers, and the various smaller varieties are called tiger cats. In my account of Mr. Morton's experience with a leopard I spoke of the beast as he was introduced me, that is as a tiger, and ninety-nine out of every hundred Africanders would so style him, yet in so doing would be at war with natural history. I recognize the fact that your American readers would feel surprised at an African tiger. L. T.

TURKEY HUNTING EXTRAORDINARY.

BELIEVERS in the Darwinian theory would claim that the love of hunting and fishing, still so strongly felt by individuals, is a remnant of the original instinct of the human race, when, in a condition of barbarism, man was dependent on such pursuits to obtain his food. Now the arts of civilization have so changed our environment that the chase of game is no longer necessary to obtain food, except on the extreme frontier, still many of us feel the keenest pleasure in such sport.

The instinct probably crops out in boys more than in grown men, mainly for the reason that men have other and more important duties which require their time and attention, but if the Nimrod is in a man it will surely manifest itself.

The writer, himself an ardent sportsman, has lately seen a case where the circumstances show how strong the instinct may be and under what difficulties the sport may be engaged in.

Rev. Mr. Vann, a well-known Baptist minister in North Carolina, when a boy had the misfortune to lose his hands by an accident with a cane mill. His left arm had to be amputated just above the elbow and his right just below it, leaving a very short stump of his forearm below the elbow joint.

Any one would suppose that such a mutilation would forever debar one from handling a gun, but Mr. Vann still manages to use his gun and is said to be not only a good preacher, but a very fine wing shot. How a man without hands can possibly use a gun is a mystery until his method is seen, and to state that he pulls trigger with his teeth would appear most absurd, but it is really a fact.

The stump of his left arm is barely long enough to support the barrel, while the short piece of forearm at his right elbow supports the butt of the stock and resists the recoil. The trigger has attached to it a leather strap surrounding the grip of the stock and terminating with an end piece which he grasps with his teeth. When his gun is thus held and sighted he gives his head a slight backward jerk and the trigger is pulled.

To load, he holds the barrel under his left armpit and releases the catch with his right stump, and so opens the breech. With this same stump he raises his cartridge bag until he can grasp the head of a loaded shell with his teeth, and so places it in the chamber and closes the action.

One of the State papers recently described a turkey hunt in which the reverend gentleman not only called up the game, but shot a fine gobbler and brought it to his "blind."

The ordinary turkey call or yelper he cannot use, but contrived to imitate the call of the turkey by means of a cigar box, a nail and a piece of broken school slate. The nail was driven into the box and its projecting end made to sound by dragging the bit of slate across it. The cal

most hunters use is a sort of miniature trumpet of wood or bone, and the imitation is done by sucking the breath through it while both hands are held over the open end, to vary the note.

The performance of this gentleman shows how much we can accomplish under adverse circumstances if we really try.

There are many other wonderful things he can do, and is by no means as helpless as one would suppose.

The wild turkey is our finest game bird and a native of North America. It is still to be found in considerable numbers in many parts of the Southern States, especially where thinly settled. They are usually hunted in the fall and winter with pointer or setter dogs trained for the purpose.

The dog hunts through the woods and bottoms a little ahead of the sportsman, and if he strikes a fresh scent he shows it by his eager and excited manner. The hunter now tries to keep as near the dog as possible, so as to get a shot at the "flush." As soon as the dog catches sight of the game he rushes into the flock, barking vociferously, and chases them as long as one remains on the ground. This is called flushing them, and the turkeys are usually so much frightened that they fly in every direction, usually going from a quarter to half a mile before alighting.

Within an hour or two the birds will have partly recovered from their fright, and then are anxious to come together again. It is this instinct that the hunter makes use of to decoy them within gunshot by calling them to his "blind." The blind is simply a rude structure of brush and sticks, barely large enough to conceal him and his dog, while he imitates the cry of the turkey with his yelper.

Under favorable circumstances one or more birds may be called up and shot, but a novice would not likely be able to deceive an old bird, for they are remarkably shy and cunning. The yelp must be a perfect imitation, and not too frequent or prolonged, or the game will become suspicious. They will then stalk around and so get together again without coming too near the concealed hunter.

Another method is called baiting. Some corn, oats or other food is scattered in places where the turkeys will be most likely to find it. When once found and eaten they will remember the place and are sure to return.

They may be induced to visit the place daily by keeping up the supply of food, usually coming at once to the bait as soon as they leave the roost at daybreak.

In the meantime the hunter has constructed a rude blind, in the most inconspicuous manner, within easy gunshot of the food, and in it he conceals himself to await their coming.

He usually sows the corn on the ground in a straight line with his blind, so that the flock, in picking it up, may be in a favorable position for a raking shot down the line. In this way it is not uncommon to kill from two to four at a single shot. The writer remembers an incident when a member of his family killed at one shot five gobblers whose aggregate weight was 100lbs.

This magnificent game bird is so similar in appearance to the domestic turkey that one not familiar with them would scarcely perceive the points of difference. The flavor of the wild bird is recognized everywhere as superior to the domestic, but their weight will not average so great. Twenty-four pounds is considered an extraordinary weight for a wild turkey, while some of the improved breeds of the domestic bird often go beyond that.

They are cunning and wary to a remarkable degree, and extremely regular in their habits on the range if not molested. To hunt them successfully requires an accurate knowledge of their habits, and a large supply of patience and leisure time. Ardent lovers of the sport have been known to sit in a blind from daybreak till sundown to secure a shot, and not always get one then.

THOMAS C. HARRIS.

RALEIGH, N. C.

WITH A .22 IN THE ROCKIES.

"It's a fellar 'u'd ever shoot me with a thing like that, an' I found it out, I'd knock the stuffing out of him."

I had stopped at a ranch in the Greenhorn Mountains, Colorado, to inquire the way to Gardner Brothers' ranch, and one of the men glanced at the muzzle of my rifle and made the time-worn remark. I carelessly shoved the lever down, and as the long, bottle-necked shell of the .22-15 Winchester slid out on the breech block, he stared at it a moment, then took the shell and examined it, and handed it to one of his companions.

"What do you think of the thing now?" I asked.

"Well, like Lem Wilson's bear, 'Blanked if 'tain't bigger than I thought it was.' You see, old Lem started to lay out a bear with a club, and after the boys had killed the bear and patched old Lem up and give him a good big drink of medicine, he looked at the bear a minute, and says, 'Blanked if he ain't bigger 'en I thought he wuz.' Goin' to stop at Gardner's?"

"Yes. I intend to work there some time."

"Come over; 'tain't more 'n two miles, an' we'll go up in the hills huntin'."

The appointed day found me at the ranch, and to my question the boss said, "Hain't been gone half an hour; went up the hollar; get a lope on ye an' ye'll ketch 'em."

I did "get a lope on me," but I had climbed nearly to the top of the mountain before I found them, and then only Joe, the leader.

"Waited fur ye half an hour. Oh, that's all right. Nope. Three more scattered round som'er's. Only got one grouse," were the answers I got.

As soon as his companions came up, he told us to spread out and we would go on up the hill. "If ye see a bear, jest climb a tree and yell; we will come and get yer," he called to me.

Two reports from the right of me, and I saw the boys pick up two grouse. I am going to get snowed under in this gang, I thought. But what is that walking up the hill not 20yds. away? At the crack of my rifle the grouse turned completely over and again stalked away. Hastily slipping in another cartridge, I fired again, and it had the effect of stopping it. "Fetch ye over a club if you want me to," called Joe. I drew down fine on his head, when it fell forward, and when I picked him up he was dead. I showed the boys two bullet holes in his body, and they consolingly remarked, "Ye did well; ye'll get 'em, if they only sit still long enough."

We went some distance before I found any more, and then, after trailing a bird over the light patches of snow about a hundred yards, as he stepped from behind a rock I fired. A roar like a small cannon from behind, and "I got 'em" from one of the gang, and he walked over and got my bird. They had four grouse and a rabbit now, and I but one grouse. I began to wish I hadn't come.

We got separated and I heard several shots, and at every one my feelings went lower. They scared up a rabbit, which I cut the head off of, and when they came up I found they had seen several grouse, but had missed them all, and I felt relieved to think they could miss.

One of them walked by a grouse that was sitting on a rock not 10yds. from him, and when I cut him down my stock rose to par. We were all walking along together, when a large flock of grouse flushed and scattered in the trees, and as they rose one at a time my thoughts traveled to my little shotgun miles away. I drew down on a bird, when that roar again; well, we both missed. I had marked some down over in the timber further, and got two and a rabbit, and found on joining the boys again that they only had the original four. Stock above par.

We separated again and I added another rabbit and a black squirrel to my string. Now came one of the prettiest shots I ever saw. One of the boys below me fired and fully 100yds. down the valley a grouse dropped out of a treetop, his neck cut nearly off.

Hearing some shooting on ahead we hurried on and found the rest walking about some spruce trees, in which they said were two squirrels. One of them wanted to try my rifle, so I traded for a .40-82. They could not find the squirrels, so I showed them one of them and went on a still-hunt for the other, which I soon found and tried to bark, but only succeeded in cutting his stomach off. I went around to where they were trying to shoot the other one, took my rifle and dropped him, which brought the remark, "Well, when you shoot something drops."

"What do you think of the little popgun now?"

They turned and started for home without a word. I had four grouse, three rabbits and three squirrels without a miss, and the three of them only had five grouse, one rabbit and one squirrel. All the way to their ranch they said not a word. As I left them at the ranch I thought of the old saying, "He who laughs last laughs best."

Still I was sorry that they had taken their defeat by the "little popgun" so badly.

Lew Gardner, when I went in, said: "Well, Pennsylvania and his popgun did get some game."

"Len'ard, a gun is like a woman. It all depends on how you use 'em. If yeh don't use a woman wight yeh don't get much out of 'em, and yeh might use a cannon, and if yeh didn't use it wight yeh wouldn't get anything with it," was the sage remark of Martin.

One of the squirrels was gray, with small black rosettes on his ears. I have never been able to ascertain its species. JIM.

P. S.—The miss I mention don't count, as the roar of that old Sharps startled me so that I could not help missing.—J.

MAINE HUNTING CONDITIONS.

NEARLY every mail brings FOREST AND STREAM such letters as the following:

"Will you kindly inform me through the columns of your paper where or in what part of Maine is the best hunting to be found, and what it will cost for three men to spend two weeks in having a real good shoot. We contemplate starting out soon, so if you will please answer in your next issue, if possible, you will confer a great favor to one who reads your paper. We want to know where to go, what it will cost and how to get there, and whatever other information you may care to give us. CHAS. BENSEL."

As a rule such inquiries are answered by mail, and the names of the best localities and guides are given in order that the sportsman may have a selection and also that he may find some one who is not already engaged. This is sufficient of course for sportsmen who have a good understanding of the conditions of Maine hunting, but there are many others, such as the writer of the letter which is quoted, who require more extended information, and it is for these that the following notes are writen.

First as to locality. The location where "the best hunting is to be found" is something like that of Ponce de Leon's fountain of youth. It never has been found and never will be. Each section is the best for the men who hunt there, and there are as many best places as there are differences of opinion among hunters and guides.

Roughly speaking there are two great sections in Maine that are regularly visited by sportsmen. The nearest for the majority is that embracing the Rangeley, Megantic and Dead River regions, near the northwestern part of the State. This section is reached by several routes from Portland, Maine, of which any railroad guide will give the necessary particulars.

The other is the northern section of the State—the Moosehead Lake country and Aroostook county. This is approached either by way of Moosehead Lake or by the new Bangor & Aroostook Railroad further east. Bangor bears practically the same relation as a starting point to this section as Portland does to the other.

The railroad points nearest the hunting sections may all be reached inside a of day from Boston. Naturally, however, the best hunting is not as a rule to be found near the railroads. To reach it wagons or canoes and more or less tramping are generally necessary, so that two days at least must be allowed for the journey. Frequently much longer periods are taken up in traveling, as when penetrating the lake region of the northern part of the State. Deer are very abundant in either of these sections, and one can hardly go amiss in choosing a locality if no other game is wanted.

Moose and caribou are much more difficult to find and are more abundant in the Moosehead and Aroostook sections.

Partridges, which are the principal small game to be counted upon, are distributed all through the State, but are found in greatest numbers as a rule in second growth and around the settlements.

It is not possible of course in such an article as this to give anything more than the most general directions as to locality. The names of guides and places are to be found from time to time in accounts of Maine outings published in FOREST AND STREAM and other journals, and such accounts are as a rule reliable.

If you happen to have no acquaintances who hunt in Maine, or no convenient way of finding out about any particular locality, it is a good plan to correspond with some of these guides whose names are mentioned. As a class they are honest and reliable, and the best known have well earned reputations to sustain, and they are very careful to give exact facts. Frequently they are more apt to understate than overstate the advantages of a locality.

Camps and Guides.

In Maine most of the country is open to sportsmen. Aside from the Megantic Club there are no large domains controlled by associations for the purpose of conserving the fish and game, and under the existing laws we are not likely to see the Adirondack system ever come much into vogue. Frequently, however, the hunting privileges of large tracts of land are leased by guides and others for the benefit of visiting sportsmen, and on such tracts hunting camps are located. Sometimes there is a main camp accessible by road, and to which supplies may easily be carried, which is a sort of headquarters, with small temporary camps scattered around in the neighborhood of the best hunting grounds. At other times, especially early in the season, the guides cut loose from all fixed habitation and camp wherever inclination suggests, and at such times tents are generally used for shelter. Most guides have their special hunting territory where they take sportsmen if not otherwise stipulated, but a good guide is capable of going anywhere within the power of human bone and sinew. For instance, a guide living at Greenville, near Moosehead Lake, will take you through the wild woods to New Brunswick or the Aroostook or down the West Branch of the Penobscot; or an Indian from Oldtown near Bangor, or any guide worth having living at Medway or any of the other places about the outskirts of this wilderness, will do the same thing. Some guides are local in their habits, but the best as a rule are familiar with the wild portions of a large part of the State.

It is customary to have a guide for each member of a party, and in large hunting parties it is frequently advisable to have an extra guide along to do the cooking and look after camp, so that the others may have all their time free for the demands of their individual sportsmen. Of course parties frequently go into the woods with less than this quota of guides, but they are either familiar with the conditions and in a measure capable of being their own guides, or else they have to be contented to go slower and to be less independent than parties better provided.

Expenses.

Occasionally visiting sportsmen dispense with guides altogether, but, as a rule, such a course presupposes considerable previous experience, both as to routes and methods of traveling, or else such sportsmen put up at one of the permanent camps before mentioned and hunt in the immediate neighborhood.

The cost of board at such camps varies from $1 to $2 per day for the sportsmen. For guides the charge for board is generally about 50 cents. Frequently sportsmen put up at these camps and are furnished with guides familiar with the best localities in the immediate neighborhood. The charge for the guide is the regular one of $3 per day, which, as a rule, I believe, includes the guide's board. Some camps advertise to supply board and guide to sportsmen at a fixed sum.

When going back in the woods where there are no permanent camps the sportsman pays for the supplies consumed by his guide as well as himself. This item of expense is generally very small, for, as a rule, only the necessities of life are carried, recource being had to rifle or rod for important parts of the menu. In this case the guide furnishes canoe, tent and cooking utensils. Sometimes he provides the blankets also, but it is a good plan to correspond with him and be sure upon this point in good season. His charges are $3 per day.

For the average sportsman an allowance of $4 per day should be sufficient to cover all expenses while in the woods, though, of course, it is possible to spend more if the sportsman so desires. This is the average cost. As pointed out, there is also a minimum expense of $1 per day if the sportsman is content to put up at a permanent camp and hunt without a guide. The railroad expenses can easily be computed. The Bangor & Aroostook, Maine Central and other roads will be glad to furnish rates as well as data of interest regarding guides, camps, etc., on application.

Methods of Hunting, etc.

In Maine most of the hunting early in the season is from the water. Partridges of course are shot in the birch and small growth around the camp, but aside from this very little tramping is done. For this reason, as well as others, the first of the season is the easiest time to get big game, *i. e.*, the time when big game may be secured with least exertion.

Deer, moose and caribou are either killed from the canoe or else very close to it. Your guide paddles you in and out along the crooked shore of the lake or up the still more crooked windings of the dead-water stream that runs through the bog, and if you are in a good country any bend may show you the game you seek.

When the day grows old he will land at some place where there is enough open ground for a fair shot and call for moose. Under such conditions the sportsman does not have much chance to complain of leg weariness. When the snow flies, however, and when the lakes and streams are ice-bound, the conditions change completely. Then the sportsman hunts on land, and each day tests his power of endurance. For such hunting he needs heavy flannels, for he must dispense with overcoat, and he needs good woolen footwear. In December two or three pairs of woolen stockings on at once under a pair of roomy moccasins is about right.

Different sportsmen have their preferences as to the time of being in the woods. Each season has its special charms. Game is prime from October to January, three months of open season, and there is plenty of it for any reasonable sportsman. J. B. BURNHAM.

Game and Fish to the Brim.

LILLIWAUP, Wash., Oct. 18.—Game here is sort of plentiful; get grouse whenever I want it. Ducks galore. Deer and bears within a half mile. Saw my first wild bear the other day in the woods, and had a shotgun with No. 6 shot in it, and the bear looked at me and said good-by, and I said thanks. Trout in stream handy; salmon on call. Killed my first a day or two since, 7¼lbs. on 10oz. steel rod. An hour and ten minutes doing it. He was a tighter. Lots of salmon running now. Catch them with a spoon any time. O. O. S.

LUCK WITH MAINE BIG GAME.

BOSTON, Oct. 26.—It really seems that quite every man who has gone into the Maine woods this fall for the expressed purpose of getting a moose has succeeded in his object. Better still, most of them have been large animals. Another party of New England sportsmen have just returned to their homes after a most successful trip, the main facts of which it gives me pleasure to send to FOREST AND STREAM. The names of the shooters are F. H. Kimball, Bath, Me.; Jas. Kirkaldy, Woonsocket, R. I.; Tenny White, Woonsocket, and John M. Kimball, Slatersville, R. I. Their glory was obtained in the Moosehead country, not far from Lily Bay. Mr. Kirkaldy, whose experience with game has been confined mostly to shooting foxes in Scotland, and who was extremely skeptical regarding the prevalence of moose in Maine, had his skepticism blown to the winds almost as soon as he was able to get into his shooting togs and get on the warpath. While walking along with his guide the latter said, "There are some moose tracks not a half hour old, shall we follow them up?" Agreeing to this they started after the forest monarch, and in a very short time came in full sight of the animal only 20yds. away. The big fellow had no idea of retreating, and while his hair was bristling up with anger Mr. Kirkaldy fired a shot which cut his jugular vein. The animal fell almost instantly and nearly every drop of blood in his body poured out of the wound. The delight and pleasure of the fortunate shooter was simply beyond description, and he has now gone to the other extreme and is convinced that a bull moose lurks behind every windfall, and can be dispatched with the trouble of pulling the trigger.

The experience of Mr. F. H. Kimball, of the same party, was even more thrilling. This gentleman, with a young Indian guide, had started out late in the afternoon, intending if necessary to stay out all night in a determined effort to get a shot at a moose. The Indian was an expert caller, and Mr. Kimball relied on his skill to bring the much coveted game within easy shooting distance. While going up Tussel Lagoon in a canoe about dusk in the evening they heard a great splashing in the water some distance ahead of them. The Indian whispered "Moose!" and bent to the paddle with renewed energy, sending the canoe along swiftly and noiselessly. The wind was in the right direction, and in a few moments a sight met their vision such as few men have the good fortune to see in these modern days. There stood two great bull moose, as big as houses (as Mr. Kimball described them), and a large calf, all splashing around in the water and having a great time. The distance was about 60yds., and it took but a second for Mr. Kimball to send a .38-56 bullet into the largest of the three. The other two were off like the wind, but the fatal bullet had done its work well with one of them. The lead went clean through the animal, sticking in the skin on the opposite side. Mr. Kimball cut it out and has it now in his possession, and a very much flattened and distorted piece of lead it is.

As an experiment the guide afterward began calling, and they could hear the calf answer time and again a long distance off in the woods. The journey back to camp was a sort of triumphal march, and Mr. Kimball took care to send word of their luck to their friends of the Night-hawk Club on Sugar Island in Moosehead Lake. Word came back in due time that their health and good luck were toasted in the proper form, but a frank admission was made that an unusual silence prevailed while the custom was being carried out. How could it be otherwise when some of the club members have been seeking moose meat for untold years without success.

Stories regarding the fine sporting qualities of that part of Maine lying in the extreme northwestern portion, and reached by the Bangor & Aroostook Railroad, have occasionally reached me from residents of Caribou and Presque Isle. A vast territory is lying out of doors up there around the upper waters of the St. John and the many outlying lakes and streams, a large part of which is still untouched by the lumberman's axe. Superb fishing and shooting can be had for the seeking according to these statements, and the wonder is that more sportsmen do not go there. The trouble probably lies in the fact that it takes considerable time to get in and out. Two Boston sportsmen have made the trip this fall, and the story they tell since returning seems to confirm those previously heard. William Wallace and H. L. Hall are the two men. They went to Island Falls on the B. & A. and there obtained a team and wagon, on which was loaded a canoe and several camping utensils. An eighty-two-mile drive was then taken to the place where they must leave their horses and plunge into the woods. Their destination was the St. Froid Lake, and thinking they could save time they decided on the advice of a French farmer to go through the woods to the thoroughfare or stream connecting Portage and St. Froid lakes, intending to canoe it down to the lake itself. On reaching the stream they found the water too low to float them down, and realized they were in a tight predicament. They were two and one-half miles from the lake, and it became a question of going way back through the woods or carrying their boat and equipment down to deep water. They had no guide, and realized if they decided on the latter plan they would be obliged to wade the stream almost the entire distance, as the bank was impassable with thick growth. With great courage they tackled the stream, and floundered about in the ice-cold water until a place was reached where they could launch the canoe and paddle down to the place selected for camping, where they finally arrived, cold, wet, and of course very hungry. A good tent taken with them provided their camp, and a stay of two weeks was made on the shores of the lake, the time being given wholly to hunting. Mr. Wallace killed a bull moose and two deer, and Mr. Hall one caribou. Besides the big game they killed many partridges, the birds being very plentiful, and also had good black duck shooting. Some few days before they entered camp a couple of lumbermen, while driving along a tote road in the woods, were suddenly confronted by an immense bull moose, which for a time declined to move out of the path, and seemed half inclined to attack the horses. Of course they had no gun, and were obliged to await his pleasure. This incident made it appear that the animals are not hunted much in this virgin region, and the evidence of Messrs. Hall and Wallace add further weight to that theory.

Another bad miss scored, and two disappointed sportsmen down on their luck, are the conditions surrounding the return to Boston of H. F. Morse and Judge Bolster. The two gentlemen were tramping through a swampy stretch of woods and at the same time both saw a great bull moose, with a magnificent pair of horns, looking straight at them but a short distance ahead. Both men instantly fired and Mr. Moose made off in a hurry without shedding a drop of his precious blood or stopping to nod good-by. Congratulations that they had not shot each other were next in order, and the balance of their walk was spent in silent meditation of what might have been. They have been in the Aroostook region for two weeks, got one buck deer, and but for this mortal shock to their confidence would have gone on record as having made an ideal trip.

H. S. Fisher and wife, of Boston, have been spending a week or more in that fine region back of the Katahdin Iron Works, in Maine. Houston Pond Camps was their stopping place, and not the least of their pleasure was obtained in viewing the enchanting scenery surrounding their pleasant home. The substantial rewards of the trip came in the shape of a 200lb. buck deer and a doe, killed a few days after their arrival. They returned to Boston more than pleased. HACKLE.

CHICAGO AND THE WEST.

Song and Game Birds in the South.

CHICAGO, Ill., Oct. 18.—Mr. Benj. C. Miles, of Brownsville, Tenn., a devoted lover of all birds and a close student of their ways, writes entertainingly in regard to the loss of bird life in last winter's storm, being moved thereto by the comment of Mr. F. F. Merrill, of Milwaukee, on the disappearance of the bluebirds from that neighborhood this year. Mr. Miles says that he positively knows where there was one nest the past spring, and saw two or three other couples at different times. "I suppose during the February cold spell," he says, "I noticed not less than a hundred frozen birds, and among these was only one bluebird. I had hoped from that fact they would get through all right, but fear now that is not the case. A friend of mine, a close observer of birds, tells me he has not seen one this summer.

"While coon hunting in the woods during the cold weather in February I got lost from my crowd, and stopped near a dry snag and built a fire. In stripping a piece of dry stuff from the snag I exposed the cosy retreat of several blues, whereupon I transferred my fire, and taking a string tied the bark in place again and put in the hole a piece of the facing of my coat, which had been torn in the chase. In May I hunted up the snag and found that a bird had nested and hatched a brood, and suppose it was one of my former camp mates, as the piece of cloth was the foundation for the nest.

"Our visiting birds have nearly all left us, and they will be truly missed. Many of the birds, which I think nest further North usually, stopped with us this year, and while I sincerely sympathize with my Northern brother in his loss, I am so wholly human that I bid them come again and stay. Lately a friend, whose acquaintance I formed through your columns, presented me a copy of Chapman's "Birds of Eastern North America," and I wish to go on record as saying that the book is a treasure to any lover of the feathered tribe who, like myself, is ignorant of bird nature, but still alive to its beauty and value, and from this Western limit of the subject of which he treats I would waft him a blessing from a lowlier member of the brotherhood of bird lovers.

"Our Bob Whites this year present a curious feature, in that many bevies are fully grown, while others are just hatched apparently, not able to fly. I saw such a bevy this evening. Of those large enough to shoot there are a goodly number, and after getting through with them we will look after the small ones, but have concluded we will have to leave them over for another year.

"Several of our sportsmen have killed turkeys in the past two weeks, and they are more plentiful than for several years past—the result of the constant agitation for better game protection which our people have kept up for a few years past, and in which FOREST AND STREAM has so ably assisted."

Bears and Fur in the North.

M. P. Dunham, a Madison county, Montana, guide whose home is at Lyon, writes that he is just back from a hunt with a man who took a .22 rifle and a kodak, and shot—with the kodak only—thirty-seven elk and two deer, and was pleased with his luck.

It is Dunham who has previously spoken of unscientific bears, and he adds in regard to the "pine nut" bear:

"I have killed a great many bear here in the mountains, but I have never got one that would answer to this description. I have killed two kinds of black bear here, one the common mountain black bear and the other a much smaller bear, with a large white spot on the breast. In some cases the whole breast was white. This last spring I killed a large bear that at a distance looked like a black bear, but on getting up to it I found it to be a dark gray; not a silver-tip, but gray—one white hair to about ten or twelve black ones. I sold the hide to Gottschalck, of Bozeman, who also called it a 'gray bear.' I have also shot brown and cinnamon bear that had climbed a tree. I saw a brown bear come down a tree this summer, and he must have climbed up to be able to come down."

I wish to guard Mr. Dunham against the unscientific habit of jumping at conclusions. It is by no means scientifically certain that, because the bear was seen climbing down the tree, it had ever climbed up the tree. Even had Mr. Dunham seen the bear climbing up the tree it could not be accepted as fact, since Mr. Dunham is not a scientist. As Mr. Dunham has submitted so poor a case, all we can consider scientifically proved is that the bear he saw coming down the tree had been born up the tree at an earlier day and had never come down before, and that it was not a brown bear he saw at all, but a black bear. I really must deprecate such unscientific habits of observation, and must ask the mountain men not to see gray bears, brown bears or cinnamon bears, but to confine their observations to two sorts, the black and the grizzly.

In Mr. Horton's fur store at St. Paul there is a mounted bear said to be the largest in the United States. It was mounted, I believe, by William Hart, of New York, and is larger than the monster bear shown by Mr. Hart at the Sportsmen's Exposition. Both these bears came from Alaska, and are the same "brown bears" mentioned by Schwatka and other Alaskan travelers. They are not the color of the grizzly, but are of a solid brown color. The St. Paul bear is said to be between 10 and 11ft. in length. (We had no way of measuring it, as it is mounted standing on its hindlegs.) Somebody most unscientifically stretched that bear hide, for we are asked to believe that the grizzly does not really weigh over 600lbs. on the scales, and it seems sure that this monster would have weighed more than twice that, unless it was a pneumatic bear. Moreover, at the feet of the big bear are two mounted cub bears (not known to have belonged to the big one) which are brown except for a plain white collar, expanding to a white patch on the throat. What business have they with that white collar? Do they lose it as they grow older? The brown color of this big bear is not the cinnamon color of the Rocky Mountain cinnamon bear. It is the color which, I am told, is found uniform among these big Alaska bears. And yet, from Alaska come jet black bear skins nearly twice as large as the average Wisconsin or Michigan black bear. Who shall tell us of all these bears? Has science got it all up her revered sleeve? To me it rather seems this way: science classifies, but nature does not; and nature saw it first. E. HOUGH.

909 SECURITY BUILDING, Chicago.

COMMISSIONER ROOSEVELT'S RECORD.

NEW YORK, Oct. 22.—*Editor Forest and Stream:* Mr. A. L. Trude, of Chicago, has recently given to the public several statements about myself which contain such reckless falsehoods that I at first thought Mr. Trude himself must be an invention of some of the newspapers. I am informed, however, that he is a real person.

One of his statements contains a long account of my shooting a trapped bear. The other contains a long account of an alleged hunt which I made after white goats, in which I failed to hit any of the goats and finally shot at a dead one which a guide had thoughtfully prepared. He also stated that my elk hunting consisted in driving females and young elk into ravines and slaughtering them. He gives as his authority two guides named Ed Marion and Beaver.

I never shot a trapped bear in my life; I never but once saw a bear in a trap; I never was out with any guides named Beaver or Ed Marion, or any similar name, and, as far as I know, I never saw them; I certainly never fired a shot in their presence. With one exception, all of the goats I have ever killed were shot while out with John Willis, now a prominent business man of Thompson Falls, Montana. I believe the editor of the FOREST AND STREAM has had correspondence with Willis, and some of Willis's letters have been published in the FOREST AND STREAM. Any one by writing to him can find out for himself the exact truth of my accounts of my goat hunting, as published in my two books. It happens that I have killed every white goat at which I ever fired, although some of them took several bullets, and one I did not get until the following day.

Some of my bear hunting has been done with Willis, some with William Merrifield, of Medora, N. D., who was at the time on my ranch, and some with Hank Griffen, who is dead. Three bears I shot when I was alone. As for shooting elk cows and calves, in all my twelve years' hunting in the West put together I have killed but five, and these were when we were in need of meat. The most successful elk hunt I ever made was in 1891, south of the Yellowstone National Park. I was with old Tazewell Woody, whose address is at Mammoth Hot Springs. Your correspondent Mr. Hough has in your paper already given Woody's account of what I did on this trip. Mr. R. H. M. Ferguson, now an A. D. C. at Government House, Ottawa, Can., was with me on this trip, and would doubtless answer any letters sent to him in reference to it. A full account of the trip is published in my book "The Wilderness Hunter."

I challenge Mr. Trude to give the date and place where a single one of the incidents which he recites occurred. They are all false from beginning to end, in every particular. Whether he has invented this falsehood himself, or whether he has been imposed upon by a couple of scoundrels whom I never saw, and has recklessly repeated their lies, I do not care. In either case he is equally to blame. A liar is sufficiently contemptible, but a liar who slanders others in wantonness is even worse.

Mr. Trude is unfit for membership in any club or association of gentlemen, and is unfit for the acquaintance of any man of honor. THEODORE ROOSEVELT.

A SURE-ENOUGH POINTER.

MONROE, Mich.—*Editor Forest and Stream:* Seeing others in your interesting journal giving their experiences causes me to give you an account of an afternoon in the field the present week. I became possessed of a young dog last winter too late to give him any field experience, and wishing to see how he would behave I took him out for a run. He had been tried a little before I got him, and being largely Laverack, inherited the same traits of character as nearly every Laverack had that I have had anything to do with, viz., a total disregard of orders and a determination to go where they pleased and select their own route. As we were not quite united in our opinions and I knew the country best, I wished to see if the few misunderstandings we were having lately about the use of the whistle as a signal for turning (not for going away; he knew how to do that thoroughly) were to be continued.

On reaching a large field of wheat stubble I cast him off. After finding the length of it and turning at the fence (I was much pleased at this unusual occurrence for him), and coming quartering back handsomely with head high in the air, he drew up to a fine point, which, although only a lark, was quite gratifying to me. After beating out another field or two and a piece of woodland, I came out to the Lake Erie marshes and some prairie land. He was going well and wide, and again throwing his head high, roading and drawing, came bold on to a crippled duck. He seemed to be of the opinion that he could capture it, but as its wings were not totally disabled I advised him to let it go, an advice he rather reluctantly heeded. On again. He had moved a short distance only when he made a most stylish point. On my going in front of him out hopped a pretty green frog. I was now nearing a spot I knew snipe always to inhabit, and my hopes ran high, as I had a gun along. When he carefully drew to a point I walked up and was rewarded by a shot and a bird. He retrieved it nicely, and wheeling into the wind, instantly trailed another, which he had also the pleasure of retrieving. His price was now rising rapidly. But the supply of birds had run out. At the next low spot he again pointed handsomely, when a brace of birds

got up and escaped. Next in a cornfield he pointed some distance off. Before I could reach him the snipe got up, but before leaving the place 50yds. he was firm on a covey of quail (rather a scarce article here the present season). His next point was on a bittern, which was allowed to escape unheeded. The next was on a marsh hawk, which on being put out of the rushes was seen to have been feasting on a blackbird. He ended up the afternoon by again pointing another crippled duck. I think now that I have a remarkable dog, and the fact of his pointing a lark, a frog, five snipe, a bittern, a covey of quail and a marsh hawk and another duck (although crippled), is proof of it, and all without a flush intervening.

JOHN DAVIDSON.

HINTS ABOUT NITROS.

THE beginner with nitro powder will generally load it much as he has been loading black powder; there not being enough wadding and the primer too weak, results are poor. There being so little noise and recoil as compared with his black powder loads he concludes that the strength of the nitro has been very much overrated. Next lot is loaded with a generous charge of powder, and on the advice of some friend is loaded in strong primer shells. As strong primers will develop far greater power in the powder than the common ones, and a slight increase in the quantity of powder seems to make a great increase in violence of explosion, the experimenter has a load of double or more the violence of the first lot, but thinks he has only added 10 per cent. or less. If such charges are used in a cheap gun the results may be disastrous to gun and shooter. If the gun is a good one and the shells are loaded according to directions of the makers of any of the well-known nitros, there is very little danger. The amount of powder must not exceed the directions of the makers, and there must be plenty of elastic wadding between powder and shot; not less than ⅜in. of felt wads, and twice that amount is better. The generation of nitro gases is very sudden and violent, so the elastic wadding is needed to give a little relief at the start and also prevent swedging or balling of the shot, which of itself is more or less dangerous in a fully choked gun of some makes. Many guns are bursted by black powder, but people have been so long accustomed to it that little is thought about it. Some fellow says there must have been dirt or something in the muzzle or it would not have bursted, and they let it go at that, but when nitro bursts the gun the powder is charged up with all the blame every time.

I recently saw a 12-gauge gun bursted by a charge of 3drs. of nitro powder and 1⅛oz. of shot. The break was alongside the extractor rod, and examination showed that the metal of the barrel had been cut away to make room for the rod, so the thickness of the bursted metal did not exceed ⅛in. Hundreds of nitro charges had been fired in the barrel before it gave way.

O. H. HAMPTON.

A GIGANTIC MOOSE.

BOSTON, Oct. 25.—The big moose of the Buckboard Road, in from Andover, Me., to the South Arm, is dead. Mr. N. G. Manson came out from Camp Leatherstocking, Richardson Lake, yesterday, and he finds that the big moose is dead. Tom French and E. A. Rowell, having got through the season with their steamers, are after the moose. Geo. Thomas, a noted Andover guide, has shot the first big moose. He was engaged by a couple of Lewiston sportsmen to guide them on a hunting trip at the lakes. On the way in, Mr. Thomas came upon the tracks of the big moose, in the vicinity of Birch Guideboard. He followed and came upon the moose lying down. The animal started and George fired. He hit the moose in the neck, when, instead of dashing away from the hunter, the wounded animal charged, but George killed it. A crew of men from Andover dragged the moose out to the Buckboard Road whole, and carted him down to the village. He weighed 700lbs. when he got to Lewiston. The animal was a black bull, standing nineteen hands high, or higher than any horse. He measured 16ft. in length. This moose is the biggest one killed in that section for many years. He has a handsome pair of antlers.

Mr. Manson had a grand time in camp, being there three or four weeks. He had all the venison he wanted in camp after the law was off. Partridges were plenty. He is much pleased with his location, especially in the fall. He was there after the bluebacks begun to run and they obtained a good many. It has been well known to the guides for a long time that these fish run up the Richardson and Beaver brooks in the fall to spawn. Mr. Manson says that the surface of the water was almost alive with them at times. He tried to take them on the fly, and bait was also tried, but without success. About the only way to take them is with a net and a light in the night as they crawl up the shallow streams. They are seen for a few days in the fall, but never at any other time.

Mr. S. B. Woodman is on the list of disappointed hunters. He has returned from his hunting trip to Princeton, Me., a point beyond Calais, without any big game. He went to the same camps last year and got his deer. One of the party also shot a bear which Mr. W. brought to Boston.

Mr. George Lanphier's party was very fortunate indeed. The two moose killed were young bulls, two years of age, with nicely budded horns, taken on the shore of Upper Bema Pond. The party also shot a bobcat weighing 30lbs. They got no deer, the leaves were falling and there was too much noise in the woods. Mr. Lanphier thinks that they must have started twenty in all, but it was next to impossible to get a shot. The party was made up of Mr. Geo. Lanphier, his brother Charles Lanphier, William G. Fisher and his son William G., Jr. They were quartered at Philbrook Camp, Schoodic, Me., and they speak in the highest terms of the treatment they received there. The camp is situated about half-way between Schoodic Lake and Jo Morry Lake. Mr. Lanphier thinks that with a tracking snow he could shoot his quota of deer in one day, and he wants no more.

Coot-shooting along the Massachusetts coast has continued fairly good, though the shooters are hoping for another storm. Since the big storm and blow of a couple of weeks ago the weather has been too fine for shore bird-shooting. A Boston party went down to Scituate to-day for shooting, and also to eat one of Gus Sherman's celebrated coot stews. Gus is cook at the Harbor Light and has got to be celebrated for his coot stews. The common idea is that nobody likes coot cooked, but the coot hunter, who knows, will quietly tell you that "you must go where they know how to cook them." The Scituate party this time is made up of Charlie Ripley, C. H. Gifford, Harry Augustine, A. I. McLauthlin and C. McLauthlin.

M. H. Adams and Henry S. Starr, of Cambridge; C. E. Belcher, of Medford, and S. M. Bevin, of East Hampton, Conn., are at Kingfield, Me., hunting in the vicinity of Mount Abram.

SPECIAL.

SOME NOTIONS ABOUT MAN AND NATURE.

Editor Forest and Stream:

The reports that I have received of the hunters of deer in the Adirondacks have indicated that as many deer were killed this fall as ever before, and that more people killed as many deer as they could. I read in *The Sun* a few days ago of thirty-seven deer being killed by one party. The dispatch was from Troy, I think, and the party was one from Saratoga. I wonder how many persons were in that party and how long they were in the woods. If there were nineteen or more of them I would like to know how many deer each individual killed. Furthermore, I would like to know why the number of deer to be killed by a party for stated periods of time is not limited as individual scores are now limited. I should think that a party of five that kills ten deer in a week ought to be as liable to punishment as the man who kills three deer in two months or a year.

I knew a party of eleven to go into Moose River one fall not many years ago, and when they came out ten days later they gleefully told me that they had killed sixteen deer. Now, sixteen deer was seventeen less than the law would then have allowed them to kill. Those men brought out pack-loads of jerked venison that, some of them, weighed over 100lbs.; yet the stench from unused fore quarters that lay about their camp was fit to sicken one's soul as well as stomach. I could cite other cases where men, hoggish for blood, were sinners inside a limit law.

It is like this: New York has a valuable safe deposit vault in which are jewels of inestimable value. There is a building around and over it that is good so far as it goes, but there are yet cracks and holes and doors and windows through which vandals can cart away the treasure, and even the vault itself. It has a few watchdogs of its own and they are inadequate or unfaithful to their trust. It depends too much on clubs to preserve its jewels and the vault—as if I'd set a guard of panthers and elephants over fresh meat and a hay field. But each year we see the forest—a vault of irreplaceable value—melting away, as it were, before sawmills, railroads, aye, and even sportsmen's clubs are going hand in hand with these devastators.

I can direct the reader to a forty-man lumber camp that is stripping all spruce and balsam trees—winter game shelter—for five miles along the road above Northwood, Herkimer county. I can direct him to at least ten sixty-men lumber camps that are disemboweling the forests of northern Herkimer county. I can direct him—I could lead him for miles along trails between heaps of dead brown tree tops. I could even point out to him a sawmill that eats 2,000 logs a day—logs that were mostly cut on a sportsmen's club's lands.

If I beat my horse with a club or starve it or burn it with fire I am taken before a man whose face shows his horror at my crime and his detestation of me, and by this man I am sentenced to pay a penalty. Better yet, the newspapers tell the people of my wretchedness, of my barbarous instincts, of my lack of appreciation of civilization, and say that my punishment is not severe enough. But I can grievously wound nature; I can torture her, I can bring tears of blood from her eyes, I can scar her with iron and steel, I can destroy her, and there is none to say "No" to my cruelty. There is no penalty to pay, for I have no heart, only a pocket.

Let us—not sportsmen, but the State—buy the ground that lies beneath nature, and if they who own it will not sell, let us declare the forest a public highway, and then pay a fair price for it, and they'll quickly take the lucre. Then when a man or woman wounds that nature which we own or that nature's children, let us punish them as you would punish me if I maltreated my beast.

RAYMOND S. SPEARS.

BROOKLYN, N. Y.

WHERE NESSMUK LIVED.

Editor Forest and Stream:

These notes of a famous Massachusetts hunter which I take from the Worcester *Spy* are doubly interesting because Mr. Dudley's hunting has been in the country of Nessmuk's youth:

On the Sutton road, about three miles from the Webster post office, in an old-fashioned New England farm house, lives the veteran fox-coon hunter of Worcester county, Reuben Dudley, who with his helpmeet and married daughters, residing on adjoining farms, now leads a life of contentment known only to well-to-do farmers of New England.

Mr. Dudley was born in Douglas, Mass., March 21, 1829. As a hunter he has no equal in the county, and many is the time when parties from Worcester have enjoyed him as guide in their hunting trips. The *Spy* man the other day heard his wonderful stories of his hunting trips, which have been his recreation from a mere lad. Mr. Dudley wants the *Spy* to ask its readers to notice the difference in trout fishing when he was a boy from that of to-day. Some fifty years ago he, with a 4-cent fishing tackle, in contrast to a $50 output of to-day, would catch brook trout, which were never weighed, but measured. One would fill a spider where now a dozen would hardly fill it. He has fished the celebrated five-mile stream that has its rise at the old Coffee House Dam, which flows south from Buck Hill woods through Thompson and has its mouth below Putnam, Conn., emptying into the Quinebaug River. His largest string of brook trout was forty-two in number, which weighed 42lbs., caught when he was only 16 years of age. He took them to Thompson and was offered 5 shillings, or about 5 cents per pound, for them by Moses Hoyle, of East Thompson. The mother of Mr. Dudley on her old spinning wheel twisted the line which, with a birch pole 18½in. long, constituted his outfit, at a cost of 4 cents. Once at Joslin's mill dam pond, now the old crumbled down saw and grist mill, he caught two trout that weighed exactly 2½lbs. each, and was offered only 50 cents apiece for them. His companions in fishing were Erastus Joslin and Royal Marsh, with whom he used to supply parties in New York city. Later on he guided such men as Samuel Slater and Lawyer Rogers, of Webster, and John Eaton, of Thompson, in trout fishing. He enjoyed a hearty laugh when he alluded to the trout fisherman of to-day, with his costly rig, a 5oz. scale in his vest pocket and a basket of 8oz. trout as a big day's sport.

As a coon hunter Mr. Dudley has no superior in the State. He has in his day, in one, two and three weeks' trips, from 5 to 40 miles distance, to Union and Stafford, Conn., bagged 700 coons, and intends this fall to visit his old grounds as his last hunt for coons. He casually remarked that this was the favorite sport of Daniel Webster. Mr. Dudley has also killed 150 foxes, having one of the best kennels of hounds in the county. He raised 92 hounds, disposed of several to leading sportsmen in the country, and has at present five hounds ready for the season's hunt. He hunted last winter more than ever before, and is anxious for his farewell season. He has trapped 20 otters, which he states is the most sensible, cunning animal he ever hunted. Has caught and killed 67 rattlesnakes, 20 of which he kept alive, catching them at Mine Dam Brook in Webster, selling them at $5 each to parties who would exhibit them throughout the country. His life has been one of work, and this hunting and fishing came after farm work was over. His farm, now comprising 68 acres, is the last farm in Webster on the Sutton road, south of the Sutton town line, and years ago was a part of the camping grounds of the Nipmuck tribe of Indians. North of the lane leading from the highway to the house is the Nipmuck Pond, covering 10 acres of land, fed by natural springs, which has been flowed and enlarged by Mr. Dudley, and stocked with trout and other fish, and each year supplies to the local market pounds of fish. He also has found 250 swarms of wild bees, 13 of which he found the past year, the largest swarm having 150 pounds of honey.

NOTES FROM THE GAME FIELDS.

HADDAM, Conn., Oct. 22.—From my observations in this vicinity I find partridges fairly plenty, but scattered singly and in pairs throughout the woods in pursuit of food, making it tedious hunting, for they are also very wild. Quail are more plenty than was expected in the summer, and it seems to me that there are more than we have had for several years. Woodcock have been unusually scarce thus far, and we can hardly expect many more flights after this cold snap. Gray squirrels are quite plenty, but seem very wild and will not remain on the tree up which they are driven by the dog; so if one does not get to the tree soon after the dog barks he will find the squirrel has fled to other trees, which makes it impossible to locate it. The trees and bushes are still loaded with foliage, which makes either squirrel or bird hunting quite difficult, and adds another proof to my often-expressed opinion that the open season in this State should not begin before the 15th of October, and, I think, should close the last day of November. I am sure if it were so we would have pleasanter shooting and in the end more game.

A.

Under date of Oct. 24, Mr. J. B. Stoddard writes concerning game conditions about Newton, N. C.: "There has been no rain for over two months. Birds are uncommonly scarce, and weather and scarcity of birds are a hard combination to struggle against. It is almost impossible to get work on the few we do find. No doubt more birds will be found after we have rain. I was out this morning early and only found one bevy. The trials will be slow unless rain sets in. I would not be surprised to see birds scarce on the field trial grounds. Our best day was seven bevies with good dogs. The best record here so far is nine bevies in one day. Most dogs will not find a bevy in a two-hour run any place near Newton. The people here give as a reason for the scarcity that the birds were froze out.

Game Preserves and the Unfortunates Left Out.

PROVIDENCE, R. I.—*Editor Forest and Stream:* It rather looks as if our little State here would in time become a game preserve, and that those of us who don't happen to have the price of admission to the ring would soon be advertising our guns, dogs and the rest of our duffle in the FOREST AND STREAM for sale.

Now what is the general idea of the readers on this question of posting all the good covers?

Game preserving is undoubtedly a vastly good thing, but it hardly seems right for those who are more fortunate in worldly goods to buy up or lease all the good covers and keep out the poor chap who likes his day afield also. It savors too much of the old style English park system, and we will soon have poachers and sneaking pot-hunters arising from the ranks of those who don't believe in that sort of thing now.

It does seem that good game laws, properly enforced, should keep up the supply of game without the forming of these preserves which exclude many of our true sportsmen.

Rhode Island has many good covers, but just try a day and see where you will be at, and what you will find. Warwick Neck, an old stamping ground, reserved for a select few; the Harmony, Greenville and Summit squirrel and rabbit grounds posted; in fact there are very few good places now that one can find without the "eheu" provoking "No trespassing, under penalty of the law. All persons forbidden shooting or entering upon these grounds."

No doubt this keeps off the pot-hunting Dago *et alii.*, including a few of us who can't well afford to buy a few hundred acres for a day's shoot now and then.

What is the opinion of the FOREST AND STREAM fraternity?

TODE.

Mourning Doves Protected in Michigan.

HOLLAND, Mich., Oct. 24.—*Editor Forest and Stream:* In your issue of the 12th, Julian, of Lansing, Mich., reports the killing of twenty mourning doves. Was not this shooting illegal? Our last State game warden held that mourning doves were protected by the law which forbids the killing of song birds at all times. Acting under this decision, our Fish and Game Protective Association has stopped the shooting of these birds here.

ARTHUR G. BAUMGARTEL.

BULLETS IN SMOOTH BORES.

SMOOTH bores are more affected than rifles by defects in the bullets, such as air-holes in the interior, wrinkles on the surface, or want of perfect sphericity in the shape. It is therefore advisable to use moulds of improved pattern, which are cut with great care and are provided with very deep holes through which the lead is poured. The leather should be hardened with about one-twelfth part of tin in order that their roundness may not be impaired by the explosion of the powder. With the same object it is better to use No. 6 rifle powder rather than the finer quick-burning brands. The part of the bullet from which the neck is cut should be placed undermost and in the center of the wad on which it rests. Turning down or crimping the cartridge case diminishes the accuracy to some extent, and crimping is not necessary except when such heavy charges are used that the recoil of one cartridge jerks forward the bullet in the other. With a moderate load of powder, balls which fit properly can be kept in their places by pouring a little melted lubricant around the part where they touch the inside of the cartridge case. The best lubricant is a mixture of paraffine candle with sufficient vaseline to give it the right degree of hardness. By varying the proportion of one or the other it can easily be made to suit either a hot or a cold climate, and it has one great advantage over any kind of oil or fat in not corroding on the bullet, even if left in contact with it for many months.

Barrels which have a straight slope from breech to muzzle seem to give better average shooting than those which are thin, and consequently dished inward for some inches below the muzzle. With my own guns, barrels that were recess-choked have been as accurate with ball as those that were cylinder-bored, and its frequent use has not in any way spoiled their patterns with small shot. I never risked firing it from muzzle chokes, believing that if a ball could pass easily through the muzzle, it would be likely to injure the barrel in its passage by rebounding from side to side. If, on the other hand, it fitted the lower part of the barrel closely, there was a possibility of splitting open the choked part, or even carrying it away altogether. With a muzzle-choked barrel I would always prefer using buckshot, although, judging from my own experience, the largest size that will chamber in a 12-bore has not sufficient penetration to insure killing an animal the size of a fallow deer at distances beyond 35yds. I am convinced that, beyond that range, for one deer bagged fully three escape wounded. The manager at the shop of a prominent London gunmaker once assured me that even light, thin barrels were never injured by bullets if the latter be one size larger than the gauge of the gun. He was very probably right, and yet it does seem possible that there would be a severe strain upon the breech while the ball is being suddenly compressed from the larger to the smaller diameter. Most gunmakers advise the use of a naked ball of such a size that it touches the barrel all round, without being either loose or tight enough to require force when pushing it through. I have frequently found bullets fitting in this way, and only once injured a barrel. On that occasion the bullet scored a broad spiral mark for several inches along the inside—which no amount of rubbing ever sufficed to remove. I have always obtained the most regular accuracy with bullets one size smaller than the gauge of the barrel, so that, when covered with a patch of tough linen, they fitted snugly enough to require one steady push of a cleaning rod to force them from breech to muzzle. The patch should be applied by tying it tightly over the ball with strong thread and cutting off all but a short neck, then leaving the ball for a few moments in melted lubricant until the latter has soaked into the fibers of the linen. If there be any dread of injuring a gun, a cloth wad with a small hole punched in its center should be placed over the felt wad, and the neck of the patch should be put in this before the ball is pushed home. Loaded thus there is no possibility of hurting the most delicate barrel, and the shooting is good up to 40 and often 50yds. I prefer placing the ball in the mouth of the cartridge case with the neck of the patch uppermost, and cutting off the latter before pushing the ball down to the felt wad. The patch is so tightly glued on by the lubricant that it adheres, while the ball passes along the barrel, but drops off at the muzzle. Loaded in this way with 3¼ drams of powder, one of my guns, a 16-bore receptacle, has put several successive bullets into a ring, eight inches in diameter at 60yds., and would doubtless do much better if fitted with a rear sight like a rifle—*J. J. Meyrick in Shooting Times.*

Maine Hunting Season.

AUGUSTA, Maine, Oct. 26.—This is proving a great season for hunting in Maine. Small and large game is plenty, and large numbers are taken by hunters.

Partridges are very numerous, and duck shooting has not been better to my knowledge for years. I refer to such birds as frequent our inland waters, the black wood teal and the "blue bills," which come in quite large numbers, stopping in our ponds and lakes on their way south.

This month will without doubt have taken a thousand deer from the woods, with a usual number of moose and caribou. It has been bad "still-hunting" weather, as the leaves have been dry, and the record shows that game is plenty. With the first snows, which may soon be expected in the woods north, the numbers killed will increase and we may look for five or six thousand at least as the hunters' crop for 1895. This number taken will not harm in the least the future supply. E. C. F.

Mr. Ronco Shot no Deer.

ARLINGTON, Mass., Oct. 22.—*Editor Forest and Stream:* I find on reading your paper of October the 19th issue an item in regard to an Arlington barber who has just returned from a trip in Maine and showed three deer, or, as your correspondent writes, had them in his possession in the close season. Now what I wish to set aright is this: Mr. Ronco has been to my camp on the west branch of the Penobscot River three years as my guest, and never has shot a deer, nor at one, in all of that time; as he only comes to fish; and as for his bringing home and showing three deer, it is a downright lie, which I stand ready to prove by the remainder of my party of seven. I would have paid no attention to this notice whatsoever had it not reflected a great deal upon my good principles of allowing no one to fish or shoot at my preserve in the close season. A. A. TILDEN.

Ontario Oddities.

BELLEVILLE, Ont., Oct. 23.—When the church officer opened the Halloway street Methodist Church on Sunday morning he found a dead partridge (ruffed grouse) on the floor beneath a window, one of the panes of glass of which the bird had shattered in its flight.

Gen. Davies, of New York State, on the last afternoon of his fishing in Hay Bay, says the Picton *Gazette*, hooked a 40lb. maskinonge, and when he was playing the fish a 25lb. one hooked on to the other spoon. The latter took care of himself till the first one, after a tussle and towing of near an hour, was safely landed in the boat, then the second fish, which had been towed by the untouched pole till then, was getting very tired and tame, and was safely landed in the boat. He also took just before a 15lb. masco, making three for the afternoon. Gen. Davies is the same gentleman who is credited with having caught a 51lb. maskinonge at Mosquito Bay some years ago.

Plover have been more numerous hereabouts this season than for many years past. A short time ago a party of three shot 126 in an afternoon, and a friend reports that on Monday he saw a flock of golden plover which numbered not less than 1,000. R. S. B.

Deer Killed with No. 6 Shot.

Editor Forest and Stream:

Up in Camp Old Stream, Washington county, Me., Billy Wheeler and I had hardly been settled in camp on Friday, Oct. 11, after a hard day's hunt, when James Dawson, of Providence, R. I. (who was also stopping at our camp), burst open the door in great excitement, yelling that he had killed a deer with No. 6 shot. Sure enough, not 300yds. down the path from the camp lay a yearling buck which had been killed with shot. Dawson had stood all of 50ft. away from the deer when he shot, and had literally peppered it for a space of 8in. in diameter; and when we opened it we found where the shot had torn the liver to pieces and we found two of the ribs broken. All this was done with a 12-bore Parker gun, loaded with No. 6 shot, at a distance of 50ft.; and if any of the readers of FOREST AND STREAM have ever seen anything to beat this I would very much like to hear from them. Deer are very thick this fall in Washington county, and I am glad to say that the game laws are very well enforced in that section of Maine, which means good shooting for many years to come. ULRIC X. GRIFFIN.

Foxes Shot Over Setters.

NEW YORK.—*Editor Forest and Stream:* In November, 1884, while shooting partridges near Valdby Kro, in Denmark, in company with Dr. P. H. Warming, our setter came to a point in a turnip field and I called up the Doctor for a shot. Much to our surprise a red fox jumped out, and we fired together and killed it. This seemed such an extraordinary occurrence that it was rarely interesting; but on Monday of this week, while hunting ruffed grouse in Lansing, N. Y., in company with Mr. M. Norton, I repeated the performance. My setter came to a point near a drumming log, and I called to Norton to come up for a shot. Three or four minutes elapsed before Norton could get to me, but as he approached a red fox sprung out from under the log, and I killed it. This fox was killed with No. 8 shot, and I think that the former one was killed with No. 8 also. Neither fox was more than three rods away when he sprang from cover, and both foxes had lain to the dog while I called up my companions for a shot.

ROBERT T. MORRIS.

Louisiana Rice Fields and Ducks.

OPELOUSAS, La.—*Editor Forest and Stream:* The open season on quail begins on Nov. 1, now close at hand. The weather and rank cover in the fields, however, will interfere with hunting, and it will be fully a month later before good and enjoyable hunting can be obtained. There are no snipe this fall. The long drought has dried up the ponds and marshes, and consequently the long-billed birds gave us the go-by. Usually at this time of year we have some duck shooting, but up to date I haven't laid eyes on a single one. Later in the season, after several heavy rains fall and the weather gets colder, I suppose we will have pretty good duck shooting. The rice crop this year is large, and when the harvesting is going on there is abundance of shattered rice that falls. This is great food for mallards, and I saw them winter before last by the thousands in the rice fields. T. A. JACKSON.

Partridge in Town.

ELIZABETHTOWN, N. Y., Oct. 24.—*Editor Forest and Stream:* Two curious incidents in the line of partridge shooting occurred in this town Monday last. At 7 o'clock in the morning of the day named above Carl E. Daniels shot a partridge while she was sitting on the roof of the Mansion House, doing the shooting from his bedroom window. The Mansion House is in the center of this village. Friend Morhous, who resides near New Russia, a settlement three miles south of this village, killed three partridges at one shot on the day mentioned above. HERMIT.

Reports from Kingfield.

BOSTON, Mass., Oct. 27.—A wide-awake party of sportsmen arrived in Boston from Kingfield, Me., Saturday afternoon, accompanied by three deer, one doe and two bucks as a result of a few days' gunning in the vicinity of Mt. Abraham. In the party were H. S. Starr and M. H. Adams, of Cambridge; C. E. Belcher, of Medford, and S. Mills Bevin, of East Hampton, Conn.

It is almost needless to say that the writer gets a generous slice of venison for the part he plays in the affair.

CACOETHES SCRIBENDI.

Quail in Craven.

NEW BERNE, N. C., Oct. 25.—The open season for quail begins on Nov. 1 in Craven county, N. C. The birds have dry weather for nesting and are more abundant than usual. Boys have been possum hunting in the pocoson near by and brought in five yesterday. C. H.

Carrier Pigeon 541.

SCRANTON, Pa.—While out hunting to-day I found a dead pigeon with band on—No. 541, C. J. R., 92. It was ten miles south of Scranton, Pa. H. D. SWARTZ.

Sea and River Fishing.

ONE EVENING WITH SALMON ON PUGET SOUND.

AN Indian, a salmon, a syenite rock, and an August evening on the North Atlantic coast form the pleasing subjects of a graphic sketch by Robert T. Morris in the September 14th issue of FOREST AND STREAM. My perusal of the article has impressed me with the existence of an apparent coincidence.

Acting on the assumption that your Eastern correspondent is an alumnus of Cornell, it then appears that about the time he was doing battle with the mighty salmon of the Labrador coast, another Cornellian, 4,000 miles distant, on the North Pacific coast, was making an analogous fight with a similar adversary.

But the environments differed somewhat, for in lieu of an eminent surgeon, a thin-faced, patois-speaking Indian, a *Salmo salar* and a rock of syenite, that constituted the *mis en scene* on the Atlantic seaboard that balmy August evening, the *rencontre* in the Pacific Northwest comprised the *personnel* of a frontier lawyer, a broad-faced, Chinook-speaking Siwash, a cedar dugout, and a 19lb. silver salmon.

The fish that Jo-mul had impaled was lured to its death by an over-susceptibility to color and an appetite deceived by the empty puffiness of a gaudy fly, but the salmon that the Siwash had gaffed in the waters of Puget Sound could never have been enticed from his lair by any similar combination of tinsel and feathers.

The hazy midsummer day was passing into late afternoon when I stopped at the Tulalip Indian agency on my way home from trouting in one of the many small lakes lying along the borders of the reservation. Everett, six miles up the Sound, was my objective point, and my mission at the agency, which is located on a little landlocked harbor, was to find passage on some passing freight boat, or with one of those nomads whose canoes are constantly flitting along the shores of the Sound. The harbor was thickly dotted with the shapely craft—which only the Indians on this coast can build—while out on the broader waters of the Sound, dimly seen through the narrow harbor entrance, enveloped in the smoky air, were drifting specks indicative of other canoe loads of Siwash engaged with the running salmon in a sanguinary dispute for the survival of the fittest.

The exhibition of a silver dollar and a discussion in Chinook-English speedily induced the owner of a canoe and his klootchman to undertake the journey. As we rounded the jutting headland that guards Tulalip Bay and paddled out on the smooth waters of Possession Sound, I tossed overboard the large trolling spoon used by the Siwash, and which is ever present in their canoes. The gear is crude, but effective. I had paid out something over a hundred feet of line and had taken a turn around my arm, for the speed of the canoe and weight of the troll made the pull uncomfortably strong, when there came a strike—shock is the better term—and a large salmon, apparently 40in. long, broke water in our wake. Three times the glistening silver sides leaped clear above the water before he realized that he was well in leading strings, and then he darted forward on the line.

"Hy-ak! hy-ak!" shouted the Siwash to his klootch, and then both bent over their paddles, sending the boat forward with fresh impetus, while I took in line. Close up to the canoe I lead the graceful swimmer, knowing well that his apparent docility was of but brief duration; and so soon as his crafty eye sized up the cause of his embarrassment, he gave one splash with his supple tail and whirled away, carrying out line with some portion of the cuticle appertaining to my fingers. Then I realized what a fight he would make on light tackle. So surely was he hooked that it was simply a question of main strength to haul him in to the gaff. My rod, which I had been using on trout, was a stiff, heavy fly-rod that had seen service with 5lb. mountain trout, and my reel held something like 300ft. of strong braided silk. Why not try an experiment? was my immediate thought.

The thought was parent to the act; so bidding the Indians to steady the canoe, and giving the buck the trolling line to hold, I jointed my rod and then told the Indian to haul in the salmon. Running the fish alongside of the canoe, the Siwash, as I careened the boat over until the gunwale was level with the water, fairly led him into the boat. It required the united efforts of the Indian and squaw to hold the plunging salmon, enveloped in a blanket to prevent bruising him, while I disengaged the trolling hook and substituted the hook on my light line. But I succeeded in securing him to my light tackle with some laceration to my hands, and then straightening up, with the rod well in hand, the Indians slid the mammoth salmon overboard. ——! ——!! ——!!! These dashes and exclamation points imperfectly translate the Chinook expletives that greeted my ears from my astonished paddlers as they beheld the light and supple rod writhe and bend, and heard the screaming reel, simultaneous with the disappearance of the flying salmon in a swirl of troubled water.

If the finny projectile had been fired from one of the coast guns at Marrowstone his flight for the first 100ft. seemingly could not have been of greater velocity. My trusty lance that had vanquished some prodigious freshwater fighters had indeed met a foeman before whom all others seemed as pigmies. Suspecting that the staying powers of the salmon would extend beyond the limits of my line, I bid the Siwash to jog the canoe along faster in his line of flight. It was fortunate that the fish did not sound, for as we were in about seventy fathoms of water he might have torn away clear from the tackle if in his first rush he had headed for the bottom. Fish and seconds flew apace, and two-thirds of the reel was uncovered with no apparent intention on the part of the salmon to discontinue his flight toward the broad Pacific. He had the butt fairly, and the tip was dancing and swaying across my wrist in a manner to test the fiber to its utmost extent, when I pressed my thumb to the flying line. It was like touching red-hot wire. But still the tremendous rush continued, and both fish and canoe were going at race-horse speed. Barely 20ft. of line remained when the tip slightly relaxed, and the great strain was ended.

Swiftly went the canoe while I worked the quadruple multiplier with all the rapidity possible. Probably three-fourths of the line had been recovered when scarcely 30ft. ahead the salmon again broke water to instantly

bridge in the Dorchester district is his favorite fishing disappear amid a shower of spray in a rush shoreward. Around whirled the canoe and another race of paddle and scorching line followed. The hubbub that arose from my swarthy paddlers was simply tremendous. Talk about the stoicism of the Indian! A perfect stream of excited Chinook, hilarious and profane, gurgled and flowed from their cavernous mouths as with hair flying they bent and swayed with rhythmic movements over their flashing and dextrous paddles. Even amid the excitement of the chase which now made my pulses quicken I had time to note the picturesque *tout ensemble* of my aboriginal outfit. But the rush was short, as upon my putting a check on the line the salmon again shot skyward. Then he did what should have occurred to him earlier in the struggle, when his strength was fresh; he sounded; 20, 30, yes, 40ft. he went perpendicularly downward without halt or indecision, and then slowly yielding to the supple lance he came to the surface and was reeled to within 10ft. of the boat.

But that quality in fishes which anglers call gameness, and which I suspect in our salmon is the instinct of self-preservation that makes him wary of the seal, the otter and the grampus, revived his flagging energies at the sight of the boat and canoe. It was the opportunity to score success, and probably would have succeeded if the alert Siwash had not been prepared for such a move and had not countered by an exhibition of superb paddling. How the Indians did it passes my comprehension, but quick as was the salmon yet the Indians were quicker, as with a shout I saw that the boat had been pivoted around clear of the line and without toppling me over from my standing balance in the narrow craft. Putting an immediate pressure on the reel, which was already under a heavy drag, I succeeded in checking the runaway, who after hanging a minute on the swaying tip of the rod swung around to the right and then broke water in a futile attempt to release the hook. It was a valiant effort, but the good rod was surely breaking down his strength. Each minute the radii of the circles the salmon was making around the boat were diminishing until he was reeled close in astern. My arms ached, and I was ready to call him in out of the wet, but there was a vicious glare in his eye as he swam along, warning me that he had not reached that stage when the white of his belly would show in token of vanquishment. He was playing a wily game to catch fresh wind, so I told the Indians to head for the beach.

For fully 50yds. he swam alongside not 20ft. distant, giving me a splendid opportunity to observe his magnificent size and action in the water. Was he ready to surrender? Easily I reeled in, and as gently he came. The klootchman dropped her paddle and raised the long gaff, but his keen eyes caught the movement and once more he made a rush for freedom. It was of brief duration. Endurance had reached its limit, and I easily turned him again toward the canoe. This time I reeled rapidly, and when the fish reached the side of the boat the heavy gaff caught him. There was a convulsive struggle, then two brawny arms lifted the quivering form over the gunwale and the battle was ended. *Oncorhynchus kisutch* was vanquished.

Ever since he emerged from the pink-tinted egg among the gravel beds of the Skykomish beneath the glaciers back of Index Peak, where he first escaped the voracious trout, he had successfully hustled to the very prime of life, preying upon the young herring, smelt and sculpins, and always dodging his foes, the seal and black killer, until in a fateful hour, mistaking the flash of a brass trolling spoon for an evening luncheon, he succumbed to the resilience of a mere withe of lancewood, weighing but 9oz., and less than one mouthful of his daily food.

The sun is disappearing behind the snow-capped summits of the Olympic Mountains, and its lingering rays, painting a broad band of vermilion and golden russet across the waters of the Sound, fall aslant a sandy beach along the western side of the Everett Peninsula. Near a long slender canoe, half withdrawn from the ebbing tide, squats a Tulalip squaw, her long black hair streaming over shoulders draped with a red and yellow blanket; a few feet distant, leaning on a carved and pointed paddle, stands her broad-shouldered Siwash husband, whose swarthy face is seamed with weather stains, and in whose outstretched hand is dropped a broad silver dollar by a corduroy-clothed pale face. On the sands, over which the purple twilight gently gathers, and in the midst of the picturesque group, lies the gleaming form of a silver salmon, whose race is run and who has fought a good fight.

CAYUGA.

EVERETT, Wash., Oct. 18.

TROUT AT THE UPPER DAM.

BOSTON, Mass., Oct. 26.—The following account (kindly furnished me by one of the oldest and most successful anglers at the Upper Dam pools in the Rangeley Lakes) of large brook trout taken at that noted place during the months of August and September this year will no doubt prove interesting to many readers of FOREST AND STREAM. The record for August is twelve trout, average 5½lbs., largest 8 5/16lbs. For September, twenty trout, average 6lbs., largest 8½lbs. Some of the lucky fishermen in September, giving date of capture and weight of their largest fish, were: Sept. 13, R. N. Parish, 8 1/16lbs.; Sept. 14, J. C. Dougherty, 5 1/16lbs.; Sept. 15, Hiram Blood, 5 5/16lbs.; Sept. 15, J. C. Dougherty, 7½lbs.; Sept. 16, E. S. Osgood, 4 5/16lbs.; Sept. 18, R. N. Parish, 5½lbs.; Sept. 18, J. C. Dougherty, 5⅝lbs.; Sept. 19, T. B. Stewart, 6lbs.; Sept. 19, R. N. Parish, 5¾lbs.; Sept. 22, W. J. Reynolds, 7½lbs.; Sept. 24, Dr. W. A. Drake, one of 8lbs. and another of 4 1/16lbs.; Sept. 27, R. N. Parish, 5lbs., and the same gentleman on the 30th, one of 8½lbs.

The Smelt Fishermen.

Smelt fishing around Boston is booming just now, and both the sportsmen and regular market fishermen are getting great numbers. I have heard it said that they are averaging larger this year than for some seasons past, and what fish I have seen rather confirm me in this belief. One of the best catches, as regards quantity, which I have heard about was made by two market fishermen on one day last week. In a little less than three hours' time they captured 533 fish, weighing 72⅜lbs. I believe they were taken in Dorchester Bay, but am not quite sure of the locality. Joshua Hammond, of Boston, is one of the most devoted smelt fishermen we have. Being a very busy man, he does most of his fishing at night, and is remarkably successful at the sport. The Granite avenue place, and, regardless of weather conditions, he can be found there on several evenings of each week. A good part of Mr. Hammond's success may be attributed to his expert knowledge regarding bait. It has been demonstrated to him that the sea worm is the great bait for night fishing, while the shrimp, the best bait for day fishing, he finds almost useless for night use. Blood worms are fair, but cannot compare with the sea worm, which is a more delicate morsel, and is so regarded by the sensible smelt.

HACKLE.

FOUR WEEKS ON PRESQUE ISLE LAKE, WISCONSIN.

ALONG early in the winter of 1894 there could have been seen two "fish cranks" talking and making arrangements for the next year's fishing trip. Now, these two cranks were trying to locate a place where they could go and spend a month and not be bothered with "fixen up" every time they went to eat a meal, where they could wear their old flannel shirts and hunting suits without having some one remark, "Look at the horrid man in the old rags."

These two cranks were J. C. Hahne, better known as Chickaree, and the writer of this. After lots of talk and some figuring and many hours spent in looking over maps we concluded that the Presque Isle Lake regions of northern Wisconsin would suit us, if the rest of the party that was to go with us were agreeable, and after any amount of corresponding (they lived in Greenville, O., as did Chickaree) it was decided that Marenisco, Mich., would be the end of our trip by rail. Aug. 25 was the day we left here. The party consisted of J. C. Hahne (Chickaree), Al Hahne (Thunderpumper), Dr. A. J. Marling (Tamarack), Abe Weaver (Old Spruce), Charlie, our cook, and last, but not to be left, the writer of this. A jollier, freeborn, half-white party never went into the woods than we.

We had sixteen pieces of baggage checked through to the end of our railroad ride; we all had round trip tickets and so did not have much fear of having to walk home. We left here at 1:52 P. M. and landed in Chicago that evening, spent the next day there and found out from the Northwestern Road that we would have to act as our own agent at Marenisco to receive our baggage and attend to checking it out when we left. Of all the roads I ever traveled over (I have been from the Atlantic to the Rockies and from Canada to the Gulf) the Northwestern tries the hardest to make it pleasant. There were no questions asked of how many there were in the party or how much baggage we had; it was, "Gentlemen, what can we do for you?"

We left Chicago at 5 o'clock P. M. on Monday by way of Milwaukee and Monico Junction, and there is where we made the mistake; we should have waited until 8 P. M. and gone by the way of Milwaukee and Powers. Then we would have avoided any tedious connections as we arrived at Monico Junction at 3 o'clock A. M., and had to wait there until 9 that morning, when we got a train for Watersmeet. There we had to change cars again, but only had a short time there, in fact, only time enough to find out that our baggage was ahead of us and had been carried to the next station beyond Marenisco, but the agent said it would be back on the train coming East that afternoon. After leaving Watersmeet the only station between there and our destination is Gogebic, and it only consists of the depot and one house, but there is a good road from there to Lake Gogebic. There wagons meet the train and take any one out to the lake. The distance is about eight miles in a northerly direction. About 1 o'clock on Tuesday we arrived at the end of our railroad ride, and found ourselves in an old sawmill town, minus the sawmill; it had burnt down some time ago.

I had been in correspondence with a party there for some time, so we were met by John McLaughlin, who told us to make ourselves at home. He took us to his house and tried to make it pleasant for us, and his effort was a success. When the train came in from the West it brought all our baggage in good shape. After storing that away in a small building there, we thought it time to make some inquiry about the trout fishing, and found that the season was a little late and that the nearest stream that had any trout in was four miles west, with no way of getting there only to walk or get on the good side of the section boss. We got on the right side, and at 7 o'clock next morning you might have seen a well-loaded handcar, bristling with fly-rods, headed west, propelled by several nationalities. We left the car where the road crosses the Little Presque Isle River. There we divided the party. Thunderpumper and myself went up the stream, while Chickaree and Tamarack, with the cook, went down stream. Old Spruce was laid up for repairs and did not come with us. We fished up and down that stream until 5 o'clock that evening, and caught seventy-nine very nice trout, which was considered a very nice catch, everything considered. When we counted up to see how many each party had caught, it was found that Tamarack and partner had beaten myself and partner, and beaten us badly; but didn't we get a "roastin'," and we haven't heard the last of it yet. All we could say was, "Wait, and we will show you how to catch bass."

Now about the trout fishing in that country. There is as good as could be asked for. I was told by good authority that where the Little Presque Isle empties into the Big Presque Isle River there is some of the finest trout fishing in the Northwest, and from there all the way down the river to Lake Superior the fishing is fine. There is where the big ones are caught. A three-pounder can be taken any day. There are a number of small streams that empty into the river and they are full of trout, but not such large ones as there are in the river. There is only one trouble about this fishing ground, and that is the difficulty of getting to it. To get there will take lots of hard work and some hardships. It will be necessary to take boats in with you as far as the falls by wagon. We found out that it took more work than money to get along in that country. We found the people very clever and not inclined to rob you. One wishing to visit that section should write to John McLaughlin, at Marenisco, Mich., who will give you all the information possible. He is a perfect gentleman and knows all that country; he and another man by the name of Hamlin are going to build a camp on the Big Presque Lake for the entertainment of guests; they have a number of tents there now, but expect to put up permanent buildings this winter as soon as there is snow enough to do the teaming. But more of this later on.

After supper we thought it time to get things ready to get down to the lakes, but found that Mr. McLaughlin had made all arrangements for teams and drivers. The next morning we were all up bright and early. When we came to getting our traps in the wagons we found we would have more than could be hauled in two loads, and as no other team could be had at that time we started with two loads, leaving one load to be brought in the next day. We had a team and buckboard to carry us. We got away about 7 o'clock in the morning. Everything went well for the first five or six miles, and then it seemed that the roads were not improving with distance, but we got along very well for nine miles, which brought us to the State line between Michigan and Wisconsin. Then trouble commenced, for of all the roads I ever had the pleasure of traveling over I think this was the worst. It was up one hill and down another, over stones and logs. Sometimes the wagon would try its luck at running on two wheels, and then there would be some lively scrambling to see who would be on the high side. That was the longest four miles I ever traveled, but at last we reached the river, as far as the teams could go, but boats were brought down from the camp to meet us. It was decided that Old Spruce and myself should take the guide and go to the camp (which is about two miles by river and lake), and there look out a good place to pitch our tents and establish our camp. The rest of the boys said that as soon as the baggage arrived they would load up the boats and follow, so with the guide we started up the river, and of all the crooked, narrow, shallow streams it was ever my lot to take a boat up this is the worst. It took us about three hours to make the camp. There we were met by Tom Darley, the camp cook, one of the jolliest Frenchmen you ever saw. His greatest delight outside of seeing a man eat is to tell a story, and I am sure if he ever tells you the story of "me buck" you will ever after remember him. After a good supper we picked out a place for the tents just across a narrow part of the lake from the camp. There was a fine spring of water right under the hill from the place where we would make our home for the next four weeks.

It was then getting dark, and we knew from our trip up that it would be impossible for the others ever to get up in the dark. Tom volunteered to go and meet them and try and give them a lift. He says that after getting into the river it was so dark he had to feel his way, but being thoroughly acquainted he had no trouble. He had not gone more than half a mile when he heard some one talking and went up to them, found it was Chickaree and the cook. They had got their boat fast on a limb under the water, and the cook, in trying to get the boat off, went overboard, and by some hook or crook got under the boat. He yelled "push the other way," but Chickaree kept pushing the wrong way, thinking he was right, and all that saved the cook from getting the top of his head wet was a log that kept the boat from going any further. At about 9 o'clock they all got to the lake as wet as if they had been at the bottom.

The next day the rest of our baggage came to the landing and we got the guides to go and fetch it down to our camp. This ended the worst part of our trip, as Mr. McLaughlin came down and brought some men with him to cut a road into the lake, and when we came out we had teams all the way and a better road.

By 4 o'clock the next afternoon we had things in very good shape. Then it was proposed we should go fishing. As we had no meat in camp, we thought fish would take the place of it; so Chickaree and myself took a boat and started out for a point across the lake, where Tom had told us there was good fishing. We had hardly arrived there when I had a strike, which I responded to by driving the hook in his jaw. Then trouble commenced, for it was nip and tuck between us as to which would get the surplus line on the reel; sometimes I had a majority and then Mr. Bass had it. Between the old split-bamboo, silk line, Frankfort reel and myself we began to get the best of it; but it was not until the bass had tried the old tactics of jumping out of the water two or three times and then trying to find the bottom. At last he was in reach of the landing net and lifted into the boat. He weighed exactly 3½lbs., but had fight enough to do justice to one a great deal larger. After catching a couple more we concluded we had enough for that evening, and returned to camp, where the cook had a good supper ready for us.

The next day the first thing was to get a supply of bait. Minnows are very plenty, and as we found that they were the best bait we could use, we built a live box to keep our fish and minnows in, and then proceeded to fill it. In the lake you will get shiners, but down in the river, where you will have to catch them with a hook and line, you can get all the chubs you want. After providing a supply of minnows we began to have some of the sport we had come so far for; but it would be tiresome to you to have to hear the old story over of how this one was taken and that one got away, so will not go over them, but will summarize: We caught about 400 fish in the four weeks we were in there.

It would probably be of more interest to know something of this country than to listen to all the different fights we had with the bass.

Our camp was located on a high point of land extending out into Big Presque Isle Lake, about one-half mile from where the Big Presque Isle River makes its start for Lake Superior. We were, about fifteen or sixteen miles south of Marenisco, Mich. The lake is very irregular in shape, being full of coves and points projecting out into it. The water is as clear as any spring water and very cold. The banks are high, with timber growing down to within 5 or 6ft. of the water's edge. The space between the water and timber looks as if some expert had been trying his hand at paving, so smooth are the banks lined with stone. I estimate that the greatest length of the lake is about three or four miles and it is very nearly as wide in its widest part. There is a narrows that connects it with Mud or Van Vleet Lake south, and there is a good portage that will take you to Crab Lake, and from there by short portages you can go to Horse Head, Ox Bow, State Line and a number of lakes in that direction. By going down Presque Isle Lake in a southwest direction you come to a short portage of 100yds. that leads you to Lake Katinka, the prettiest of all the lakes we visited; it is about one and one-half miles long and about three-quarters of a mile wide at its widest part; it has two islands in it, with points of land running down toward them which leave only small narrows to pass through. The shores are all high and dry and wooded

like those of Presque Isle Lake. I think there are more bass in Katinka Lake than in any body of water for its size I ever saw. They are not so large as in some lakes we visited, but they make up in number and fighting qualities. There is one very peculiar thing about this lake: the water is of a blue tint and all the fish caught out of it have a bluish or steel color.

Going from Katinka Lake in a southwest direction, you come to a portage of about 400yds. in length, which leads to Pappoose Lake, the waters of which are of an amber color. There is where we catch muscalonge, but being a little early in the season we did not have much luck. This lake cannot be called pretty, for in some places the water is covered with lily pads, and in places the shore is grown up with rushes, which also grow some distance out into the lake; but that all goes to make good muscalonge fishing ground. The banks of this lake have been marred by fire and wind; one of the islands has been burned off and left it covered with black stubs of trees and fallen logs.

From Pappoose Lake in a southeasterly direction lies Big Lake, a very irregular-shaped body of water, having lots of points setting out into it. It has very fine bass fishing in it. Rice Creek connects it with Little Crooked Lake. The creek must get its name from the amount of wild rice that grows there; it would be a great place for ducks, and in fact a great many come in there; but the Indians go in to get their supply of rice as soon as it is ripe enough, and they keep up such a racket that all ducks stay away until the Indians are through; then there is not much left for the fowl.

But to go on and try to describe all the lakes in this section would take more time than I have, and I am afraid it would tire the reader before he got through. All the lakes we visited had good fishing—some have nothing but bass, others a variety. In Pappoose Lake there are muscalonge, wall-eyed pike, both small and large-mouth bass, grass pike and goggle eyes.

There are two islands in Presque Isle Lake. The larger covers several acres; the smaller is only about 150ft. long and about half as wide. On it A. P. Brown has pitched his tent and is living a happy life. He came in there last spring, and liking the looks of things went to work and built an ice house, packed it full of ice, put up his tent and prepared to put in the summer there trying to regain lost health. We found him to be one of the most obliging gentlemen we met on our trip. He is authority on that section of the country; nothing was too much for him to do for us. He puts in a great deal of his time looking around. One day when on one of his tours he discovered a lake that is not down on any map; when he came back he told us of it and wanted us to go in and fish it; he said he would blaze a trail and cut out some of the brush so we could portage a boat in. We went up there, took in a boat and fished about four hours; caught two coffee sacks full of bass; they were all of the big-mouth variety, weighing from 2 to 6lbs. each. We did not catch these fish to throw away, for we had a place to put them. The camp over the lake had several men working clearing out the brush and cutting roads. They had to be fed, and to them we gave all our fish and they were very glad to get them, as they had no time to catch them. Mr. Brown discovered another lake a few days before we left, but we did not go into it to fish; some of the boys went and looked at it and they pronounced it a very pretty piece of water. The lakes are very numerous and you cannot miss it by going to any of them.

This country would certainly be the paradise of the deer hunter, as it was almost a daily occurrence for some of the party to see deer. On one occasion three swam across a narrow arm of Pappoose Lake within a short distance of where we were fishing; it would have been no trick at all to have rowed our boat up and killed them with clubs. But not being a hunting party and the law not being out, we contented ourselves with watching them until they reached shore, gave themselves a shake, looked calmly around and walked into the woods.

I must tell you of a little incident that happened at camp one evening. We had a tent 18x24ft., which was our general living place; in front of that we had a fly 18x20ft., stretched to form a roof for our kitchen. At odd times the cook cut tamarack brush and set them around, to form a wall for the fly, and wove hemlock branches in between, until he had a room as snug as could be asked for. In one corner of this, close by the stove, he had built a bench out of a cedar log split in two. On the other side of the fly and at some distance from the stove he had built for himself a rustic settee out of small cedar poles. On the evening I speak of he was stretched full length on this settee taking it easy, and the rest of us were trying to keep the stove warm, for the evening was very frosty. We were busy talking over the day's luck and telling about the big ones that had got away, when the cook jumped off his settee and came running up to me and wanted to know, "Are all the boys in? Are all the boys in?" I asked what was the matter; he answered, "Are all the boys in?" I answered that they were, when he caught up a lantern and started out around the tent. Tamarack, seeing by the wild looks and actions of the cook that something was wrong, started out on the other side. I took after the cook and caught up with him close to the rear of the tent. There he stood holding the lantern above his head looking out into the woods. I approached close to him and asked what he was looking at, when he turned his head and looked at me; he was so excited he could hardly talk, but he managed to stutter out, "Eheu! did you ever see such a buck?" Then I looked ahead and there stood one of the finest bucks I ever saw. He was within 10ft. of the tent and not more than 20ft. from us. When I stepped aside to get a better look at him he concluded it was time to leave, jumped over a log and went back of the tent, and in doing so almost ran over Tamarack, who was on the other side of the tent. I think he was trying to sneak up and put some salt on the deer's tail, but when it was put at him he denied it, and the cook said that if he had had some he would have put it on the tail of the deer, for if he had he knew he could have caught it.

There were lots of Indians around, and the cook had thought it was one of them prowling around trying to see if they could pick up anything they could carry away, but we were not bothered any with them.

If any sportsman who happens to read this thinks I could give him any information that would be of any use to him I am ready to answer any and all who may apply, for I am sure that any one who has the love for outdoor sports such as there is in that country cannot be otherwise than pleased. There are some hardships to go through, but there is more good to be derived from such a trip than all hardships will amount to. When I went into the woods I was not able to do anything; could hardly row a boat, and when it came to portages it was all I could do to get myself over, but in less than two weeks I was carrying my half of the boat and doing my share at the table. J. W. McCREA.

INDIANA.

CAMP BLAIR.

CAMP BLAIR, of the North Wakefield Trout Fishing Club, Canada, found the keeper, cook and guides ready to receive members and guests Sept. 14, and six of us answered to roll call on that evening, and as we all had brought our appetites with us we did ample justice to La Roque's good warm supper.

The night was cool and crisp, and the wood-fire in the broad fireplace made the sitting-room brilliant and comfortable as we took our after-supper smoke, arranged our tackle and laid plans for the morrow. Last season the first week of our stay in camp was warm and very quiet, extending to the lakes, the hills, the rocks and the trout; and while very beautiful and entrancing to the brush of an artist like Hart, did not pan out worth a cent for the rod and line with fly attachment. This year our first week's fishing proved the best, as most of the nights were frosty and a cool breeze by day.

Our experience in those lakes is, that trout will not rise to the fly, especially the large ones, in warm quiet days, but that they seek the deep water, 20ft. and over, and remain there as quietly as their outer surroundings until the temperature gets down to 40° or 50°, when they seek the shallower water and are ready to take the proper fly skillfully cast. During the warm days in the last week of September some of our party succeeded in taking some fine trout of 1 and 2lbs. weight, with earth-worms and minnows, from the deep water; but there was no sport in it, for they took the bait like suckers, often swallowing it before you knew you had a fish on your hook and then of course could make little resistance to being "snaked" in like a pound or two of salt mackerel. Of course this kind of fishing was not followed closely or continued long. Taking the two weeks together which we spent in camp, we took a greater number of trout with less rods than last season, though the fish did not run as large as last year.

One of our members who had spent nearly two months in the Rangeleys of Maine, taking only two trout during the time (and he is a skillful and persistent fisherman), met us on his return at Rouse's Point and went into camp with us, and the first morning's fishing gave him thirteen trout that averaged over a pound each. When asked his opinion between the two localities he said he liked to catch the big trout of the Rangeleys, but, like the Kentuckian, he said it was an awful long time between drinks. I am sure my patience and purse would not allow me to devote so much time to the catching of two trout, even though one of them weighed 10 and the other 6lbs. We kept the table fairly well supplied with partridges, though they were shy and less plenty than in previous years.

One of our members, a jolly whole-souled fellow, whose toast is usually, "One flag, one country and zwei lager," told one of the guides that if he would take him where he could get a fair shot at a deer he would give him $10, and if he killed the deer he would give him $15. The guide went that evening and got a hound, and the next morning they started out and about a mile from camp the dog started two deer which separated, one turning to the right, which the dog followed, and the other taking quietly to the left in the runway, where our friend and the guide were stationed. Very soon the guide's experienced ear caught the sounds of the quietly approaching deer, and whispering to our friend to get ready, the next moment the deer stepped leisurely into the opening less than 50ft. away and stopped. Did our friend shoot? The guide says yes, but that he shot at anything but the deer, pulling both barrels of his gun, loaded with buckshot, at the same time, when the deer bounded into the dense forest unharmed. Whether our friend M. had the "fever" or the "ague" perhaps can be determined by your pleasant correspondents who have been discussing such occurrences in "our family paper" recently; I am inclined to think he had both in a desperate form; at all events, when we returned from fishing we found him standing on the porch of the club house with his coat tails raised saying: "Gentlemen! go ahead, I am ready and deserve it." After chaffing him awhile some one said: "Why didn't you kill him?" With tones filled with vexation and shame he blurted out: "How could I kill him? There he stood like a big cow looking right at me!" Of course we got no venison steak, but we had more fun over the failure than we should have enjoyed in the killing of several deer.

Our entire sojourn at camp passed very pleasantly—we had an enjoyable company, an abundance of fish for the table all the time—the air was invigorating and all "grew fat and saucy." We heard nothing of the license fee for non-residents while there, but since our return have been informed that the authorities had made inquiries in regard to our fishing there, and as soon as known a committee was appointed to correspond with the Canadian Government in regard to the matter. Of course if we are liable under their law to pay the license we shall do it; but as we own by purchase and lease our grounds and lakes, which were purchased and leased of the Government for this very purpose of fishing, we cannot think we should again pay for the privilege.

The most of our party were forced to leave camp before the season closed; only three of us, who had "enlisted for the war," remained to fight it out to the end and close up camp, and we were amply paid, for the last three days' fishing gave our three rods about fifty fine trout. But this was not all; there is a quiet, thoughtful pleasure, tinged perhaps with a melancholy regret, not unlike the "hail and farewell" of the mariner to some bright isle of the ocean that has shed joy and sunshine on his gloomy trackless way. Such are these outings—they are green and refreshing bowers along the pathway of life, which, "like a thing of beauty," are "a joy forever." We regretfully left the camp, and yet thankful for the recreative blessing of our two weeks' sojourn, and with an earnest hope that another season may find us at Camp Blair. A.

HADDAM, CONN.

FISHING ON CAYUGA LAKE.

OCT. 7 dawned fair and windy, and before a sou'wester light scuds were flying as gulls before a gale. White-caps as far as the eye could reach broke and disappeared only to give place to others, while the good yacht Zitter, owned by Mr. George Ogden, left Ogdens at 8:30, Capt. Osgood at the stick, for a twenty-two-mile run to Union Springs, our destination. Only those who love the water can appreciate the sail we had. Four of us, Capt. Osgood, Tunis Osgood, Fred Pell and the writer, after a very delightful sail reached the ship owned by H. H. Morse, of Union Springs. But we were destined not to fish that day, as the heavy sea on made it out of the question and the thermometer was near 32°. We did not suffer with the cold, thanks to that genial gentlemen, Capt. John Carr, as he informed us that there was a good coal fire in the cabin of the Wide Awake, and lure with hammocks and chairs, we lounged and told tales of fishing (all true).

Tuesday, however, was fairly bearable, so we pulled out for the Spring holes, and after nine hours' fishing we returned to the dock; a pair of scales (tested) from my tackle box told that Pell & Co. had 19lbs. of pickerel and black bass, and the Osgood Brothers 22lbs. of the same varieties.

Wednesday, Thursday and Friday were very inclement, so we did not venture out, but Saturday the "fever" took renewed hold on us, and in a pelting rain we were after them again. The rain stopped after a short time and an ideal day for fishing followed. After eleven hours' fishing we returned with the following: Pell & Co., 44lbs.; Osgood Brothers, 38lbs. of bass and pickerel; total, forty-four black bass, twenty-two pickerel and about fifteen perch. Largest bass 4¼lbs., caught by Pell. Largest pickerel, caught by Abe Osgood, 3½lbs., with Tunis Osgood a close second. Largest perch caught by Pell's oarsman. Total, 145lbs. of fish.

Ask Fred how large the bass was that he handled so nicely, and just as he was about ready to net gave a jerk and bade him adieu. No wonder he gave a groan, for it was a whale. While memory lasts I shall not forget that scene—joy turned to indescribable dismay, a study indeed and a lesson.

But that was soon forgotten; the black bass needed our attention, strikes were frequent and savage, and we were kept busy taking them in while the boys at the Springs were waiting for the weather to moderate. Sunday morning we broke camp, spread sail, and after pleasant farewells cast off before a dreary nor'wester with all reefs in. We made the run in two hours and thirty minutes and towed two boats. If you think this is a fishy tale wait and see the kodak pictures that were taken before we left. Another year, when we hope to win fresh laurels to our names as fishermen. HECTOR.

The Salt-water Fish Supply.

ASBURY PARK, N. J., Oct. 24.—*Editor Forest and Stream:* The query of Gonzola Poey under date of Oct. 18 in relation to the absence of school weakfish is pertinent to the arguments of advocates of protection to our sea fishes. If Mr. Poey will refer to the Sept. 22, 1894, issue of FOREST AND STREAM he will find I have mentioned the same fact, although not in the nature of a question. To the man who is on the grounds it is not a difficult problem to locate the trouble. I refer to the large ocean fishing pounds. While it is true that their catches of marketable size fish this fall have been very meager, the destruction of the small fingerlings of the weakfish has been phenomenal. Sickness has prevented my usual personal observations; nevertheless reliable information assures me that untold millions of these fish, too small for any purpose save the compst heap, have met that ignominious fate the past four weeks. A larger size mesh would obviate this trouble and save them to future usefulness.

To the angler, ocean fishing since early in August has been most discouraging. While weakfish have been plentiful in the bays and rivers, the surf has been apparently devoid of fish life; even the plaice or fluke, usually so abundant, have been remarkably scarce. Various theories are advanced to account for this fact.

Still the knowledge that the increased net capacity of the pound men for the season of 1894 was fully 100 per cent. over that of 1893, and that the increased catch of all manner of fish was but a trifle more than 10 per cent. for the same period, leaves but little room for conjecture as to the cause. Their reports to the Fish Commission for the season of 1895 will be of interest.

Now that the authorities have locked horns with the menhaden people and secured convictions in the lower courts, the results of the appeal to the Supreme Court is most anxiously awaited. Once the three-mile limit act is sustained then seizures will follow in rapid succession, as any citizen is authorized to make such seizure and prosecutions run in the name of the State. Altogether the prospects are not particularly rosy for either the menhaden or pound fishers, as a merry war will beyond doubt be waged against the last named in our Legislature the coming winter. LEONARD HULIT.

Potomac Notes.

DURING the week of October 14 to 19 a number of anglers from Washington fished around the islands in the vicinity of Seneca. Tuesday and Wednesday (15th and 16th) the wind was high and the fishing very poor. On Thursday the weather was more favorable and the fish commenced biting. Messrs. Tappan and Dow, fishing at Edward's Ferry, took eight fine bass, the heaviest 4lbs. weight, several 2½lbs. each.

Messrs. Billings and Murphy arrived at Seneca on the 5th or 6th and remained there two weeks. For about ten days their luck was bad, but during the two last days they took bass by the wholesale. Murphy says he never knew them to bite better.

Mr. O. Belaski, fishing with the trolling spoon in the river near Seneca, made good catches after the 18th.

Two of our well-known anglers fished the Potomac from Catoctin to Tuscarora one day early in the week, and notwithstanding they had the best of tackle and choicest bait, caught nothing, if we except two little bass returned to the river. BART.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Camp-Fire Flickerings.

"That reminds me."

Relative to the snake question, I have nothing to offer in the way of information; but I can tell you of the experience of my father with a ferocious blacksnake. It happened this way: One of the members of our family is very deaf and has in her possession an ear trumpet or speaking tube or something that goes by some such name, and the resemblance between this instrument and a good-sized lively blacksnake is wonderful. It puzzles me to know whether the man who invented this thing tried to imitate a snake or just simply to invent a trumpet; anyway the imitation is worthy of a place in a museum. So, along about dark one Sunday evening I took the trumpet out on the lawn and fixed it up so it looked as if it was trying to crawl over the walk. Then I told the rest of the family, and about ten minutes after, my sister going to the door, glanced casually out, then just happened to see the snake. "For heaven's sake, what's this on the walk?" she cried.

"What's what?" inquired the governor.

"Why, a big snake or something out here on the walk."

Governor got up, ran out, then hollored for me.

"Boo!" I yelled, "what the deuce is it?"

"Big snake!" yelled the governor. "Come, now, where's a stick or something?"

"Take the carpet whipper," I suggested, and then we both tore for the shed where this infernal machine is kept. Governor wanted me to lick the snake, but I told him I was afraid; so he went at it. For about three minutes he belabored that speaking trumpet, then, noticing something queer about its not moving, and hearing some smothered laughter back of him, he suddenly saw through the sell, and remembering a piece of pie in the kitchen, went to get it and forgot to come back. Five minutes later I found him there sitting on a chair holding his sides and smiling; but there was some melancholy mixed with his smile when I told him solemnly that a deacon in a church who would kill snakes on Sunday ought to lose his job. He is still a deacon; but it would take a good deal of coaxing to get him to kill snakes again.

MAC.

Game and Fish Protection.

Protection by Protection.

HOLLAND, Mich., Oct. 24.—*Editor Forest and Stream:* I was very sorry to read in your issue of the 5th of the failure of the Manistee County Fish and Game Protective Association to accomplish its mission. Our experience here has been altogether different, I am happy to say. A few yeare ago this place could not have been easily beaten for violations of the game and fish laws. Fish were netted and shipped by the barrel. Quail and other game birds were shot at all seasons. Spasmodic attempts were made to enforce the laws, deputy State wardens coming here at times and catching many violators in the act, but the few arrests made had no lasting effect. As soon as the wardens were gone, the lawless would be at their old tricks again. One of the local wardens was himself caught netting fish.

About two years ago violations became so very frequent and the violators so bold that some of us sportsmen concluded something must be done. Fish had become so scarce in our lake that it was nearly impossible to catch a fair-sized string.

Six or eight of us met one night and organized a protective association. About this time an energetic county warden was appointed and we resolved to assist him in any way we could. To get public sentiment with us, we stocked some of our brooks with trout and procured pheasants with which to stock the woods. People said that these birds and fish must be protected by all means, and in this way we got them on our side.

The warden at once went to work and in a short time had a number of the worst offenders arrested. Many of them paid fines for illegal fishing, and one man paid $50 for shooting three quail and two partridges. We did not rest with these convictions, but have kept at the work since, with the result that the violations have practically ceased. So far this year we have had but one case, and that for shooting song birds. A few nets set in violation of the law have been seized and destroyed.

Many of the fishermen made threats that if a warden was to seize their nets they would drown him. Three or four of one party were particularly loud-mouthed; but it was all bluff, for one day the warden and two assistants came upon the party of twelve pulling a seine and they all ran but two; those who had done the most talking ran the fastest and furthest.

In less than two years a great change has taken place; public sentiment, which at first was against us, is now in our favor; the laws are in most cases cheerfully complied with, and we are now enjoying fine fishing in the proper season.

We shall now devote ourselves more to restocking the woods and to introducing desirable game and fish. The pheasants which we liberated last spring have bred, and the prospects are that we will some time have good sport with them.

ARTHUR G. BAUMGARTEL, Sec'y Rod and Gun Club.

Protection for Essex County, New York.

FLETCHER S. BEEDE, of Keene Valley, has been appointed Game and Fish Protector for Essex county, the position which Robert Bibby, of Minerva, recently gave up.

NEW PUBLICATIONS.

"SCIENTIFIC DUCK-SHOOTING IN EASTERN WATERS," by Russell Scudder Nye, is a narrative abounding in all the circumstance of duck-shooting as seen and experienced by the sportsman whose days are filled with business cares within city walls; and, of the days of the year, but a few can be set apart by him for special recreation. Scientific Duck-Shooting has all the charm of enthusiasm, thorough knowledge and genuine enjoyment of the sport. The scene of the shooting is in Cape Cod waters, about Coleman's Island, and the successes and disappointments, patient effort, hardship and incident of camp life and shooting are charmingly recounted, all so skillfuly colored with description of places and happenings that the spirit of the writer is felt by the reader. The work treats mostly of blind shooting over live decoys, the black duck figuring conspicuously in the sport. The work covers the whole scope of shooting experience, moonlight shots, camp-fire chat, camp meals, clear and foul weather. The author *en passant* utters a few words of regret for the days which have gone: "In those days the wild and picturesque hills which stretched along the eastern horizon were wooded with living forests of noble oaks and stately pines, at the base of which flowed the great expanse of Chequaquet River, and down this natural highway the birds would speed, flock succeeding flock in rapid succession, passing out over the beach within gunshot, and affording magnificent and exciting sport. But the innovations of modern times in a great measure changed all this, and where once stood a stately forest are now to be seen shimmer cottages, gayly decked out in all sorts of harmonious colors of plebeian paint, supplemented by the most fanciful gewgaws and designs of gingerbread work, which to the lover of art in nature can, as he beholds them, appear but the abomination of desolation and but a poor substitute for the dark, rich mantle of living green that once covered the romantic spot. No wonder that the birds have forsaken their former course of flight, avoiding it as a pestilence, either passing it high in the air or choosing the darkness of night in which to make their passage." The motive of the sport is found in the following passage: "Grand and glorious the sport is—black duck-shooting over live decoys—a sport which, in the skill and science and the amount of patient toil involved, together with the necessary amount of hardships that must be encountered in order to circumvent the natural instincts of this most wary of the duck species; the weary hours of watching and waiting amid storm and cold, calling for extreme fortitude and the most hardy requisites of the sportsman; the uncertainty which always attaches to the obtaining of a favorable shot even after the utmost skill has been exercised on the part of the hunter; and again on the other hand the fact of being brought face to face with nature in her utmost solitudes, in all her most variable moods; the ever changing panorama of sea and sky, of lake and stream and marsh, and forest-crowned hill and shore, the glorious daybreak and the gorgeous sunset, followed by the calm, clear and silent moon-lit evenings, during which some of the very best shooting is to be had—these and a thousand other things that go toward making a successful day's duck-shooting, all combine to form what in our minds is the *par excellence* of field sport, a sport that is by no means to be measured by the amount of game bagged." The author has something to say about duck-shooting, and he says it without drawing on a thousand extraneous circumstances, or dwelling on others beyond their value, and having skillfully presented what he had to say, he stops—a matter not always truly appreciated by speakers and writers. The book of 116 pages is neatly bound in cloth.

The Kennel.

FIXTURES.

BENCH SHOWS.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show. John L. Lincoln, Sec'y.

FIELD TRIALS.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 5.—Oxford, Mass.—New England Beagle Club trials. W. S. Clark, Sec'y.

Nov. 11.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, 250 West Twenty-second street, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

HUNTING.

Nov. 13.—Western Massachusetts Fox Club's meet.

Nov. 18.—Owingsville, Ky.—National Fox-Hunter's Association's second annual meet. H. L. Means, Sec'y, Louisville, Ky.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.

Jan. 20.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.

Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.

COURSING.

Oct. 28.—Goodland, Kan.—Kenmore Coursing Club's meeting. C. F. Weber, Sec'y.

THE NORTHWESTERN BEAGLE CLUB TRIALS.

COLUMBUS, Wis., Oct. 24.—Less than a dozen men, less than two dozen dogs, the most beautiful of weather, the finest of grounds, the poorest sort of work and yet the most delightful sort of a time—this would briefly but accurately describe the third annual trials of the Northwestern Beagle Club.

Last year the club had a foot or two of snow to spoil the sport. This year the weather was ideal, but the ground was dry as tinder, and covered with dry leaves. This made the trailing very difficult indeed. As an exhibition of beagle work, the trials were unsatisfactory and discouraging, and did not one know that the best beagles of the Northwest were entered, dogs which have proved themselves on other occasions, he would be tempted to say that half the entry should have been disqualified for lack of trailing ability. It was the rarest thing for any brace to hit off a trail for themselves. Time and again, when brought up, with their noses thrust into a form just deserted by a rabbit, they failed to carry off the trail. It was the rarest thing to see a dog which could be called holding its trail and running the rabbit without switching off and puzzling and losing. But few rabbits were brought to anything like a finish or indeed brought into sight at all. As a show of sport the trials were therefore very dismal. Yet one should not jump at any conclusions from this, but should weigh the effect of most unusual conditions; though it seems hard that beagles should ask for rain before doing anything at all, and should debar the hunter from sport in these most glorious October days.

The Derby showed some very good young dogs, better in average than the All-Age stakes. Indeed, it was an 18-months puppy which did the work of the meet and won the championship at ease. The type of dog on hand was very modern, it seeming to be the wish nowadays to breed all breeds to a racing form. The spiky, terrier type of head was in evidence. Speed (for the short heats) there was an abundance. Of deep, sweet and musical voices there was great dearth. Of legs too fast for noses there were several. Of noses capable of holding fast to one trail—one cannot in fairness say there were none such present; he can only say that they must have been present.

Mr. Joe Lewis was to have judged at the trials, but failed to appear. Mr. Charles Sidler, of Milwaukee, and Mr. Louis Steffen, of Milwaukee, the efficient club secretary, judged together, and they did it well. Two more painstaking, hard-working and conscientious judges one has never seen at any trials. They did the hard and discouraging work of running through scrub oak thickets after the dogs most faithfully, and the club should thank them.

Columbus is a most pleasant place for these trials. It is a beautiful village of 3,000 souls, with a comfortable hotel, at which the members stopped. The field party being so small, one carry-all and one carriage served to accommodate both men and dogs on the trips to and from the running grounds. The latter were located on the farm of Mr. Wm. Bush, a sportsman-farmer who knows a thing or so about beagles. Mr. Bush was a most efficient guide and obliging host, and it is to his aid that the club is indebted for much of the pleasure of the meet. The grounds were of second-growth and scrub oak, with thickets, dry swamp lands and grass cover—ideal ground for cottontail rabbits. The latter were there in abundance. Probably twenty-five were seen the first day and nearly as many the second. The party was hardly more than half a mile from the house on the whole day's work, and could walk in to a hot lunch with perfect ease at noon. Mr. and Mrs. Bush certainly made all very comfortable. The place is about a nine miles' drive from Columbus, but the ride in the nipping and eager air of autumn was one of the pleasant experiences of the meet. It was a delight merely to be afield in such weather and amid such surroundings, and everybody enjoyed the meet thoroughly. The enjoyment, too, was of a gentlemanly sort. A quieter, nicer and more pleasant set of men than these Northwestern men never was seen at any kind of trial, and there are many field trial parties who might well imitate them. There was not a boisterous act nor unseemly speech in the field, and not a word of bickering or criticism was heard. To be out in the woods in such pleasant company, weather so beautiful, watching the dogs in so pretty a style of sport, was a rest and comfort and pleasure, and one could only promise himself to come again when possible.

Mr. Edward Kemeys, of Chicago, without doubt America's greatest sculptor of animals, attended the trials and made a most acceptable member of the field party. Mr. Kemeys is an admirer of the beagle (though he prefers the older type) and moreover knows a great deal about the breed. He usually had an armful of the little creatures about him, going over their points with the keen eye of the anatomist.

Mr. G. A. Buckstaff, the president of the club, should be satisfied with his winnings, as reference to the runnings will show. Mr. Buckstaff however wished further honors, and attempted unfair advantage for his dog Unser Fritz, which had been trained by a German gardener rather upon cats than upon rabbits. When a rabbit was started Mr. Buckstaff sought to lay Fritz on by means of the customary war cry, "Katzen suchen!" Fritz, however, was of phlegmatic temperament, and coming to a rabbit sitting in a brush heap drove it out, got into the form himself and curled up, to wait till the rabbit came around again. For this display of intelligence, and in spite of Mr. Buckstaff's repeated explanations, the judges unfeelingly "turned down" Unser Fritz, insisting that the dog must run in English and not to any *Katzen suchen* directions, as the rules said nothing about cats whatever. There was some discussion over the best way to prepare *Hasenpfeffer*, but Mr. Buckstaff's gardener not being present, the matter was laid over until the following year.

The Annual Meeting.

The annual business meeting was held Wednesday evening, Oct. 23. Officers were elected as follows: President, Mr. C. Niss, Jr., of Milwaukee; First Vice-President, Mr. F. F. Merrill, of Milwaukee; Second Vice-President, Mr. E. H. Rummele, of Sheboygan. The present efficient secretary-treasurer, Mr. Louis Steffen, of Milwaukee, was continued in office. The executive committee chosen were Messrs. T. S. Maxwell, of Columbus; Edward Bender, of Oconomowoc; Oscar Hintze, of Milwaukee; H. A. Dillingham, of Sheboygan; G. A. Buckstaff, of Oshkosh. Three new members were elected, Messrs. T. S. Maxwell and Henry Hiller, of Columbus, Wis., and Mr. E. L. Harris, of Kansas City, Mo.

The Drawings and Descriptions.

The drawings to the runnings were as follows:

Class A.

For dogs of all ages, 15in. and over 13in., that have not been placed first in any all-age class at any beagle trials held in America.

ROYAL ROVER—G. A. Buckstaff's b., w. and t. dog (Rover—Singer G.)

with

KING LEAD—C. Niss, Jr.'s, b., w. and t. dog (Goodwood Driver—Goodwood Music).

SPOTTED CHIEF—G. A. Buckstaff's b., w. and t. dog (Krueger's Bob—Pearl Caroline)

with

ALDERMAN—H. A. Dillingham's b., w. and t. dog (Krueger's Bob—Fannie).

Class B.

For bitches of all ages, 15in. and over 13in., that have not been placed first in any all-age class at any beagle trials held in America.

LADY E.—R. Engelmann's b., w. and t. bitch (True—Dolly)

with

PANIC—E. H. Rummele's t., b. and w. bitch (Doc—Peg).

PEARL CAROLINE—C. Niss, Jr.'s b., w. and t. bitch (Krueger's Judge—Krueger's Pearl)

with

SPEEDIE—Dr. A. White's b., w. and t. bitch (Bounce—Nellie).

RUTH C.—H. A. Dillingham's b., w. and t. bitch (Base—Nellie). *A bye.*

Class C.

For dogs and bitches of all ages, 13in. and under, that have not been placed first in any all-age class at any beagle trials held in America.

ROYAL DICK—G. A. Buckstaff's b., w. and t. dog (champion Royal Krueger—Baby W.)

with

PRINCE II.—Theo. Zschetzsche, Jr.'s, b., w. and t. dog (Brittle—Judy).

PHYLLIS—Truman Sears's b., w. and t. bitch (champion Royal Krueger—Flora K.)

with

QUEEN SINGER—C. Aiss, Jr.'s, b., w. and t. bitch (Rover—Singer G.).

Class D—Derby.

For dogs and bitches, 15in. and over 13in., whelped on or after Jan 1, 1894.

RAMROD—R. Engelmann's b., w. and t. dog (Black Joe—Flora)

with

DUKE—Henry Hiller's b., w. and t. dog (Finder II.—Molly).

TEN SPOT—G. A. Buckstaff's b., w. and t. dog (Jim Lee—Spaedte)

with

RINGER—R. Engelmann's b., w. and t. dog (True—Dolly).

UNSER FRITZ—G. A. Buckstaff's b., w. and t. dog (Royal Rover—Bess)

with

SPEEDIE—Dr. A. White's b., w. and t. bitch (Bounce—Nellie).

Class E—Derby.

For dogs and bitches, 13in. and under, whelped on or after Jan. 1, 1894.

OONAH—Truman Sears's w., b. and t. bitch (Sandy—Phyllis). Sole entry to qualify. Speedie, entered in this class, was found to be over 13in. and was transferred to Class B.

Champion Class G.

For dogs and bitches, 13in. and under, having won a first prize at any beagle trial held in America.

SPOTTED CHIEF (first in Class A)

against

SPEEDIE (first in Class B).

Champion Class F.

For dogs and bitches of all ages, 15in. and over 13in., having won a first prize in any beagle trial held in America.

ROYAL DICK (first in Class C), sole entry.

Tuesday, First Day, Oct. 22.

The weather was at first cloudy and cool, clearing later, the day being most pleasant for work, except for the dryness of the ground, which proved excessive and injurious to the sport, as the dogs could trail but little.

Derby—Class D.

RAMROD—DUKE.—These had no less than four rabbits to try upon, putting one to earth, and losing the others after much baffling work in dry cover. The judges tried them well for thirty minutes. Ramrod usually was ahead and gave tongue merrily, though of no quality in voice. He was eager, but his legs were better than his nose, and he was erratic. Duke showed the truer trailer and safer dog. Mr. Engelmann handled Ramrod, Mr. Hiller Duke.

TEN SPOT—RINGER.—Mr. Niss handled Ten Spot, Mr. Engelmann Ringer. Ringer opened first and did some work on a sprung hare. Ten Spot was far away and hard to find. He seemed very independent and averse to pack, and was lost much of the time. He was bold and rapid when lined out, but inferior to Ringer in true beagle quality at handling the hare. The latter made most of the music and did most of the work. They had thirty minutes.

UNSER FRITZ—SPEEDIE.—Mr. Engelmann handled Fritz, Mr. William Bush Speedie. The latter, after one baffling try, located a second hare at a brush pile, but even after its course was plainly seen could get no scent to give tongue upon for 75yds. It was seen the dogs could do little on the dry leaves. Speedie proved merry and active, and made one drive through the scrub which looked like sport for a moment. So much could not be said for Fritz, which seemed quite unable to negotiate a trail under the conditions. They had three hares in their forty minutes.

Second Series.

DUKE—RINGER.—These the judges allowed one hour and ten minutes, and they had two rabbits and a good spin on one of them. One rabbit was seen in form, and both dogs actually walked over and upon it, not catching scent. Ringer caught the rabbit after it sprung, but it escaped. Duke showed quality in this heat, drawing to the other's tongue well, but keeping busy himself in workmanlike way. In voice he would lose to Ringer, but not in nose and true trailing genius.

RAMROD—SPEEDIE.—The usual course was followed: a hare was jumped by the pedestrians, and the dogs trailed briefly and then lost, hardly giving tongue at all. A second hare offered a better chance. Ramrod drove this off for a quarter of a mile, but did little else, and was not remarkably handy at hitting off a trail at its freshest, the ground being too dry for his nose. They were taken up at 12:30, and the party repaired to the comfortable farm house of Mr. Wm. Bush, where a good lunch refreshed all.

Third Series.

TEN SPOT—SPEEDIE.—The judges asked to see these run before making the Derby decisions. They were put down at 2 P. M. and taken up at 3 P. M. Speedie continued to show plenty of range, but her nose had not improved since morning. Ten Spot pursued his original policy of going off and getting lost and not saying anything about it.

The judges placed the Derby winners as follows: Duke, first; Ringer, second; Ramrod, third; Speedie, reserve. The Buckstaff special prize, $5, for best voice in the Derby was given to Ringer.

Duke, first, is owned by Mr. Henry Hiller, of Columbus. A good chunk of a beagle, with some nose, brains and muscle. Ringer, second, is owned by Mr. R. Engelmann, of Milwaukee. A lemon, tan and white, of good voice and well built for rangy work. Ramrod, third, is also owned by Mr. Engelmann. He is less of beagle type, his spiky nose fitting well with his thin and yaupy voice. Speedie, reserve, is owned by Dr. A. White, of Milwaukee. She is a compact beagle of very marked speed and eagerness. Age will make her a good beagle.

Derby—Class E.

But one entry qualified—Oonah, property of Mr. Truman Sears, of Pine River, Wis. Mr. Engelmann handled her, or tried to do so, but the little thing proved too much for anyone. She was very timid, and only made one attempt to follow a rabbit by sight. She allowed no one to get near her, and at length ran away entirely and was lost at nightfall when the party left the woods and went home.

All-Age—Class A.

SPOTTED CHIEF—ALDERMAN.—Mr. Engelmann handled Chief; Mr. P. Woog, Alderman. The brace went down at 3:40 and were not taken up till 5:10. No less than six rabbits were seen, but the footing was so deplorably dry that not even the old dogs could do anything. It was start, puzzle, fault and quit, one time after another, most discouraging in all. Nevertheless Chief showed he could partially hold a trail at times and also do a bit of ranging. Both dogs did all one could ask under the conditions, Chief's nose winning attention.

Wednesday, Second Day, Oct. 23.

Another beautiful day, clear and bright, and so pleasant it was a delight simply to be out in the woods. The scent appeared to lie better toward evening, or at least it was then that the first work of any merit in the entire meeting was shown. Then there was really a little genuine beagle work done. Speedie, which only reached "reserve" in the Derby, went out of all prediction for herself and won the All-Age bitch class with a lot of margin. Her work in her heat with Pearl Caroline was high-class, even in view of the fact that she knows the grounds and runways thoroughly from having hunted them so often under Mr. Bush, who keeps her at his farm. It was refreshing to see at last a bit of real beagle work, after nearly two days of worse than mediocre quality. Speedie did little the day before, but now seemed to come to her nose, and certainly showed all the range and speed any beagle should have, and for a beagle at least a passable voice.

The bitch Oonah, which ran away the day previous, was found, and at length caught by Mr. Niss after long pursuit by the entire party. She was wild and ugly, and bit Mr. Niss when he caught her.

During the afternoon the party was joined by Mr. E. L. Harris, of Kansas City, an enthusiastic beagle fancier who had come up from his home to see the Northwestern trials. Mr. Harris has nine beagles at home. He thinks a Southwestern beagle club may perhaps be organized.

Mr. G. A. Buckstaff, the president of the club, was in the field all day, but was obliged to return to his home in Oshkosh in the evening, thus having only one day at the meet.

All-Age—Class A.

ROYAL ROVER—KING LEAD.—Mr. Buckstaff handled Rover; Mr. Niss, King Lead. Down at 8:50. Rover opened at once, King joining briefly. Both showed good voice, a relief after the soprano beagles of the day before. Lead showed the better range and speed, and held to the trail better. Under decent trailing conditions both dogs might have been disqualified, for they blundered continually. Put into a form from which a rabbit had just been started, they could not do more than puzzle and lose. The two worked wide apart most of the time. No less than five hares were seen. It could not be told what rabbit they were trailing, but it was certain they did not hold any one. It was hard judging in the thick scrub, but the judges were active and patient, and gave them one hour and ten minutes of faithful trying. This the two at least repaid by plenty of range and plenty of tonguing, but with poor display of nose.

Second Series.

SPOTTED CHIEF—KING LEAD.—Mr. Buckstaff handled Chief; Mr. Niss, Lead. This was much a repetition of the heat previous, plenty of work and voice, but little meritorious trailing. Put on a hot trail, both dogs failed to take it up. No doubt they put up several rabbits. One was driven out of the scrub and ran to earth unpursued. The two then took a lot of work out of a small rabbit and ran it to a standstill. The rabbit doubled not 25yds. ahead of the dogs on hard grass ground, and squatted, much fatigued. It was seen by the entire party, and for five minutes the judges tried to get the dogs on the trail. Yet they were entirely at fault and wide of the trail. They were then caught and brought up and the hare was started. It ran 30yds. and stopped. Even then the dogs missed driving it out. Chief uncertainly nosed it out, not giving tongue. He was within 10ft. of the rabbit when it sprung. Running entirely mute, he caught and killed the hare inside of 60yds. Under the circumstances, judging was only guessing, but so far as could be guessed Chief appeared a bit more reliable, aside from his part in the coursing match which closed the heat. Up at 11:10.

ROYAL ROVER—ALDERMAN.—Mr. Buckstaff handled Rover; Mr. P. Woog, Alderman. Down at 11:25. Both showed range, Rover of better voice. Rover apparently put one rabbit to earth. Both ran sighted for a moment, but could not hold the trail and went at fault. Not much could be said for the sport afforded, which was pursued under most discouraging conditions. Up at 12:40 and the party went in for lunch.

The judges placed Spotted Chief first, King Lead second, Royal Rover third, Alderman reserve. It was at least a near thing to put Chief over King Lead.

Spotted Chief, first, is bony, strong-framed, rangy and honest. As to nose, few deponents could say much for him or for any dog run at the meet up to this time. King Lead, second, is more compact and is of useful look. He is of good range and has very fair voice. In common with Chief, the weather was too much for him. Royal Rover, third, is of smaller type. He has a pleasant voice, which he is not averse to lifting up betimes. His legs often carried him beyond his nose. Alderman, reserve, is white and slaty-drab with tan. He also ran.

The F. F. Merrill special prize for best voice, $5, in this class was given to King Lead.

All-Age—Class B.

LADY E.—PANIC.—Mr. Engelmann handled Lady E.; Mr. Woog, Panic. Down at 2:15. Panic showed fair voice and some speed. Lady had the squeakiest treble ever carried by a beagle. They opened in three different trails and crowded two hares. Panic drove one a stiff gait, and, losing for a moment, Lady saw it and sprang for it and the two killed it. The rabbit was found to be diseased and weak. These two were given a good trial in a brier-covered thicket and had full chance. Up at 2:55.

PEARL CAROLINE—SPEEDIE.—Mr. Niss handled Pearl; Mr. Bush, Speedie. A move was made to wider cover. In a swamp a hare was put up. The dogs, as had now become customary, were caught and had their noses poked into the form. Yet they did not hit off this trail right, Speedie casting it in the wrong direction and Pearl making slow work of it, whispering where one should have expected full cry. Another hare was sprung, but the dogs went wide apart and perhaps had different trails. A third rabbit appeared, coming from toward Speedie's voice, and Pearl took the trail of this and drove it off in good style. A fourth or fifth hare was started on a scrub oak flat and went off like a bullet, a great buck rabbit, large as either of the dogs. Here began the first decent work of the entire meeting, and that of quality to raise the enthusiasm of all. Speedie lined this hare out and went after it like an arrow. She worked it in a half mile circle, the big rabbit, which came to be known as "Old Mossback," being seen as it came back over an open glade at a fence. It made into the scrub, but Speedie drove it out, coming full cry and at terrific pace fair on the trail. No less than three times she drove this big fellow over same circle, the rabbit seen each time by nearly all the party. She seemed all at once to have come to her nose and rushed her game with a speed and precision refreshing to behold, and in a way which revived the drooping spirits of all. She was alone in this last work, distancing Pearl. The "Mossback" was not stopped and at length put Speedie at fault in spite of her brilliant work. Up at 4:05.

RUTH C.—A BYE.—She was handled by Mr. Woog and Lady E. was put down with her. Ruth showed good voice for a bitch, but was given to babbling. Lady's voice was singularly thin and squeaky. Both of these dogs failed to carry a trail till poked against it by force of hand. This was the same big hare of the previous heat; it swung wide and carried the dogs far out into the woods, coming back again to the oak flat. Up at 4:30.

Second Series.

PANIC—SPEEDIE.—A small rabbit crossed a glade, and the dogs were laid on, Speedie giving tongue first, Panic also opening and displaying good speed in the bustling they gave the rabbit over the oak flat. They drove over a swamp at full cry and then were at fault. Speedie worked this out first, and drove off alone at a tremendous gait, showing much positiveness and brilliance. Panic followed, jumping high in the air in the effort to get sight, but forsaking her own nose. Up at 5.

PEARL—RUTH.—In usual custom the judges found a hare for the dogs. When brought up Pearl went right, but was slow at it, and soon was hopelessly at sea. Ruth was cheerful and gave tongue nicely, but it was soon seen that there was not always any rabbit going when she opened. Ruth continually followed Pearl when the latter was casting about, silent, for the trail. At dusk a rabbit crossed a glade, but the dogs could not be laid on, though brought to the spot where it crossed. Not very high-class performance. Up at dark.

The judges placed Speedie first, Panic second, Pearl third, Ruth reserve.

Speedie, mentioned in the Derby as reserve, is a compact tan and brindle, with good speed lines and good speed. She doubles close under at speed, like a greyhound, and she is very fast. To-day she seemed to have nose, and she certainly outclassed any performance of the two days. It would not show good judgment to want a faster beagle. As she is a '94 puppy, she may well ask consideration for her years. Panic, second, is a dachshund tan color, and stands low. She however has speed, and is a merry worker, with a passable voice. Pearl Caroline is a beefy, heavy black and white, of which under usual conditions one would expect work steady, if not rapid. She has a mind of her own and a voice not distasteful. Ruth, reserve, is smaller, tan and black, of melodious voice and range enough, but not of level-headed beagle sense, on her showing of to-day.

Thursday, Third Day, Oct. 24.

The weather was clear and mild, but the trailing seemed no better. The runnings were finished before lunch. After lunch the trials were terminated by a grand hunt, in which all the dogs were turned down in the expectation of making a great commotion among the rabbits. To the surprise of all only three rabbits were killed by five guns, or rather only two, for Speedie caught one of them herself. The grounds, which had swarmed with rabbits, were deserted entirely by them—a very useful lesson on the practice of hounding deer.

Class C—All-Age, Under 13In.

ROYAL DICK—PRINCE II.—Mr. Engelmann handled Dick; Mr. Woog, Prince. Down at 8:55. Dick nosed out and drove a rabbit, but lost. Judge Steffen as usual found a rabbit and the dogs were put on its form. The two proved a merry couple, running well together, and both active and eager, Dick, however, taking chief honors in the work, such as it was. Up at 10.

PHYLLIS—QUEEN SINGER.—Mr. Englemann handled Phyllis; Mr. Niss, Queen. A hare was started, and as usual the dogs were rounded up and carried to the trail in their handlers' arms. They nosed off slowly, but did not open. At last both gave tongue and went off well together for 300yds., puzzling then and harking back on the dry cover. Queen's greater size gave her more speed, and she went away from Phyllis, which is only a toy beagle. Queen showed good voice. Phyllis seemed a bright little worker. Up at 10:50.

Second Series.

PRINCE II.—QUEEN SINGER.—Prince was faster and went off ahead on a trail he hit off. They drove the hare hard to a brush heap, where it doubled back and they over-ran, faulted and lost in the scrub. Up at 11:25.

The judges placed the dogs in this class as follows; Royal Dick, first; Prince, second; Queen Singer, third; Phyllis, reserve. Royal Dick, first, is a well-built, small beagle, lemon, tan and white; a merry goer. Prince, second, is a black, white and tan, with a turn of speed at times. Queen Singer is tan and brindle, not a bad one and of good voice. Phyllis is almost too small for actual work, and would drown in a heavy dew.

Class E—Derby, Under 13In.

Oonah, sole entry, was run with her dam Phyllis. Oonah was the runaway of the day previous. She now proved more under control, and the two made a merry brace, Oonah leading her mother roundly on one rabbit. Oonah's timidity does not take the form of gun-shyness, but is more like a case of flightiness or temporary insanity. She did better as she became better acquainted with those in charge, her owner not being present. Up at 11:45.

Championship—Class G.

SPEEDIE—SPOTTED CHIEF.—These two made the only entries, Speedie qualifying on her winning of first in the open bitch class and Chief in his first in the All-Age open. Mr. Bush handled Speedie; Mr. Engelmann, Chief. There was only one way for it, and that was to give the championship to Speedie, which outclassed the other fairly. As soon as put down (at 11:50) Speedie started and drove a rabbit at full cry. She left Chief entirely out of it, and by the time he found the trail she was a quarter of a mile away and alone. She is as fast a beagle as one ever saw go,

her gait being that of a good setter. Very active, nervous and a demon to hunt, she was certainly a comfort to watch after the long reach of mediocre work that had been seen. Speedie was at times over-fast and over-ran her trail on the oak flats. Yet when the hare turned back Chief came through entirely off the trail, while Speedie had it right and was soon far away with it. A rabbit was marked and the two were brought to the trail. Again Speedie was off first, tonguing, though both went at fault soon and worked some time before they lined it out. It was very noticeable that while Chief was hard-headed and obstinate and hard to catch, Speedie was tractable and under control and could readily be called in. It being thought that Speedie knew certain of the grounds too well, the pair were taken further away. They had three tries on three hares that were started by the spectators, and though Speedie did hardly so well as she had done the day previous, she sustained her reputation. Up at 1:25. The judges placed Speedie first. This was a most popular award. The little bitch is a bundle of energy. She has no great quality about the head, but has a splendid little running machine of a body. Her voice is good, and she is most merry and industrious, not snuffling and puzzling, but showing dash and certainty. One could wish that all the dogs could have had a better chance to show their nose, but under the circumstances it is not too much to say that Speedie made the only respectable showing seen at the meeting.

Championship—Class F.

Royal Dick, first in Class C, was sole entry. He was down briefly after lunch and again proved himself a bright and merry little beagle, worthy of better weather.

Special Prizes.

The judges awarded the following special prizes: For the most musical voice, King Lead; for the most accurate trailing, Speedie; for the most effective ranging, Spotted Chief. The F. F. Merrill special prize, $5, for best voice in Class A, went to King Lead, as announced above; and the G. A. Buckstaff special, $5, for best voice in Class D, went to Ringer, as mentioned.

At the close of the general hunt, a drive home late at night and a supper of wild goose, sent from Dakota by Mr. F. F. Merrill, an absent member of the club, closed the meeting. E. HOUGH.

909 SECURITY BUILDING, Chicago.

FIELD TRIAL TRAINING.

THERE is indisputably an apathy in field trial matters on the part of the general public as compared with the interest exhibited some years ago, and as to the causes of it, they are other than lack of merit in the sport itself, for sport with the dog and gun has not lessened in its non-competitive features; indeed, field shooting has increased steadily year by year—so much so as to excite unpleasant apprehension in respect to the permanency of the game supply. Therefore, as to the cause of the falling off, it can reasonably be assumed that the indifference is not to the sport itself, but to some displeasing feature of the manner in which it is conducted.

Objections to the Field Trial Dog.

But has there been any objection expressed on the part of the public which could reasonably be accepted as of general meaning and earnestness? Undoubtedly, there has been such objection, and, moreover, it has been in existence some years. That is to say, the field trial dog, in a general way, is not considered as being a shooting dog. He is looked upon as a racing machine, distinct and apart from the sportsman's use or real pleasures afield. He does not appeal to the purposes of the practical sportsman who goes afield to shoot, nor does he form a sympathetic association with his pleasant remembrances. This state of affairs has been fostered by some unwise utterances emanating from a field trial source to the effect that there is a difference between field trial dogs and field dogs—an absurdly shallow statement, since the difference was not at all in the dogs, but in the manner of handling and training them—a distinction which sets the matter at rest, for to dispute it would be to admit that the field trial dog cannot be trained for practical use to the gun afield.

Field Trial Training.

Let us consider now whether the objection had any material ground for its existence. No doubt but what it had such ground. Mr. Brailsford's letter, in a recent issue of FOREST AND STREAM, was a most courteous expression of the objection, although it may be explained that the lines were drawn more strictly at the Manitoba trials concerning work to the gun than they have been in a long while. Nevertheless, the objection which Mr. Brailsford expressed is the objection of a multitude of American sportsmen.

The field trial dog and field trials themselves occupy a realm of their own, apart from that of the sportsman who loves sport for its own sake, and who cares naught for the field trial except in so far as it is an exponent of field work and as it brings to the fore the best dog for practical field shooting.

No man, dearly as he may love field trials, can seriously deny that in times past there has been too much of the wild, heady, or roughly and imperfectly broken dog, which made field trials a scramble, undignified many times, and specifically changing the nature of work in a competition from that of the dog afield for shooting.

Working to the Gun.

For the best enjoyment of sports afield the dog must work to the gun. Moreover, it is one of the essentials of a broken dog's education. If he does not work to the gun he is not properly broken. Breaking a dog to point steadily when he points birds, and backing with more or less reliability, is not all of dog training. If the trainer must chase his dog between whiles, following his dog's erratic courses off the main course, which he is unable to follow owing to the dog refusing to keep a course marked out by the trainer, such dog is not broken properly.

Not a few dogs in field trials fail to work to the gun. They range entirely beyond the trainer's control and are only approachable during the few moments they are on point, or they alternately work under control awhile and self-hunt awhile.

Wide ranging at high speed at field trials, regardless of whether the dog works to the gun or not, has too often been accepted as the correct exposition of good work. The evil once established is difficult to cure. It is much easier to half train a dog than it is to train him thoroughly.

Now a dog may range wide and still work to the gun. If he is working to the gun, the trainer can serenely keep on the course laid out for him by the judge. The trained dog will keep his trainer in mind, note his whereabouts, and observe him as a point to which to shape his efforts. If he is not broken to the gun, the trainer cannot keep his course, and becomes hurried, irritable, warm, and prolific in excuses and explanations.

Wide Ranging.

Wide ranging has been overdone. Even where there is abundance of room, when a dog ranges beyond a certain distance, useful to the shooter, he is getting beyond bounds. There is a certain territory on each side of the shooter which the dog can beat out with reasonable thoroughness, so that his gallop to and fro, and the walk of the shooter in a more direct course, work conjointly in harmony. Their actions are timed so that the efforts of each supplement the other. When a dog goes too wide, there must be good ground left unworked in the course of the shooter, to say nothing of the loss of time in walking unreasonably long distances to points which might have been made much nearer to hand if the dog had worked within a more reasonable range. Still, there are dogs which range wide, yet beat out the ground so well and are conscientiously working to the gun that the shooter does not mind now and then the walk to a far-off point.

These matters are of sufficient importance to engage the earnest consideration of field trial managers and field trial judges. While a competition cannot be run on exactly the same lines as those of actual shooting, it can at least approximate to it. With a return to conditions which would show that the field trial dog and the shooting dog belonged to the same breed, public interest would be reawakened and field trials and dog interests in general would be a gainer.

Stakes and Entry Fees.

So much for the competitive features. Now, as to the financial features, the columns of FOREST AND STREAM were the first to point out that the stakes were too high for field trial clubs safely to assume as a responsibility. It was making the field trial feature too expensive. It has been pleaded by some that to reduce the prize money would not leave enough prize money to pay the expenses of the winners. Such ones have ignored the fact that the winners are in a small minority, and that the ways and means of the losers in paying expenses is of quite as much importance as are those of the winners. FOREST AND STREAM advocated a reduction in stakes to an amount which a club would have a reasonable certainty of reimbursement from its receipts, and also a corresponding reduction in entry and starting fees. The success of the recent chicken trials of the Continental Club, run financially on moderate lines, was an object lesson of the success of them from a financial standpoint. The Continental Club had a good balance left after paying all expenses. Field trials are all right in themselves, but they need some readjusting in practice and also a reduction in the prize list and entrance fees.

Bull-Terrier Club of America's Meeting.

AT a special meeting of the executive committee of the Bull-Terrier Club of America, held Oct. 12 at the Farmers' Deposit National Bank of Pittsburg, there were present: Mr. John Moorhead, Mr. Given, Mr. Higginson and Mr. Brereton.

The meeting was held for the purpose of issuing a formal protest against the anti-cropping question which is now being agitated by the A. K. C.

The secretary, upon motion carried to that effect, was requested to solicit the co-operation of all the breeds that are cropped at present and to request the various clubs to enter their written protest against the movement.

PITTSBURG, Pa., Oct. 12.—*To the American Kennel Club, New York City.* Gentlemen: As breeders and fanciers of bull-terriers we would respectfully remonstrate against the proposal to disqualify from competition at the shows held under your rules bull-terriers and other dogs born after a certain date that are cropped.

Our reasons are: That bull-terriers, having been cropped for many years—in fact ever since the breed has become a fixed one—in consequence it was unnecessary to pay particular attention to the ear natural, nor has there been any such recognized, and that natural ears appear of every known description, from the semi-erect bat-wing to the pendulous ear of the beagle. To disqualify now would be to upset the work of seventy-five or one hundred years.

The fact that the English Kennel Club now have this rule in force is an added reason why it should be let alone here for the present, as they have yet to establish the ear before even breeding to produce it; if the same task be attempted here there will in all likelihood be two specimens of natural ear evolved, giving rise to endless confusion and wrangling, as it is not likely that all fanciers and breeders will adopt the same ear as desirable to breed to.

Still further, it is our opinion that in a few generations, if cropping be persisted in, nature, aided by judicious cropping, will stop reverting to such useless and unsightly appendages as most bull-terriers' ears naturally are. We therefore petition that further action in this matter be postponed for the present.

THE BULL-TERRIER CLUB OF AMERICA.

The Champion Stake.

SHERRILL'S FORD, Catawba County, N. C.—*Editor Forest and Stream:* I was much interested with your good, common-sense article in last issue of the champion stake, and sincerely hope it will not be spoiled or marred, as mentioned as a possible outcome.

While at Norris, Man., Mr. Avent asked me if I was in favor of a handler's club being formed for the purpose of holding a champion stake.

My answer was in the negative, giving the reasons, first, that I did not believe handlers should belong to field trial clubs, much less on the governing committee, as in my opinion it was not fair for competitors to sit in judgment over each other, where the case need be.

Secondly, that Messrs. Dexter and Titus were already getting up a champion stake and had issued circulars to that effect, and the way things were looming up in its favor, it would certainly be a "go."

The next thing I saw was a letter from Mr. Avent, in the *Field*, in which he says, if I remember rightly, all the handlers except one are in favor of a handlers' club, to hold champion stakes, and to the effect that we have had a succesful meeting, at which all the handlers were present.

I for one received no notification of this meeting and the only two I have seen since were also not notified; but apart from this, what is the object of this No. 2 proposed champion stake, with the previous knowledge that Mr. Titus was already striving to obtain to the best of his ability, both through the papers and by private correspondence, the advice and co-operation of all those interested in field trials to bring into operation such a stake. I hardly think we need or could sustain two champion stakes with the present number of slated events, and sincerely hope everything will be amicably arranged and dissolve into one good solid stake, with two-hour heats and a cup at the head, and I feel certain my friend Nat. Nesbitt (secretary of Handlers' Club) will agree with me in this.

While speaking of champion stakes I believe I am correct in stating that the pointers Rip Rap and Jingo (first cousins) are the only two living field trial champions on this continent. I was very much disappointed this morning, when reading the entries for the Eastern Subscription Stake, to note that neither of the owners of the three pointers, that we read so much about last spring under the heading of "Which is Best?" have made an entry.

Here is an opportunity to prove "Which was best," but perhaps they are waiting for the proposed champion stake. C. E. BUCKLE.

POINTS AND FLUSHES.

A marvelous instance of canine scent and sagacity which occurred in Vienna last week is told by one of the *Chronicle's* correspondents. A Viennese, named Kohn, traveling in Transylvania, took his dog Caro with him, a large animal resembling the Danish breed of hounds popular in Austro-Hungary. He missed him at Klausenburg, and after ineffectual efforts to find him gave him up as lost. Herr Kohn reached home on Tuesday evening, and on Friday evening he was startled by hearing Caro barking violently at the door. On opening it the dog rushed in exhausted, but joyful. He ran alone 450 English miles in three days.—*British Fancier.*

The want of a good and reliable Kennel Registry and Assurance Association has, no doubt, been keenly felt by many a dog owner who has had the misfortune to be deprived of the society of a favorite canine companion either by loss or accident. The want, however, is not likely to be any longer felt, as it is fully supplied by the foundation of the Pioneer Kennel Registry and Assurance Association of Manchester, who, upon the registration of a dog at their offices, will supply the owner with a metal label bearing a number and their address. The finder of a lost dog will, therefore, if he is honest, communicate with the manager, Mr. T. H. Cowper, who will pay all expenses incurred for the recovery of the animal, and return it to the owner. The society also undertakes to pay compensation to the owner for the loss of his dog when going to or from a show; and to defend actions for dog bites upon special terms. In fact, it appears that the existence of Mr. Cowper's Association has only to become known among dog breeders for it to be well supported. The idea is as original as it appears to be both sound and feasible.—*Stock-Keeper (England).*

The number of the *Royal Natural History*, July 15, devotes all its pages to the history, origin and description of the domestic dog in all his divisions into breeds, besides treating of his anatomical peculiarities, of his aboriginal ancestors, his relation to the wild dog and his congeners of the wilderness. The number is quite fully illustrated. To those who are interested specially in dogs the number abounds in information, and is not without profit to those whose interest in man's best friend is but passing. Frederick Warne & Co., 3 Cooper Union, New York.

Mr. Simon C. Bradley, well known as a sportsman, was recently elected to the office of first selectman of the town of Fairfield, Conn. After filling so satisfactorily the many difficult positions in the canine world, and thus deriving the higher education, the office of selectman should be very easy.

While angling in a secluded glen the writer some days ago witnessed a curious combination of poaching and natural history. The facts are as follows: A hill shepherd, in destroying a litter of foxes, took it into his head to rear one as a pet. He did so, and the animal has not only become very tame, but is a most useful ally. It and a collie hunting together kill rabbits to a miracle. They work very much in the same way as do lurchers. The collie goes out and hunts the rabbits among the fern and heather of the braes or the rushes and long grasses of the stacks, while Reynard all the time sneaks about the holes and picks them up as they come in. They understand their respective parts perfectly. The collie seems to know that it is not his business to kill and the fox is never under the slightest temptation to bolt out and give chase. —*Pall Mall Gazette.*

A meeting of the Metropolitan Kennel Club was called to meet at Delmonico's on the evening of the 31st inst., for the purpose of adopting a constitution and perfecting the organization.

R. B. Morgan, Gibson Wells, Tenn., offers broken setter and pointer. The Bandle Arms Co., Cincinnati, offer broken setter and pointer. Mr. F. L. Cheney, Pittsfield, Mass., offers Irish setter. J. H. Miller, Christiana, Pa., offers rabbit dogs. Fieles & Bro., Christiana, Pa., offer coon dogs, trained setters and pointers, fox and rabbit hounds. High Hill Kennel, Port Jefferson, L. I., offers trained hunting dogs. Mr. C. Farquhar, New York, offers St. Bernard puppies.

Mr. C. E. Buckle informs us that his P. O. address is Sherrill's Ford, Catawba Co., N. C.; railroad station nearest him is Catawba, W. N. C. R. R. He has both Rip Rap and Delhi with him.

Mr. Washington A. Coster intends to devote next week to grouse and woodcock shooting in Connecticut with Messrs. Simon C. Bradley and F. Hodgman.

Postponement of U. S. Trials.

TRENTON, Tenn., Oct. 26.—*Editor Forest and Stream:* Owing to the universal reports, that come from the handlers who are fitting dogs to run in the United States Field Trials at Newton, N. C., commencing Nov. 7, that the hot and dry weather has retarded the work of the dogs to a very great extent, the club has changed the date of commencing the Trials to Monday, Nov. 11, thus giving several days more time in which to prepare the dogs that are to compete in the Trials. The week of Nov. 11 will give ample time to finish the United States Trials before the commencement of the Eastern Trials.

W. B. STAFFORD, Sec'y U. S. F. T. Club.

Eastern Field Trials Club.

BROOKLYN, N. Y., Oct. 27.—*Editor Forest and Stream:* Please add to the official list of All-Age entries, E. F. trials, this much-belated arrival, which has been to Mississippi twice and to Washington P. O. once, a sort of globe trotter:

All-Age Stake: Joe Bowers, black, white and tan English setter dog, by De Soto ex Ruth Gates. Whyte, Bedford, Miss.

This gives us thirty entries in the All-Age Stake.

WASHINGTON A. COSTER.

Yachting.

OPINIONS differ as to the lowest possible point yet reached by the great daily papers. Some contend, and with reason, that it is in the plan of some Boston papers, of publishing on the first page a quarter of a column of flashy headlines, next a dozen lines of "news," and filling the rest of the column with a blood-curdling description of some loathsome disease and its infallible remedy. Others again give the palm to the professional "interview" in which a man is recorded as making an unlimited number of absurd, untruthful and generally abusive remarks. The regular "interview" is expected to justify something sensational in the way of headlines, or perhaps in the case of the evening papers a genuine "Extra," and when, as generally happens, truth fails, invention steps in to fill the gap.

The modern "interview" has thus far been considered as a peculiarly American form of torture, but during the past week it has appeared in a very advanced form in London; the interviewed being none other than Lord Dunraven and the interviewer—the reporter of the United the Press—august and conservative editor of the *Field*. The interviews were certainly well done from a newspaper standpoint; they were sufficiently offensive to attract attention on this side, the one object in view. Who is most to blame, Lord Dunraven or Mr. Kemp, is a matter that Americans will worry little over; the main point is that the latter gentleman has in any way condescended to adopt such an American institution.

THE news of the withdrawal of Mr. Rose's challenge was most un welcome to the New York Y. C.; but as we look at it, the sooner such a foolish business is ended the better for all concerned. No good sport can possibly come from such an obviously after-dinner affair as the Rose challenge was, and the New York Y. C. is well out of it. So far as the club is concerned, the only occasion for regret should be that the challenge has been in any way exploited as coming from the Prince of Wales and intended as an open rebuff of Lord Dunraven.

Mr. Rose has, by his foolish and ill-considered challenge, placed himself in a very embarrassing position; but his mistake was in getting into it, and not in getting out. It yet remains to be seen whether his first brief cable will be followed by such explanation and apology as are clearly due to the New York Y. C.

The Royal Victoria Y. C., as sponsor and guarantor for an unknown challenger, is in the least enviable position of the three parties.

THE *Field* of Oct. 19 says editorially:

FOREST AND STREAM says Lord Dunraven has lost his *status* among British yachtsmen by withdrawing from the third race. It is really wonderful that Americans cannot realize our ideas of sport fairly conducted. So far from Lord Dunraven having lost his *status* among yachtsmen, his stand for fair play has raised him immeasurably in the estimation of his countrymen.

Having been directly on the spot throughout the season, and being well inside of the wide circle of false reports and sensational misinformation which have confused observers at a distance, we consider that we are better qualified to judge of the matter than the *Field*. Had Lord Dunraven announced his determination to sail no more off New York immediately after the second race and before the protest was decided, and had he omitted the foolish insistence on Marblehead, where all the steamers would have gone before Valkyrie could have started, we might have believed that his assigned reason of a crowded course was the true one. On the contrary, Valkyrie was docked and specially overhauled on Wednesday, and was at the line in perfect condition, with the fleet far away, her opponent ready to meet her, and her own conditions of a windward course in a moderate breeze and smooth water. We cannot understand how the withdrawal of the yacht under such circumstances can be construed as a "stand for fair play," or as anything but childish pique.

If the *Field* will go carefully over Lord Dunraven's record, from the date of his first challenge in 1889 down to his withdrawal from the last race this year, it will find that, so far from making a bold stand for fair play against notoriously unfair conditions, he has sought only such special conditions as would benefit himself, and in return has compromised the rights of all future challengers. That fair conditions are offered to-day is due in no way to Lord Dunraven's efforts, but to the growth of public opinion in America in favor of fair play and true sportsmanship, such as was once sadly lacking in the Cup contests.

The America's Cup.

THE past week has furnished some excitement and surprises in yachting, but of a sort that might well have been dispensed with, and the present situation is most unsatisfactory on all sides. Mr. Rose has withdrawn his challenge, Lord Dunraven has repudiated an alleged interview, or two alleged interviews, cabled to this country, and explanations, disapprobation, repudiation and condemnation are hurled about in a way that is simply confusing to all impartial yachtsmen.

On Oct. 22 the conditions drawn up by the Cup committee to govern the races under the challenge of the Royal Victoria Y. C. and Mr. Charles Day Rose with the cutter Distant Shore, and embodied in the letter sent on Oct. 16, were made public in New York as follows:

NEW YORK Y. C.,
No. 67 MADISON AVENUE,
NEW YORK, Oct. 15.

DEAR SIR—We have the honor to inform you of the acceptance by the New York Y. C. of the challenge from the Royal Victoria Y. C. sent by you in the name of Mr. Charles D. Rose.

In compliance with your request we submit the following proposals for the conditions of the match, and at the same time we hope you will feel quite at liberty to make any suggestions, which we will be glad to consider.

Number of Races.—The match to be decided by the best three out of five races.

Courses.—Starting from Sandy Hook Lightship. First race: To windward or leeward and return. Second race: Equilateral triangle. Third race: Similar to first race. Fourth race: Similar to second race. Fifth race: Similar to first race.

The starting line and compass bearings to be announced as early as practicable.

In every case the course from the starting line to be laid to windward, if possible, from Sandy Hook Lightship.

In case a course, as required by the conditions, cannot be laid out from Sandy Hook Lightship the regatta committee may provide some other suitable starting point, and in this case the preparatory signal will be given about half an hour later than the time named for starting from the Lightship.

Length of Courses.—The courses shall be 30 nautical miles in length.

Start.—The starting signals shall be given at 11 A. M., and this time shall not be changed, except as follows:

First—By the regatta committee, as described in the preceding paragraph for changing the starting point.

Second—By the regatta committee in case of fog.

Third—By the regatta committee if, in their opinion, the space around the starting line is not sufficiently clear at the time appointed for the start.

Fourth—In case both yachts consent to a postponement, in which case the regatta committee shall determine the time of the start.

Fifth—In case of serious accident to either vessel, as hereinafter provided.

Signals.—The preparatory signal shall be given ten minutes before the starting signal, and in case of a change in time of start a preliminary signal shall be given ten minutes before the preparatory.

At the starting signal a yacht may cross the line; the exact time at which a yacht crosses the line during the succeeding two minutes to be taken as the start, and the end of that period as the start of the one crossing after its expiration.

If a race is not started by half-past 1 P. M. the regatta committee shall have the right to declare the race postponed for the day, and no race shall be started after 3 P. M.

Time Limit.—If in any race neither yacht goes over the course within five and a half hours, exclusive of time allowance, such race shall not count and must be resailed.

Selecting the Defender of the Cup.—The challenger shall be informed at least one week before the first race what vessel is to defend the Cup.

New York Y. C. Rules to Govern.—The system of measurement, time of allowance and racing rules of the New York Y. C. to govern the races, except as hereinafter modified.

Intervening Day.—Unless changed by agreement, one day shall intervene between each racing day, not counting Sundays.

Repeated Races.—An unfinished race of one kind shall be repeated until finished.

Accidents.—In case a serious accident occurs to either vessel prior to the preparatory signal, she shall have sufficient time to effect repairs before being required to start, or, if such accident occurs during a race, before being required to start in the next race.

Representatives.—Each vessel shall have on board during races a representative named by her competitor.

Manual Power.—Manual power only shall be used for working the competing vessels.

Measurement.—The competing yachts shall be measured with all of the weights, dead and alive, on board which they intend to carry during a race, but shall not have on board more persons, all told, during any race than one for every 2ft. of racing length or fraction thereof. Waste or water tanks, if carried, must be filled with water at the time of the measurement.

The restriction of the New York Y. C. rules as to floors, bulkheads, doors, water tanks, bower anchor and cable to be waived.

If either yacht, by alteration of trim or immersion, by dead weight, increase her load water line length or in any way increase her spar measurements, as officially taken, she must obtain a remeasurement by special appointment before the next race, or, failing this, must report the alteration to the measurer at the club house at 10 P. M. of the day before the race following such alteration, and must arrange with him for remeasurement, and if required be in the Erie Basin by 7 A. M. of the day of said race, and there remain until 9 A. M. if necessary, for purposes of remeasurement.

If either yacht decreases her measurements for sailing length in any way in order to profit thereby in time allowance in any race, she must obtain a remeasurement by special appointment before such race, or notify the measurer and be at his disposition as above described.

A measurement taken, as provided above, shall be final and not subject to protest by either party.

In the event of the measurer being unable to obtain a measurement which he considers accurate before a race a remeasurement shall be taken as soon as possible after the race.

Marking the l.w.l.—Distinct marks shall be placed at the l.w.l. at the bow and as far aft as possible on each vessel.

We would suggest for the date of the first race July 23, which will be ten months from the receipt of the challenge by cable. In case, however, you desire we will fix upon a later date.

As you are probably aware, 90ft. is the limit of load waterline length for single-masted vessels, and as the length named by you is so near this, we would suggest that the only restriction be that neither vessel exceed this length.

You will observe that we have made the time limit five and one-half hours instead of six, as in the last two contests; we have for some time past considered that the speed of modern racing yachts rendered such a change imperative.

We take this opportunity to express our appreciation of the sprit of the challenge and of the confidence which Mr. Rose has so courteously shown in our committee. We shall look forward to a most interesting contest, and meanwhile we hope that Mr. Rose will consider that any services we can render him will be a great pleasure to us.

A New York Yacht Club book will be sent to you by the next mail.

We have the honor to remain your obedient servants,

THE AMERICA'S CUP COMMITTEE,
JAMES D. SMITH, Chairman.
A. CASS CANFIELD, Secretary.

PERCY THELLUSSON, ESQ.,
Secretary Royal Victoria Yacht Club, Ryde, Isle of Wight.

While in the main identical with the terms of the Valkyrie-Defender rules, there are several important changes of detail; the regatta committee reserves the right to postpone the start in the event of undue crowding about the line; the time limit is shortened from six to five and one-half hours, and the limit of crew is decreased.

Hardly were these conditions made known before, on the morning of Oct. 23, the following cables were received:

NEWMARKET, Oct. 23.

Oddie, Secretary New York Yacht Club:

Owing to the general impression that my challenge might be construed as an expression of opinion on the result of the last race, I much regret having to ask you to withdraw the same.

CHARLES D. ROSE.

RYDE, Oct. 23.

Secretary of the New York Yacht Club:

Have received letter from Rose withdrawing challenge for America's Cup. Have called committee. Will mail you officially.

THELLUSSON.

Secretary Oddie replied—

Charles D. Rose, 39 Hill street, Berkeley square, London:

Cable announcing withdrawal of your challenge received.

ODDIE, Secretary.

Secretary Royal Victoria Yacht Club, Ryde, England:

Your cable this date received.

ODDIE, Secretary.

Knowing full well the manner in which the ordinary newspaper interview is manufactured, and the unreliability and untruth of this style of "news," we have refrained from quoting or commenting on the various alleged interviews with Lord Dunraven at Newport, Mr. Ratsey at Cowes, and Mr. Watson at Glasgow. When Mr. Watson first visited this country, in the fall of 1886, he kept well clear of the professional interviewers, with good reason, after the treatment Sir Richard Sutton had met with on his first arrival in the previous year. One of the many reporters who were on his track went to a yachtsman for information as to the possible whereabouts of his prey, and said: "I don't want to bother Mr. Watson or to talk to him, if I can only get near enough to see him and to say, 'How do you do?' I will attend to the interview." The many alleged interviews of the past season bear evidence of having been manufactured on the same plan.

On the arrival of Lord Dunraven the following was cabled to the American papers, but we passed it over as at best unverified; and even if true, of but little importance.

LONDON, Oct. 19.—Lord Dunraven, who arrived at Cowes from Newport, R. I., yesterday on board Mr. Laycock's steam yacht Valhalla, was seen in London this afternoon by a representative of the United Press. His Lordship was looking wonderfully well after his three weeks' sail across the ocean. In the course of a long talk with the reporter on the subject of the events connected with the recent contests for the America's Cup Lord Dunraven expressed himself in the following language:

"It was a great mistake on the part of the New York Yacht Club not to have postponed the third race so that an unimpeded contest could have been assured beyond any possible doubt. The challenge issued by an American for the America's Cup is most disagreeable, not to say offensive, to me, for the reason that the American people have been assured by the American press that the challenge is intended as a mark of censure upon me and a vindication of the action of the Cup Committee. The New York Yacht Club, however, knows perfectly well that it is not an English challenge, although it is backed by the committee of the Royal Victoria Club, which committee by this time must greatly regret its acquiescence in an unconditional challenge made by an Anglo-American. The attitude of the New York Yacht Club's Committee in accepting the challenge as a vindication of its conduct is simply ludicrous. Current gossip here is that two American gentlemen are associated with Mr. Rose in building the Distant Shore, and the members of the New York Yacht Club must be simple indeed if they fancy that Englishmen attach any importance to Mr. Rose's challenge.

"My motive in laying up the Valkyrie in Brooklyn was mainly the hope that she would get a chance to race for the Cup again in 1896 against the Defender, especially after the hint to this effect that was thrown out by the New York *Herald*. Another reason for my laying her up was because I was unable to communicate with Messrs. McCalmont and Robinson, who are part owners of the Valkyrie, to ascertain their views of the situation. Until I confer with them the future of the Valkyrie is uncertain, but I have many projects in view. I especially desire to have it out with the Defender in a fair, square race over a clear course.

"A great deal has been said about Mr. Iselin's offer to resail the protested race. I would gladly have done so if Mr. Iselin had offered to withdraw his protest and resail the race, but since he asked in the matter the decision of the committee, which disqualified the Valkyrie, resailing the race was out of the question, even if the committee had agreed to it.

"I was not aware of Mr. Iselin's proposal to resail the whole series of races until I saw it in the papers. I would have agreed to this if the committee had sanctioned it and had undertaken to provide a clear course."

Lord Dunraven spoke in the highest terms of the individual members of the Cup committee and other American yachtsmen, and said his only regret was that the committee in its executive capacity had caused him disappointment.

Two days later the following, which we published last week, appeared:

LONDON, Oct. 21.—Dixon Kemp, the well-known yachting authority and editor of the *Yacht Racing Calendar and Review*, has furnished to the United Press exclusively the substance of a second interview with Lord Dunraven.

His Lordship expressed himself as being still strong in the belief that the Valkyrie III. is the superior of the Defender in sailing to the windward in moderate breezes, and very much faster than the American boat in running before the wind. He admitted, however, that the Defender was the faster boat in reaching.

"What I should particularly like," said Lord Dunraven, "would be to have the Defender fight it out with the Valkyrie in the Mediterranean."

If this could be arranged, he added, he would then have the Valkyrie prepared to meet the American boat. He thought that the yachts would have a fair trial in the Mediterranean regattas, but the Valkyrie would doubtless be greatly handicapped by the French rating rules, which include measurement of beam and girth besides sail area.

If the Defender should proceed to the Mediterranean it would settle once and for all the question of whether the American boat is built and rigged sufficiently strong to cross the Atlantic on her own bottom.

Lord Dunraven expressed to Mr. Kemp his belief that a decision to bring the Defender over to the Mediterranean lies entirely with W. K. Vanderbilt, who owns eight-tenths of the boat, while Messrs. Iselin and Morgan each own one-tenth.

The prizes for the coming Mediterranean regatta are much more valuable than ever before, and Lord Dunraven is convinced that grand races could be sailed with the Britannia, Ailsa, Satanita, Valkyrie III. and Defender.

A representative of the United Press, having shown to Charles D. Rose, the challenger for the America's Cup through the Royal Victoria Y. C., a copy of an interview with Lord Dunraven published in yesterday's New York papers, that gentleman said this morning:

"I am very sorry that such things should continue to be published. They do no good and only tend to stir up bad feeling."

Mr. Rose then dictated to the reporter the following:

"I very much regret that the question of my challenge should be construed as in any way having anything to do with the action of the New York Y. C. My challenge was made simply and solely with the object of trying to recover the America's Cup.

"I shall take the earliest opportunity to see Lord Dunraven, and should I learn from him that my challenge ought not to have been made before consulting him I shall at once withdraw it. No one is concerned in this challenge except myself."

While it is not plain that the first interview was written by Mr. Dixon Kemp, it would appear that he was the "representative of the United Press" and the "reporter" who is mentioned as specially interviewing Lord Dunraven. On Oct. 23 the following appeared in the New York *Herald:*

"As Lord Dunraven in his last communication to the America's Cup committee said that there was no need of further comment anent the Cup races of 1895, there was great surprise manifested in yachting circles on this side on account of the interviews which were sent from England to this country during the last three days.

"In these interviews Lord Dunraven was put down as finding fault with everything, and he was said to be actually in the sulks.

"The interviews were recabled to England, and came to the notice of Lord Dunraven Monday. As soon as the latter read them he lost no time in contradicting the cable stories, for he immediately cabled his American representative in this city, Mr. H. Maitland Kersey, authorizing the latter to deny all interviews in toto.

"Lord Dunraven, in his cable to Mr. Kersey, says: 'The interviews are wholly bogus; never talked in any such way, nor have uttered a word about the Cup races to any one in England; in fact, I have refused to say anything.'

"Lord Dunraven does not know for a certainty that the interview with Watson, which recently appeared in the Glasgow *Citizen*, is true or not, but if Watson has been treated as he has then Lord Dunraven presumes that the interview with Watson is also false.

"Lord Dunraven evidently wants to be put right before the American people, and at the earliest moment possible. Yachtsmen will be pleased to learn from Lord Dunraven himself that no such interviews ever took place, because they were in such tone that they would do no good to yachting.

"The writer had a long private talk with Lord Dunraven at Newport, and while not making it public, it is no breach of confidence to state that Lord Dunraven, instead of showing any feeling, acted quite the contrary. In fact, he looked very favorably on the suggestion that he leave the Valkyrie here, and race her next season, which he has now done.

"The make-up of the bogus interviews, whether in England or in this country, only throws discredit on himself, for, with cable between the two countries, it is only a question of five hours for positive denials. A. G. MCVEY."

It is worthy of note that the gentleman who has apparently constituted himself the special representative of Lord Dunraven, and who now comes forward with ready excuses for his Lordship, only last week made use of an alleged and questionable interview with Mr. Watson as an excuse for a bitter personal attack; assuming from the start that the interview was genuine throughout. The sequel to Mr. Kemp's interviews is as follows:

LONDON, Oct. 23.—Dixon Kemp, the yachting authority and editor of the *Yacht Racing Calendar and Review*, through whom both of the recently cabled Dunraven interviews were furnished to the United Press and by the London manager of the association accepted as authentic, has written to the United Press the following note under to-day's date:

"I saw Lord Dunraven at 27 Norfolk street, Park Lane, last Saturday noon, and sent you some of the topics of the conversation which took place between us, interspersed with my own remarks. Unfortunately, you attributed some of my remarks to Lord Dunraven, especially the one stating that the New York Y. C. knew perfectly well that Mr. Rose's challenge for the America's Cup was not an English challenge, and that the Royal Victoria Y. C. was sorry for having backed it. These were purely my remarks, as I wrote you last evening. I very much regret the misunderstanding. Faithfully yours,

"DIXON KEMP."

After the receipt of this letter the manager of the London office of the United Press sent the following telegram to Lord Dunraven at his residence in Norfolk street:

"Will you kindly inform me if the disclaimer of an interview with you, which was printed in yesterday morning's London papers and credited to the United Press, was authorized by you? As the statement is calculated to do us some damage, and as I hold the copy of an interview made at my request by Dixon Kemp, it is necessary for us to protect ourselves. I shall accordingly be obliged to you for your answer."

No reply to the foregoing has as yet been received, but an explanation of its delay may be found in Mr. Kemp's letter referred to above as having been written last night, which was received in this morning's mail. The letter is as follows:

"Lord Dunraven called on me just now. He is not going to make any revelations at the dinner in Cardiff or elsewhere. In your cablegram to New York you make him say that the New York Yacht Club knew perfectly well that Mr. Rose's challenge was not an English challenge. Lord Dunraven did not say this. The remark was mine in the letter I wrote you. DIXON KEMP."

It will be seen from the foregoing that Lord Dunraven does not venture to deny the interview, but calls upon Mr. Kemp to ask him to moderate a certain portion of it, now desiring to repudiate his hasty language. Those who know Lord Dunraven will read between the lines. There is no doubt that he said all that the interview contained, and that Mr. Kemp out of pure friendliness, wishes to shield him,

and, therefore, takes the blame himself. The original interview, as furnished by Mr. Kemp to the United Press, contained no indication that anything therein was especially the remark of Mr. Kemp. The interview purported to be the result of a talk with Lord Dunraven, written directly after seeing him, and without doubt was a faithful representation of Lord Dunraven's remarks.

Louis H. Moore, the London manager of the United Press, yesterday sent a letter to the London newspapers concerning the Dunraven interview, which is printed in the *Pall Mall Gazette*, *St. James's Gazette* and *Westminster Gazette* to-day. After referring to Lord Dunraven's denial of the accuracy of the interview, Mr. Moore proceeds:

"I wish to say that I have a copy of the interview in question signed by the yachting editor of the leading sporting newspaper of London, who made the interview at my request. I am prepared to show this copy to you or Lord Dunraven if desired. The name appended to the interview will be at once accepted as a guarantee of the accuracy of the report."

We learn that a well-known Western yachtsman is about to offer two prizes for 15ft. yachts built in his locality, in hopes that the best of them may enter the trial races of the Seawanhaka Cor. S. C. for its international cup.

The *Boston Globe* says: New Yorkers, lookout! It is whispered here in Boston that the "Adams boys," George and Charles, have the half-rater bee in their bonnets for next season, and are contemplating a 15-footer to compete for the honor of defending the Seawanhaka international cup. Their success in the 20-footer Rooster in these waters last season shows that success in the 40 and 46-footers has not spoiled their skill in small boats, while those who have sailed against them in their many races in New York and Newport waters will not underrate their ability in whatever they may undertake.

The Inter-Lake Yacht Racing Association.

THE pressure of the two series of international races and of yachting on the coast through the past summer has prevented us from giving that attention which it deserves to yachting throughout the country, and especially on the lakes. On Lake Erie in particular the past season has been a busy one, the new Inter-Lake Yacht Racing Association has been doing good work for yachting on the lakes and with most satisfactory results in spite of light weather this year. We are indebted to Capt. R. D. Potter, of Toledo, Ohio, for the following report of the regattas at Put-in-Bay.

Our harbor of Put-in-Bay never looked as pretty as on Aug. 5 and we can honestly say no sight could be more grand than to see a fleet of seventy-two yachts, large and small, lying at anchor with flags flying and crews working to get their boats in the pink of condition for the races to-morrow. The captains are visiting the different yachts, leaving their crews hard at work aboard their respective boats, and the "historic bay" never had the appearance of so much enthusiasm and glorious times in its history. The captains of the various boats meet to night to obtain the sailing instructions for the week, the programme being:

Monday, Aug. 5, assembling of yachts; meeting of owners and captains at Beebe House at 8 P. M. Tuesday, Aug. 6, naphtha launches, 30 and 25-footers, and special race for single and double catboats and fore-and-afters; yachts to sail around the course once, naphtha launches to go around the course twice. Wednesday, Aug. 7, first class: 55, 46, 40 and 35-footers, sailing around the course twice. Thursday, Aug. 8, ladies' day: cruising among the islands; reception and ball in the evening at Wehrle's. Friday, Aug. 9, free for all race, with time allowance, to and around stakeboat off Lakeside, O., and return; course, from stakeboat off Gibraltar to northward of Ballast Island, to and around stakeboat off dock at Lakeside, returning to northward of Ballast Island and across starting line; no time limit; banquet and presentation of prizes at Beebe House, 9 P. M.; the ladies are cordially invited to be present. Saturday, Aug. 10, "Home, Sweet Home."

Single or double cats and fore-and-afts, if with bowsprit and carrying jib, will be classed as sloops and schooners respectively. The preliminary gun will be fired at 12:30 P. M. sharp, Standard time. The course for all yachts will be from stakeboat between east end of Gibraltar and west end of Middle Bass, to and around stakeboat 3½ miles N.N.W., thence to and around stakeboat 3½ miles S.W. ¾s., thence 3½ miles E. ¾s., across the line between judge's boat and stakeboat. Entrance Fee.—For first class, 55 and 46-footers, will be $3; 40 and 35-footers, $2; 30 and 25-footers, $1; for special race of catboats and naphthas, etc., $1. Free-for-all race, $2.

Tuesday, Aug. 6.—All the morning long the wind was S.W.—a fair sailing breeze, with just enough motion on the water to gladden the heart of every sailor, and the outlook for a great race was good, but as the hour of starting approached the wind died out, leaving just a breath when at 1:26 P. M. the starting gun was fired, with the boats well bunched. Before the first mark was turned a heavy squall from the west played havoc with the little fellows and some did not finish, and even some of the larger ones put into the Bay.

In the 25ft. and 30ft. class were entered two fore-and-aft fish boats: one, Undine, which won in the 20ft. class, defeating the Com. Gardner by 3m. 17s., and Marie M., the winner in the 25ft. class, defeating Elfin by 8m. and 55s. Immediately after the race a protest was entered by the Com. Gardner for a remeasurement of the Undine, claiming her measurement was wrongly taken; but the judges overruled the protest, to the great disgust of yachtsmen interested in this just protest which the Com. Gardner had entered and which boat was rightly entitled to first place in the 30ft. class. The point I wish to make here is, that there should be a special class for this kind of boats, which are not and cannot, in my estimation, be termed yachts. There is no doubt but that this classification must be changed, for it hurts yachting; and next summer, at our meet, I hope to see this matter changed by making another class for these fish boats, as they are called.

Below is given the start, finish and corrected time in the 25 and 30ft. classes:

25FT. CLASS.	Start.	Finish.	Corrected time.
Pearl	1 31 00	5 02 20	3 31 20
Marie M.	1 31 00	4 28 20	2 56 23
Sprite	1 31 00	5 10 11	3 37 34
Jester	1 31 00	4 52 45	3 19 11
Elfin	1 31 00	4 39 20	3 05 18
Priscilla	Did not start.		
Arab	1 31 00	5 16 20	3 42 10
Brownie	1 31 00	4 53 45	3 18 26
Teal	1 31 00	5 03 22	3 23 28

Marie M. wins first prize, $25, and champion flag; Elfin second, $10; Brownie third, $5.

SPECIAL CLASS.	Start.	Finish.	Corrected time.
Bonita	Did not start.		
Alleni	Did not start.		
Clytie	1 36 00	5 21 25	3 20 25
Zebra	Did not start.		

Clytie wins first prize, $10, and champion flag.

NAPHTHA LAUNCHES.	Start.	Finish.	Corrected time.
Nellie	1 18 30	5 02 30	3 44 30
Arlington	Did not start.		
Restless	1 19 00	5 07 10	3 04 25
Hobo	1 19 15	Did not finish.	
Pearl H.	Did not start.		
Priscilla	1 20 00	Did not finish.	

Restless wins on time allowance champion flag.

30FT. CLASS.	Start.	Finish.	Corrected time.
Com. Gardner	1 26 00	4 16 45	2 30 45
Mischief	1 26 00	Did not finish.	
Lucy	1 26 00	4 33 00	3 06 08
Henrietta	1 26 00	4 59 40	3 32 08
Sammie	1 26 00	Did not finish.	
Suroco	1 26 00	4 49 08	3 21 02
Wah-wah-say-su	1 26 00	4 52 20	3 22 25
Undine	1 26 00	4 15 30	2 28 28

Undine wins first prize, $25, and champion flag; Com. Gardner, second, $10; Lucy, third, $5.

Wednesday, Aug. 7.—The races between boats of the first class, 55ft., 46ft., 40 and 35-footers were set for this day. In the morning at 8 o'clock there was every indication of a good whole sail breeze, but when the starting gun was fired at 1:35 P. M. the wind was very light, but the boats all made fair time on the first round, but nothing exciting happened, and the sail from the start to the first mark on the second round was a drifting match, with Sultana, of Toledo, and Neva, of Cleveland, neck and neck. Finally the above boats rounded the stake with a lead of nearly two miles on the rest of the fleet. The judges at last sent out a tug for the fleet, and nearly all were towed back into the bay, thoroughly disgusted with the second day's racing. We arrived in the bay about 7:30 P. M., hoping that the morning would bring us a gale of wind, for after having two drifting matches we had made up our minds that we wanted a gale of wind to see which was the best boat.

The same classes sailed again next day, making twice around the course, or 21 miles, in fair time, but not within the time limit, which was 5 hours, 15 minutes; and so this day's racing was inconclusive. Both days the same boats were in the lead of their respective classes, but the race was again postponed until Saturday. In the 55ft. class Nera was all alone, with the exception of the first day, when Avacet, of Cleveland, entered, just to make a race in that class; but she never turned the first mark on either day. In the 46-footers Sultana was well in the lead of the whole fleet, and in the lead of her class both days, there being entered in that class City of the Straits and Surprise, of Detroit, Mich. In the 40ft. class Puritana demonstrated her sailing qualities by showing a clean pair of heels to her sister ships in making the best corrected time around the course. In this class were entered Scud, Josephine, Lulu B., Albatross and Puritana. In the 35ft. class the little cutter Alborak, from Windsor, Can., had everything her own way, but the judges said, "Sail this race over again Saturday." To-morrow is the race of the meet, and we pray only for wind; but no time limit is on this race, so wind or no wind, there will be a race.

After furling canvas, and getting the boats into condition for the evening, we all attended to the ball given at Wehrle's for the yachtsmen and their friends. Dancing commenced at 8:30 P. M. and continued into the early hours of the morning and it was three o'clock when Mr. Wehrle bade good-bye to the yachtsmen, extending to them the comforts of home whenever they desired. All felt well satisfied with the evening's pleasure, and three cheers were given for Mr. Wehrle, and three for the I. L. Y. A. To-morrow comes the free-for-all, with time allowance, and may the best boat win.

No wind again this morning, but before the race was finished the wind had reached a velocity of eight miles an hour, and this was the best day's race of the meet. The starting gun was fired at 10:25 A. M. with the wind dead aft, being Southwest. After a run of two miles dead to leeward, and after rounding Ballast Island, the wind hauled to Northeast, and in the afternoon went to the Eastward. This course was from Put-in-Bay, around Ballast Island, and from there to Marblehead and return, a distance of about 15 miles. The following boats entered and started: Sultana, Nera, Josephine, Cynthia, Mischief, Elfin, Brownie, Sprite, Pearl and Clytie. All the boats were bunched going down to Ballast Island, and after rounding Ballast Island the wind hauled and the larger boats kept steadily increasing their lead. Sultana kept gaining on the Nera and Josephine, and when the stake boat off Marblehead was turned Sultana was in the lead by some 12m. and at the finish found her some 18m. ahead of the next boat, which was the Neva. The official times were:

	Start.	Finish.	Corrected.
Brownie	10 22 19	Withdrew.	
Elfin	10 23 23	Withdrew.	
Cynthia	10 23 45	3 34 44	4 49 22
Sprite	10 26 10	Not timed.	
Josephine	10 26 24	3 30 28	4 58 33
Sultana	10 28 03	3 03 23	4 27 30
Pearl	10 28 23	4 22 20	5 23 15
Mischief	10 28 37	3 37 36	4 47 16
Clytie	10 29 50	Withdrew.	
Neva	10 30 38	3 16 04	4 45 56

Sultana wins first prize, $40, by 18m. and 26s.; Neva, second, $20; Mischief, third, $10; Cynthia, fourth, $5.

The postponed races of Wednesday and Thursday were called for Saturday A. M., 8 o'clock, in case no wind the first around to make a race. The wind was S.W. about 5 miles an hour, but dropped completely before the first mark was turned. The big cutter Neva, of Cleveland, was in the lead, Sultana second and the rest pretty well bunched. After turning the first mark Neva and Sultana put about for the second, while the rest of the fleet stood further to the westward, and by so doing gained considerable on the two leaders, for at the second mark boats were all bunched. The Shamrock, whose record is known to all yachtsmen on the lakes, withdrew from the contest about half way down to the second mark and headed for home. Nearly all the fleet turned the second mark far in the lead of Toledo's pride, Sultana. From this mark to the finish it was decidedly a drifting match, with Neva far in the lead. The wind had changed to N.E., very light and at last dying out altogether. After rounding the second mark the boats, with the exception of Sultana and Cynthia, stood off toward the northward, while the pair stood off to the eastward. About half way to the finish the wind hauled north and with balloon sails set, they glided for the finish, while the boats to leeward had nearly a dead beat to windward, finishing about an hour after the leading boats. Take it all in all the week's racing was very unsatisfactory, and more than one heart was broken on water as well as on land for lack of wind.

Below is given the official figures of the race;

55-FOOTERS.	Start.	Finish.	Corrected.
Nera	8 55 06	1 12 12	4 36 16
Avacet did not start; went to Detroit Wednesday.			
46-FOOTERS.			
Sultana	8 55 00	2 25 09	5 45 57
City of the Straits	8 35 12	2 03 10	5 26 58
Surprise	Did not start.		
40-FOOTERS.			
Puritana	8 37 21	1 38 02	4 54 50
Josephine	8 35 12	1 57 33	5 22 21
Scud	Did not start.		
Lulu B.	Did not start.		
35-FOOTERS.			
Alborak	8 35 54	1 44 23	4 59 59
Miriam	8 36 58	2 33 05	5 48 52
Cynthia	8 36 28	2 43 20	5 58 04
Gertrude	8 37 21	2 49 00	6 03 37
Cora V.	Did not start.		
Shamrock	8 35 26	Did not finish.	

Prize winners: 55-footers—Nera first prize, $50, champion flag and time prize for the best corrected time, 46-footers—City of the Straits first prize, $50, and champion flag; Sultana second, $25. 40-footers—Puritana first prize, champion flag and $40; Josephine second, $30. 35-footers—Alborak first prize, $40 and champion flag; Miriam second, $20; Cynthia third, $5.

On Saturday afternoon and Sunday morning the yachts and yachtsmen left for their home ports with a friendly feeling to all who attended the meet, and all hoping to meet again next year in Detroit; and with flags flying and cannons barking we bade good-by to old Put-In-Bay, beloved by all the yachtsmen of Lake Erie.

International Yacht Racing.

Editor Forest and Stream:

I shall feel obliged if you will allow me, through your columns, to suggest a plan for a fair, square and impartial international yacht race.

My proposition is, that a sum of, say, £500, be subscribed by both the Americans and English, with which a handsome gold trophy of £1000 value be purchased, to be sailed for by either one or more yachts of each Nation (if more than one, in equal numbers).

That the yachts shall meet and start from some neutral port in the Atlantic to some other port and back—say from Halifax, N. S., to Bermuda, or from Antigua to Port Royal, Jamaica, and back, the distance in both cases being about 900 miles from port to port. In either case there would be a dead heat and a run over the greatest part of the course, the prevailing winds in the first-named course being southerly, and in the latter the easterly trade winds.

Each vessel should, of course, berth her own crew, which should be limited to sufficient hands to sail the vessel in watches, but to be allowed to take a navigating captain in addition to her sailing master. They should also be obliged to carry all their own spars, spare sails and gear, no tender or friendly yacht being allowed to assist in any way. The details and arrangements for the match to be carried out by a committee composed of an equal number of Americans and Englishmen, with power to elect an umpire in case of any failure to agree among themselves.

It is evident that if this plan be carried out the vessels will be placed on an equality, which can never happen in matches sailed in either England or America, as one vessel must cross the Atlantic while the other remains at home, getting her trim and exercising her crew, besides being built much lighter than her competitor.

A trophy of this kind and won in this way would be something for a yachtsman to be proud of indeed. W. S. KELLY.

PLYMOUTH, Eng., Oct. 16.

Another "One-Design Class."

THE Solent yachtsmen have for some time considered the idea, first suggested, if we remember, by Lt. Col. Bucknill, of a one-design cutter of moderate type as compared to the later racing machines. The matter has lately been taken up actively, and we learn from the *Field* that in accordance with the wishes of those who were present at the Cowes meeting, Col. Bucknill has obtained from Mr. Soper a design for a boat, the cost of which as estimated by Fay and Co. will not exceed £175 (including the designer's fee), provided an order is given for six.

The drawings indicate that the boat will undoubtedly be a fast one, though speed is not the sole object of the promoters of this class, who will be satisfied with two or, at the most, three days' racing a week.

The following are the main features of the design: Displacement, about 5 tons; l. w. l., 25ft.; length over all, 35ft. 6in.; beam, 7ft. 9in.; draught, 5ft.; S. A., 680 sq. ft. The boat will be built of red pine on oak frames and copper fastened. The ballast, about 27 tons, will be all on the keel, which is a fairly long one, and admits of the boat being easily laid ashore.

There is a pole mast, and the rig suggested is a cutter's. The cabin is of a convenient size, as is also the forecastle, which has a hatch of its own. The decks are canvas covered.

Several clubs have already intimated their intention of giving races for this class should it be successfully formed.

Such a boat will be most serviceable for general use in many places, and yet will give good racing in its class.

The New Y. R. A. Rule.

NOW THAT the 1-raters and ½ raters have become popular in this country, the question of the future of these boats abroad becomes an interesting one in view of possible international races for the Seawanhaka cup. The possibilities and probabilities under the new rule are discussed as follows by the *Field:*

It seems now pretty certain that the designs under the new rating rule will be a greater departure from the existing type than was at first supposed to be the case. Already a 1-rater is in hand, 23ft. on the water-line, and with a sail area of 450sq. ft. This is 150sq. ft. more sail than a 20ft. 1-rater of the present pattern can be given, and, of course, the beam will have to be considerably reduced, and there need be some decrease in the draft of water; also, the mid-section would be more or less of the V type. Take the Wolfhound as one of the extreme existing 1-raters. Her l. w. l. is 19.2ft., beam 7.3ft. girth 16.6ft., square root of sail area (313sq. ft.) 17.7. Of the girth only .75 is used in the formula and 0.5 of square root of sail area. Wolfhound's linear rating will therefore be:

$$\frac{19.2+7.3+12.44+8.85}{2}=23.89,$$

the class linear rating being 24ft.

If a 1-rater's length on load line be increased to 23ft. and her sail area to 450sq. ft., this would bring her linear rating to 26.7ft., or 2ft. in excess of the rating allowed. Twice 2.7ft. is 5.4ft., and 5.4ft. would therefore have to be taken off the total by means of reducing beam and girth. This could be done by reducing the beam to 5.4ft., draft of water to 5ft., and the girth to 12ft., three-quarters of which is 9ft., and half the square root of sail area 10.6ft. The quantities, summed as before, would be:

$$\frac{23+5.4+9+10.6}{2}=24\text{ft.}$$

The displacement would probably be increased to from 3½ tons to 4 tons, and the freeboard could also be increased, as it is not taxed, girth being taken from load line to load line under water.

In light and moderate winds this craft ought to succeed against any of the existing broad and shallow-bodied craft.

But it must be remembered that the narrow-beamed 21ft. Tottie (21ft. on the load line, with 500sq ft. of canvas) was beaten without time allowance by the modern 1-raters, 20ft. long, with 300sq. ft. of canvas.

It would seem from the possibilities under the new rating rule that 24ft. was rather too high a number to fix upon for the class to represent the present 1-raters, and that 18ft. also was too high a number to represent the 0.5-rating class.

In connection with this matter it should be remembered that at a recent meeting of owners interested in small yacht racing about the Thames and east coast, a resolution was passed that the Y. R. A. should allow four hands for the new 24ft. linear rating class and three for the 18ft. class. We do not think there is any doubt that it will be found necessary to increase the crews as proposed at the meeting referred to, as the boats will be very considerably larger, and have 50 per cent. at least more sail area.

We just now said that the new 18ft. class will be composed of much larger boats than the present 0.5-rating class, and the question is whether a 15ft. class should not be formed at once to more nearly represent the existing 0.5-raters in length of load waterline and sail area—craft which can be comfortably worked with two hands as at present, and with a first cost about the same, for there is no doubt that all the class boats under the new rule will cost considerably more to produce than the old raters from 0.5 up to 10-rating did.

So also will the 20-rating class, represented by 52 linear rating, be much more costly to produce, and this can readily be realized from the fact that a 52ft. linear rating class can easily be 33ft. on the waterline with a sail spread of 3,000sq. ft.—much the same as Clara had in 1885.

The limits of 20ft. and 15ft. by Seawanhaka rule just fitted the old 1-rating and ½-rating classes, allowing, as in such a 1-rater as Wolfhound, a margin for that increase of sail area which would be necessary in racing in America; while the crew limits were the same, three and two men respectively, in both countries. If the above speculation of the *Field* is correct, as it seems to be, a bar will be raised against international racing in these classes just as it has begun with so much promise.

The Seawanhaka Fifteen-Footers.

New Orleans Times-Democrat.

THE Southern Y. C. now has a chance to enter the lists of international yacht racing, which, if carried to a successful issue, would cover the club with glory and, at the same time, greatly stimulate yachting in the South, and place it on the same patriotic and advanced plane that the sport enjoys in the North.

The opportunity for the home club to make itself felt in the yachting world is afforded by the international cup offered for ½-raters by the Seawanhaka Corinthian Y. C., of New York. The ½-raters are little sloops 15ft. long on the waterline and about 23ft. over all, and must be sailed by a crew of two. These little racers give more sport than the large racing boats, and may be said to be just as good models with which to carry on the evolution of speed and yacht designing, and will do it sooner, owing to the greater number built, while they have the great advantage of being cheap, easily handled and comparatively inexpensive to run. This size of boat is very popular in the North, many yachtsmen who have fine, large yachts, preferring to carry the little sloops for racing purposes, as in racing them the small crew—perhaps the owner and a friend—are right on their own resources, which is a keen pleasure to the thorough yachtsman, and not to be enjoyed on a large craft full of paid hands. The Seawanhaka Club put up the $500 cup, and after they had received an English challenge for it for this year the club arranged for a series of trial races to select a defender, and invited all the other American clubs to enter candidates. The trial races, which were won by the Ethelwynn, of the Indian Harbor Y. C. (she was designed by W. P. Stephens, yachting editor of FOREST AND STREAM), and the international races, the Ethelwynn successfully defending the cup from the English boat, Spruce IV., all took place this summer. The club now has a challenge for early next year from Canada, and J. Arthur Brand, owner of the Spruce, has expressed his intentions of building and coming here again later in the year if the Canadians are not successful in winning the cup. Now, our home club could not float an international racer like the peerless Defender, owing to the local shallow waters, but we can build and race small, light-draft boats. In fact, we have had to develop this class from very necessity, the club having some of the fastest jib and mainsail boats and their sailors in the world. We have but few as small as 15-footers, but from long experience in the 20ft. "sand-baggers" we could turn out a fleet of smaller fixed-ballast boats that would be as good as any in the country. The Southern Y. C. should immediately foster the ½-rater class; the regatta committee should draw up a set of rules and offer a fine cup to encourage building. The class would be the life of the sport next spring, and many a man who can now only afford to look on at the expensive racing of larger boats would be steering his own little pet. After the class was well established here the pick of the lot could be sent North and might prove fast enough to have the honor of being selected to defend the Seawanhaka cup.

Society of Naval Architects and Marine Engineers.

THE third general meeting of the Society of Naval Architects and Marine Engineers will take place in New York city at 10 A. M., Thursday, Nov. 7, 1895. Through the courtesy of the president and managers of the American Society of Mechanical Engineers, the meetings will be held in the auditorium of 12 West Thirty-first street, the sessions continuing through Thursday and Friday, Nov. 7 and 8.

There will be a banquet at the Hotel Brunswick, at 7 P. M. Friday, Nov. 8, to which members and their guests are cordially invited.

In order that suitable arrangements may be made, the executive committee requests that members will notify the secretary as early as practicable of their intentions as to the banquet, and also as to the probability of their attending the meetings of the society.

Members intending to propose candidates for membership are requested to notify the secretary in order that the necessary blank forms of application may be forwarded and properly filled out.

The following papers will be read Thursday, Nov. 7:—1. American Maritime Department—By Captain Henry C. Taylor, U. S. N., President Naval War College. 2. Performance of the Twin-Screw Steamer City of Lowell—By Professor Jas. E. Denton, Stevens Institute of Technology. 3. Rudder Experiments—U. S. S. Monterey—By Elliot Snow, Assistant Naval Constructor, U. S. Navy. 4. Aluminum, —its alloys and their use in ship construction—By J. C. McGuire, Esq. C. E. 5. Methods and Forms for Certain Ship Calculations—By D. W. Taylor, Naval Constructor, U. S. Navy. 6. The Number of Longitudinal Intervals in Ship Computation, as affecting the Accuracy of Integration for Displacement, and Note on the Relation between Reduced and True Wetted Surface—By Professor W. F. Durand, Cornell University.

Friday, Nov. 8.—7. Recent Designs of Vessels for the U. S. Navy—By Philip Hichborn, Chief Constructor, U. S. Navy. 8. Tactical Considerations Involved in War Ship Design—By Albert P. Niblack, Lieutenant, U. S. Navy. 9. The Centerboard—its influence on design, its value and its proper use—By Wm. P. Stephens, Esq. 10. Engineering Research in the Navy—By Professor Wm. S. Aldrich, University of West Virginia. 11. The Ventilation of Ships—By F. E. Dowst, Esq., M. E. 12. An Experimental Test of the Armored Side of U. S. S. Iowa—By Albert W. Stahl, Naval Constructor, U. S. Navy.

Niagara and the British 20-Raters.

THE relative performances of the Herreshoff bulb-fin Niagara, owned by Howard Gould and sailed this season by Capt. John Barr in British waters, are shown in the following letter to the *Field*. Audrey and Eucharis are new boats, and Isolde is a sister to Niagara.

By Col. Smith's formula for figure of merit, first published in the *Field* and subsequently in other places, the records published on Oct. 5 of the 20-rater racing for 1895 figure out as follows:

	Firsts.	Starts.	Figure of Merit.
Niagara	25	46	45.63
Audrey	16	32	40.34
Inyoni	15	38	32.49
Zinita	6	15	28.70
Dakotah	4	23	13.42
Isolde	3	23	10.45
Stephanie	3	24	9.70
Eucharis	2	11	7.50
Luna	2	33	4.00
Vineta	0	12	0.00
Dragon	0	9	0.00
Windward	0	4	0.00
Maida	0	3	0.00
Rosetta	0	3	0.00
Molly	0	2	0.00
Mimosa	0	1	0.00
Elizabeth	0	1	0.00
Stella	0	1	0.00
Maris	0	1	0.00
Osiris	0	1	0.00
Thalatta	0	1	0.00

Niagara had five sails over, and Stephanie one sail over. These are not counted either as "firsts" or as "starts" for finding the figure of merit. Isolde would have had a far better figure of merit if Niagara, her sister ship, had been absent, as "their days" were similar; and Luna's fall was due to the same cause. Had Niagara stuck to the Solent it is possible that Audrey would have beaten her in the final result. As it was they met on thirteen occasions, Audrey beating Niagara six times, and being defeated by Niagara seven times. As you remark, Inyoni could beat either of them in light weather, but it seems to pay best to win in a moderate breeze; and hard weather boats are sure to do well in our English climate, especially on the Solent.

This has been proved over and over again—the successes of Humming Bird and Babe, and more recently of Gareth, in the 25-rating class; of Savourna, and more recently of Flat Fsh, in the 5-rating class; of Decima, and more recently of Dakotah, in the 10-rating class—making it very evident that yachts designed to excel in strong and in moderate winds are better prize winners than those which excel in light and in moderate winds.

Indeed, it may be truly stated that a yacht which is a fairly certain winner in light winds seldom wins in moderate weather, the hard weather boat beating her in every kind of weather *except* light winds.

Thus, Niagara this year won eleven firsts in fourteen starts in "*moderate* winds," whereas Inyoni won only three firsts in nine starts.

Mr. F. H. Collins arrives at a diametrically opposite conclusion, but his own figures contradict him. Occasionally a light weather year occurs when his pattern yacht would head the list at the end of the season—in the Jubilee year, for instance; but such weather seldom occurs in our climate for any length of time.

The alteration of the rating rule may, however, encourage sail to such an extent that light-weather boats may become better prize winners than heretofore. Nevertheless it should be borne in mind by Mr. Collins and by every one else that the success of a hard-weather boat, or of a light-weather boat, depends principally on their competitors, and not upon the type, or the rating rule, or the weather of the year.

Thus, in the 20-raters, 1895, Isolde and Luna were comparatively unsuccessful because Niagara and Audrey were better boats in their weather, and, had there been as many light-weather 20s as there were hard-weather boats, Inyoni's winnings would probably have been reduced considerably.

Another matter which Mr. Collins appears to have entirely overlooked is the well-known fluking which is inseparable from light winds, and which greatly reduces the number of wins of the fastest boat in light weather. She is fluked out of her prize time after time, but the hard-weather boat very seldom suffers in a similar manner, if she be well sailed.

The total number of prizes won in light weather is consequently no proof whatever that it pays best to build yachts to win in such weather.

A glance at the first column in Mr. Collins's table of the 20-raters' wins for the past season should have shown him this fact; and I feel sure that Col. Smith's figure of merit is a far more accurate summary of a yacht's success than the analysis made by Mr. Collins and the reasoning he tacks on to it. THALASSA.

Keeping a Clear Course.

RECOGNIZING the absurd and impracticable character of the demand on the part of British yachtsmen that future international races of the New York Y. C. should be sailed elsewhere than off New York, we are glad to see that, while offering perfectly fair terms to the proposed challenger of 1896, the New York Y. C. gives no intimation whatever that the races will be sailed elsewhere than off Sandy Hook. We are proud to have fought for so many years against the gross injustice of compelling a foreign vessel to sail an international race over the New York Bay courses, as was done even so late as 1887, but now that the inside course has been abolished and one of the best and fairest of open water courses known to any club has been established outside of Sandy Hook, we propose to stand by this course until it is proven that some other is materially better. So far as transferring the races bodily to some neutral point, such as Madeira or the Mediterranean, the suggestion is one that no club in the world would accede to, and as for Marblehead and Newport, both are open to the one great objection of crowding, and distinctly inferior in other respects to the Sandy Hook course.

The true solution of the difficulty of interference lies not in the transferral of the races to some other point, or in efforts to conceal the dates and mislead the spectators, but in devising some plan for controlling the fleet.

There are, it is true, a certain number of craft that are difficult to manage; some of the larger steamers have shown an utter disregard of the rights of the yachts, and the press and photographers' tugs are particularly troublesome, running almost into the yachts at times, as told by Mr. West, the English photographer. The great majority, however, offend through ignorance, both of where the yachts are going and where they should go themselves.

In a recent editorial the Maine *Journal* discusses the question as follows:

"The evidence of the last international races was not that the excursion steamers were not eager to obey the wishes of the race committee in keeping the course clear, but that the committee were not sufficiently explicit in stating their wishes, and that the steam yachts which performed patrol duty were in command of people who had very remote ideas as to what constituted their duties. It is one thing to express in general terms "keep the course clear," and quite another thing to specify exactly what that means, and how excursionists are to know when they are trespassing. The probability is that the patrol yachtsmen this year had no more specific instructions than to "help keep the coast clear," and that in their eagerness to see the race themselves they paid only intermittent attention to that point. It was on a par with having a lot of men sworn as special policemen to keep order at a meeting who had very hazy ideas of how the audience should be accommodated and no system or captain to direct them. There is room this winter, therefore, for the establishment of a detailed system of patrol for such occasions, with selected officers, understood signals and the promptest means of communication and co-operation.

"If this idea is worked out on a business basis, no one will welcome it more than the excursion steamer men, who will then have something to rely upon instead of mere amateurish opinions. We can vouch for the steamer captains and pilots, that without exception they will be glad to co-operate to the fullest extent with any fair and practicable directions of the yachtsmen if explicitly expressed, and we but state a fact that can be verified by any one who has had to do with excursion steamers at such race meetings in the past when we say that the steamer men have been unfairly blamed for not obeying the wishes of the yachtsmen, because those wishes, if ever reduced to concrete specifications by the yachtsmen themselves, have never been so distinctly stated for the advice of the steamer men. If it should be requested by the yachtsmen that steamers do not cross any line from a quarter to half a mile in any direction away from the course, for instance, we have entire confidence that there would be little if any need for even a patrol to guard it."

Shortly after the late races a scheme was outlined to us by Mr. Frank Herreshoff, brother of the designer, the main point being the preparation of a chart showing where the yachts would sail and where the attendant steamers should lie; the former area for instance being printed in red and the latter in blue. As the course varies from day to day, some difficulty would arise in allotting a place for the fleet with all directions of the wind, but this is not a material objection. The plan proposed the placing of such a chart on board of every vessel which would follow the race; with possibly an experienced yachtsman as a volunteer, to direct the captain. We believe much might be done through some such scheme to control and restrain the great body of the fleet, and any individual offenders might be brought to terms by the weight of condemnation which would rest upon them.

Another thing which would help would be to go some five or ten miles offshore from the Lightship, and to start from a line marked by two buoys specially set for the purpose. Such a line would be far better than the use of the Lightship as a mark, there would be less chance of having to shift to get a windward course, and the distance would bar out some of the multitude of smaller steamers. There would be an objection on the score of this extra distance for the yachts, but withthe fast tugs and steam yachts now about New York this would amount to little.

YACHTING NEWS NOTES.

Pending the completion of the Devonshire Building, at Devonshire State and Washington streets, Boston, Mr. W. B. Waterhouse, the designer, is located at 54 Devonshire street.

Canoeing.

THE racing rules of the American Canoe Association are particularly well worded in respect to their amendment; it is expressly provided by them that the regatta committee at the conclusion of the season's racing shall prepare a full report of the races and of its conclusions after the experience of a year; and further, that all proposals for changes of the rules, whether originating with the committee or with members outside, shall be specifically stated in this report. It is also required that the full report shall be published in the FOREST AND STREAM at least fourteen days before the annual meeting, in order that all members may be made aware of intended changes of rules. So far as the requirements go, they could hardly be improved upon; the one weak point is that they are ignored by the successive regatta committees. Last year, as in previous seasons, no report was presented; this year, however, the chairman of the committee, M. V. Brokaw, on whom the work of managing the races at the meet finally devolved, has complied with the rules and drawn up a very full report. This report was sent out some weeks since to the distant members of the committee for signature, and though ample time has elapsed for its return, it is still missing; so, in default of publication for the required period, no changes of rule can be made at the meeting on Nov. 12.

ONE change in the rule is strongly called for—the removal of the limit of 18in. to the drop of the centerboard. This limit was placed in the rules fifteen years ago, with others calculated to keep the centerboard within reasonable bounds both in size and position. The other limits have long since been abandoned, making this one worse than useless, yet with a strange inconsistency the Association has clung fondly to it. The best form of centerboard for a small boat now known, the Hope knife board, is thus prohibited in canoes under the A. C. A. rule.

New York Y. C.

THE regular October meeting of the New York Y. C. was held on Oct. 24 at the club house, with Com. Brown in the chair. The most important business of the evening was the reading of the report of the America's Cup committee of 1894-5, a lengthy document which was accepted as follows:

Resolved, That the report of the America's Cup committee of 1894 be accepted, and that the committee be requested to have 2,000 copies of the same printed for distribution among the members of the club.

The report will doubtless prove very interesting reading, touching on one matter that has not been generally known, the accusation of Lord Dunraven that in the first race Defender was ballasted below her measured waterline to a material extent, as thus mentioned in the report:

"On Saturday, Sept. 7, Lord Dunraven communicated to the Cup committee his belief that the Defender had sailed that day's race immersed 3 or 4in. more than when she was measured. Lord Dunraven stated that he believed that the change had been made without the knowledge of the Defender's owner, but it must be corrected or he would discontinue racing.

"He did not wish to say to the committee what action it should take, but he desired a remeasurement that day (Saturday, Sept. 7).

"The Cup committee, after considering the communication from Lord Dunraven, ordered a remeasurement to be made at the earliest possible moment.

"On Sept. 8 the yachts were marked, as requested by Lord Dunraven, at the same time they were remeasured, with the result of only 1/16in. difference in l w.l. in case of the Defender, and 1-16in. in the Valkyrie.

"As the result varied the time allowance only a second or two and in no way affected the outcome of the races, it was not deemed necessary to give additional measurements."

The committee was finally discharged with thanks.

Vice-Com. Ward then moved the following:

"*Resolved*, That a cup be presented to the owners of the Defender, in recognition of their successful defense of the America's Cup in the recent match, and that a cup be also presented to Mr. George J. Gould, as an expression of the club's appreciation of his generous and sportsmanlike action in putting the Vigilant in commission and placing her at the disposal of the club; and that the procuring of the cups be referred to a committee of three, to be appointed by the chair."

Commodore Brown appointed to serve on the committee Vice-Com. H. C. Ward, Rear-Com. J. C. Bergen, and Frank T. Robinson.

The various telegrams relating to Mr. Rose's challenge were read, and the following nominating committee for the annual election was appointed: Lloyd Phœnix, George L. Rives, Richard S. Palmer, H. F. Lippitt, Frederick G. Bourne, Philip Schuyler, William E. Iselin, Gouverneur Kortright, William Butler Duncan, Jr., and Fordham Morris.

Secretary Oddie gave notice of a proposed amendment reducing the minimum limit of tonnage from fifteen to ten tons, but no action will be taken before the annual meeting.

The following members were elected: C. T. Russell, F. C. Dininny, Jr., Jacob Ruppert, Jr., Lawrence E. Embree, Leroy M. Garrett, U. S. N.; Louis Kempff, U. S. N.; Frederick V. McNair, U. S. N.; the Hon. Henry L. Pierce, Albert L. Key, U. S. N.; Edward S. Hatch, James W. Ridgway, E. S. Thomson, Gen. Gilbert H. McKibben, Dr. E. H. Marsteller, U. S. N.; J. R. P. Pringle, U. S. N.; Louis J. Brush, Charles Henry Harlow, U. S. N.; J. B. Wheeler, Edward Browning, Franklin M. Singer, Edward White, U. S. N.; Leland H. Littlefield and Theodore D. Rich.

The Executive Committeé Meeting.

COM. HUNTINGTON has sent out the following notice:

THE annual meeting of the executive committee and board of governors of the A. C. A. will be held at Stanwix Hall, Rome, N. Y., on Monday, Nov. 11, at 10 A. M.

It is hoped that all members of the committee will make a special effort to be present at this meeting.

Particular attention is called to Art. VI., Sec. 3, Deputies, and Art. XII., requiring the publication for two weeks of any proposed amendments of the constitution printed below.

THOMAS H. STRYKER, Sec'y-Treas. WM. R. HUNTINGTON, Com.

Art. VI ,Sec. 3—Deputies.—A member of the committee may appoint by letter another active member in good standing of his own division as deputy to vote for him in his absence at any meeting of the committee, but no person to have more than one vote.

Art. XII.—Amendments.—This constitution may be amended at any meeting of the executive committee, provided the amendment receives the votes of at least two-thirds of said committee, and has been published in general terms in one of the official organs of the A. C. A. at least two weeks before being voted upon, or by writing signed by the commodore and two-thirds of the members of the executive committee, after a similar publication.

A. C. A. Membership.

CENTRAL DIVISION: Lewis J. Allyn, Rochester, N. Y.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., Oct. 20.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions: 200yds., strictly off-hand, rifles under 10lbs., 3lbs. trigger pull, at the standard target, 7-ring, black. It would be more interesting to riflemen in general if all clubs in publishing their scores would be more explicit in their noting of the conditions under which they shoot. Let more attention be paid to this and the greater will be the enthusiasm displayed:

Election Day at Cypress Hills.

THE third grand annual individual rifle championship match will be held at Cypress Hills Park, Brooklyn, N. Y., on Tuesday, Nov. 5. The entrance fee is $5, and $2 forfeit must accompany each entry, no entries being received after Nov. 2, the date of our issue.

The match will be shot under the management of the following committee: Gus. Zimmermann, chairman; Ignatz Martin, Henry D. Mueller, Geo. W. Plaisted; Chas. G. Zettler, treasurer, and Bernhard Zettler, shooting master. Targets will be open for practice at 9 A. M., the match starting at 10:30. Ten sighting shots will be allowed all contestants who are not present at the opening of the match.

All riflemen who intend taking part in this annual affair should apply at once to Chas. G. Zettler, 219 Bowery, New York city, where entry blanks can be obtained and entries made. As usual, this match will be full of interest.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Nov. 5-7.—KEWANEE, Ill.—Annual tournament of the Kewanee Gun Club; added money and merchandise prizes. L. C. Huckins, Sec'y.

Nov. 7-8.—WELLINGTON, Mass.—Annual fall tournament of the Boston Shooting Association. H. M. Federhen, Sec'y.

Nov. 12.—NEWARK, N. J.—All-day shoot of the South Side Gun Club; New Jersey Trap-Shooters' League contest at 11 A. M. W. R. Hobart, Sec'y.

Nov. 26-28.—DES MOINES, Ia.—Tournament of the Des Moines Gun Club; live birds and targets. O O. Perkins, Pres.

Nov. 27-28.—IRONTON, O.—Holiday tournament of the Iron City Gun Club. H. E. Norton, Pres.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

Billy Hobart, secretary of the South Side Gun Club, of Newark, N. J., writes us as follows: "In 'Drivers and Twisters' I notice that you announce that the competition for the gun donated by the Winchester Repeating Arms Co., which was announced for Nov. 12, would take place at 2 P. M., on the grounds of the South Side Gun Club, at Newark, N. J. As the entries for this contest will probably reach a half hundred, and the number of targets is 50 each man, this hour will not allow time enough, particularly as the sun sets about 5 o'clock. Please, therefore, correct the above statement by saying that the hour appointed for the commencement of the contest will be 11 A. M. Should there be time enough after the gun is won, sweepstakes will be held until dark. All contestants in this match will be handicapped according to the scores made in the League team matches, and no one need be afraid to enter. The grounds of the South Side Club are open every Saturday afternoon and opportunity afforded for practice for the match of Nov. 12."

Oscar Guessaz (Texas Field) and Joe George, both of San Antonio, Tex., were each presented recently with a spick and span hunting suit by Fred Quimby. Here's the result as told in a letter to Fred, dated Oct. 20: "You ought to have seen the expression on the features of the first mallard drake that flew over me on the morning when I first donned the handsome suit you sent me. It was funny for me—but he died, like all the rest. Thanks, old man, thank's again. Joe and I will spend a few nights this coming week in thanking you jointly for our dude suits, and you can expect something startling, as Joe is some pumpkins on thanks."

The Hazard Smokeless Powder Co. will hold a four day's shoot at Cincinnati, O., May 19-22, 1896. The "Blue Ribbon" tournament will be managed by Bob Waddell, the Hazard Co.'s agent at that point, who writes that he wants "to make it a rouser." We are promised something of special interest in this programme. In regard to the above date Mr. Waddell writes: "My object is to follow Memphis, Tenn., on the circuit, and the Ohio State League will probably take the first week in June at Dayton, O., if it cannot come to an agreement with Memphis."

In talking with Capt. Money last week about the E. C. Powder Company's tournament next May, he asked us to state that no restrictions whatever would be placed on the shooters in regard to the powder to be used during the shoot. "Also please state," said he, "that the company will adopt FOREST AND STREAM's suggestion for a championship at targets, as outlined in your issue of Oct. 19. We may make some slight changes in the scheme, but it will be open to all, nobody barred."

Bob Waddell, of Cincinnati, O., in writing about the "Blue Ribbon" shoot referred to elsewhere, says: "We are going to adopt, with some modifications, FOREST AND STREAM's suggestions in regard to a target championship." He adds that he will inform us as to scheme more fully at a near date. As he will be in this city next week, we should be able to outline the programme for the Hazard Powder Company's tournament, May 19-22, very shortly.

On Oct. 16 Bland Ballard, of Louisville, Ky., shot a 100-bird race with Walter Watson, of the same city. Mr. Watson is chief train dispatcher on the L., St. L. & Texas R. R. The shoot took place on the grounds of the Kentucky Gun Club, Harry Snyder being chosen for referee. Ballard won by scoring 93 to Watson's 88, the former losing 4 dead out of bounds to Watson's 5. The match was a tie at the seventy-second round.

In the match for the live-bird championship of Kentucky, decided on the grounds of the Kentucky Gun Club, Louisville, Ky., Oct. 23, Hutchings, Watson and A. W. du Bray tied for the championship on 24 out of 25 pigeons. On the shoot-off Watson won the championship and the silver cup valued at $150. Du Bray writes that all three shot Parker guns, using E. C. powder and U. M. C. Co.'s Trap and Smokeless shells.

The Des Moines, Ia., Gun Club will hold a three-days' tournament, Nov. 26-28; live birds and targets will be used. Mr. C. O. Perkins, president of the club, will furnish any further information.

Notwithstanding the conflict of dates, both the DuPont tournament at Baltimore, Md., and the Clarke Hardware Company's tournament at Atlanta, Ga., were successes, each in their own line.

Rolla Heikes did not retire to the Alabama home of his brother at Huntsville for nothing! Joe's cooking and a diet of quail are answerable for his 95 per cent. average.

Ohio trap-shooters, as well as crack shots from other States, should not forget the Warren, O., Gun Club's shoot on Nov. 7.

Nothing is likely to result from all the talk about a match between Morfey and Brewer for $1,000 a side; anyway, there's no money up at present.

EDWARD BANKS.

The Atlanta Tournament.

ATLANTA, Ga., Oct. 25.—The Clark Hardware Company's tournament was brought to a close at about 4 P. M. Monday, adding one more link to the long list of successful tournaments held in '95. Despite the big counter attraction at Baltimore, the shoot was a success and shooters were present from twenty-one different States, of which the Ohio delegation was the largest, with the exception of Georgia. The quality of shooters was such as to compare favorably with those that attended any of the large tournaments this season; with one or two exceptions all the crackerjacks were here.

The shooting grounds were located about three miles from the city in an old field, on the top of a hill that sloped off on each side and in front of the traps. In consequence, No. 1 on the first set of traps was down in a hollow, and No. 5 was on the hill, while the reverse was the case with the set on the left. This made the shooting extremely difficult, as a quartering bird on one set of traps would be going up hill while the same bird on the other set of traps would be going down hill. The background was also very trying. Just beyond the traps, about 150yds. away, was a big strip of wood, the foliage of which presented rather a variegated appearance, as the leaves in this section of the country are just beginning to turn, while the sun also beat down in the shooter's face most of the day.

Everyone present was unanimous in the expression that these were the hardest grounds they had ever shot over. The wind blew a gale most of the time, especially on Friday, otherwise the weather was perfect.

Atlanta and the surrounding country is very hilly, and for this reason it is impossible to secure a more level tract of ground, or one that has a good background. It was through no lack of effort on the part of the Clark Hardware Co. that a more suitable site for holding the tournament was not secured, as had such a thing been possible they would certainly have done so. The grounds were also very inaccessible; the car line ran to within about a quarter of a mile of the grounds, and sometimes the cars ran every fifteen minutes, but most of the time about every hour.

The Clark Hardware Co. had made arrangements to have conveyances to take the shooters from the car line to and from the shooting grounds, but after the first morning, a bridge on the road, that spanned a deep cut through which the railroad passed, had to be torn down, and thereafter the shooters were compelled to walk to and from the car line; everything seemed to conspire against the success of the shoot.

Jack Parker managed the shoot, so nothing need be said on this score. He had a good deal to contend with, as his corps of assistants were all inexperienced; none of them had ever seen a tournament before. Paul North was present and also contributed his share toward keeping things moving. With North and Parker on hand it is scarcely necessary to state that blue rock targets, traps and electric pulls were used.

The programme announced $700 added money, while the regular events showed but $630 added. The additional $70, however, was given as average money, $10 each being given to the seven high averages. The first of course was won by Rolla Heikes with an average of 95.3 in all programme events; Ralph Trimble, of Covington, Ky., was next with 92.2; then came Wheeler, of Marlboro, Mass., with 91.7; fourth was B. H. Worthen, of Charleston, S. C., with 91.1; Raymond and Glover tied for fifth, each having an average of 89.1; then came Capt. B. A. Bartlett, the popular representative of the Burgess gun, 88.8 was his average; H. L. Foote was seventh with an average of 88.6. It may be out of place here to state that Foote shot a 16-gauge gun, with which he did exceellent work throughout, he got four straights during the shoot, two 15s, a 20, and 25.

This tells part of the shoot, while the balance can be learned from the tabulated scores, which show who were present, where they came from, the number of events in which they participated; the gun, powder and shell used by each contestant, and also the averages each day, and the total average for the whole shoot. This table is as follows:

	Day.	No. targets. 20 15 20 15 25 20 15 20	Shot at.	Score.	Av.

NOTES OF THE SHOOT.

Everybody will regret to learn of John Connor's misfortune: he came all the way from Knoxville to attend the shoot, but was only able to participate in a few sweeps on the preliminary day, as that night he was taken ill, and was confined to his bed during the shoot.

In the preliminary sweeps on Tuesday, Heikes developed quite a streak. He participated in three 15-bird sweeps and scored straight in each one of them. In the same events Elliott also did some good work, scoring 72 out of 75, while White also finished strongly, breaking 43 out of his last 45.

Col. Anthony has joined the pump gun squad; he now shoots a Winchester.

Some of the boys kicked because it was only a half walk from the carting line to the shooting grounds.

Keller had the misfortune to break his gun on the first day, and while it was being repaired he had to shoot one that did not fit him very well; this partially accounts for his poor showing on the two first days.

H. E. Norton, of Ironton, O. is a new beginner at the traps. He shot an 88 per cent. gait on the first day, which is a very creditable showing, taking the hard grounds into consideration. He informs me that his club will hold a shoot on Nov. 27 and 28, the principal event of which will be a six-men team race, with $50 added. All the Ohio boys have promised to attend.

Ralph Trimble made the biggest winning at the shoot, in the fifth event on the first day he was the only one to score 25 straight. This netted just $70.10.

"E. C." Money could not strike his gait, evidently he was thinking of the bear he, Irby Bennett and Tom Divine are going to slaughter next month.

B. H. Worthen, that clever young shooter from Charleston, S. C., shot in excellent form throughout.

A very singular thing occurred on the second day: The fifth event was a 25-bird race with forty entries, of which thirty-eight got a place. There was only one straight made and this by Greer, who had only got a place once in the previous event. This netted him just $66.40, and he promptly jumped the game. There were no twenties; the two who failed to get a place scored 19 and 18 respectively.

Robert Baugh, manager of the Birmingham Arms & Cycle Co., came down to the shoot on the second day. He shot in all the evrnts on that day and made an average of 86 per cent.

In the eighth event on the first and last days there were no straights made, but these were the only exceptions. While only in four events were shooters fortunate enough to win first without a tie, this occurred in two 20 and two 25-bird events.

On the last day Rolla Heikes missed but one bird of his first 130. He however dropped three in his last string of 20, winding up with four misses for the day.

Fred J. Waddell was present at the shoot, looking after the interests of DuPont powder.

Tee Kay and Dutchy added much to the pleasure of the shoot by their humorous and witty remarks.

Arthur Schleman, he of the cowboy appearance, aroused Jack Parker's suspicion that he was dropping for place; so he promptly informed him that such a thing would not be tolerated, and if guilty of such an offense he would be debarred from the shoot.

Most of the boys were quartered at Bachelors' Domain. This hotel is not like others in a great many respects. It contains forty-four rooms, which in place of being numbered each bears the name of a State, in exact rotation in which the same were admitted. On the top floor is one large room which is known as the Territories. Paul North was one of the last to arrive; so after inquiring where the boys were stopping, he strolled around to the Domain on Jasper Highway and inquired of the clerk if he could get a room. The clerk informed him that the States were all full, but he could give him a cot in the Territories! Tom Callender and I took compassion on Paul and allowed him to occupy North Dakota with us. Some of the boys were in Maryland, some in Massachusetts, and others in Texas.

Tom Callender was called home on business, so he was only able to take part in the first day's shoot.

R. O. Heikes, J. A. R. Elliott and H. G. Wheeler were the only ones who went from here to the San Antonio shoot.

The following is a list of the targets thrown during the shoot: On Tuesday there were five sweeps shot at 15 targets, in which the entries ranged from 12 to 24; the number of targets thrown was 1,425. On Wednesday there were 6,810 targets thrown in the programme events and including one extra; the entries in the programme events ranged from 36 to 48, with an average entry of 43.5. On Thursday there were 6,580 targets thrown including three extras; the entries ranged from 39 to 44, with an average of 41.1; while on Friday there were 5,780 targets thrown, including five extras; in the programme events the entries ranged from 34 to 38, with an average of 36.2. This brings the total number of targets thrown up to 20,665.

PAUL R. LITZKE.

The DuPont Tournament.

THE DuPont Smokeless Powder Company's tournament was brought to a close on Friday afternoon, Oct. 25, after four consecutive days of live-bird shooting in about as glorious fall weather as could possibly have been desired. As will be told later on, a little more wind on a few different occasions might have improved matters somewhat, but otherwise everything—bright, clear weather, crisp atmospherical conditions, etc.—was "strictly made to order." The tournament itself was a success, the number of shooters in attendance being above the satisfactory mark.

Baltimore, Md., the scene of the big shoot, is naturally a shooting center. Geographically speaking, it is located very favorably, and is easy of access from all parts of the country. The North, South and West can send their shooters to Baltimore about as easily as they can to any point on the Eastern coast, the "Down-Easters" too, thanks to the excellent service of the P. R. R., can make quick time to Baltimore. The selection, therefore, of that city as the place to hold a big live-bird tournament in was well advised, and the results show that the selection was justified.

Outside of her standing as a commercial center, Baltimore can brag of several other attractions that make her worthy of note: The beauty of the surrounding country; parks shaded by magnificent groves of ancient oaks; streets so clean and neat that they might be held up as a pattern to any other city in the Union; a cable and trolley car service, transferring passengers to all parts of the city, second to none; and last, but not least, the Baltimore belles, with their dark eyes and long sweeping lashes.

THE PROGRAMME.

With three sets of traps the management, with H. A. Penrose as manager, had no difficulty in running off a somewhat lengthy programme on the first two days of the shoot. Had there been a score more shooters present on each of the first two days the full programme, with perhaps the exception of the miss-and-outs that brought each day's proceedings to a close, could have been finished before dark. As it was, there was time to spare when one of the sets could have been kept running to advantage.

Tuesday, the first day of the shoot, had for its programme five events: No. 1, 5 birds, $5; No. 2, 7 birds, $7; No. 3, 10 birds, $10; No. 4, 15 birds, $15; No. 5, miss-and-out, $5. The first four events called for 37 birds, with a total entrance fee of $37. The programme for the second day was precisely the same as that for Tuesday, excepting No. 4, which was a 20-bird event, $20 entrance. It thus called for 42 birds and $42 entrance. The third day had only one event regularly scheduled, the DuPont Smokeless Powder Grand Championship Handicap, 25 birds, $25 entrance, birds extra at 25 cents each, making a total entrance in this event of $31.25, a rebate being given for all birds not shot at. In this event only DuPont Smokeless was to be used.

The regular programme events, exclusive of the miss-and-outs, therefore called for 104 birds, with an entrance fee of $110.25. The miss-and-outs and extra events added largely to the above totals, everybody having all the shooting they wanted.

QUALITY OF THE BIRDS.

James R. Malone, of Baltimore, had full control of the birds and their handling. The quality of those supplied was excellent on the first two days. On Tuesday, perhaps, they were not as good as those trapped on Wednesday, but on the latter day the strong wind behind the birds aided them very materially; they were really very good birds, taxing the skill of the shooters to the utmost.

On Thursday, the opening day of the big event, the air was crisp, but still. It was a typical Indian summer day that was about four weeks ahead of time. With no wind to help the pigeons there was a great deal of luck in the matter of drawing birds, fast birds being followed by several that were lazy in their flight. As an onlooker said after the shooting on Thursday was closed: "It looks as if it was largely a matter of birds in this race. One fellow gets a lot of easy ones, while the man that follows him is liable to get two or three corkers." Those who saw the birds that Fulford drew will agree that he got rather more than "two or three corkers." Friday, the last day of the shoot, saw fourteen rounds of the big handicap yet to be shot off. There was a fitful breeze that at times developed great force, promising to make the birds very hard. But somehow or another it did not live up to its promise. The birds were not as fast as one would have looked for; they acted as if they had been fed recently; in fact one or two that we handled gave signs of full crops. From their appearance they were as nice a lot of birds as could be selected, and yet they were deceptive, corkers being mixed with lots of easy ones that needed scare ropes and balls before they would fly.

DOGS THAT RETRIEVED THE BIRDS.

We never had the pleasure of witnessing a tournament where a better lot of dogs was used for the purpose of retrieving the dead birds. Taken as a whole, the dogs were a capital lot of quick and sure workers. One or two would, of course, make blunders, but as a rule they were fast and certain in their work. The pick of the lot to our mind was a liver and white pointer of the gentler sex, the property, we believe, of C. E. Bonday, of Baltimore. She was as fast and as accurate as any dog we have ever seen employed in a similiar duty, while her good looks were undeniable—a veritable belle of dogdom. Another dog that deserves mention was a liver-colored setter puppy, about 7 months old at a guess, that did its work as if the thing was a good joke and, next to eating, the best thing in the world. An Irish setter, also a lady, but of uncertain age, did good work during the entire meeting.

THE MANAGEMENT A CAPABLE ONE.

In making arrangements for the bringing off of the tournament, the committeee of management had left very little unthought of and uncared for. In short, if there was anything lacking we did not notice it. This is a good deal to say, but it's the fact.

In the first place, take the press. Newspaper men, of both the local and out-of-town papers, were looked after in a manner that might be copied with advantage by the management of every tournament. H. Lee Clarke, one of the sporting reporters of the Baltimore *Sun*, acted as the official press agent, looking after the interests of the reporters and seeing that they got the fullest information on any point they wanted. Instead of having to badger the life out of the gentlemen who held down the cash box and the squad sheets, Lee Clarke was the man to hunt, and to him FOREST AND STREAM returns thanks for favors received. In the cashier's office, H. P. Collins Southern agent for the DuPont Powder Company, looked after the cash, while Stanley Baker, secretary of the Baltimore Shooting Association, filled the position of entry clerk. Their duties, which of course were not as heavy as at a target tournament, were capably discharged. Dr. Fort was always ready to do anything to keep things moving, acting as referee, squad hustler or as scorer, according to the exigencies of the case.

In laying out the grounds Penrose had ample room at his disposal, as the Baltimore Shooting Association, under whose auspices the tournament was really held, holds a lease on about twenty acres of grass land. When figuring on his three sets of traps, therefore, he had lots of room to work on. No. 1 did not interfere in the slightest with No. 2, while No. 3 was so far from No. 2 that it was a day's march from the one to the other. All three sets faced about due east, making the light during the entire day an excellent one, as shooting never commenced before 10 A. M. King's patent traps were used, ropes being utilized for pulling the same in place of the automatic pulls in vogue at many clubs. Scare ropes were fixed up, but the birds were usually started by mock oranges, the fruit of the Osage orange, being thrown at them instead of the wooden balls so often used for that purpose; they did their work very well.

Although the Association has a club house on the grounds, its size was not sufficient to accommodate one-third of the shooters expected. Back of No. 1 set of traps was a good-sized wall tent intended for the accommodation of the shooters at that set in case of rain. Luckily its services were not required. In rear of it, and in line with three other tents that stood between it and the club house, was the press tent, which was also the headquarters of the handicap committee. Next to it came a tent that was used as the headquarters of the Western contingent, under the leadership of E. S. Rice, the Western agent for the DuPont Company. Next in order came the tent which was handed over to, *inter alia*, the Pittsburg boys. The last of the three (the one nearest the club house) was the headquarters of the DuPont Company. Another tent was in charge of the representative of Carlin & Fulton, of Baltimore, whose hand-loaded shells were largely used during the tournament. Beyond the club house was the lunch tent, while another tent was erected for the shelter of the shooters at the No. 3 set of traps in case rain should fall during the shoot. The accommodations, therefore, may be classed as ample under any conditions.

FIRST DAY, OCT. 22.

As announced in our special from Baltimore, which appeared in our issue of Oct. 26, the weather was decidedly favorable for a good shoot. The sun shone clear and bright, making the middle of the day seem more like June than the latter end of October. Overcoats were needed while traveling to and from the grounds in the morning and evening, but at noon they could be thrown aside with impunity. As a matter of fact, it was the weather rather for target shooting than for live birds.

The start was a late one, but that is nearly always the case in a four days' tournament, particularly when the main event is put off until the end of the meeting. In this respect we think the management made a mistake in its programme. Should not the *piece de resistance* be set for the second day? If you changed around a bill of fare at a large dinner, bringing on the dessert first and the soups last, the latter would not receive much attention, while the roasts would not benefit by the change. We must not be understood to mean that the list of entries would have been any larger in the main event had it been brought forward a day, but we do think that the attendance on the first day would have been materially improved. Twenty-nine entries all told was the sum of the first day's list, while on the second day the numbers ran up well into the forties.

FROM OUT OF TOWN.

The list of out-of-town shooters for the first day comprised the following, the names of many being very familiar to most trap-shooters: A. H. King and J. O'H. Denny, Pittsburg, Pa.; W. G. Clark, Altoona, Pa.; E. Browne, Burton, Tex.; J. L. Brewer, New York; E. C. Burkhardt, Buffalo, N. Y.; D. M. Porterfield, Vicksburg, Miss.; T. H. Gibbs, Columbia, S. C.; D. A. Upson and C. T. Bodifield, Cleveland, O.; W. Wagner, Washington, D. C.; Frank Class and James Timmons, Morristown, N. J.; L. F. Gemmett, Fort Madison, Ia.; E. D. Fulford, Utica, N. Y.; C. E. Verges, Lowell, O.; Allen Willey, Hadlyme, Conn.; Eddie Bingham and W. L. Shepard, Chicago, Ill.; C. M. Grimm, Clear Lake, Ia.; Fred Gilbert, Spirit Lake, Ia., and George Corning, Jr., Auburn, N. Y.

The local shooters were represented by B. W. Claridge, E. B. Coe, Hood, Hayward, Gent, Ducker, Buck and Williams. Both Claridge and Coe showed up well, particularly the former, who killed during the day 38 out of 43 birds shot at, an average of 88.3 per cent. In Claridge, Coe and Hawkins (who shot during the remainder of the tournament) Baltimore has a decidedly hot trio.

CHANGING THE PROGRAMME.

It is nearly always better to stick to your programme, but it is sometimes thought best to change it for reasons that may arise at the last moment. At the DuPont shoot it seemed to be the idea that the handicaps that might be awarded in the Maryland handicap and the Monumental City handicaps, set respectively for the first and second days, would stand also as the marks at which the men would shoot in the DuPont trophy shoot. It was deemed best, therefore—all the shooters present being agreeable—to change those events from handicaps to "all at the same mark, class shooting, four moneys." Personally, while we approve of handicaps and high guns, and don't approve of class shooting, we think that under the above circumstances it was best to alter the progamme as stated. The above decision being arrived at, the handicap committee had no work to do until the evening of the second day.

RESULTS OF THE DAY.

The following figures show concisely how each man shot on Tuesday:

	Shot at.	Killed.	Per cent.		Shot at.	Killed.	Per cent.
Brewer	44	43	97.7	Verges	37	31	83.7
Fulford	50	48	96	Coe	42	35	83.3
Upson	43	40	93	Timmons	32	26	81.2
Wagner	43	40	93	Burkhardt	46	39	80.4
Clark	44	40	90.9	Porterfield	43	34	79
Grimm	43	39	90.6	Class	37	29	78.3
Hayward	43	39	90.6	Ducker	17	13	76.4
Bingham	43	38	88.3	Willey	37	28	75.6
Claridge	43	38	88.3	Corning	38	28	73.6
Gilbert	41	36	87.8	Hood	22	16	72.7
Gibbs	47	41	87.2	Gent	23	15	68.1
Denny	38	33	86.8	Bodifield	25	17	68
Woodruff	15	13	86.6	Gemmett	5	3	60
King	37	32	86.4	Buck	2	1	50
Brown	41	35	85.3	Williams	1	0	

MORE DETAILS.

No. 1 event had twenty-six entries, the first squad being King, Clark, Brewer, Denny, Brown and Coe. Each one of that squad killed their 5 birds, their example being followed by no less than eleven out of the remaining twenty entries. In all sixteen men divided first money with 5 straight, their share of the purse amounting to about $3 each. Eight men scored 4 and divided about $30 ($3.60 apiece), while Gemmett and Corning, with 3 each, split up third money, $19 50. (In all the events, except the 20-bird race on Wednesday, and the DuPont trophy on Thursday and Friday, the men shot at their scores in squads of six. In the 20-bird race they still shot in squads, but shot half the number of birds at No. 1 set, going on to No. 2 set for the last half.)

The second event had the same number of entries—twenty-six. Of that number nine went straight and divided $68 25—$7.58 each; nine more scored 6 birds and took $4 59 apiece; the remaining eight killed 5 out of their 7 birds and divided $27.30

The 10-bird event was a lucky one for Clark and Brewer, as they were the only ones to go straight, dividing in consequence the sum of $93. Eight men killed 9 and agreed to shoot off miss and-out for second money; Burkhardt, Wagner, Fulford, Grimm and Bingham, after killing 6 more, divided the pot—$58. The ties on 8 for third money, for which seven men were left in, were shot off miss-and-out until only Upson and Hayward were left in; they divided $49.25.

In the 15-bird event, which was shot at the center set of traps, Brown, Claridge and Upson were the only straights, the three dividing first money—$117. Brewer, Fulford and Grimm killed 14 and divided second money—$88 70; third money was divided between ten men, each of whom had killed 13, their share of the purse being less than $6 apiece. For fourth money—$29.25—three men scored 12 each and took nearly $10 each.

The last event of the day was the $5 miss-and-out. This was won by Clark, Brewer and Fulford, who divided $40. The scores in detail are as follows:

First Day's Scores.

	No. 1.	No. 2.	No. 3.
King	11111—5	11211 12—7	1020101211— 7
Clark	21111—5	112112•—6	1211112221—10
Brewer	21112—5	1212112—7	1211121111—10

No. 5, miss-and-out, $5: Clark, Brewer and Fulford 7, Porterfield 6, Brown and Gibbs 3, Burkhardt 2, Bodifield 0.

WEDNESDAY, OCT. 23.

The second day of the shoot was even better than its predecessor, there being more breeze to aid the birds in their flight. The pigeons were good flyers, too, making the boys do good, sharp work to stop them. A largely increased entry list, together with a good crowd of spectators who watched the proceedings with evident interest, made everything move with considerable life, and there were few minutes between the hours of 10 and 5 that one did not hear shots being fired.

Among the new arrivals were: J. M. Green and J. H. Gulick, Washington, D. C.; E. S Rice, Chicago, Ill., Western agent for the DuPont Powder Company; Capt. A. W. Money, Oakland, N. J., of the American E. C. Powder Company; Bergner, Ashbrooke and Barker, all Philadelphians, members of the Riverton Gun Club; W. Fred Quimby, of the Empire Target Company, New York city; O. I. Melot, Fleetwood, Pa.; James E. Schmeck, Coldron, Esterly and Ewing, Reading, Pa.; H. B. (Brewster) Shoop, Harrisburg, Pa.; John Rothacker, Philadelphia; Phil Daly, Jr., Long Branch, N. J.; Fen. Cooper, Mahanoy City, Pa., etc.

Proceedings opened at 10 A. M. with the regularly scheduled event of 5 birds, $5. This had 43 entries, 39 of whom got money, the four unfortunates being Class, Denny, Hood and Hopkins. Fifteen men had straight scores and divided $80.75, each man thus getting a fractional part of a dollar more than he put in; 20 scores of 4 each to their credit, the 20 dividing second money, $48.30, about $2.40. Third money, $32.20, went to 4 men who had scored 3 of their 5 birds. A more perfect specimen of the anomalies of the system of class shooting could not be found; 15 men kill all their birds and only just break even; 20 others lose one bird and with it 50 per cent. of their entrance fee; but 4 men who couldn't do better than 3 out of 5 receive $8.05 apiece, $3.05 more than they put in!

Event No. 2, 7 birds, $7, had 42 entries, 35 of whom drew down part of the purse. There were 17 straights, 11 with 6 each, and 7 with 5 kills to their credit. Straights paid a little less than $6.50; 6 paid within a few cents of what a straight did, while men who were in it for third money received also within a cent or two of what the straight men got. The moneys were: $110.25, $66.15 and $44.10. Figure it out for yourselves.

In the third event, 10 birds, $10, there were 41 entries, 29 of whom got back money out of the pot. There were 8 straights, 13 men with 9 each, and 8 men who had scored 8. The moneys were: $153.75, $92.25 and $61.50; thus straights paid $19.20. We believe that the ties on 9 and 8 were shot off miss-and-out as on the first day, but we have no record of the scores made if such was the case.

NO 20 STRAIGHT.

The fourth event was at 20 birds, $20, four moneys, class shooting; it had 31 entries, 25 of whom got back all or part of their entrance fee. It seems very curious that there was not a single 20 straight in the crowd, but it's a fact that 19 was the highest score, no less than 8 men scoring that number. Both Eddie Bingham and Allen Willey had good chances to make straights, and it looked as if Bingham would land all right, but he tripped up right at the end, to the disappointment of his friends. Willey looked like another straight when he started in to shoot his second string of 10 birds at the center set of traps. Porterfield was also a possible straight when he began his second string in the same squad with Willey, and as there was not a straight up to that time, considerable interest was evinced as to who would be the lucky man. Porterfield fell down on a good bird that left No. 3 trap very fast, but was almost knocked down with the first barrel. Porterfield, thinking that the bird would come down and that he could then use his second to better effect and more certainly on the ground, held his fire until it became apparent that the bird would reach the boundary unless stopped with the second. That second barrel did no good, the bird dropping dead outside the boundary, falling among the No. 3 set of traps. Willey's cypher was obtained in a most unsatisfactory way. He drew a bird from No. 1 or No. 2, we forget exactly which trap, which flipped in toward the score and was missed clean by the first barrel, the bird alighting on the ground some 20yds. from Willey, who drew a bead on it. It was a 1,000 to 1 shot that he would kill the bird, but he didn't—he lost it and away went his chance of a straight. How it happened we can't say, but it looked to us, and to several others who were standing close by, that the pattern made by that second barrel was the widest we had ever seen. It looked as if the top-shot wad had shaken loose in the second cartridge. Several who were immediately in rear of the score said that he shot a foot over the bird. Anyway it was a costly miss, as he had to be content with one-eighth of $198.50 instead of the whole pot. Nine men scored 18 and divided second money, $148 50; third money, $99, went to 4 men who had killed 17 birds, while the 4 16s divided up fourth money, $49.50.

The miss-and-out event, No. 5, had thirteen entries, it being after sundown when it was started. So dark did it become before the event was stopped that lanterns had to be held to enable the scorer to do his work. In the 7th round Clark and Melot, two of the 8 still left in, missed their birds, and, as it was really too dark to see anything like a bird, a division of the purse of $54.50 was made between the other six.

The best averages made during the day were:

	Shot at.	Killed.	Per cent.		Shot at.	Killed.	Per cent.
Brewer	49	47	95.9	Claridge	42	36	85.7

Brown	00211211010110110•1•22—13

The second day of the shoot was even better than its predecessor, Gilbert, Grimm, Hayward, Money, Ewing and Daly 8, Wilson and Hood 7, Esterly 5.

Extra events were shot as follows:

No. 1, 10 birds, $10: Hayward, Jackson, Coldron and Jones 10, Ashbrook, Barker, Upson and Mott 9, Money, Ewing and Daly 8, Wilson and Hood 7, Esterly 5.

No. 2, same: Barker and Mott 9, Ashbrook 8, Money and Coldron 7, Wilson 5.

No. 3, miss-and-out, $5: G. W. Johnson and Jim Jones 9, Wilson 8, Money 7, Mott and Ashbrook 3, Barker 2.

No. 4, same: Heiskell, Money and Fulford 9, Mott 8, Ashbrook 6, Jim Jones 5, J. W. Johnson and Barker 3, Edwards, Cockey and Burkhardt 2, Corning 1.

THE DUPONT HANDICAP CHAMPION.

Thursday and Friday, Oct. 24 and 25, were almost wholly taken up with the big event of the shoot—the DuPont Smokeless Powder Championship Handicap. This event was at 25 live birds, $25 entrance, $1,000 and a very fine trophy being guaranteed for this event. The only condition imposed on the shooters was the use of DuPont's Smokeless, the other rules governing the contest being the A. S. A. rules.

The weather again was perfect on both days, that is, from a spectator's point of view. The sun shone brightly all day long, making the temperature very agreeable. On Friday the breeze came up pretty strongly during the morning, but it finally died away to nothing.

Misses came fast quite early in the game, and by the close of the day, although only eleven rounds had been completed, there were only twelve men in with straight scores. The names of these fortunate individuals were: Upson, Porterfield, Willey, Coe, Wagner, Brewer, Hayward, Gilbert, Clark, Cooper, Melot and Schmeck. Three other shooters had retired, their names being Gibbs, Rice and E. D. Fulford. This left forty-eight of the fifty-one starters in the race at the end of the first day. The total number of entries was fifty-three, there being two who paid forfeit—Bland Ballard, of Louisville, Ky., and R. B. Cook, of Davenport, Ia.

The handicap committee, which consisted of Jacob Pentz, Chairman, H. P. Collins, Kelso, J. H. Gulick, W. L. Shepard, Dr. S. J. Fort and Edward Banks, met on the evening of Wednesday in the parlor of the Carrolton Hotel and apportioned the handicaps for thirty-three entries already received. In addition to that number the handicaps of A. H. King, A. L. Ivins and A. Woodruff were held over till the morning. A number of shooters entered at the last moment, among the number being Class, Timmons and Brewer. The latter was shooting in such excellent shape that the maximum penalty of 33yds. seemed no bar to making him a hot favorite in the pools. As the score will show he went straight up to the last bird of his 25, losing a tricky one from No. 2 trap that looked like a duffer, but which went off fast enough when once started to carry the shot out of bounds.

ALL INTERESTS POOLED.

During the hours that intervened between 6 P. M. on Thursday and 10 A. M. on Friday, an agreement was come to between the twelve straight men to divide up the money equally, shooting out for the trophy and the honor of wearing the title of DuPont Smokeless Powder Handicap Champion. As there was $1,295 in the purse, this meant over $100 apiece to each of the twelve, supposing that there should be four straights, thus shutting out the 24s. As it happened, there were but two straights, Gilbert and Hayward, who shot off for the cup at 5 birds each, Hayward missing his second bird, while Gilbert went straight and won the trophy.

King, of Pittsburg, who had missed his first bird in the race, was thus let in for a try at third and fourth moneys, as he had killed straight after his first error. His opponents were Brewer, Coe and Wagner. When an offer was made to split up the two moneys between the four, King agreed, the four shooting out for place. There was nothing to be gained by either shooter, so far as money went, in rolling up a big score; on the contrary, it cost money to keep on shooting. Jack Brewer thought so evidently, as he deliberately missed his second bird in the first shoot-off at 5 birds. To get the thing over, Wagner shot into the ground on his fifth bird, the bird being lucky enough to be liberated just when Billy did not want him. The case was so clear that Penrose asked Wagner to shoot at another bird, which he killed with his first barrel. Another round of 5 birds was ordered, with King, Coe and Wagner still left in. King drew a corker that fairly beat him and retired, leaving Coe and Wagner to fight it out. In the third series of 5 Coe lost his fourth bird dead out of bounds, following this loss with a miss of his fifth. Thus Wagner took third place, the young Baltimorean, who had shot a capital race, being accorded fourth place on the list.

HAS A MAN THE RIGHT TO MISS A BIRD?

There is something in this matter that is of rather more than passing interest. This case of pooling of interests is not to be confounded with dropping for place and pooling in class shoots. In "high gun" events, agreements to divide work no injury to shooters who are not included in the pools. Once the destination of the trophy was arrived at by the shoot off between Hayward and Gilbert, there was nothing, practically speaking, to shoot off for. Save for the honor of landing in third or fourth place, the four men above named had no incentive to keep on spending their quarters for birds to shoot at. Whether or not a man has a right to miss a bird in order to bring to an end a contest that he is unwilling to prolong, providing of course that in so purposely missing a bird he does not injure another contestant's chances (as is possible in class shooting), is a question that we think might be answered in the affirmative, the act of missing a bird under those circumstances being equivalent to a voluntary retirement from the contest.

GILBERT, THE WINNER.

Fred Gilbert, the winner of the DuPont Smokeless Handicap Championship, is a young man of 27 years of age. He was born and raised at Spirit Lake, Ia., a country town of about 2,000 inhabitants. During the twenty-seven years of his life Gilbert has done a great deal of shooting, having hunted for the market during the open season, spending the close season in a general store, where he acts as a clerk, handling groceries and dry goods instead of his Smith gun and U. M. C. Trap shells, loaded with DuPont Smokeless. As a trap-shot, particularly at targets, Gilbert has made quite a reputation. At the St. Paul shoot this year he won second average, having to shoot very hard the last day to land where he did. He is a quiet young man, makes no fuss about the honors he has won, claiming that no small amount of the credit of winning the trophy was due to a well-worn rabbit's foot which he carries in his right-hand vest pocket. This being his first experience at live birds in a big tournament, he deserves great commendation for the way in which he handled himself, and for the nerve he displayed when it came to a pinch.

The runner-up, Hayward, was none other than Chas. MacAlester, one of the best known amateurs of this country. His name is also well known in Europe, as he has probably done as much as any other amateur who has left this country to try conclusions with the crack shots of Europe to make American pigeon shooters recognized as an important factor when it comes down to business. MacAlester shot throughout the tournament in splendid shape, killing his hard birds as easily as his slow ones. When it came to the shoot-off for the cup it looked as if the odds were in his favor, notwithstanding the fact that he was conceding Gilbert 3yds. When he missed his second bird in the ties it was a surprise to everybody, as the pigeon did not seem to be a hard one.

Everybody knows Billy Wagner, of Washington, D. C., the third man in the race. Wagner's handicap of 28yds. gave him an excellent chance of winning the trophy, and it seemed at one time as if he was sure of a straight score. The bird he missed, his fourteenth, was a nasty one from No. 1 trap that would have beaten a good many of those who were shooting along with him. Wagner is handicapped very seriously by having to wear very strong glasses, his sight being poor; it was owing to his being unable to cover all five traps with those glasses that that bird from No. 1 got such a start before Wagner caught a glimpse of its wings.

Coe, the winner of fourth place, is a Baltimorean. He shot a capital race, going straight until the twenty-second round, when a good bird from No. 5 trap beat him. He drew as hard birds during the race as anybody, and the manner in which he dropped them proved that in Coe Baltimore will have a good man to represent her in the Grand American Handicap next April, should he come to New York and take part in that great annual event.

Alec King, of Pittsburg, was fifth. As previously stated, King made a bad miss of his first bird, an incomer, his miss being distinctly attributable to over-carefulness. After this error he steadied down and killed his next 24. In shooting off the ties he drew some very hard birds, and several of his second-barrel kills called forth considerable applause from the crowd.

Brewer, the sixth man, might have finished in a higher hole had he tried to kill his tie birds. As told above, he missed his second bird in the first series of five birds to put an end to the matter. Everybody who has seen him at the score knows how he can shoot, and, putting all prejudice on one side, he again demonstrated that the 33yds. mark is no bar to him. When he wants the birds he comes pretty close to getting them all.

A GOOD CROWD.

Before closing this necessarily somewhat brief account of a very big event, we must not pass over the attendance of spectators, nor the interest they evinced in all the proceedings. A more orderly or more gentlemanly crowd it has seldom been our pleasure to see at a tournament, whether at live birds or targets. The fair sex too were present in good numbers, particularly on Thursday, the first day of the main event. It is very plain that the people interested in shooting in Baltimore have a good future before them if they will only keep things moving now they have gotten a good start.

Exclusive of the tie birds it took just 900 birds to finish the handicap. On Tuesday, according to our figures, 1,022 birds were trapped in the different events, while on Wednesday 1,603 birds were trapped. On Friday several of those who had dropped out of the big race started in to shoot extra events. Three $3 miss-and-outs, a 10-bird race, $10 entrance and a $5 miss-and-out were shot off. The scores were as follows:

No. 1, miss-and-out, $3: Fulford, Corning and Wellington, 3; Heiskel, 2; Money and Daly, 1.

No. 2, same: Heiskell and Wellington, 6; Fulford and Money, 5, Corning, 4; Grimm, 1; Upson, 0.

No. 3, same: Money and Wellington, 7; Corning, 6; Fulford, 4; Heiskell, 3; King, 1.

No. 4, 10 birds, $10, three moneys, class shooting: Upson and Claridge, 10; Clark, Fulford, Hayward, Porterfield and Heiskell, 9; Money, Woodruff and Malone, 8; Denny, Bonday and Ducker, 7; Corning, 6; Shaffer, 4.

No. 5, miss-and-out, $5: Fulford, 12; Money and Corning 11, Claridge and Heiskell, 10; Upson, 2.

The scores in the big event, showing trap, flight of bird and the result of each shot, are given in full below:

DuPont Smokeless Powder Championship handicap, 25 live birds, $25 entrance, handicaps from 33 to 24yds.:

Trap score type—Copyright 1895, by Forest and Stream Publishing Co.

HIT OR MISS.

The Western contingent under the leadership of E. S. Rice was decidedly in evidence at the traps. It is generally understood, however, that their best records were made on board an oyster boat on Friday afternoon. The way Shepard put it was thus: "In Chicago we go into a restaurant and order and eat what we are told are oysters, and pay about 40 cents for the privilege of tasting a few of them. Here in Baltimore we go on board a boat and find a man who is only too glad to open oysters for us as long as we can eat them, and be charged nothing for them!" "Yes," said Gilbert, "and Eddie eats about a bushel of them."

Fulford's patent telephone-pole-hole-digger (we think that's the right name) attracted a lot of attention at this shoot. The mechanical ingenuity displayed in the working model was the subject of much favorable comment.

Upson's last words: "I can kill easy birds, but when I get a hard one, it gets away." Look at his scores and see how few hard ones must have fallen to his lot.

We wonder if Charlie Grimm has more like Gilbert out West. With Grimm at 29, Bingham at 28 and Gilbert at 27yds, the Western men could find no fault with their handicaps.

Photographer Bendann made a series of excellent photographs during the shoot. His list of subjects was unusually varied, while all the photos were clear and distinct. The plates are 10×12 and the price of each single photo is $1; three for $2.50. Mr. Bendann's address is 205 N. Carey street.

A canvass of 47 of the 51 guns used by the shooters in the big event showed that there were 15 Smiths, 11 Greeners, 6 Parkers, 5 Lefevers, 4 Francottes, 2 Scotts, and 1 each of Whitmore, Remington, Purdey and Boss. Jim Denny's single-trigger Boss attracted lots of attention, being the first seen at a tournament in this country.

About the eighth round of the handicap Penrose told every shooter to hand him two shells, as he wanted to "examine the wadding." The following is a list of the shells used: 23 Smokeless, 19 Trap, 1 V. L. & D. Special, 1 Leader, 1 Nitro, 2 Smokeless and Trap, 1 Leader and Blue Rival, 1 Trap and Nitro, 1 Trap and Rapid, 1 Smokeless and Leader.

Eddie Bingham says: "Tell Hough about Gilbert's rabbit's foot, and what it did for him. If we'd known about it before, every one of us from the West would have come provided with one. Yes, some of us in Chicago do believe in rabbits' feet after all."

Elmer E. Shaner paid a visit to Baltimore and enjoyed—as a spectator—the shooting and the unlimited flow of chaff. It was a new thing for Elmer to have nothing to do at a shoot, and he enjoyed it accordingly.

Wellington, of Harrisburg, Pa., was a new arrival at the grounds on the morning of the first day of the championship handicap. His fellow citizen, Harry A. Dill (Henry), was not so fortunate, being delayed by the wreck at Newport, not reaching the grounds until about 4 P. M. on the same day, too late to enter the event. Wellington shot well in the sweeps on the last day, having a mortgage on the $3 miss-and-outs.

It is unwise just now to say anything to Bill Clark about music, the band on his soft hat having caused him to lose his twenty-fourth bird.

E. C. Hall, a member of the Baltimore Shooting Association, was always on hand during the shoot, and worked as hard as anybody for its success. Hall is a good shot himself, particularly at targets; but on this occasion he devoted himself to the best interests of his club.

The local press did a great deal to help on the shoot, devoting lots of space to it. The scores were given correctly and in an interesting manner, but the descriptive work showed at times an amusing ignorance of the subject. The following, apropos of Brewer's well-known lightning second barrel, is worth reading: "Brewer makes a good living shooting for a New York powder concern. * * * He is rapid on his second barrel, and a favorite trick of his is to purposely give a glance shot with his first barrel and then bring his bird to ground with his second."

The following item from a local daily of the 24th is rather puzzling: "To-day will probably decide who is the champion live-bird shot of the world, if all those who have entered are on their mettle, but if the size of the event has affected their nerves it may take two days to determine the question." The size of the event affecting the nerves and prolonging the event is something new.

Alexis I. DuPont, of the firm of E. I. DuPont de Nemours & Co., was an interested spectator during the whole of the tournament, enjoying his four days at Baltimore as much as anybody, and making lots of friends for himself and the powder manufactured by the company he represented.

H. P. Collins says that it's no joke to act as cashier at a tournament; he comforts himself by reflecting that it is not every body who can fill the office and come out only $10 or so behind each day!

Phil Daly, Jr., disguised himself on the second day of the handicap by shaving off his moustache. Anybody that didn't notice the change in his appearance was no longer his friend.

It was a great shoot, and the trophy was won by a good shot, who thoroughly deserves all the honor coming to him.

By kind invitation of Mr. Alexis I. DuPont, the Western shooters were afforded an opportunity on Saturday, Oct. 26, of seeing how DuPont's Smokeless was made. The visiting party to the company's nitro powder works (which by the way are in New Jersey and totally distinct from the black powder works) was composed of E. S. Rice, W. L. Shepard, Eddie Bingham, Charlie Grimm, Fred Gilbert, D. M. Porterfield, C. F. Lewis, of the *American Field*, and Edward Banks, of FOREST AND STREAM. The party was escorted to Wilmington, Del., by Messrs. A. I. DuPont and H. P. Collins. At Wilmington Mr. Francis I. DuPont met the visitors and took them on board the tug Emily, which in about half an hour landed them at the works. Reinforced by Mr. Pierre I. DuPont, the party then made a tour of the works and witnessed the process of turning "old stockings" (as Gilbert described the material) into DuPont's Smokeless. After enjoying an excellent lunch prepared for the party in the laboratory, Captain Denny and the tug Emily landed the visitors in Wilmington in time for them to catch the 3:05 train on the P. R. R. for Philadelphia, where they were going to see the U. P.-Lafayette football game. This trip to Chicago, Baltimore and Wilmington was Gilbert's first real trip away from home. After

his visit to the DuPont works he remarked that if he started in to tell all he knew when he got back the folks wouldn't believe him.

Just as Verges was leaving the Carrolton Hotel on Friday night, en route for Lowell, O., a gentleman to whom he had been talking went up to Gilbert and said: "Is that the gentleman who won the championship to-day?" "No, sir," quietly replied Gilbert, "I don't believe he is."

The Baltimore Shooting Association ought to be well satisfied with the attendance of spectators at the shoot. Baltimore is evidently right in line for trap-shooting tournaments in the future.

M. M. McMillan, president of the Farmers' Gun Club, of Mahanoy City, Pa., champion live-bird shot of the State of Pennsylvania, was present at the tournament during part of Wednesday and Thursday. His honors, won at the Pennsylvania State shoot at Holmesburg Junction in August, haven't changed him a particle. He was on his way South, accompanied by his wife and child.

The ride to and from the grounds in the trolley and cable cars of the Baltimore Traction Company was not the least enjoyable part of each day's pleasure at this tournament. EDWARD BANKS.

Huntingdon is Awake.

ALTOONA, Pa., Oct. 26.—This was a lively day for the staid old town of Huntingdon, Pa., being the occasion of the fall tournament of the gun club of that place. The citizens turned out *en masse* to see the contestants smash targets. From start to finish the score was a most interesting one. Thirty men took part in the various races, and had the Altoona people shown up in numbers as they should have done, there would have been at least forty entries. When FOREST AND STREAM'S representative left Altoona at 7:15, instead of finding a good sized delegation that had promised to be on hand, he found himself alone. At Barree, W. H. Wilson and J. T. McBurney joined him. Arriving at Huntingdon, we were met at the depot by a reception committee that was no doubt as much disappointed as we were. The preliminary arrangements for the occasion were perfect; everything that the ingenious hustlers of this lively club could command was at the disposal of their guests. The grounds had been re-arranged from what we had last seen them, and a new set of five of Fred Quimby's Empire traps had been lately placed in position, and everything was working capitally.

A dense fog hung over the field until 10 o'clock, and when old Sol had succeeded in dispelling the gloom the new background proved to be a very good one. Nothing but the county courthouse steeple to the right and a half dozen church steeples to the left quarter were visible in the distance. The day turned out to be one of the finest in this, the prettiest season of the year. It was just warm enough to render overcoats unnecessary and was so calm that scarcely a breath of air was perceptible. Six 10-target events were shot off in the forenoon. At 1 o'clock a half dozen Altoona shooters came straggling in, and their entries for the remaining events of the day added much zest to the contests.

Such an enthusiastic crowd of shooters as these Huntingdon boys are is rarely seen, and it is a great pleasure to be with them on occasions like this. Their record as a club, which is only in its infancy, I believe cannot be beaten in the country. Only a few months ago there were not three residents of the town who had any idea of trap-shooting. Now their club of sixty members is running shoots like an aggregation of veterans. Then notice the scores. See this new material climbing up toward the 90 per cent. mark On the occasion of my first visit to them I felt like filling my ears with cotton, so old-time-cannon-like were their loads, and a cloud of smoke hung continually over their three traps. Now nitro powders have succeeded soft coal, and their newly erected club house and adjacent conveniences are among the best in the State. Their surroundings are among the most picturesque in the State. Winding in and out in graceful curves around the jutting hills flows that beautiful stream to which the poet referred in the old song sung by our forefathers, running something like this:

"Wild roves the Indian girl,
The lovely Apharata,
Where flow the waters of
The blue Juniata."

To the south is Warrior Ridge; in the rear Jack's Mountain, and within a few steps of the score is the site of "Standing Stone," to where the early settlers so frequently fled for protection during Indian depredations.

The scores of to-day's events follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	Per
Targets:	10	10	10	10	10	10	10	10	10	15	10	10	10	10	10	15	cent

C Leister	..	..	..	..	..	..	..	..	..	..	3	..	4	..	..	..	35
Ike	..	..	..	..	..	..	..	..	..	..	..	6	..	..	..	..	60

The purses were divided 50, 30 and 20 per cent., with targets extra.

The mountains in the vicinity of Huntingdon are on fire, and have been burning for several days. At one point it has reached to within a half mile of the town. Five hundred people are out fighting it. The destruction to property and game will be great. The sight afforded from the trains on the P. R. R. is a magnificent one.

GRANT.

F M. D.

New Utrecht Gun Club.

BROOKLYN, N. Y., Oct. 22.—Four members of the New Utrecht Gun Club shot a race to-day at 50 live birds per man, $25 entrance, birds extra. The wind blew strongly from the southeast, making the birds very fast. Duryea won with 48 kills, running his last 30 straight; his two lost birds fell dead out of bounds. Dr. Wynn made a run of 37 straight after losing his 9th and 10th birds, and looked like diving first money until he dropped his 48th bird. C. Furgueson, Jr., shot well also, tieing Dr. Wynn for second money. The scores were as follows, each man standing at the 30yds. mark:

L T Duryea	1112121211•22212222•212122—23
	1222122222122211211212112—25—48
Dr Wynn	1122222200122211211222211—23
	2222221112121212222222012—24—47
C Furgueson, Jr	2212121222222222222202222—24
	2022222022022222222222222—23—47

	22•0•2022222222221212202—22—44

Oct. 26.—Three events were shot off to-day, No. 1 being the club shoot at 10 birds, and Nos. 2 and 3 being 5 bird sweeps. The scores made were as follows, the birds being an extra good lot:

	No. 1.	No. 2.	No. 3.
W Allen (27)	1122212112—10	.....	.....
C M Meyer (39)	2222222122—10	•2222—4	10202—3
C Furgueson, Jr. (30)	2221220212— 9	•0222—3	02220—3
*Cord Meyer (28)	10001•2120— 5	11221—5	11121—5
E B Knowiton (27)	11•1210212— 8	10112—4	.....

* Guest.

Our target shooters had a shoot to-day, Dr. Shepard challenging A. A. Hegeman for the New Utrecht Inanimate Target Challenge Plate. As Hegeman is a class A man and Dr. Shepard a class C man, the latter receives 6 extra targets and 2 extra pairs, scratch men (class A) shooting at 30 singles and 10 pairs. The plate was won at the first contest by S. Pool, then R. E. Gray challenged Pool and won it, successfully defending it against N. E. Money (twice) and Capt. Money (once). He then forfeited it to A. A. Hegeman, who has held it since last spring. Both men to-day were in poor form, Hegeman retiring in the second round of the pairs. Scores:

Dr Shepard (class C)	0101100100111001001110100010000111110—18

San Antonio Gun Club.

SAN ANTONIO, Tex., Oct. 19.—*Editor Forest and Stream:* We notice an article in your "Drivers and Twisters" of Oct. 19 that fills us with surprise.

The announcement of the first annual tournament of the San Antonio Gun Club has been before the readers of your valuable journal for some time. You mention a quarrel between two organizations; allow me to correct, there is no quarrel between organizations, for there is but one in San Antonio that has been so far mentioned.

We ask you frankly, we ask the sportsmen and shooters of this country frankly, have you seen a line published or written by this club reflecting in any way or attacking in any way any proposed event to be given by any organization or individuals? And we ask you again in all frankness, can the same be said of others?

We have put our tournament before the sportsmen in a fair and manly way, without any recrimiations or reflections

It was only when forced to do so that we in any way noticed the attacks made upon us as a body directly or indirectly.

We think you do us an injustice in the article mentioned, and with your usual kindly instinct of fair play we trust you will correct it.

In conclusion allow me to say—for our tournament will be a thing of the past ere this appears in your columns—that the San Antonio Gun Club stands upon its record, and will let the shooters who attend its first event judge whether we are worthy of consideration or not. And will further add that we value highly the good opinion of our friends, but we do not fear our enemies.

WILLARD L. SIMPSON, Sec'y S. A. Gun Club.

South Side's Saturday.

NEWARK, N. J., Oct. 26.—The fine weather to-day brought out a good attendance at our regular Saturday afternoon shoot. All the events on the table were 10-target events, except No. 7, which was at 15 targets. Thomas's team beat Warren Smith's team after a close race by the narrow margin of two breaks—117 to 115. All events were at unknown angles. Scores:

Events:	1	2	3	4	5	6	7	8	9

SECRETARY.

Endeavor Gun Club.

JERSEY CITY, N. J., Oct. 26.—In perfect weather the Endeavor Gun Club held its regular monthly prize shoot this afternoon, Carl Von Lengerke leading his opponents with 21 out of 25 in the club shoot. Besides the club event two 25-target races and one 20-target race were also shot off, the following scores being made:

No. 1: E. Ingram 23, Collins 22, Fletcher and A. R. Strader 20.

No. 2: Collins 23, A. R. Strader 20, Fletcher 19, Bijure 16, E. Ingram 15.

No. 3: Collins and Ingram 18, A. R. Strader 16, Fletcher 15.

Scores in the club shoot for prizes were as follows:

A R Strader	0011111100110111100110100—15
E Collins	1011111111101101101010101—19

E Ingram	0101101111101111111001111—19

G. A. CREVELING, Sec'y.

Zeeland Won this Time.

HOLLAND, Mich., Oct. 15.—We have met the Zeeland Rod and Gun Club in a trap-shooting contest once more, but this time we were unsuccessful, being defeated by 12 birds. We challenged them for the Resort Steamboat Co.'s medal and the contest was held to-day at Zeeland. The shooting grounds were nice and level and the traps were in fine working order; but there was one serious drawback: About 150yds. in front of the score, and extending to the left from No. 3 trap, is a line of beech trees which at the time had dropped none of their leaves. The few straightaways from the first three traps and all the left quarterers were thrown toward those trees, and as the leaves were about the same color as the targets it made the hardest kind of shooting for those not used to it.

The day was cold and dark and accounts in a measure for the few fair scores. We were badly handicapped by two of our team being unable to shoot and their places had to be filled by others on the grounds. Following is the score:

Zeeland.

H. H. STEVENS, Sec'y.

A dispatch from Long Branch, N. J., dated Oct. 27, to the New York *Recorder* gives the following account of an accident that may seriously interfere with Edgar Murphy's shooting at pigeons in future: "While engaged in cleaning his bicycle, assisted by his brother, Walter, he in some unaccountable manner had his finger caught between the chain and cogs as it was being rapidly revolved around by his brother, and the first joint of his trigger-finger was cut off as cleanly as if it had been done with a cleaver. Mr. Murphy and his brother hastened to Dr. J. R. Wert, on Broadway, and had the injured member dressed. His extremely good physical condition and well-known pluck are likely to pull him through without much other trouble, unless blood poisoning sets in. The hemorrhage was excessive, Mr. Murphy's powerful frame carrying an unusual amount of blood, the flow of which was difficult to stem."

PUBLISHERS' DEPARTMENT.

The Happy Hunting Grounds, also Fishing, of the South.

UNDER the above pleasing title the Southern Railway has in press a beautiful and comprehensive book appertaining to the hunting and fishing of the States through which that system extends.

This indeed comprises nearly the entire South, including Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Tennessee and Kentucky, as throughout these States the Southern Railway has its own lines.

The book is written in the happiest style of Mr. William Bruce Leffingwell, of Chicago, and the illustrations are ample and are especially prepared for this particular volume.

This is the first time that such a publication has been attempted exhibiting in such an attractive manner the almost innumerable resorts for sportsmen in the South.

The publication will be issued prior to Nov. 1, 1895, and can be obtained through any of the agents of the Southern Railway system. —*Adv.*

New Large Caliber Repeaters.

THE new catalogue of the Marlin Fire Arms Company contains the announcement of a full line of large caliber rifles which have just been put upon the market. The old model of '81 Marlin was a popular gun on the plains some years ago, and it has been a cause of surprise to many that its manufacture was discontinued. The new model of 1895 will take its place and fill a gap in the Marlin list by adding four powerful large caliber rifles from which big game hunters may take their choice. The new rifles are bored for the .40-65 cartridge (which is identical with the old .40-60 Marlin) and for the .40-82, .45-70 and .45-90 cartridges. The action of the 1895 model is the same as that of the model of 1893.

Ladies' Bicycle Saddle.

HULBERT BROS & Co. have something new in store for the bicycle manufacturers and dealers, which they will probably be able to announce next week, in the shape of a new ladies' "Mesinger" saddle.

In the early spring of this year they realized the fact that '96 would be essentially a ladies' year on cycles, and their saddle factory has been paying particular attention to perfecting a saddle especially designed for ladies. Very little attention has so far been given to the subject of a ladies' saddle, and with but very few exceptions the only difference between the ladies' and the men's saddle, among the various manufacturers, is that the ladies' is a trifle smaller in size, while the saddle which Hulbert Bros. & Co. have designed is quite the reverse of this, and also includes many features distinct from any other saddle on the market.

"Among the Ozarks."

"THE LAND OF BIG RED APPLES" is an attractive and interesting book, handsomely illustrated with views of South Missouri scenery, including the famous Olden fruit farm of 3,000 acres in Howell county. It pertains to fruit raising in that great fruit belt of America, the southern slope of the Ozarks, and will prove of great value, not only to fruit-growers, but to every farmer and home-seeker looking for a farm and a home. Mailed free. Address J. E. Lockwood, Kansas City, Mo.—*Adv.*

Bicycles.

MR. THOS. J. CONROY, of fishing tackle fame, has taken up the manufacture of bicycles. This line of manufacture is distinct from the fishing tackle business, and is carried on under the firm name of Willard & Conroy. The address, however, is the same, 310 Broadway, New York.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at 98c. until all are sold. These Rods are all nickel mounted, solid reel seats, beaded butts, silk wound. Extra tip. Complete in wood form and cloth bag, and will give satisfaction. Lengths and weights of Fly Rods are: 9ft., 6oz.; 9½ft., 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. **Reel seats below hand.** Lengths and weights of Bass Rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz.; 10½ft., 14oz; **reel seats above hand.** Any of the above rods sent by mail on receipt of price and 30c. extra for postage.

No. H.—A special lot of hard rubber and nickel, raised pillar, multiplying reel, with balance handle and side spring click, 40yds., 68c.; 60yds., 78c; 80yds., 88c.; 100yds., 98c. Any of the above reels sent by mail on receipt of price and 10c. extra for postage.

No. E—Special lot of hard rubber and nickel, raised pillar, click reels, 40yds., 48c.; 60yds., 58c. Sent by mail on receipt of price and 5c. extra for postage.

No. C—Special lot of extra fine nickel plated, raised pillar, multiplying reels with click and drag, and screw off oil cup, 40yds., 58c.; 60yds., 68c.; 80yds., 78c; 100yds., 88c.; 150yds., 98c.

Single gut leaders, mist color, 1yd., 20c. per doz.; 2yds., 40c. per doz.; 3yds, 60c per doz. Double gut leaders, mist color, 2yds., 75c. per doz. Hand twisted treble gut leaders, 3ft. long, 10c. each, 90c. per doz

A special lot of Trout Flies at 16c. per doz. Sent by mail, 1c. per doz. extra for postage.

A special lot of Bass and Pickerel Spoons at 5c. each. Sent by mail, 1c. extra for postage.

All kinds of **Hollow Point best quality hooks**, snelled to single gut, 10c. per doz.; double gut, 15c per doz.; treble gut, 20c. per doz.; four-ply, 25c. per doz. Sent by mail, 1c. per doz. extra for postage.

300ft. braided linen reel lines on blocks, 40c.; 300ft. hand made linen reel lines on blocks, 9 thread, 38c. Sent by mail, 3c. extra for postage.

Brass box swivels, all sizes, Nos. 1 to 12, 15c. per doz. Sent by mail, 1c. per doz. extra for postage.

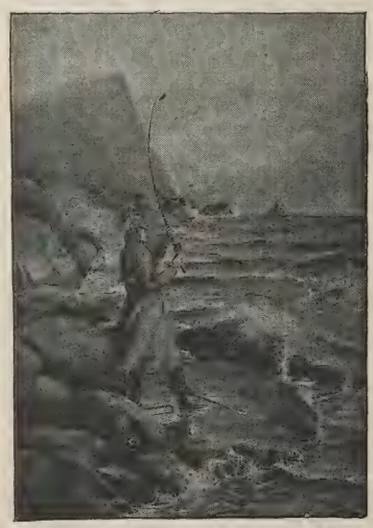
FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

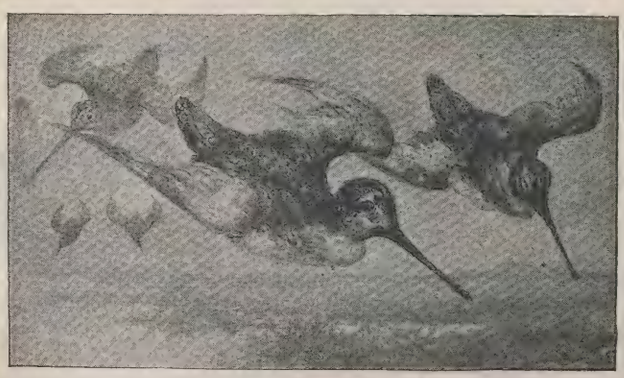
HE'S GOT THEM.

AS PREMIUMS.



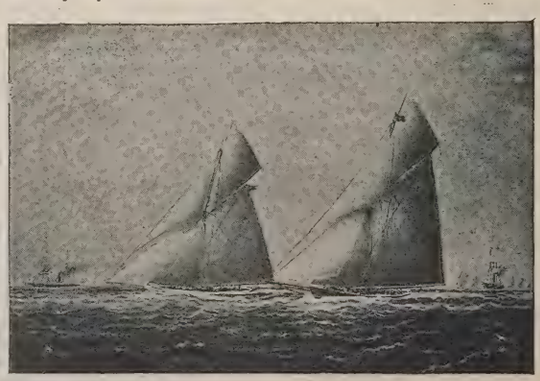
We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19 in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, **$5.**
Forest and Stream *6 months and any two pictures*, **$3.**



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.



Copies of them may be seen at this office, and inspection is invited.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, $5.
Forest and Stream *6 months and any two of the pictures*, $3.
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

THE SEASON AND THE BIRDS.

TO THE dwellers in cities a prolonged drought excites only gladsome remarks and mutual congratulations on the clear and pleasant weather. So thoroughly is the water supply of most large cities assured by artificial means from never failing sources that the innumerable hardships entailed in the country and towns by a scarcity of water are seldom directly felt. To the dwellers in the country the rainfall is of constant and vital importance. Long droughts result in dry wells, low or dry streams, short crops, bare pastures, suffering to cattle, and much extra labor and loss in the agricultural districts; the more remote effects are felt later in the manufacturing centers in the extra prices for food and in its inferior quality.

The agricultural interests are in direct and constant sympathy with the rainfall; the manufacturing interests are in direct and constant sympathy with agricultural gain or loss, thus ultimately feeling the misfortune or prosperity of the farmer. Yet cities which were not supplied from large bodies of water suffered severely this year, some being forced to adjust their needs to a short supply, while others, as Altoona, Pa., were forced to import a supply by railroad.

Reports from New Jersey estimate the cranberry crop at one-fifth of the average yield, owing to the drought and the consequent low water and inability to flood the bogs. Thus the turkey, wild and tame, will be shorn of one of his Thanksgiving glories, or at least will have it diminished.

For two years the drought has been widespread and intense. Inland streams, lakes, sloughs, etc., have been very low, and some of them were entirely dried, the latter more particularly in the prairie country, where there are not the natural reservoirs as in a hill country.

From the South come reports of injured cotton crops from the effects of the drought. From the West, beginning at the Pacific States, a deficiency in the rainfall is reported, which is charged chiefly to the months of September and October, the former month having but .95 of an inch this year as against a normal average of 3.94 inches.

In our columns this week will be found most valuable information on the game supply, written by men of rare observation, intelligence and experience. It will be noted that in some sections birds are reported as being scarce, while in other sections they are abundant.

These reports cover a vast region of country, and while they are particularly correct in the information concerning their respective sections, they may be considered as reflecting the general situation of the game region. They are from Virginia, Louisiana, Texas, Mississippi, Pennsylvania, Ohio, North Carolina, Georgia, Manitoba, New Jersey, North Dakota, Arkansas, etc., and, in addition to the information as to game conditions, they contain other matter of special interest.

To what extent the breeding of the birds was affected by the peculiar weather conditions it is difficult to determine. That they were affected is a reasonable inference; for all reports from the quail region indicate a remarkable number of squeakers, the result of second or extremely late hatchings. Whether this was due to the drought or the heavy spring rains is a matter of speculation. Knowledge on these subjects is lamentably meager. It is conceded that heavy rains during the hatching season will chill the eggs or destroy the young birds; of the drought and its direct effects on birds all is vague conjecture.

If the drought deprives an ordinarily well watered region of its water, many sportsmen strenuously maintain that it in no wise affects the birds, as they drink the dew, and that even in ordinary seasons birds live and thrive many miles from water; yet in seasons of extreme drought there are many nights in which no dew falls, or at least not more than a perceptable dampness. The birds cannot drink dew then. There are seasons when birds are extremely plentiful or extremely scarce, without any apparent reason for either. If they are plentiful, it is carelessly attributed to the season with little consideration of what the season really was, for few indeed can definitely recount the weather details of a season after it is past.

The scarcity of ruffed grouse has been attributed to the grouse tick; the scarcity of chickens and quail, to too much rain, or too much shooting, etc., yet birds are often plentiful in sections where there was an excess of shooting and rain. As to the embryological effects of the weather on the birds, we know still less. And yet all these matters as studies have their special interest and are not without profit. It is a field which as yet has been subject to little research.

But whatever the effects may have been on the breeding and habits of the birds, there are no doubts as to its effects in the practical realm of sport. Sportsmen are a unit in affirming that there has been no sport. The trainers of every section complain of the extreme dryness and the consequent inability of their dogs to do good work or, rather, any work of consequence on birds. So dry is the ground that there seems to be no scent left by fur or feather.

The trials of the Northwestern Beagle Club were noticeable for the apparent inability of the dogs to trail rabbits; in reality, it was a physical impossibility for them to follow a trail on which there was no scent.

The trials of the Dixie Fur Club were abandoned in consequence of the same unfavorable conditions. No doubt that other trials would have met the same fate, had not the rain of last week done much toward improving the conditions for sport afield.

The Continental Field Trial Club has abandoned its trials at Newton, N. C., owing to the scarcity of birds, which the dry weather may have made more apparent than real.

But as to the causes of the peculiar game conditions, there is a field of research opened to the sportsman which he should not ignore.

SNAP SHOTS.

We said last week that the Missouri non-resident sportsman law was a dead-letter. New evidence of this fact is afforded in the report printed in another column of the meeting held in St. Louis last week to contrive means for the better protection of game. It was pointed out by some of the speakers that the non-resident shooters were responsible for the great dearth of game in many portions of the State, and a suggestion was made that a tax might well be levied on non-residents in order to discourage their coming and so to lessen the destruction they wrought. The astonishing feature of the discussion was the fact that none of those who took part in it appeared to be aware that there was already on the books a stringent law, not simply to put a deterrent tax on outsiders, but positively forbidding them under a penalty from crossing the borders of the State armed and equipped for shooting. So much for one non-resident law.

We are unable to recognize in a non-resident license system the long sought panacea for the cure of lax game protection. Nevertheless it is probable that if Missouri must discriminate against outsiders a license system would prove at least an improvement upon the present farcical condition of things.

You may trace it even to-day, the old woods road, leading from the swamp on the mountain top down to the valley far below. It follows the precipitous sides of the ravine, curving and twisting and doubling upon itself, to give the teams advantage of every grade. For long stretches it is buttressed with great walls of stone, tremendous blocks which must have been laid in the years when there were giants upon the earth. One is amazed at the moss-covered monument of that toilsome age. Here the fathers built a memorial to endure for centuries.

Resting here beside the spring while you eat your frugal sportsman's lunch, you may hear in memory the wood-wagon creaking and straining and groaning for all the world like a ship laboring in the sea; and the fearful oaths of the driver to his team like those of mate to crew.

It is years and years since the uproar of the wood-team affrighted this peaceful spot. The names of those who built the road, felled the wood, captained the teams, al are but a memory, dim and shadowy, and held only by the oldest inhabitant, whose voice quavers as he tells of the primitive days of his fathers. The institution of the ox team has vanished from these parts, and there are no oaths now like those that woke the echoes here.

But the ravine itself remains, clothed with vernal green in trouting time, and with the glory of scarlet and crimson and gold in the hunter's season; the brook still babbles and gurgles and tinkles; the grouse drums, and in the thicket flashes the brief vision of the startled hare. Musing in reverie by the old woods road, dip up in hollowed hands a draught from the pure spring, and give thanks that you are here, to enjoy to the full these autumn days in the woods.

It is related, whether truly or for advertising purposes only, we know not—that Sherlock Holmes proved such a nuisance to Conan Doyle, by reason of the letters the author received from readers interested in the fortune of the superhuman detective hero, that in self-defense he was obliged to make an end of the fellow by dropping him from a cliff, and so putting a *finis* to the Sherlock Holmes series. Something of a similar strategem has been resorted to by the Western genius who got up the story of the bear farm where bears were to be bred like sheep for their pelts and flesh.

It was in Minnesota. A native expert on bears, backed by the ready capital of a New York physician, had built a hotel or asylum or reformatory for bears, had corralled a number of the brutes and assigned them rooms, and laid in a stock of provisions for their feeding during the winter months. Left to themselves, the bears would have crawled into holes and wintered without grub, as their forebears had done before them; but the Minnesota enterprise was to be something entirely novel in the history of beardom.

As elaborated by the man who wrote it, the story was a literary product, which one would think might well have been continued in many successive chapters. There is a well-defined public thirst for bear stories. Properly managed, the Minnesota ranch might have supplied bear bulletins for months to come. But when the author began to get in the returns, when his mail was filled with letters asking for more particulars, when he was implored, for instance, to give the cubic space required for each bear on a bear farm, the probable cost of maintenance per head, the market price of bear skins, the ruling quotations for bear meat, and a host of other questions, such for instance as FOREST AND STREAM received after it printed its skunk farm reports—the pestered and desperate man resolved to make an end of the troubles he unwittingly had precipitated upon himself. In an evil hour—it came this week, and we regret to say on the Sabbath—he permitted himself to become intoxicated with the exuberance of his own imagination, and forthwith consigned the bear farmer to a fiery doom. In the dead of night the herder of plantigrade sheep awoke to find his house and barn in flames and his own retreat cut off. There was no way out but through the bear den. That way he took; and fled from flame only to be killed by the bears. It was a cruel death; but we must remember that the story writer had great provocation.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.

III.—Along the Shore.

THE campers were astir betimes in the silver dawn that they counted of greater worth than a golden day for their use. After a hasty breakfast, Sam and Antoine embarked in the canoe at the landing above the Slab Hole, where the boats were unloaded the night before; but Uncle Lisha and Joseph preferred the stable land to the fickle waters, and prowled westward along the lake shore as slowly and almost as stealthily as a couple of aged mud turtles might have gone over the same ground.

Peering out upon the bay through loopholes of the cedar-clad cliff, they saw great flocks of ducks riding safe and far on the glassy water. The nearest were a triple gunshot out of range of this shore, while many were so tantalizingly close to Garden Island that the dusky lines cut the reflected brightness of the island's autumnal splendor.

"Good airth and seas!" Uncle Lisha whispered, as he and Joseph crouched on hands and knees, peering through the branches with longing eyes at the distant flocks, "ef we was on'y jest on that 'ere islan'. I wonder if we hedn't better go an' git the scaow bwut an' go 'way raound an' come up on t'other side?"

"Wal, I do' know 'baout it," Joseph whispered dubiously. "It's a good way off 'seem's 'ough it was, an' the weather might change consid'able 'fore we could git back. I hain't no gre't appetite for water, not sech a sight on 't, an' I don't b'lieve I want tu go aout 'mongst so much on 't, not sca'cely, anyways, not tu-day."

"Wal, I wish the wind 'ould change an' come aouten the north, an' blow 'em over here er suthin'."

"Ef we hed us some corn an' kinder hove it over the bank, mebby it 'ould call 'em up tu us." But as they had not the means at hand for trying this experiment and as no favoring gale blew the ducks within range, but they on the contrary began to waddle out by dozens upon the shelving shore of the island to bask in the sun, the two sportsmen reluctantly withdrew from their point of observation and pursued their way along the cliff to where it slopes to the low shore of a shallow bay. Here grew some hickory trees bearing a profusion of nuts as foreign to Danvis as the fruit of a cocoa palm. As Uncle Lisha and his companion were filling their pockets with the fallen nuts, they surprised a gray squirrel who was rasping out his breakfast on a lower branch and now retreated to a hiding place among the topmost leaves. They were at once filled with a desire to secure him as a trophy and a toothsome addition to camp fare, and so with guns at a ready they went slowly around the tree, scanning every branch and intricacy of leafage, often fooled almost to the point of firing at some semblance of the object of their search, but never quite discovering it.

"Wal," said Uncle Lisha at last, grounding the butt of his gun and leaning on the muzzle while he gazed wistfully up into the tree, "the critter's up there somewheres, sartain, fer he hain't got no wings an' the' hain't no tree he could jump off intu. Naow, Jozeff, I b'lieve if you'd go down there tu the lake an' git a han'f'l o' stuns, I c'ld fling 'em up in there an' start the critter aout so's't we c'ld shoot him. I use 'ter be tol'able hendy flingin' stuns."

Accordingly Joseph set his gun against a tree and made for the shore with all speed, which he did not abate till he had crashed through the fringe of cedars and come out upon the stony beach. Then to his intense disgust a great flock of teal arose almost at his feet in a flurry of alarm at the noise and sudden apparition, and went whistling away far over the bay. Joseph stared after them open mouthed but speechless, till surprise and chagrin took audible expression in a long exhaled "Gosh," and then, with eyes following the swiftly retreating flock:

"Who in Sam Hill 'spected you was here? Wal, there goes one lot o' M'ri's feathers."

Heaving another sigh he turned his back upon the lake, and picking up an armful of stones returned to his companion, inwardly berating himself at every step and groaning over the lost opportunity.

Uncle Lisha's arm still possessed enough of the strength and skill of youth to dislodge the squirrel with a few well directed missiles, and Joseph brought it down after a pottering aim of the long gun.

"You done well, Jozeff, an' your father'd be'n praoud on ye if he'd seen ye," said Uncle Lisha as he picked up the squirrel and held it forth for the successful sportsman to feast his eyes upon.

"Father!" cried Joseph ruefully, "Gosh, ef he'd ha' seen what I done er ruther what I didn't du, he'd kick me higher'n Gilderoy's kite, if 't wa'n't for the rheumatiz in his laigs. I went a kerflummuxin' daown yunder through the bushes right slap ontu a snag o' ducks 'at I might jes' 's well crep' up tu an' shot if I'd on'y 'spected they was there. I bate ye the' was more'n ten paound o' feathers on 'em. But haow easy they did kerry 'em off, though."

Uncle Lisha lamented the chance which had deprived both of distinguishing themselves, but consoled Joseph by assuming an equal portion of the blame. "An' naow, who knows but what the critters 'll come back there arter they git over their scare. What fetched 'em there oncte 'll fetch 'em ag'in. Le's go an' sed daown there an' wait."

Joseph readily assented to a plan which required so little exertion, and the two sat down behind the screen of evergreens where through an opening in the bushes they could command a view of the shore and the rushy border of the bay in front of them, and so for half an hour they sat enjoying their pipes and a whispered conversation no louder than the stir of the breeze among the tree tops, the patter of the falling leaves and the break of the ripples on the beach. Suddenly these dreamy sounds were overborne by a pulsing, sibilant beat, prolonged in a whistle of set wings, which ended with a resounding, fluttering splash, as a flock of twenty of more teal settled upon the water within 40yds. of the ambuscade and swam to and fro in busy inspection of their surroundings.

"Aim int' the thick on 'em, an' when I caount three, fire," said Uncle Lisha in a trembling whisper as he and his companion cautiously poked their guns through the bushes and took deliberate aim.

"One—tew—three," Uncle Lisha counted, and with the sharp expiration of the last word his ancient queen's arm belched forth its mighty voice. Joseph Hill pulled lustily at the trigger of his half-cocked piece, shutting both eyes tighter as the pull became more desperate and bracing his nerves for the inevitable recoil which must follow such a reluctant discharge.

"Sam Hill!" he ejaculated when at last he desisted and opened his eyes to see a half dozen victims of Uncle Lisha's shot floating belly up and the affrighted survivors scurrying away in wild flight. "It don't seem's 'ough this plagued ol' gun was use to shootin' ducks. It don't 'pear tu want tu go off at 'em."

"It wants tu be cocked fust, Jozeff," Uncle Lisha remarked, as he cast an eye upon the unready weapon, and they rushed from cover to secure the game. "Cock her an' let flicker at that waounded one. It's a-floppin' clean aouten reach."

Joseph stared a moment in chop-fallen dismay at the lock of his gun, then cocking it and leveling the long barrel to careful aim, put a merciful end to the struggles of the wounded duck. By the aid of a pole and a favoring breeze the sportsmen were able to gather their booty—seven plump teal in all, which they ranged side by side and gloated over with as complete satisfaction as if the green beauty spots on each wing had been as many emeralds. Then they tied the birds in two bunches, to the smaller of which the squirrel was added, and these Uncle Lisha magnanimously permitted his less successful comrade to carry as if it were his rightful trophy.

So laden, and quite content to try their fortune no further, they set forth toward camp. As they drew near it Joseph broke a long interval of silence.

"I've kinder be'n a-thinkin' on't over in my mind, Uncle Lisher, 'at like 'nough, mebby, it 'ould be jes' 's well not tu say nothin' 'baout my not cockin' my gun, I do' know but mebby it 'ould be full better not tu, Antwine's so kinder aggervatin'."

"Good airth an' seas, Jozeff, I won't say nothin'. Ef the ol' fuzee hedn't sot back so, I shouldn't knowed whether it was me or you 'at fired, an' I sh'd thought you hed if you hadn't said nothin'. It's lucky you didn't er we wouldn't ha' got that 'ere waounded one. Pshaw, I won't say nothin', Jozeff."

The camp was silent and deserted but for a chipmunk that sat clucking contentedly on the rock table after a feast of crumbs. The fireplace gave forth neither smoke nor warmth, but only the faint breath of new-made ashes and freshly-charred wood. The slovenly array of frying-pan, pot and tin plates stood cold and untouched since breakfast, and it was evident that Sam and Antoine had not returned since the morning departure.

"My sakes!" said Joseph, as he viewed the unhousewifely scene with a kind of a shame-faced satisfaction, "I'm glad M'ri' hain't here to see aour housekeepin'. She'd have a tantribogus fit, 'most seem 's 'ough she would."

"Wal," said Uncle Lisha, "the' is a diff'ence 'twixt men folkses haousekeepin' an' women folkses, as a gen'al thing. Where the' hain't, the's suthin' wrong wi' the man er the womern. If it's a womern a keepin' haouse like a man, she's a reg'lar sloven, you may depend; an' if it's a man 'at keeps haouse as a womern ort tu, he's jest as sartain ter be a he ol' maid. Naow le's eat a col' bite an' then light up a fire an' heat some water, an' kinder git the thick on't off'm these 'ere dishes. It's tew bad Drive ain't here tu help us."

After fortifying themselves with cold potatoes, raw pork and onions, they set manfully and unskillfully to the task of dishwashing, which was in a manner accomplished in the hour which intervened before the return of their friends.

ROWLAND E. ROBINSON.

IN JONES'S BAYOU.—III.

THE hunting season was now on in earnest. We had been waiting for a heavy frost so that we could go bear hunting, as it is more comfortable in these dense jungles and canebrakes when the weather is cool and the fleas and mosquitoes—and especially the gnats—are all dead. It is almost beyond human endurance to stand the poisonous insects that attack one in the months of June, July and August in some locations in the Mississippi and Arkansas swamps. I have wet a towel and kept it tied over my mouth and nose many a time to rid myself of the buffalo gnats, and I have known them to kill cattle by the score.

My rod man, Julian Fleming, had left me and returned to his home in Chattanooga, so I had a new man with me. I was now doubly lonesome since Fleming's departure, as he and I were almost like brothers. I now felt like the fellow who was "alone on the wide, wide sea," and almost as disconsolate as Enoch Arden, who returned home and found his wife married to another fellow. I would go over to Uncle Zack Jones's house and "spark" one of his sandy-haired "gals" once in a while, and also talked love to a young and very handsome widow who was a niece of Uncle Taylor and lived with him. This was not done by proxy, *à la* Miles Standish, either.

However, this did not satiate my longing for something—that inexplicable longing for fellowship and social intercourse with the outside world. I did long to see a good theater, or hear a nice band play, or listen with rapturous ear to a grand concert once more. But alas! the song of the katydid, the chirp of the cricket, the croak of the tree frog, and the monotonous "giggerum, knee deep," of the bullfrog, mingled with the sad and plaintive cry of the whip-poor-will and screech owl, were destined to be the sole music for my ears for twelve months to come. I did get desperate every two or three months and rode fifty miles through the cane to Greenville, just to see a steamboat and hear the sound of wheels rattling on the hard streets. But Greenville was a small town and did not afford much entertainment to a stranger, so I would go back to Jones's Bayou and plunge into the forest with rifle in hand, determined to drown my sorrow and lonesomeness in hunting. And I usually succeeded, because just as soon as I killed a deer I would forget all about my lonesome and forlorn existence.

One day about the middle of October Uncle Taylor sent me word that he was going to take a stand at one of his favorite water holes the next day, and would be glad to have me accompany him. Of course I went, as I never refused an invitation to hunt, unless there was very pressing business on hand. Two hours before daybreak I was at Uncle Taylor's house mounted on Selim, Mrs. Beaver's old family horse. Uncle Taylor was watching for me and the moon was shining almost as bright as day. We struck into a cattle trail leading in the direction of the Sunflower River. We traveled very slowly, as the matted vines often caught us under the chin and almost unseated us before we could stop our horses. Finally we arrived at the water hole, which was a shallow pond 50ft. wide and of some length. It was, of course, in the bed of a bayou, and Uncle Taylor said it was one of the few places in that whole country that never went dry. We had traveled in an opposite direction from Snake River and were probably twelve miles from that stream.

We now dismounted, and leading our horses back on the trail for about a quarter of a mile tethered them and fed them so they would keep quiet. We approached the pond very cautiously, as Uncle Taylor said there might be game there now, although the first streaks of dawn had not lit up the horizon yet. There was no game in sight, however, so we both climbed up into his blind. The blind consisted of a board about 4ft. long planted firmly in the fork of a tree and a very comfortable back had been made to this bench, so that a person could rest there for hours without becoming in the least cramped or tired. I was very sleepy, so I told Uncle Taylor to keep watch while I took a nap. He said, "Wal, go to sleep, jist so you don't tumble out o' the tree an' skeer all the game off." So I fastened my rifle so I could not drop it, and getting into a comfortable position was soon fast asleep. I think Uncle Taylor was very willing for me to go to sleep, as he was afraid I would talk and that would have spoiled everything.

I do not know how long I had been in "Nappy Land," but the first thing I remember is that Uncle Taylor gave me a punch in the ribs with his elbow, and as I opened my eyes he put two fingers to his lips. I understood him and did not speak. He pointed in the direction of the sun, which was just rising, and I could distinctly hear some heavy animal approaching. Whatever it was, it certainly did not try to walk away, and was entirely unconscious of the danger that awaited it. We did not have to wait long. The cane kept on popping and cracking as the animal would step on dry or dead stalks, and in a few moments a large black object emerged from the dense wall of cane on the opposite side of the water hole. It stopped, raised its head and sniffed the air, as if trying to smell danger. It was evidently satisfied, and went straight to the water's edge and began to drink. We were within 40ft. of it and up over the animal, so we could both see it perfectly. It was a good-sized black bear. We both took aim and fired almost simultaneously. The bear gave a snort or snarl, stopped a moment to bite its side, where one of the bullets had struck it, and then with a roar that almost froze my blood made a break for the cane. We were too quick, however, and before he reached the cane my rifle spoke again, and a second later Uncle Taylor's No. 8 shotgun barrel roared out its message of death. As the smoke cleared away we saw the bear on the ground. We now got down out of the tree, and a shot from my Winchester through its head finished it. I now turned to Uncle Taylor, who stood exultantly over the carcass of the fallen beast, and said, "Now, Uncle Taylor, don't you feel ashamed of yourself?" "An' fur what mout I be 'shamed of, pray?" "For murdering this poor beast without provocation," said I, "and without giving it a ghost of a chance to either escape or defend itself." I had forgotten that I was one of the murderers and did not notice the inconsistency of my remarks to Uncle Taylor. But Uncle Taylor was too busy in his mental calculation of how much that bear would bring him to notice me much.

Every shot fired had struck the bear, and I think that any one of them would have caused his death.

After securing our horses, I climbed up in a slender tree just over the body of the animal, and securing a rope to the top of it swung myself down again. By pulling on the rope with all of our strength and combined weight we succeeded in bending the tree down partially. Then securing the other end of the rope to the bear's hindfeet we turned the tree loose. In this way we lightened up the load until we were able to lift it up on old Selim. We then tied the bear very securely on the horse, and about 8 o'clock were ready to start homeward. I walked and led old Selim, and Uncle Taylor rode home, as he was old and not strong enough to walk six or eight miles. The bear weighed nearly 300lbs. without anything being taken from him, and old Uncle Taylor got about $15 or $20 for that day's work, as bear meat sold like "hot cakes" in the railroad camps at 10 cents per pound. I took one ham and the skin as my share. I despise bear meat, however, and I do think it is the nastiest stuff I ever put into my mouth. It always makes me think of the Eskimo drinking oil, it is so fat and greasy.

That mode of hunting did not suit me, and I did not try it again the whole time I was in the swamp, although I had numerous invitations to accompany both Uncle Taylor and Uncle Martin. I had just as soon shoot one of Barnum's bears in his cage and call it sport as to murder one at a water hole or salt lick. There was no use to expostulate with Uncle Taylor or Uncle Martin, however, as they were both pot-hunters of the worst type, and were after meat the easiest way that it could be obtained. Uncle Taylor used to say to me after I got through berating him for trapping turkeys and water-hole hunting, "Why, Wingfield, you air a durned fool. Hain't you larnt afore this that you kain't break an ole houn' o' suckkin' eggs?" "Well, blame your old skin, I wish you would get hold of a rotten one once in a while, then," said I. Old Uncle Taylor would then throw his head back and "haw, haw" as only a backwoodsman can.

He used to accuse me in a good-natured way of breaking up his turkey pens. I denied it with all my might, and held up my hands in horror at the idea of my treating my old friend that way; but it was true. Uncle Taylor really thought it was an old fellow named Coleman, who lived up the bayou five or six miles, and who had once had a big lawsuit with Uncle Taylor about some cattle that Coleman had branded with his own brand when the cattle really belonged to Uncle Taylor. It took the good advice and gentle counsels of the whole of the Jones's Bayou settlement to keep Uncle Taylor and old man Coleman from shooting each other about the cattle business. And the hatred was still very high against each other; so, whenever Uncle Taylor lost a turkey pen he always swore that that eheu rascal John Co'eman did it. I always said, "I guess he did; as nothing but a mean man would tear another man's turkey pen up anyway." But inwardly I was enjoying Uncle Taylor's rage and chagrin. He always imagined that the pen was full of turkeys and that John Coleman had stolen the turkeys and then torn the pen up, and I do believe if he had seen

John Coleman with two or three turkeys tied to his horse and had found one of his pens demolished he would have gone gunning for Coleman. I guess I did wrong in destroying the pens of both Uncles Taylor and Martin after they treated me as cleverly as they did; but I could not help it. It would make me so mad to come across one of these traps in the woods that I would invariably tear it to pieces and usually set fire to it. I was the cause of Uncle Taylor building several new ones that fall; but in spite of me or his imaginary enemy Coleman, Uncle Taylor succeeded in trapping thirty-nine turkeys that fall and winter. Uncle Martin caught more than that, as he was a better hunter and a younger and more active man than Uncle Taylor.

I killed that fall and winter by actual record kept in my diary thirty-two turkeys. I shot a great many of these flying and also called quite a number up with a turkey call. Jim Pyron, who lived with me at the Beaver mansion, was an expert caller, and many is the old gobbler that he has brought up in range of that deadly .44 Winchester of mine. It is a pretty sight to see an old blue-necked gobbler come stalking and strutting up, spreading his tail and dragging his wings and crow-hopping along sideways—coming on proudly to meet his gentle hen, as he supposes the "turk," "turk," "turk" of the seductive call to be. Just one imperfect note in the call, however, and there is a whir of wings and the old gobbler is gone.

A. B. WINGFIELD.

[TO BE CONCLUDED.]

CAMPING ON THE CLEARWATER.

Editor Forest and Stream:

Your contributor Sancho's article in FOREST AND STREAM some time ago gave us a good pen picture of two egotistical foreigners; but they must not all be placed in that kind of a frame. Possibly some of our American sportsmen abroad have acted quite as ridiculously in the eyes of the residents of the country they visit.

I will give your readers a sketch of two English sportsmen I met on Camas Prairie, in Idaho. They had come out West to engage in the stock raising business, and had brought along their dogs and guns. They became American citizens. For over a year they were very busy tending their sheep and improving their ranches. The fall of 1870 found me, like a great many prospectors and miners, "broke." It was then that I went as guide with them on a hunt.

On the appointed day at 1:30 P. M. we were off. We had six miles to go and two very steep mountains to climb. The brush was well loaded with snow, which gave me a full benefit on the way up, for I was in the lead. I shot three ruffed grouse. When we came out of the thicket on top of our first mountain I stopped and fixed up our packs and scraped the snow off. My comrades were cheerful and did not care; they had come out to kill some big game and intended to follow me. Here we saw quite a number of fresh deer tracks, and while going through some open timber I showed them seven whitetail deer. They wanted to know what about their trying for a shot, but I told them no, we would not have time to make camp and fix up comfortably for the night. We were soon climbing our last mountain, and before we reached the top I had killed two more ruffed grouse. Soon we rode out of the thicket on to the big meadow on Meadow Creek. My friends remarked that it was a nice-looking park, although it had a kind of a wintry look. I showed them where we would camp for the night, near some dead black pines that were still standing. These would give us plenty of fuel, for I am very fond of having a rousing fire after supper.

When we reached the place I soon unpacked the mule and then their horse, while they were securing their saddle horses. My horse, being thoroughly trained, would stand for hours where I left him. The boys were anxious to help, so I put them to shoveling away the snow for our tent and fireplace, while I cut some poles. The snow was only about 1ft. deep, so it did not take long to clean it away. As soon as we got the tent up I cut down a pine about 1ft. in diameter, felling it across another so it would break and splinter up. Then I took my horse, crossed the stirrups, made a breast collar out of the pack cinch, ran the ropes through the stirrups so the draft would not be too low, hitched on to the log and snaked it in and kept at it until I had plenty of wood for the night. We soon had a good fire. I cut a white fir after knocking it a number of times to knock the snow off from the boughs. The boys carried the limbs in and laid them where they would dry off. When I had all I wanted I made down our bed and threw a mantle on top of it to sit on.

In the meantime one of the boys had skinned our grouse and brought our camp kettles full of water. We then cared for our horses. We took off our saddles and spread the saddle blankets over the horses, then put the saddles back on and cinched them but a little, as this would keep them warm and keep the blankets on. Then we tied them up near camp. I soon turned my attention to supper, which I had ready in about two hours, as I stewed the grouse; and when it was ready and we sat down to it, my friends praised it very much, forgetting how hungry they were and that exercise and hunger are the two best sauces.

A little after 10 we were ready to turn in. Mr. C. said, "Lew, where are your blankets?" "Well," said I, "my bed is made. You told me all you wanted was me with the dog and gun." The boys looked puzzled, and soon B. said, "How do you manage it when you go out in the mountains?" "We always sleep three in a bed."

C. said, "That is all right; then we can do the same," but that in the hurry at the ranch he had forgotten about the extra blankets.

C. being a very large man took the outside, and B. being the smallest took the middle. Having a splendid bed, and all being tired, we were soon sound asleep. Some time in the night B. shook me and said, "Lew, I heard some kind of an animal sniffing like." Soon I heard it. "Oh, that is a deer; it has smelt our camp and can't make out what it is." We waked C. up so that he could hear it; then we soon went to sleep, or I did, and when I waked up again I struck a match and looked at my watch. It was half-past 4. I jumped up, put on my clothes and soon had a good fire. The boys got up, but it must have taken them nearly an hour to get their boots warm enough to put on.

I fed our horses the first thing, then prepared breakfast, after which we did up our packs, saddled our horses, and by the time it was light enough to see to travel were on the move. We had not gone 100yds. before we saw where a small band of deer had been playing around in the night, some of which we had heard whistling. Near the lower end of the meadows is a large sarvis thicket. In going through we saw nine deer. My friends wanted to stop, but I told them not yet, that when we crossed the mountain over on to the breaks of Clearwater, if we did not see any elk tracks we would camp and hunt deer. They agreed, yet I could see that they thought we were throwing away our best chances. It took us about two hours to cross the mountain, and as we did not see any elk signs we camped. As soon as the loads were off we hobbled the horses and turned them loose, as the snow was not more than 2in. deep and there was plenty of bunch grass sticking out.

We were in a splendid deer range. I showed B. where to go, as he was the lightest and proved to be "as tough as a b'iled owl." I showed C. where to go, and told him he would be likely to see deer in less than a half mile from camp; while I would go down into the fir flats toward the river. As B. had the furthest to go, he left about fifteen minutes ahead of C. and me. After going a couple of hundred yards we separated. I was poking along in the open timber between the fir thicket. I had crossed lots of fresh deer tracks, but had not seen anything. I had stopped under an immense fir where the snow had not reached and was looking over the ground ahead, when I was startled by two shots in quick succession. It sounded to me like artillery, and reverberated across the Clearwater Cañon, then rolled away up against the high rocky bluffs on Twenty-Mile Creek, and the echo answered back. It had hardly died away when it was again repeated. This was the first time I had ever heard the report of an Express rifle, and I thought that if the kick was as tremendous B. would never be able to get to camp, for the shot came from his direction. It was probably ten minutes before he fired again. I was then satisfied that he was not entirely disabled. I waited and listened for more, and when they did not come I moved on, and near the last ridge to the Clearwater saw a small band of deer. Some were feeding and some lying down. They were in nice range. I watched them quite a while. My intention was to kill a small one for camp meat. While I was watching them a buck stepped out from behind a bunch of brush. It was different from any deer I had ever seen—longer and a great deal larger. The body was nearly red, while the neck was almost black; he had an immense pair of horns. I raised my rifle and took a good aim at his neck. At the crack of the rifle he fell; and those that were lying down jumped up; but they could not tell where to run. Not wanting to shoot any more, although I knew the buck would be musty, I thought I would trust to the boys to kill one fit to eat. I went up to where my dead deer lay, and surely it had been a monarch of the glen. His right ear had been split in two places from the head to the tip; the left ear had one split in it. His neck was covered with scars, which showed that he was the champion; he had earned his laurels.

Off to my left came the booming of the Express cannon. It was boom, boom so quickly that it made one long, rolling echo, which was taken up and handed back and forth, until a third single shot continued the sound. I stood waiting, expecting to hear another, but that was the last; everything was quiet.

I went down on to the river to where some Chinamen were working, and sold them the big buck for $5. Two of them came up and carried down the meat. I took the hide and head and hung them up, then returned to camp.

As the boys had not come in, I built a fire, and had dinner well under way when B. came in; and it was an easy matter to tell that he had had lots of fun and had killed his first big game. He brought the liver and heart in for dinner.

He reported that as he had got near the head of the draw I had told him to go up, two large bucks had got up out of some brush, and after a few bounds up the hill stopped. He fired both barrels at the biggest one, and one of the shots knocked it down. Then he loaded and tried the other with two shots, and missed. He said he knew, from the trouble he had in getting out the shells and reloading his rifle, that he was getting rattled. He then sat down and took good pains and fired for the shoulder. At the report of his rifle the deer bounded forward and fell. After dressing his game, he went on up to the summit, where he saw a band lying down, and thought he could get very close to them by retracing his steps a short distance and crossing the divide lower down. When he got to where he thought he would be within good range he looked very carefully, but they had run.

"What did you kill?" he asked, when he got through telling me of his fun.

"I got one, but it was a big buck; so I went down to the China camp and sold it, but kept the head and hide."

I remarked that C. had fired three times. "Oh yes, I heard them; does it not make a tremendous rumbling among the cañons and those high bluffs beyond the Clearwater, and is not that a grand sight, that old Buffalo Hump Mountain so rugged and high. I can't see what so many Americans want to go abroad for, when there are such places right at their doors and with such quantities of game."

Our conversation was interupted by C. coming in with success stamped on every feature. He had killed one two-point buck and wounded one which he wanted to follow very much; but I had told him to follow a wounded deer but a short distance and that I would help him.

It was a great source of satisfaction for me to listen to these two men as they repeated every little detail of their hunt, and how well they were pleased with their Express rifles and the beautiful mountain scenery and the music of the echo of each other's rifle. C. said, "Lew, your rifle sounded like a popgun in a cellar, but after all it did better than ours." B. chipped in and said, "You must not forget who was at the breech."

While eating we decided on our next move. C. was religious, and, while he did not want to force his opinions on B. and me, yet he did not want to hunt or move camp if it could be avoided on the next day, which was Sunday. I told them we had better get our game in and then move down on to the Clearwater, a couple of miles below our old mining claim, where we would have an excellent camp, with plenty of feed for our horses.

I gave B. my saddle horse and put his pack saddle on the mule, and he said that with that outfit he could bring his deer into camp. I took his saddle horse and with C. on his we went after his deer. We had not left camp more than a quarter of a mile when we saw four deer come out of a fir thicket and start up the mountain; they were about 200yds. away. I told C. to take a shot at them. He gave me a very credulous look and said, "I know positively I could not hit one and I don't believe you or John Rigby could either." The deer were standing in a draw and we could not see all of their bodies while we were sitting on our horses. I jumped off from the horse and raised my rear sight for 200yds. All I could see was their heads and a few inches of the necks. I drew a bead on the neck of a small one and fired. At the crack of the rifle the deer dropped. The rest gave a few jumps and stopped and looked at their fallen companion. C. was much surprised and said, "You please lead my horse; I want to pace the ground, for that was the best shot I ever saw made."

We got nearly half-way to the deer before the others went off. I think we could have killed all the band. When C. reached the deer he called out 179. It was a yearling doe, and I had broken its neck about 4in. below its under jaw. We hung it up and went up the mountain, and soon reached the place where C. had done his shooting.

He had killed a two-point buck. He showed me where the other was standing; and upon examining the place, I told him he had hit his deer a long way back. I followed the tracks a short distance and found blood; but when it was scattered on the snow it was like spray. He had shot the tip of the tail off; and when the deer would stop, it would throw the blood out more than ten feet each way. I decided that there was no use of following it unless we wanted to kill it for a curio, it having been shot with an Express rifle. C. said we better return to camp. I told him to hold the pack horse while I put the deer on. He was willing, but the horse had no notion of carrying a dead deer to camp. I got my hands full of blood and rubbed the horse's nose good, then put my coat over his head and tied the sleeves under his throat; threw the deer on and lashed it good and fast, and took the coat off from his head. He looked at the deer; then smelt of it, and did not buck, but walked right off. We soon got back to my little deer, which I dragged into camp. We saw B. coming, leading my horse, and the mule was following; he had a deer on each. It was but a few minutes' work putting our packs on, and we were ready to start. I told B. to ride my horse and keep the trail which crossed Meadow Creek a mile from the Clearwater, while I would take his horse and go and get my big deer skin and horns and follow the river trail, which was too dangerous to go with a pack; and would meet them at our old houses. We made our intended point before dark and camped at the mouth of Little Sheep Cañon.

The snow was all gone, the grass good and wood plenty. The young deer furnished camp with plenty of good fat venison; it was the only one we had killed that I considered fit to eat. I hobbled all the horses but the mule and turned them loose. B. and C. thought I was taking chances, but when I told them the nature of the range they said, "We trust it all to you." We had a splendid supper, and after lounging around on our bed of fir browse I cut off a piece of venison and stuck it up before the fire to roast. B. and C. wanted to know if I had not had supper enough. "Oh yes, but I like a little roast venison before I go to bed." I cut off a piece for each of them, to which they remonstrated. I replied, "When you fellows see me eating it will make you hungry." When the meat was done enough I began on mine and soon the boys commenced on theirs and were loud in their praises of its excellence; they thought it was the best meat they had ever eaten.

It was broad daylight when I woke up. I got up and had a good fire. B. soon got up, but C. was lazy and did not turn out until we had breakfast ready. Our horses were in sight of camp, which pleased the boys very much. After breakfast C. said, "Boys, I shall remain in camp to-day, but you two can do what you like." "Well," said I, "so far as hunting is concerned I care nothing about that, but I will do whatever B. wants to." B. said he would like very much to go up to the head of Sheep Cañon and try for a sheep. So B. and I picked up our rifles and started for the head of Little Sheep Cañon. We had a very high, steep and rocky mountain to climb.

B. was good at walking; and when we reached the top of one very high precipice I told him that sometimes sheep lay at the foot of the cliff. B. walked out and took a good look over the precipice, where I was afraid to venture. Not seeing any, we kept on, intending to strike the cliffs near the head of the cañon. In going down the divide I saw a small band of deer. Some were lying down, and some feeding on buck brush. I showed them to B.; he responded that we were not after deer to-day. I asked him if he thought he could hit one. He raised his rifle, and after sighting it a while took it down, and said it would be doubtful. I handed him my rifle; he sighted at the deer, then took the rifle down; took his, tried it; then took mine again; then said, "I could hit one with your rifle. I had no idea there was such a difference in the sights. My sight covers the deer completely, while yours does not hide more than the size of my hand." We showed ourselves to the deer, and they bounded away into a fir thicket. We went down into the head of Sheep Cañon and found where a small band had been that night or in the morning. We followed their trail down below the snow line, where we lost it.

We kept on around the point, and had gone about one mile when I heard some magpies chattering around in a small gulch. I told B. they were with the sheep, as I had often seen them sitting on sheep picking ticks off; the sheep seem to enjoy it. We went very cautiously and I was ahead. I looked the ground over very carefully. Soon I saw a very big ram standing on a log. He was looking down toward the river. I motioned to B. to move up, which he did, and took a good look at the first mountain sheep he had ever seen. Soon the ram looked square at us, but we never moved until he turned his head; then we squatted down. The wind was blowing up the river, so we were in danger of being detected by scent. I soon peeped up, but the ram had got down. We moved up a short distance, when I saw seven. They were not more than 80yds., and I whispered to B. to try and kill the ram. He raised his rifle and bang! bang! it went, nearly deafening me.

The sheep ran down around on to the point we were on—all except the ram, which ran up the gulch. By the time the sheep got straight below us B. had two more

cartridges in his rifle and fired two more shots. This time I got to one side, so did not sustain such a shock. He missed again. I then shot at a small one and killed it. Then I gave my rifle to B. and he shot at a small ram and killed it dead. He was going to shoot at another, but I told him we had enough, and he took the rifle from his shoulder. As we were not a great way from camp, our shooting was interesting to C.

We went up to where the big ram had stood when B. shot first. He had over-shot with one barrel, but we could not find where the second shot had struck. We followed the ram's tracks a short distance, but not finding any blood went to camp, where C. was eager to hear the details of our hunt, and seemed to be as well pleased as we were. I started dinner while B. drove in the horses. After dinner B. and I went and got our sheep. C. thought the ram we brought in had a fine pair of horns, and he asked me how old I thought it was. I told him not over two years. He looked in its mouth and said it was two years old if they had the same mouth the domestic sheep have. The lamb I killed was fat and good.

After we had our sheep hung up B. said, "Lew, let's go over on to that ridge in the cone, where you told me we would find elk signs if there were any in the cone." I rode C.'s horse, not wanting the mule to follow. It was only a little over a mile to the top of the ridge. When we got near the summit I showed B. where an elk had gone along but a short time before. This seemed to excite him more than anything he had seen on our trip. We tied our horses and followed on down the ridge toward the Clearwater, and soon I saw an old bull elk lying down, not more than 150yds. from us. I showed it to B., who stood gazing at it for more than a minute without moving. Then he squatted down and whispered to me that he would give $50 if it were not Sunday and C. were with us. I told him to follow me. I retraced my steps a short distance and went up on a small mound a little closer and higher, where by crawling up we had a fair view of the elk, which was chewing its cud. We could tell from the way his horns shook. It was about a four-point. After satisfying ourselves, we crawled back, returned to the horses and went back to camp, where B. told C. what he had seen. He thanked both of us for our consideration of him, for I had told B. that if we shot we might not find any on Monday or for a week, and it would make C. feel bad if we killed one and could not find any for him to shoot at.

Monday morning bright and early we were up and had our breakfast by the time I could see to find our horses. Then we packed all our game except the forequarters of the young ram, which I hung up out of the way of varmints, and we were soon up into the cane and camped on a small ridge about one mile from where we had left our elk the day before. We picketed horses, shouldered rifles and started to find an elk; but before we left camp I got the boys to promise that should we find any game they would shoot only one barrel of their rifles at a time, for when they fired both barrels in quick succession the recoil of the rifle threw them clear off. We had been out an hour when I struck the fresh tracks of a cow and calf. I followed very carefully and in less than a mile saw them feeding not 100yds. away. I cautioned the boys to take time and not over-shoot; they got ready and both fired almost simultaneously; then they fired the other barrels. The cow fell; the calf ran up over the ridge, B. and I after it, but it got into a fir thicket before B. could put in a shot. We dressed, quartered and hung up our game, and returned to camp feeling fine. The boys were in the best of spirits.

After dinner we went up on to what the boys thought a high mountain, but when we reached the summit there was another only a short distance which was much higher, and had we gone to the top of that we could have seen the Seven Devils, between the Salmon and Snake rivers, much higher.

We returned to camp tired and hungry, as usual; and that night we concluded that we would on the morrow return home by way of Mt. Idaho.

On our way out we saw where several elk had crossed the trail in the night, but the boys had had all the sport they wanted in one outing.

Such was the disposition of two Englishmen who hunted on Clearwater with LEW WILMOT.

MORE ABOUT BEE HUNTING.

Editor Forest and Stream:

Thursday night we cut a bee tree—one that Guy had located about a month ago, with only one bee to get his line. He let the bee go four times, and three times it came back, bringing with it its friends and relations to the comb in the bee box. The fourth time it failed to turn up, so Ferguson guessed, and guessed right, that he had gone by the tree. His experience enabled him to find the tree, not many rods from where he let the bee go the last time. Ferguson located his tree, which was about a mile from the place he caught the bee, on sweet-clover blossoms. He never marks a tree, and has no other guide than his memory, but that is sufficient, and I know he can go to any tree, though there be a dozen of them, any time, day or night.

He and Andrew and I went to this tree by lantern-light, Guy leading the way of course. He went almost directly to it. It stood in quite thick timber, on a mountain ridge which has some thousands of acres on it. It was a 15in. oak and perfectly sound at the base. We each took turns swinging the double-bitted axe or "pickerel bait," as Ed. Phelps calls them. You know Ed. came back from a distant part of the Adirondacks, and told of a pond where the pickerel were so big that the favorite trolling spoon was an ordinary double-bitted axe. The Keene Valley guides invariably speak now of a "pickerel bait" where before they used "double-bitted" in describing the kind of an axe used.

I managed it so I had the axe when the tree fell, and a terrible crash it made in the echoing woods on that still night. The first feeling I experienced was that of apprehension lest the owner of those woods would hear too! Conscience, you know, makes cowards of us all. But there was no danger of that, for we were too far back on the mountain. You know, it is rulable here for any one who finds a bee tree to cut it and say nothing about it, no matter who owns the woods, nor how much honey you get out of it, nor how big the tree is, provided it is not so near the owner's house that he would hear you chopping! A while ago some one cut a bee tree right near Willie Fisher's house. But he's deaf.

Andrew was ready with a wad of damp leaves to stop up the hole the minute the tree struck. We thought he had done his work well, until we saw the bees pouring out from one corner, and we kept our distance, but soon it was apparent that the night was too cold for them to fly much, and after leaving them alone for a half hour nearly all had gone back. About fifty were still out, but all huddled together, and these I fixed by slapping a great handful of mud on them and ramming it in the hole.

You probably know how they do the rest. Guy cut a neat hole just below and put in his sulphur "match," blowing the fumes in from time to time, and then putting a wad of leaves over to keep the fumes in. Then I partially unstopped the first hole to give draught to the smoke, while Guy blew it through the mass of bees. In ten minutes the bees were harmless, and Ferguson jumped on top of the tree and neatly cut off a slab, exposing the combs. He cut a little too deep once, and bled the comb in one place by cutting crosswise of the comb, but on the whole it was done in a woodsmanlike manner. I guess there were four bees to one honey, for it was a large "swarm of Italians," but we only found about 6lbs. in our pails, after we had eaten all we possibly could.

Guy knows where two more trees are, and when we cut them I'll let you know how much we get. One thing I noticed about Guy that rather surprised me was that, although a splendid woodsman and hunter, a carpenter, paper hanger, etc., etc., a man who can turn his hand to anything, yet when it comes to plugging up a hole in a bee tree he isn't in it at all. He's generally about five rods away, telling you that they won't sting, and "to just smush 'em with your buckskin glove and plug her up." HEATHCOTE.

LAKE CHAMPLAIN, Oct. 27.

Natural History.

NORTH AMERICAN SHORE BIRDS.

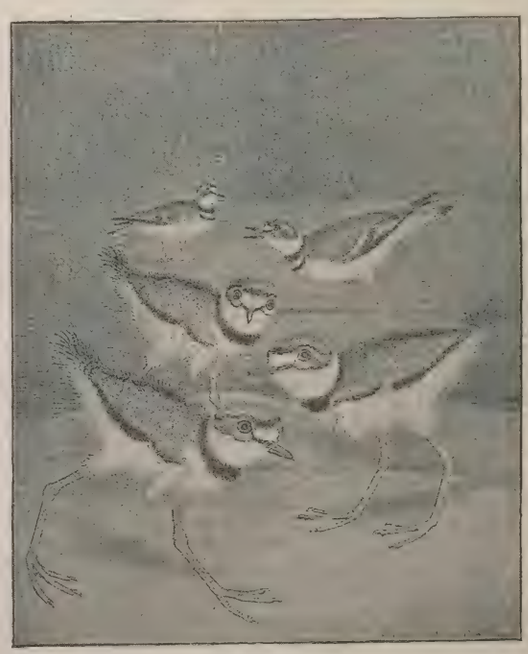
NATURALISTS, sportsmen and bird lovers generally are to be congratulated on the appearance and character of this volume. It is what its author intended it to be, a reference book for all these classes, and certainly no one is more competent to prepare such a reference book than he.

Mr. Elliot's attainments in all three of these capacities are well known, and while most of his works have been of a more technically scientific character than the volume before us, yet he has written a great number of papers which were purely for sportsmen, and treat in a popular and pleasing way of the open air life among the birds which they love so well. Readers of FOREST AND STREAM who are acquainted with his pseudonym will recall many charming accounts of wildfowl shooting from his pen, as well as his recent interesting and valuable paper on the Wild Turkeys. Well known in science as president of the American Ornithologists' Union, Mr. Elliot's name is known also among wildfowlers as long the president of the Narrows Island Club, of North Carolina, one of the most successful ducking clubs of our Southern seaboard.

The title-page of this latest work gives in succinct phrase its contents: "North American Shore Birds: a History of the Snipes, Sandpipers, Plovers and their Allies inhabiting the beaches and marshes of the Atlantic and Pacific Coasts, the prairies and the shores of the inland lakes and rivers of the North American Continent; their popular and scientific names, together with a full description of their mode of life, nesting, migration and dispersions, with descriptions of the summer and winter plumages of adults and young, so that each species may be readily identified. A Reference Book for the Naturalist, Sportsman and Lover of Birds, by Daniel Giraud Elliot, F. R. S. E., etc., Ex President American Ornithologists, Union, Curator of Zoölogy in the Field Columbian Museum, Chicago; Author of "Birds of North America."Illustrated Monographs of Ant Thrushes, Grouse, Pheasants, Birds of Paradise, Hornbills, Cats, etc. With seventy-four plates." This gives a clear enough idea of what the volume contains, yet falls short of doing it justice.

Mr. Elliot's purpose being to make a book which should be for the sportsman and bird lover rather than for the naturalist, he has written his descriptions so that they shall be plain and easily comprehended. This he has done not by using words of one syllable, nor by writing the long and involved sentences which would be required with each description to explain what is meant by such technical terms as primaries, axillars, lores and so on, but by giving in the first pages of the volume a large outline figure of a snipe on which every space and every group of feathers which has a technical name are plainly marked with that name. No matter how unfamiliar he may be with the names used in describing a bird's plumage, the reader who goes over one or two of the descriptions with this diagram before him will at once learn the signification of these terms, which will thereafter have no terrors for him. On this point Mr. Elliot in his Preface says:

"To the various portions of a bird's plumage certain names have been applied by ornithologists which to the non-scientific mind may savor of pedantry. Some of these, however, I have found it necessary to use, and although they may be unfamiliar to the general reader, yet I believe they will be as readily understood as any substitute would be, though couched in apparently simpler language. Thus, the long stiff feathers of the wing, instead of being described by that sentence, are called primaries, the ornithological term, because they are the first or most important, and without which no bird could rise and sustain itself in the air. They are sometimes called 'flight feathers,' but this term carries with it no clearer definition to the layman than 'primaries,' and consequently attains the desired result of simplicity or clearness no better.



"The long sentence given above is, of course, impossible, objectionable in two ways—the space it occupies and the weariness that would arise from its constant repetition. In order, therefore, to render clear any term referring to, or describing any portion of, a bird's plumage, a 'map' of a bird is given, and every part indicated, with the name it bears, clearly portrayed, thus serving as a handy dictionary, and explaining all the terms used in these pages. It is believed that with little trouble the use of this 'map' will smooth away any difficulty arising from the occurrence of some unfamiliar word in the descriptions. A glossary will also be found defining all the terms used."

The plan of the volume is entirely simple. Following the short preface come the table of contents, list of illustrations, outline plate of snipe and glossary of technical terms. Then follows introduction, giving a short account of the family to which this group belongs, after which come the short life histories, from one to three or four pages in length, each accompanied by its plate and description of the species. The work closes with an Appendix, which consists of keys to the families, genera and species which should enable any one to identify any member of the group. There is a full index.

This volume is especially admirable for its simplicity and directness and for the very high quality of its many illustrations. These last were done by Mr. Edwin Sheppard, whose drawings illustrated Baird, Brewer and Ridgway's Birds of North America, Mr. Trumbull's Names and Portraits of Birds and other well-known works.

Mr. Elliot's volume is entitled to high praise. Like Mr. Trumbull's book just mentioned, it fills a place hitherto unoccupied, and it cannot fail to have a wide popularity among all men and women who use the shotgun.

For the accompanying illustration from the book we are indebted to the courtesy of the publisher.

KILDEER PLOVER.

From Elliot's "North American Shore Birds."

NATURAL HISTORY AT ATLANTA.

THE exhibit of the U. S. National Museum in the Government Building at Atlanta is intended, in the language of the catalogue, to convey to the mind an impression similar to that received by visiting the Smithsonian buildings in Washington.

Most of the objects exhibited are from the collections of the U. S. Museum, and are so arranged as to give a good idea of the character of the treasures therein preserved, besides illustrating the methods by which animals are studied, classified, arranged, labeled and displayed in a great museum.

The first department represented is that of mammals. Here the various types of mankind are shown either by figures or portraits, the bright costumes of some of the figures being very striking. Twelve of the most characteristic types of the human species are thus shown. Groups of Rocky Mountain sheep, Rocky Mountain goats, prairie wolves, armadillo and American badgers are also exhibited.

Next in order are the birds, of which six cases are exhibited. Five of the six cases contain groups, by far the most instructive and attractive way to show these subjects. First are the bower birds, fitted up with a playhouse such as they construct in their native wilds in Australia. The bower is constructed of long twigs, brought together above and below, forming a cylindrical runway. This is decorated with bright feathers, shells, bones, buttons—when they can steal them from the natives—and other subjects.

The second group represents the lyre bird and its curious dancing mound. The third group is that of the American flamingoes, showing the construction of nest and the manner in which the bird sits upon the eggs. This is a very showy group. Next are the long and slender-toed jacanas from Mexico, whose peculiar habit of walking upon the broad-leaved aquatic plants is here illustrated.

The fifth group, "The Interrupted Dinner," appeals strongly to the mind of every lover of the gun. A red-tailed hawk in the act of feasting upon a recently caught grouse is suddenly set upon by a goshawk, and is mounted with claws in air trying to keep the marauder away.

The last case of birds contains a fine collection of the birds of paradise from New Guinea. About thirty kinds of these birds, so remarkable for beauty of plumage, are shown. Some of the specimens are very valuable, and the exhibit, though not so large, is well worth going to see.

The snakes are represented by such well-known friends

as diamond rattler, banded rattler, prairie rattler, copperhead, harlequin snake and water moccasin. The poisonous snakes of the United States thus brought together in a group make an interesting exhibit.

Next are shown representatives of seventy-two families of American fishes. These are preserved in alcohol and exhibited in flat-surfaced jars.

Next we come to the department of anatomy, where interesting structural developments of various animals are to be seen. By the use of specimens and models some of the internal secrets concerning the development of embryo, skeleton modifications, etc., are to be seen at a glance. For instance, under modification of the skeleton for locomotion is shown the kangaroo, the ape, the sloth and the dude (mentioned in the order of their value).

Among the marine invertebrates are to be seen many pretty objects, both dried and in alcohol.

The department of mollusks exhibits a case of showy shells, and must not be overlooked.

A very fine exhibit of insects is made, the popular portion being eight frames of beautiful *Lepidoptera* and *Coleoptera* (butterflies, moths and beetles), gathered from the four quarters of the globe.

Passing on, we come to the fossils; next the geological exhibits; then the minerals, and on to the ethnological. Here we see many things of interest pertaining to the life of the sons of the great American forests and plains.

That the Smithsonian and National Museum exhibits at Atlanta will instruct the people drawn to it by its attractiveness cannot for a moment be doubted; the educational values of great museums cannot be computed, and the unstinted evidences of hearty appreciation of the Government display by the President of the United States and the members of his cabinet during the recent visit to the Atlanta Exposition was fully merited.

B. A. BEAN.

THE VELVET OF THE ANTLER.

Editor Forest and Stream:

In your issue of the 24th inst. Mr. Tenner says it is evident that I have not had opportunity to observe the habits of deer or I would not deny the well-known fact that deer get rid of the velvet on their horns by rubbing them on young trees. As to my chances of observation, I have killed deer since the winter of 1854, and have been in the mountains continuously since the 10th of June, 1860. So on that score I believe I have had good opportunities. From Mr. Tenner's statement I am led to believe he thinks the velvety covering on the deer's horns during their growth is fast to the horn, which it is not. The horn is covered with skin and that skin is covered with fine hair. Now, while the horn is growing to break that skin makes a scar on the horn, and the deer are very careful about hurting their horns at this period. When the horn gets ripe, or has attained its natural growth, this skin bursts open and comes off in strips. I have killed bucks which had strips 8 or 10in. long hanging to their horns.

For quite a while before the horns begin to peel they attain their growth, and no blood circulates in any part of them.

Here the horns of some are now beginning to peel, yet I have killed them as late as Oct. 5 with velvet on parts of their horns and they had begun to horn brush. I have never been able to find where a deer has horned the brush until about the time the bucks separate in the fall, and the horns are ripe and mostly pulled before that takes place.

Now, Brother Belknap, I want you to keep your eye on the gun and when you go up into the glades around Camas Prairie this fall to kill a buck while he is in the short blue; I want you to observe how early you find where one has horned the brush, for I am going to send FOREST AND STREAM some of the skin with a little velvet on from the horns of the blue buck I killed last Labor Day with my .22, and I am going to try to send a horn with the ripe velvet on.

I send with this a little of the skin covered velvet from horns that I got last Labor Day; they were too ripe to show good. I hope to be able to secure a pair of horns this fall that will show them partly peeled.

LEW WILMOT.

[The belief that deer rid their horns of the velvet by rubbing them against young trees and bushes is certainly very general, and is confirmed by the books on natural history. Mr. Wilmot, we fear, has undertaken a large contract if he expects to prove a negative. It is not unusual to see deer and elk "shaking," as it is sometimes called, at the very time that the velvet is peeling. We have often seen elk "shaking" in the Rocky Mountains in the very first days of September, and at that time of the year have killed bulls that still had patches of velvet clinging to the antlers near the base, and at the same time had this rough base filled with finely crushed pieces of green bark and leaves. On the other hand it is altogether probable that deer fight bushes long after the velvet has disappeared, acting when doing this just as they do when rubbing off the velvet. Domestic and wild animals often do this, sometimes apparently in play and sometimes to scratch the head and neck. We have seen this done by domestic cattle and by buffalo. We should be glad to receive from our readers all over the country facts bearing on this question with regard to all species of deer.]

Bluebirds and Robins in Colorado.

DENVER, Col., Oct. 27.—Mr. W. R. Gorman, of Paschal, Ga., inquires through FOREST AND STREAM of Oct. 19 about the bluebird. I don't know whether a report from this section of the country will interest him or not, but suppose it will do no harm.

Bluebirds arrived here from the South last spring, March 2. They were throughout the city in great numbers for a few days until they ate up the ivy berries, and then they gradually thinned out, scattering throughout the country. I think about the average number nested in town. Many nest in the mountains up to an altitude where frost is frequent all through the summer. In the fall they did not assemble in such great numbers in town as usual, probably because food was so exceedingly plentiful all over the country. The season was unusually fruitful. Last year bluebirds appeared Feb. 16, robins ten or twelve days later. This year robins came March 5. Both birds differ somewhat from those of the Eastern States, and I think in their migration they follow the mountain chains southward into Mexico. WILLIAM N. BYERS.

Woman, Fashion and Plumes.

Editor Forest and Stream:

Will you kindly allow a woman to say a word in defense of her sex? In your issue of Oct. 5 you publish an article by E. Hough. How little he knows the sex he traduces. Because there are a few women who, through ignorance, insist upon having choice plumes, the whole sex is scored; at least those who have the wealth to satisfy their whims. Oh, Mr. Hough, how little you know the warm heart that beats under the sealskin as well as under the $2 jacket. I think you have never been sick and alone among strangers.

In my thoughtless youth I wore a part of the bird of paradise in my hat. But when I was informed that the beautiful bird was sacrificed for the few feathers I used ostrich feathers instead, as I was assured that they would be dropped later by the bird if they were not cut in their prime. I think nearly all women have kind hearts, and could Mr. Hough's article be disseminated through the land, no real woman would wear the plumes and the species would not become extinct. But oh, Mr. Hough, you who are so tender and gentle in your searches into nature's heart, and who can listen to the song of the mouse and interpret it to us with such entrancing word-music, I pray you, teach us a little less roughly and give us credit for some heart.

Another thing, Mr. Hough, although I do not deny that women like to be admired (so does the other sex), still I do not think the extremes of fashion are intended for the opposite sex so much as for their own; and where one woman is a slave to fashion thousands are giving the best that is in them to promote the health and happiness of their families and their fellow-men. MATER.

Another Grouse Incident.

CANTON, Pa., Oct. 31.—Curious incidents that happen while hunting ruffed grouse are common, but perhaps the following may be of interest to some of your readers. Last October, while grouse shooting on a hill south of and overlooking the village of Canton, Pa., I flushed and fired at a large bird which went off in a direct line toward the village, though intervening bushes prevented my marking his flight for any great distance. In the afternoon a gentleman in town told me that his brother-in-law, while at work on the south side of his house, on the lawn which faces the hill where I was shooting, was startled by a large grouse which flew against the side of the house and fell dead. I inquired the time and it corresponded almost exactly with the time I had shot at the grouse on the hill three-fourths of a mile away and about 400ft. above the village. I could not ascertain whether the bird had any shot marks or not. Probably it was the same bird at which I fired—at least the coincidence was curious. Grouse are very plenty this fall in this vicinity, but quail were never so scarce in my recollection.

J. W. P.

Prairie Chickens in Confinement.

TOLEDO, O.—Friend Ames's letter in this week's FOREST AND STREAM reminds me that within a few days I have learned of a "plant" in this State where it is reported that the rearing of prairie chickens in confinement is carried on with success on quite a large scale. I am looking the matter up, and hope to be able to give the facts in the case to FOREST AND STREAM before long. There is nothing improbable about the story, if the man in charge has the requisite skill and knowledge, and both these birds and quail ought to be reared about as easily as barnyard chickens. The man who had the care of the birds Mr. Ames saw must have been a very dismal failure.

JAY BEEBE.

An Editor who Hied.

OUR silence for the last two weeks we must attribute to the fact that our junior has taken a lay-off and we were compelled to hie ourself to the bad lands to secure our usual supply of venison for the winter. We were also fortunate enough to secure a few wolf hides. The bounty on the latter will enable us to purchase paper, ink and other material necessary to run a newspaper with. Our tattered garments float humiliating but boldly out to the breezes, and the gentle zephyrs glide stealthily through our whiskers, but we will be in it all the same.—*Sandusky Miner and Prospector.*

The Linnæan Society of New York.

A REGULAR meeting of the Linnæan Society will be held at the American Museum of Natural History, Seventy-seventh street and Eighth avenue, on Tuesday evening, Nov. 26, at 8 o'clock. A paper will be read by Mr. Frank M. Chapman, "Remarks on Birds Collected in Greenland by the Peary Expedition."

WALTER W. GRANGER, Sec'y,
American Museum of Natural History.

Soon or Early?

Editor Forest and Stream:

I notice in the South a very general substitution of the word "soon" for "early." Where a New England resident would say he got up early in the morning, the gentleman of Dixie would remark that he got up soon. Or, to perfect the paraphrase: The "early bird" catches the worm, but the "sooner dog" takes the rabbit. Would this be correct? C. H.

American Ornithologists' Union.

PORTLAND, Conn., Oct. 18.—The thirteenth congress of the American Ornithologists' Union will convene in Washington on Monday, Nov. 11, at 8 o'clock P. M.

The public meetings will be held at the U. S. National Museum, commencing Tuesday, Nov. 12, at 11 o'clock A. M.

JOHN H. SAGE, Sec'y.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Game Bag and Gun.

WHEN THE SEASON OPENS.

THE dog days of 1895 are a thing of the past and the days of the rabbit have arrived. The odor of the damp, decaying leaves of the oaks and the maples is as incense to the nostrils of the hunter who is fond of the cry of a hound in pursuit of a rabbit. The season when bunny can be hunted legally is always looked forward to in no uncertain spirit by a large number of devotees of the dog and gun.

Love of sport in some shape or other is really inherent in us all, did we but know it Some have different ideas of it from others; it is true, but it's there, all the same. The man on his $400 hunter who follows a pack of hounds that is driving a Kentucky red for all he is worth, or who is galloping over the springy turf of Exmoor after a warrantable stag, is worthy of the name of sportsman. The man who risks his limbs and expends much wind in his efforts to circumvent the wily goat of the Rockies or the agile chamois of the Alps; the man who, gun in hand, clambers up the boulder-covered slopes of the Alleghenies and reckons himself fortunate to come home with his body whole and a solitary ruffed grouse in his pocket, and all others who seek their game in the forest or on the field, these men all exhibit the love of sport cropping out in some sort or other.

We don't have it all alike. As is the case with measles or chicken pox, some take it more severely than others. Why then should the man, who with his gun, shells and little yellow dog sallies forth to force mild-visaged rabbits to their own undoing, be looked upon as less worthy of the name of sportsman than those who fly at bigger game?

Have you ever been rabbit hunting on Long Island?

And if you have, did you ever leave New York city during the afternoon or evening hours of Oct. 31 via the L. I. R. R.?

The open season for hunting rabbits on Long Island commences Nov. 1, and the exodus from New York during the hours mentioned above is worth witnessing. Thirty-fourth street ferry and James Slip both deliver a varied assortment of hunters, dogs of all kinds, guns and demijohns, at the Long Island City depot of the L. I. R. R. No one portion of the island appears to be more favored than another; main line or branches, it's all the same, the baggage cars are turned into temporary kennels for dogs, whose duty it will be on the morrow to drive the cotton-tail from his form and to send him round the wood so that the man with the gun can have a chance at him.

Illustrations in the English sporting papers have made us familiar with the exodus to the North that takes place in London on the eve of the opening of the season on grouse. The dogs that appear in those illustrations are all high-toned setters or pointers (comparatively few of the latter), and all of them are led by porters in the uniform of railroad employees. Gun cases and other hand baggage strew the platform and make it hard work for the porter to lead his charges to the place set apart for the canine passengers.

But here in New York we have a latter-day exodus that has many different features from those portrayed in the above-mentioned illustrations, although the general object—sport—is the same in both cases.

Take Oct. 31 of this year, for instance. Rain, after a long-continued dry spell, was coming down in torrents. The "sidewalks of New York" were running with a muddy stream that made things under foot decidedly unpleasant. They were slushy, to say the least of it; the man or woman who had to walk found that out very quickly. Yet through it all, and cheerfully too, came by ones, twos or threes, men with guns over their shoulders, and with a dog or dogs in tow. What did they care for the rain! The wet weather of to-day would make the scenting just so much the better on the morrow. With good luck they might not have to buy a single rabbit on their way home to save their reputations as nimrods, a thing that had happened on more than one occasion previously.

On the ferryboats the aspect of affairs changed. Friends greeted friends while their talk was all on the one theme—rabbits and how this or that dog was "the best you ever saw." Men with two dogs and with guns in fine cases looked down with a *soupçon* of contempt upon the man with a single animal and his gun encased in stout wrapping paper, little thinking how, on the return trip, the tables might with justice be turned.

In the waiting room there was a little more excitement; two dogs had disagreed and their respective owners were likely to do so too. Another man, whose gun and grip bothered him somewhat, found that he had a big contract on hand with two excitable dogs, each attached to him by separate chains; one tugged him forward while the other pulled him just as forcibly to the rear. A sportsman who tripped over the leading dog added a few words to the general conversation. It was a spirited scene.

Just as a main line train was ready to leave, a stout man, whose sole baggage was a gun in a brand-new canvas case and a shawl strap that held a bundle evidently composed of three bottles of something that was to be used in case snakes were met with, ran up to the ticket office and asked for a ticket to ———. Where was his pocketbook? Ach! What had he with the dollar bills done? His friends, who had been waiting for him, urged him to hurry up; he did so, but not a cent of money could he find. At the sound of "All aboard!" one paid for his ticket, another seized his bundle (they all seemed very anxious about that), and together they ran for the train.

With such an excellent service to all parts of the island, the departure of the hunters was not so noticeable as it otherwise would have been had there been only a few trains at their disposal. Still there was lots of fun, and a couple of hours, say between 5 and 7 P. M., any Oct. 31, could be spent very pleasantly in the Long Island City depot of the L. I. R. R., watching the departure of rabbit hunters who claim this city of New York as their home. Our illustrations will convey some idea of what may be seen during those two hours.

North Carolina Deer and Bear Country.

NEW BERNE, N. C., Nov. 1.—Deer and bears are very abundant near here at the Fine Lakes, at White Oak River, at Richlands, on the Quaker Bridge Road, and at Brown Sound. Bucks run up to 125lbs. dressed. C. H.

THE SEASON'S GAME.

Manitoba Grouse Country.

WINNIPEG, Man., Oct. 30.—*Editor Forest and Stream:* To explain the shortage of the grouse crop is a puzzle. There are lots of theories, but never one that can be satisfactorily substantiated, but the pintailed grouse and pinnated grouse "crop" was a failure, and this certainly was not in consequence of their being shot out. The ruffed grouse, on the contrary, is more plentiful than for years past. It is only about thirteen years ago since the first pinnated grouse (or what is dubbed the Minnesota prairie chicken) made their appearance in Manitoba. This bird has traveled with civilization, or rather, with wheat cultivation, and is now found 250 miles west of the 49th parallel and seems to be going west a few miles every year. The pintailed grouse, which abounds—or did abound two years ago—at the foothills of the Rocky Mountains and extending eastward for about 100 miles, have this year almost disappeared. I traveled last month 400 miles parallel with the mountains, and from observation and inquiries found the same story repeated: "Something has killed them." This phrase covers scores of theories. I could give my own, but it would also be a theory.

Cranes, both blue white and brown, seem to have bred well north, also swan and geese. They are in the southwestern portion of the Province in great numbers. I saw a flock of cranes a few days ago that resembled a flock of sheep to a demonstration; had I not known that sheep were not kept in that locality I should have passed on.

One thing is certain: every effort will have to be exercised to uphold our game laws and see them enforced or we in Manitoba will be like our cousins in Dakota. A friend in Dakota wrote me to get him guest-permits for himself and three friends to shoot in Manitoba, writing me that they had not a feather in their county. I wrote him that when he showed some interest in trying to preserve the game in his county I should be delighted to be of assistance to him; but now he had helped to kill every feather they had without once raising his voice in favor of game protection he would never get my assistance to aid him in killing our game to the last feather.

THOS. JOHNSON.

Conditions in Louisiana.

OPELOUSAS, La., Oct. 30.—*Editor Forest and Stream:* While the conditions for breeding were not of the best, I am under the impression that the crop will in no wise be cut down. The summer was one long wet spell, and interfered very much with the breeding. This wet season lasted several months, and I doubt not that many nests were destroyed or young bevies drowned by the excessive floods. Since about Sept. 1 of last year we have been treated to dry weather, and at present water is scarce. The pools, ponds and marshes are all dry, and it is a mystery to me how the birds get water. The negroes down South say that during a long dry spell the birds drink the dew on the grass. This superstition would hardly have held good this time, for the atmosphere has been too dry for even dew to form on the grass. But the birds get water from somewhere, and are not suffering.

Our open season begins on Nov. 1, only a few days off; but it will be entirely too dry to permit of good shooting.

The best breeding season is a dry one, with occasional showers. T. A. JACKSON.

Texas Quail, Chickens and Snipe.

GALVESTON, Tex., Oct. 31.—*Editor Forest and Stream:* From my observation since Oct. 1 I find quail fairly abundant. The severe weather of last February seems not to have affected them. From other sections of the State I learn that the birds are abundant.

The past season was very favorable for the hatching of prairie chickens, as we had a dry summer and no spring rains to drown out the nestings; so our bird supply is practically unaffected either by weather conditions or excessive shooting.

Jacksnipe are coming in, but on account of there not being any very recent rains, they are not very plenty yet near Galveston, but we may look for good shooting throughout the winter on these birds with the advent of several good rains and colder weather. The first jacksnipe made their appearance on the coast Sept. 2.

R. W. SHAW.

The Virginia Bird Crop.

RICHMOND, Va., Nov. 1.—*Editor Forest and Stream:* The "bird crop" of quail in Virginia this year is the poorest we had since the deep snows of '56 and '57. The truth is there are not enough in any county in the State to enable a sportsman to make a respectable bag in a week's time. The members of the Virginia Field Sports Association are not going to shoot at all, and the farmers throughout the State will forbid shooting in order that the few birds left may restock the covers for another year. The cold weather of last winter not only killed out the quail, but almost completely wiped out all of the small birds as well. I have not seen a bluebird since the deep snow last January. The English sparrow is with us, however, in great numbers, both in the towns and in the country, and like that other "nuisance," the small boy and his gravel shooter, is here to stay.

POLK MILLER.

Mississippi Quail.

WAVERLY, Miss., Oct. 27.—*Editor Forest and Stream:* So far as I can say I think birds are fully as abundant as last season. I was out this morning and found altogether in about three hours ten bevies within a half-mile circle of the kennel. Reports from country friends say there are more quail than last year, but some are later and smaller. Striking the medium, I think it is safe to say that the quail crop equals in every respect that of last season W. W. TITUS.

NEWTON, N. C., Oct. 29.—*Editor Forest and Stream:* The bird crop is short this year. The trainers who are on the ground are the people from whom I have gathered my information. I will give you some of their experiences here during the last three weeks. Mr. Stoddard and Mr. Hammond have been all over the country in every direction, and have, I think, about as good idea as anyone can have. They tell me that they have run a good brace for three hours and not a single find. Then they have run puppies and found from three to five coveys in an hour. They have gone out a number of times and found nothing, and they have found as many as nine coveys in a day's hunt.

Mr. Buckle is down in the country about eighteen miles from here and his report is about the same. Messrs. Johnson, Gray and Mayfield are out from town about four miles and their reports are about the same.

Two young men, residents of the town, drew the west side grounds and found six coveys until 10 o'clock with two brace, and on the eastern grounds they found seven coveys with one brace in an hour's time, and they put down two more brace without a single find.

Now we must confess that this looks very blue, but we can draw some consolation from the fact that the natural surroundings are dead against the dogs. It is dry here beyond description, there having been no rain for more than three months. The weeds, brush and everything are covered with dust, and a dog after running for an hour sets up a continual sneezing on this account and it kills his nose for birds.

I really think there are more birds here than the trainers find. I know too that they are not as plentiful as they were last year, but there are enough birds for trial purposes if it should ever rain and the natural conditions should become favorable.

The shortness of the crop is attributable to several causes. The very severe winter left the birds in a weak and feeble condition, and the powers of propagation on this account were undoubtedly impaired, for we see very few full-grown birds, showing that the first crop was almost a complete failure. The pot and meat hunters had something also to do with it. I will give you one instance. After the poor birds had weathered through our terrible winter they were weak and frail, and our pot-hunters here and through the country killed them in great numbers. B. J. S.

WILKES-BARRE, Pa., Oct. 30.—*Editor Forest and Stream:* I am pleased to say that there are a great many more grouse this season than last, due entirely to an exceptionally favorable breeding season. This year we had no rain to speak of during the hatching season. Wet weather only affects the very young chicks. Birds 3 or 4 weeks old will survive almost any storm. The season of 1894 we had fewer grouse in this section than I have ever known before, due largely, I think, to nineteen days of almost incessant rain, which commenced during the last of April and continued during the time most of the birds were hatching.

I have gunned three days this season and have killed nineteen grouse and one woodcock. All the grouse killed were young birds but two, which proves conclusively that the birds have done well with us. We put out a number of Mongolian pheasants here last fall. I think that they have not done well. I myself have seen none, and have had no reliable information concerning them.

H. M. B.

CHATTANOOGA, Tenn., Oct. 29.—North of Chattanooga the cold weather of last winter killed most of the birds left over. In this immediate neighborhood they are reported to be fairly plentiful. I hear from good authority in southwest Tennessee that birds are very plentiful, and I take it that they are fairly abundant south of this place.

The hatching season was favorable in this section, though heavy rains in July and August may have drowned a good many of the young birds. F. I. STONE

CINCINNATI, Oct. 29.—*Editor Forest and Stream:* I hear no encouraging reports about the quail, as a result of the almost unprecedented drought of the past summer, but my investigation of the subject has not been as thorough and extended. One of my acquaintances, recently in central Illinois, found the birds scarce and quite small, evidently of a second hatching. Unless the country is favored with drenching rains to get the ground in proper condition for the dogs, the shooting will be seriously injured, even should birds be found more plentiful than now. HUNTER.

ATLANTA, Ga., Oct. 28.—*Editor Forest and Stream:* The rapidity with which birds have been destroyed in this section is much to be deplored by those enterested in reasonable sport and the preservation of game. It seems to be a matter of little difference whether the season is good or bad, as the majority of the hatch is exterminated before they are well feathered, while in the long open season from October to April scarcely enough escape for seed. EDWARD S. GAY.

WASHINGTON, D. C., Nov. 1.—*Editor Forest and Stream:* I have been carefully investigating the question as to prospects for quail shooting this season, and am fully satisfied that so far as relates to the States of Virginia and North Carolina the shooting will not be anything like as good as in the past two years, especially during the early part of the season. My advice to sportsmen from the North would be to defer their visits to these particular States until late in the season, as most of the birds were late hatched, and are too small as yet to afford any enjoyment to either dog or sportsman.

F. B. FARNSWORTH.

PERTH AMBOY, N. J., Nov. 1.—Yesterday's storm will make better shooting than has been since the opening of the season. There are some quail and many rabbits, but both have been hard to find on account of the extreme dryness of the ground and fallen leaves. Ducks are fairly plentiful in Raritan Bay. The attention of game warden J. L. Tooker has been called to violations of section 10 of the game law, which prohibits the use of sailboats in hunting wildfool, and the practice is likely to be broken up. Woodcock have been very scarce, but there should be a flight next week. Some large striped bass were taken recently in the Raritan River, one of 5lbs. with rod and line and one of 14lbs. in a fyke net. Last week one man caught twenty-five good-sized bass in two hours at Marsh Point, half a mile above the railroad bridge. J. L. K.

GRAND FORKS, N. D., Oct. 27.—*Editor Forest and Stream:* The rainfall during this spring and early summer was exceptionally heavy for North Dakota. While this produced two crops of wheat in one it produced about one-third of a crop of chickens.

Never did I see such a quantity of old birds as wintered over ready for business this spring. Although January and February had the lowest average temperature of many years, birds wintered well.

But we had some very sour weather in the latter part of May and early part of June. It was both cold and wet. This either addled the eggs so they did not hatch or it chilled the young ones to death. My experience with birds I have hatched under a domestic hen is that during the first two or three days after incubation they are easily chilled.

I have just returned from my month's shooting over the State and find that the scarcity of birds has not been local. In some localities I found it was attributed to a hail storm. But I found birds just as scarce in localities where there had been no such storm.

Nor is it attributable to excessive shooting. For several years I have shot in a locality thirty-five miles from a railroad station, where no one has shot but myself. For miles from my center not a gun has been heard but mine, save an occasional farmer's—very few of these, because I have kept them supplied with birds. I have never shot wantonly; never wasted a bird. Last year I shot more birds than during my first visit there; but this year I bagged about half as many as I did during the first season.

So it cannot be excessive shooting that thinned the birds this season.

My experience is that birds can stand a dry season better than they can a wet one. There were plenty of birds here in '89, although we did not have a shower between seeding time and June 6.

Our State has suffered in spots from some non-resident sportsmen (?), who have shot only with the idea of slaying everything in sight. Hundreds of birds have been shot and allowed to rot in heaps in certain localities, especially in the northern part of the State. I am sorry that the law for next year is not likely to exclude such persons; for although it imposes a fine of $25 on non-residents, it will not reach the class of men who commit such wantonness. W. HAMILTON SPENCE.

P. S.—I got forty-four jacksnipe one afternoon this fall, between 2:30 and half an hour before sunset. I was not trying to make a record either, or I had shot more. I shot at nothing I knew I could not pick up in the open ground. This, with my No. 16 gun, with which I shoot chickens, ducks, sand-hills, geese, etc., is not bad, is it? Compared with this, goose shooting is but pot-hunting.

W. H. S.

LITTLE ROCK, Ark., Oct. 27.—*Editor Forest and Stream:* Heavy rains during the early season destroyed most of our first "crop" of birds, but the second crop is growing nicely and in a few weeks will be right to shoot. Many crops are now but half grown and very few have been shot up to date. We had snow on the ground for seven weeks last winter. That is very unusual here and thousands of quail were trapped and potted; so our crop will be short, but we will have plenty for good sport by Dec. 1. We do not shoot them until heavy frost kills the vegetation. Our duck shooting is very good just now and will be fine within the next two days. The mast is also very heavy, and my information is that there are plenty of deer and turkeys in the southern districts; a friend of mine killed two last week within a few miles of Little Rock.

JOS. W. IRWIN.

DALLAS, Tex., Oct. 31.—*Editor Forest and Stream:* I have been out with my gun but once or twice, but from what I can learn the crop is a good one. The shooting season begins here by law the 1st of this month, but I am sorry to say that it is observed only by gentlemen sportsmen. The common herd shoot at any time and at anything they choose to. I live near a city, and this class begins on the birds just as soon as they can fly, and of course they are quite scarce near me. My hunting ground is in Montague county, this State, where birds are very plentiful. I expect to go there next week for a month's shoot. MAJ. A. J. ROSS.

A Day's Sport in Pennsylvania.

ON Oct. 25 Messrs. F. S. Hyatt, C. A. Hall and I. S. Vought, of New York city; W. H. Schroeder, of Elmira, N. Y., and Price Bros., W. J. and M. D., proprietors of Spruce Cabin House, Canadensis, Monroe county, Pa.—a popular headquarters for sportsmen—accompanied by the noted guides Paul Price and Mart Fish, left the house for a hunt in Monroe and Pike counties, the object being large game, which abounds in this section. Ere the guides had posted the gunners on the different runways Fish ran plump up against a black bear of immense size. This fellow was brought to grief by two well-directed shots in the head, and the fun commenced. Scarcely had W. J. Price secured favorable position, awaiting the appearance of anything in the game line, when a large buck and doe bounded directly toward him. Price, free from "the fever" and biding his time, brought down the doe with the first shot at a distance of 60yds. The buck, being behind, veered to the left and escaped. In the second drive another buck came from the same direction and was downed at long range by two well-directed shots. A goodly number of pheasants were also secured.

All the game was brought to Spruce Cabin House on the following day, and, with the gunners, was photographed by Mr. Parsons, of New York city, a patron of the house. The photographs will adorn the walls of the reception room. W. E. D.

Adirondack Deer.

BROOKLYN, Oct. 30.—*Editor Forest and Stream:* Apropos to the discussion relative to the hounding of deer in the Adirondacks, permit me to state a little of my observation and experience. Some of your correspondents write as if a deer had no chance for life in "dogging time," but I believe that of all the deer run by dogs nearly or quite as many escape as are killed. No "starter" and no dog can steer a deer into a given lake, and water is so abundant in the Adirondacks that "stray" races are frequent. I have known a dozen dogs to be in the woods and as many men watching on Utowana Lake and vicinity, and not a deer came to the water all day. Again, I have known parties to hunt with dogs unsuccessfully for a week at a time, and once did it myself, though I have had my share of success both hounding and still-hunting. If no man kills more than his legal two a year we are in no danger of exterminating the deer.

J. C. ALLEN.

CHICAGO AND THE WEST.

Hundreds of Hunters.

CHICAGO, Nov. 2.—Mr. Charles Harris, traveling passenger agent of the Big Four R.R., is just in from Wisconsin. He says that 135 deer hunters from Ohio and Indiana got off at one station—Abbotsford, Wis.—on one day this week. The railroad people think there were over 500 men came in from other States to hunt deer in Wisconsin last week. Many of these men will revile the game laws which prohibit hounding and all the easy ways of destroying deer. Many will wonder where the deer went, pretty soon. In Wisconsin the wise deer hunter wears a red cap, so that he is not so apt to get shot at by some of the motley crowd. Each season from two to six men are killed in the woods of Wisconsin and Michigan. Nearly always they are the wrong ones.

There are three men in jail at Florence, Wis., for illegal deer shooting. One is an Ohio man, and two are local shooters. One of the latter was fined $60, and in default went to jail for 60 days. The Ohio man was fined $47, and jailed in default.

In Chicago Protective Circles.

City Warden Charles H. Blow was an undertaker before he went into the warden business. He had no saloon at that time. By industry he has accumulated funds and started a saloon, on the window of which in gilt letters is the legend "Blow's Place." In the door there is the full-sized figure of a stuffed elk. It is a cow elk, or at least has no horns. A good sign for a game warden.

P. S.—The Illinois State Sportsmen's Association has not started any saloon.

Deputy Warden S. L. Hough has continued the war along the sedgy banks of Fox Lake. On Oct. 25 Bert Stanley fired a few shots after sunset, on Grass Lake. He was fined $15.

Chas. O. Boyle fired one shot before sunrise, on Long Lake. It cost him 10 plunks of the realm.

Wm. Dubois on Oct. 20, on Grass Lake, fired three shots before sunrise. Value, $15.

Jack Suess on Oct. 25, on Grass Lake, fired five shots. He claimed he was lost, and was firing signals of distress, after sunset. The judge hardened his heart, and assessed him $10.

Geo. Beckwith and his friend Nelson were shooting in a gunny sack blind, beyond the natural cover of the rushes in Rankin's Bay, Fox Lake. Warden Hough arrested them. The case is not yet tried.

C. E. Gurley, of Chicago, fired after dark and was arrested. He swore to the jury that he was trying to get a shell out of his gun and couldn't, so he shot it off. Then he cried like a baby to the jury, said he was of good family and not used to being arrested. The jury let him go. All the above cases were brought before Justice John J. Burke, of Antioch, Ill. The deputies seem to be willing to undergo great inconvenience to catch these men, and they have had great success all this fall. They are upheld by sentiment, and are making a good object lesson in protection.

On Winnebago Waters.

Mr. G. A. Buckstaff, of Oshkosh, Wis., the young sportsman Assemblyman who has been back of the fight on illegal netting in Lake Winnebago, tells me that the wardens have burned over two miles of nets, and have made it so hot for the law-breaking fishermen that they have to sneak what few fish they catch by wagon to other points, as the express companies are afraid to handle the goods any more at Oshkosh.

And They Protect in Dakota.

There is a club of Dubuque, Ia., sportsmen who call themselves the Minnewaukon Club because they sometimes shoot near Minnewaukon, in the Devil's Lake country of North Dakota. The warden found they were breaking the laws and made a raid, confiscating all their game, which included 153 geese, 38 grouse, between 200 and 300 ducks and 84 jack-rabbits. They had previously filled four trunks with game, which was exclusive of the amount seized, and shipped it to St. Paul, but when they reached the latter city their cup of woe ran over when they were informed that the game warden had also attached that. How they escaped being attached themselves is not known. It is sickening to read of the slaughter of game made by visiting sportsmen in Dakota. The hunt, which should be made an occasion of gentlemanly pleasure, is all too often turned into a carnival of killing. I could never see why such shooters should come back and boast of such work. More power to the wardens!

Old Duck Grounds Burning up.

Great fires have raged this week on the Kankakee marshes of Indiana. The marshes have been largely drained, and the dry weather has turned the bog into peat. The old duck grounds are burning up.

Bogus Placards.

Unknown parties have filled the Fox Lake region with bogus game law placards, which give wrong advice as to the actual law. Several misunderstandings have arisen from this pernicious business.

Bears at Bobo.

Preparations go on at Bobo, Miss., for the bear hunt to which I have been invited. Mr. Divine writes that the party will probably consist of Mr. R. W. Foster, of New Orleans; Col. Dick Payne, Mr. Noel Money, of Oakland, N. J.; Mr. Irby Bennett, of Memphis, with himself, also of Memphis. The bears of the Delta would better be looking for tall cane now, for about Nov. 17 there will be trouble in their neighborhood.

Mr. Divine writes also that Noel Money is already at Memphis, and has had heavy shooting at Lucy, Tenn. Mr. Money and his friend there killed over 200 quail in two days and a half. They started twenty-five bevies the last day they shot and killed seventy-five birds. The crop of quail must be extraordinary.

The Bell and the Shot.

The big shoot at Atlanta was minus the company of Mr. Tom Divine, who was counted upon to head the Memphis contingent. The reason of his non-attendance is not generally known. I am credibly informed that it was on account of a difference of opinion between him and a gentleman of color.

The nigger had a cow killed by Tom Divine's railroad, and Tom gave him $10 to settle the claim and took the bell that was on the cow; but the nigger insisted on having the bell returned. Tom would not give it up, so the nigger sued out a writ to replevin the bell, and Tom had to stay home and attend court in place of a shoot.

It is no secret that Tom Divine has a room full of unlawful cowbells he has thus accumulated. But what would you expect of a claim agent who would offer a man $15 in settlement for the death of his wife and family—and make the settlement, too!

Mr. Irby Bennett shot a great gait at Atlanta, and moreover was out every night at some ball or pink tea. We have only a few men who can singlefoot, trot, gallop and canter as Irby does.

They Left no Potatoes or Pumpkins.

Among callers at the Western office of FOREST AND STREAM this week were Mr. Harry R. Loughran, of the Iroquois Gun and Rifle Club, of Pittsburg, Pa.; Mr. F. F. Merrill, of Milwaukee, Wis.; Mr. J. Herbert Watson, of Brooklyn, N. Y. The latter was on his way to the coursing meet at Goodland, Kan.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

WISCONSIN WANDERINGS.—III.

AT Fairchild, Wis., there was found a good hotel, with a host disposed to attend to the wants of his guests. Arriving there at noon and after dinner, finding that no business could be done till evening, I unpacked the gun and strolled into one of the many scrub oak groves which dot the country to the west and south of the village. The trees are of young and vigorous growth, few of them over 50ft. high, and none or at most very few of them with holes in them, but everywhere were scores of squirrel nests made from leaves, showing that these groves were the favorite summer resorts for them. Two were bagged in a few minutes, and having no use for more, I turned my attention to the thick brush in the ravines that looked good for ruffed grouse, but none were seen.

The N. C. Foster Lumber Co. have a logging railroad running twelve miles northeast from the village, and are building an extension further into the woods. The engineer of the road said he saw prairie chickens fly from the train almost daily, and gave me a cordial invitation to go out on the log train next morning until chickens appeared, when he would stop the train and let me off, and pick me up on the evening train. As every foot of ground traversed by the road is pine chopping or tamarack swamp, I thought the birds must be partridges, and told him so, but he said, "No, we see partridges in the swamp, but these birds I've been telling of are prairie chickens."

I was curious to know whether these were chickens being evoluted into partridge habits, and the next morning found me on the pilot of the locomotive, gun in hand, and alert for a sight of some of those chickens. There was not a square foot of prairie on the entire route. The land had been covered with pine in the drier portions, and tamarack and spruce in the low places. All the large pines had been cut; fires had killed the smaller ones, as well as the tamarack and spruce. Thousands of them were still standing, branchless and blackened to their pointed tops, while hundreds of thousands more were lying on the ground or across each other, many of them turned up by the roots and others broken short off at various heights. In the moister portions grass had got some hold, and patches of fire-stunted bushes were on the higher grounds. It was a dreary-looking waste, that became still more so after two hours' climbing over the fallen logs, and stumbling over roots. No houses, no cattle, no visible life of any kind. Twelve miles into this wilderness we went, but no chickens were seen. Then I got off and tramped for seven hours and saw no life except a few chipmunks. I did not expect to see any prairie chickens, but hoped to find some sharp-tailed grouse. When the afternoon log train came along I mounted the rear of a long train of log-loaded cars, headed for town.

When we were within two miles of town six chickens flew from the engine and alighted 200yds. from the track. Marking them by a pair of big pine stumps, I jumped off when the train slowed up for the mill, and walked back a mile and a half after those birds. I wanted to know if they were really prairie chickens. They were flushed about 25yds. from where they had gone down, and got up quite wild. The first shot set one to wabbling badly and the next barrel brought the bird down with a broken wing. Marking it instantly by a stump, I turned to watch the other one. It was flying irregularly, making desperate efforts to tower, but presently fell on its back close to a bush covered with scarlet oak leaves, making it very easy to mark it. The other one lay where it fell, but I could not find it until it tried to fly. The one by the oak bush was lying on its back, dead.

It needed but one look to see that they were the pinnated grouse—the real prairie chickens—an old hen and five young cocks, heavier than the old hen. I had killed thousands of them on the Iowa prairies, but these were the first ones for more than seven years past, so I shook hands with myself over the good luck and examined the birds with as much interest as if they were the first pair that had ever fallen before me. Then I indulged in some old-time chicken shoots on the Iowa prairies, with Ezra and the Smith boys, and other shooting companions, many of whom are now gone, as well as the chickens. Then I followed the rest of the chickens and flushed them at close range in the edge of thick brush, cut off the top of a bush with the first barrel, and found the gun had not been opened far enough to cock the second, so no bird was hurt.

It seems odd that a bird that ordinarily never goes to brush, except to perch on high trees in winter, should make its permanent home in a place so different in every way from its old prairie country. It has probably taken refuge here when driven from its natural domain by the encroachments of the farmer and many hunters, and finding these log-entangled choppings more secure, has taken up its permanent abode in them. It is a wise move on the part of the bird, for few men would care to hunt them in such forbidding cover. It is to be hoped that these safer retreats will keep some of the birds alive until our grandchildren can at least see a few of them.

The next day I reached my favorite town, Marshfield, and Charley Foster said that Jim Kerr had gone away, which made me a bit lonesome; but the next morning being one of glorious October's very finest I spent the forenoon in the woods, bagging five squirrels and three partridges. Arriving at the hotel, Foster asked if I had met Jim. I told him no. "He was not gone, after all," said Foster, "and when I told him you had gone to the woods, he took his gun and started out, hoping to find you." But Jim did not find me, and the train coming before he returned, I did not get to see him.

At Oshkosh my business trip was ended, so I hied me to Berlin, twenty miles west, to see Ed Hathaway, who keeps the Berlin House, one of the most comfortable hotels to be found anywhere, and Berlin is a very pleasant town on the Fox River, in whose waters are bass and pickerel. There are marshes along its shores that afford fine snipe shooting, and sometimes there are many ducks too; while there are a few chickens on the prairie and partridges and squirrels in the woods, the rabbits are too numerous to mention. Ed gave me a hearty welcome, but put on a long face when snipe were mentioned. He said the marshes were dried up and the shooting would not be good until there were heavy rains. "Are there no snipe at all?" I asked.

"Of course there are a few," Ed replied. "I suppose we could find fifteen or twenty in the little flat, and perhaps twice as many on the lower marsh, but not enough to be worth going after."

Then I knew the snipe shooting was good enough to satisfy a reasonable man, for Ed is always taking the gloomiest views of game matters, and if he admits that there are any at all, that is enough.

I stayed at Berlin just a week, and was out for snipe five times, averaging four hours each trip, and was on no ground more than thirty-five minutes' walk from the hotel. I used 200 shells in all. Ed says if a man could use 200 shells in a day he would consider it fair shooting, such as there would be if it rained enough to get the ground in proper condition, and that the shooting would be good every day from Oct. 1 until frost seals the marshes for the winter, about Nov. 10 to 20.

One day Ed and I drove eight miles west from town to get some partridges, and to me it proved a day of rare enjoyment. Imagine a vast stretch of level land. It is prairie, well filled with "islands" and "peninsulas" of small oak trees, thickly filled in with undergrowth of hazel and other low-growing bushes, making in most places very dense cover. Every portion of the prairie ground has been mowed, and the short aftergrowth is as short and fine as a well-kept lawn. Long, narrow tongues of woods run out into the prairie, and exquisite glades of prairie wind and curve among the "islands" of woods. Many of these glades, not over 30 to 50yds. wide, run into the woods for half a mile, then either stop abruptly or connect with a larger body of prairie. Everwhere, at every turn, some new feature of beauty opens before the eye. There is no blending of prairie and woods where they meet. Right where the velvet turf of the prairie ceases, there begins the dense woodland growth—a solid wall of it. Now paint the oak leaves every hue, from deepest green to glowing scarlet, and light the picture with the mellow Indian summer and let the stillness of a Sunday morning rest upon it. See right here, what a place for an autumn camp in this horseshoe nook of prairie of just one-half an acre—sheltered on three sides by the nearby woods and 500 acres of perfect lawn in front. Dry wood near at hand, spring water in the brook at the right. One taller tree than all its fellows is just the one from which to float Old Glory, and two miles due north is a high wooded hill, the only one in all the region; a sure guide to the camp, situated in so intricate a maze that it would be hard to find it without some guiding mark. Miles of partridge cover on every side, and there are some chickens too.

In all my wide wanderings I have not found another such spot so perfectly adapted to my tastes for camping and lazy rambles through woods and brush and prairie.

As we were returning from this trip some chickens flew nearly over us and Ed shot one, which went down in a field some distance away.

Some "No hunting" boards were nailed to the fence, which we had no sooner crossed than two unwashed Polanders came rushing from the house and across the field toward us, shouting a lot of unintelligible jargon. When they came up to us one of them shouted, "Py—, gant you not see dem bleck bords by de fences?" "I'm not looking for blackbirds," said Ed, "we are after chickens." Then both these specimens of foreign-born American citizens broke loose entirely and raved all round us, but we could understand nothing except occasional references to "dem bleck bords by de fences." After they had run out of breath and expletives, Ed again mildly explained that we did not want blackbirds, but chickens, that we were looking for one we had crippled and were going to have it if we had to take the field home with us and run it through the pulp mill, and they might just as well go back to their potato digging. Then came more "bleck bord" talk. At last Ed comprehended that the "bleck bords" were the "No hunting" signs, and told them we didn't want the signs and they might take them down whenever they liked. Just then the dead chicken was found and we departed, followed by more naughty words from the pair of unwashed.

Now these wanderings, like all other good things, have come to an end in fact, but the rested mind and recreated body are still in evidence that they were good, and some winter nights when the howling winds and flying snow compel an indoor life for awhile, memory will array them all before me, for she has photographs of every face and woods and every bird, and these are photographs in colors—the green of summer and the yellow and scarlet of autumn; and they have motion too—the shadows of flying clouds, the waving of trees, the rippling of water, the swift flight of the partridge and the nimble running of gray and black squirrels over the treetops. And these photos have voice too; they will make the faces of my friends speak to me; the sound of partridge wings, the barking of squirrels, the whispering of the wind, will all be heard.

O. H. HAMPTON.

Pennsylvania Seasons.

MOUNTVILLE, Pa., Oct. 21.—*Editor Forest and Stream:* A squirrel hunter showed me the other day a large gray squirrel he had just killed that was evidently suckling young ones, as its teats were full of milk and showed signs of having been recently sucked. Our opinion here is that the game law ought to make the open season on squirrels, rabbits and quail in Pennsylvania from Nov. 1 to Dec. 15. We find that pot-hunters go for squirrels and kill anything else they see.

TELL.

IN THE SWALES OF DUTCHESS.

FORTUNATE indeed is he who in these bright autumn days has a relation or friend in the country to extend to him an invitation to spend a few days of his vacation around the old homestead among the nut brown trees and "deep tangled wildwood." And though chained to business he may be, how he struggles; and if perchance he may kick off the fetters, with what a bounding heart he takes down his breechloader and hies him to the train. As the iron horse bears him swiftly away from the heated and dusty city and by the flashing villages and he sees the forests robed like Joseph's coat of many colors, and draws in from the open window the clear fresh untainted air, how proud he feels; and knows that all is good and that he is indeed to be congratulated.

We had arrived at our place of business some weeks ago, when we found awaiting us one of our boyhood companions whom we had not seen for nearly twenty years. Oh, how good it was to see that genial face and meet that warm clasp of hand; recall the reminiscence of forty years ago, before our locks had become frosted with time. He said he was located in Amenia (Dutchess co., N. Y)., some eighty miles from the city, and wished us to promise to make him a good visit. We told him we went nowhere in the autumn days unless there was a chance for a hunt. He replied that he had not fired a gun since the war, but that he would make inquiries and let us know. Promptly within the week came his letter, saying there was some game in the neighborhood; that Jack Fitzpatrick, the engineer of the brick works with which he is connected, was an ardent sportsman and that his brother Mike had the best setter in the country; that they had located more than one covey of birds for us, and that after the first heavy rain and one or two frosts we might expect to bag almost any amount of fall woodcock. That settled the matter for Jacobstaff. Saturday, the 19th, found us about dark on the station at Amenia, where we were met by Mr. Wm. P. Boardman, bookkeeper and acting superintendent of the Amenia Brick Co. On the way to his house, but a short walk from the station, he remarked that the boys Jack and Mike, in anticipation of our coming, had been out a short time in the afternoon and we might see some of the result on the supper table. And we did—some fat woodcock broiled to a nicety by little Kate, Mr. Boardman's handmaiden, he called her.

Now, I am aware that according to the rigid rules of the epicurean sportsman the true way to prepare this most delicate bird is by roasting with the head intact, and as some sportsmen contend, with the internal arrangements also as nature presented them. Roast woodcock are very, very nice; we would prefer them dressed. But those fat, juicy fall woodcock broiled by little Kate were indeed delicious. How she came to hit it so perfectly is a mystery. It was her first attempt, we understood, at preparing game, but these birds were done to a hair's nicety. Woodcock, like canvasback duck, should never be overdone, but the blood should almost follow the knife, and they should be served hot. Thus were these served. The juicy flavor of that evening repast lingers on my palate yet. As we sat down to the table a knock came at the door, a hand protruded presenting a quart bottle of home-made grape wine something like 5 years old, we heard later. It was in honor of the visit of a representative of FOREST AND STREAM, sent in by Mr. Guild, a courtly gentleman of the old school, who by honest and consistent effort in business has obtained a competence which in his declining years he and his worthy dame can fully enjoy, and as it were truthfully sit under their own vine and apple tree. Mr. Guild, we were informed, manufactures yearly about fifty gallons of grape wine for his own use and his friends, and it is good. He also makes a capital apple wine that is very appetizing.

After supper we strolled down to the village, and at James Numan's—an army veteran, the stationer of the place and a kind of headquarters for the sportsmen (an Uncle Lisha's Shop, as it were)—we were introduced to the two Nimrods who were to be our companions in the swales, John and Michael Fitzpatrick, very intelligent gentlemen, good shots and most indefatigable workers; it seemed as though Mike never would tire.

The following day was spent in reminiscences and a short visit to the brickyard, where they were about to fire up a kiln of some 75,000. From there we took in the iron mine, about a mile out of the village, to get a few specimens for our sporting friend Dr. Sevenig's cabinet. This mine, it is said, has been worked for over 100 years. It furnishes a fine quality of gray ore, hematitic in character, that with a mixture with an ore up the River Troy way somewhere makes a capital combination.

Monday morning the boys were on hand with a buggy and Cute, the black and tan bitch—genuine Webster stock, and a good one she is too. They proposed first to try the big swamps some five miles away, hoping there might have been a fall flight, as the frost the night before was very heavy.

As we were driving by a small pond by the roadside we remarked that on one side where the ground was low it looked snipy, just the place for a *Scolopax wilsoni*. It took but a moment for us to slip in a couple of cartridges (No. 9) and reach the low ground, where to our surprise the well-known *yelp, yelp* of the greater tattler (yellowleg) broke on the air, and a couple of these fine birds sprang from the edge and essayed to cross the pond. Two reports, and Jacobstaff had opened the proceedings of the day.

We reached the swamp in due time, but an hour's thorough investigation failed. Not only did we not start a bird, but we found no signs, no borings or spatterings. Another swamp or swale was tried with the same result. Matters were getting lugubrious. "Boys, the birds are not here; they haven't been here. If there are any in the country they are in the cripples. Yonder side knoll of oak saplings looks well. Maybe a grouse is hiding there."

We had hardly got over the fence (and a barbed wire one at that, confound them) when Cute began drawing, and the well-known whistle, so dear to the ear of the sportsman, broke out clear and resonant. As the *philo-'tela* twisted around a bunch of thorn bushes, it was neatly cut down by Jack's right. A fine bird. Ah! how grand it looked, fat and plump; a fall bird, full size, and not mutilated at all. "Good for you, Mr. Engineer. What did I tell you about the cripples? We will find more here." And we did. The next one got up wild and wouldn't stop for either Mike's or Jacobstaff's right barrels, but it was well marked down and promptly pointed by the setter, furnishing an easy mark for Mike, who very complacently handed it over to us. Just after this Mike made what we consider a very remarkable shot. A hare (vulgo rabbit) sprang out and went skipping through the underbrush. Mike let go at a venture and keeled over *lepus*; but when he went to pick it up he found along side another animal in the throes of death—a garter snake, the neck of which was nearly severed with the same load that had killed the hare.

We tried swale after swale, but in all the day's tramp we found only two birds in the low ground. They were either on the knolls or hillsides, or on the outer edge of the swales, and were I think all summer birds, *i. e.*, not flight birds at all. These are yet to come, and we opine that Jack and Mike will give a good account of themselves when they do find them.

Suffice it to say we had a good day, though we got but one grouse. We only put up three and they were very wild. The next day the wind came up very strong, too much so for a shoot. In the afternoon it quieted down somewhat and we took in a few hours with the gray squirrels. We found quite a number and Jacobstaff regretted that he could not stay longer for a day with the bushy tails. We took the 1:46 P. M. train Wednesday for home, well pleased with our visit; and shall long remember the cordial attentions of veteran Numan, the Fitzpatricks, Coz, Will, and others who made our visit so pleasant.

JACOBSTAFF.

BOSTON BUSINESS MEN IN THE WOODS.

BOSTON, Oct. 31.—Henry S. Fisher, with Harding, Whitmen & Co., has just returned from his fall shooting trip. This time he visited the Katahdin Iron Works, in Maine, and from that station he went three miles further into the woods to Houston Pond Camps. He is much pleased with the location; thinks that it is an ideal spot. The hunters are quartered in new log cabins, with the cooking good. He brings back a nice deer. Mr. Fisher has a record for shooting a big moose three or four falls ago, and the mounted head and antlers now grace his office room. The antlers are pronounced by sportsmen and hunters to be the most symmetrical they have ever seen. He scarcely cares to shoot another moose, especially if it is far away in the woods. The trouble and cost of getting it out is too great. The sportsman who has never had the chance to try can think of it. An animal bigger than a horse to be got out of the woods, perhaps several miles beyond the possibilities of any sort of a team. Brooks, swamps and hills are to be crossed; the dead animal to be drawn on a rude sled, improvised at the scene of the shooting. A gentleman, who has killed his moose in Maine, suggests that he shall never again try to get one out whole. The head can be carried by one or two men, the hide by another, and one or two trips can be made for the meat.

It is refreshing to read of now and then a disappointed hunter; that is, if one reads the daily and local papers. No disappointments are mentioned in such papers—it is all success. So much success will do for the novice who has never been on a hunting trip. A Boston gentleman whom I met yesterday, Mr. A. C —— (I must not give his name), came down on the train from Portland yesterday with a couple of disappointed hunters. They had been into the Moosehead region. They had a doleful tale to tell about the ground being covered with leaves a foot deep. At every step they made noise enough to frighten every deer out of the woods Not a deer could they catch a glimpse of. They hunted for several days in discouragement. At length their guide suggested that they visit another camp, a short distance up the mountain. Here they met one or two other guides, who soon suggested that if the hunters would wait at a certain point jutting out into a pond a half mile away, they would "be likely to see a deer." If a deer was shot, they should expect $5 apiece. No questions were to be asked. The hunters went to the point in question and a deer was driven into the water for them by dogs. But, curiously enough, the hunters say that the dogs made no sound. They shot the deer and paid the money to their guides, as directed by the other guides. Withholding the names is obvious.

Mr. E. Frank Lewis, of Lawrence, and author of the well-known wool shrinkage book, is back from his fall hunting trip. He was accompanied by Homer Sawyer, of the Boston Rubber Shoe Co., and Harry Bradford, of Fenno Bros. and Childes. They went to Lincoln on the Maine Central, and from thence about fourteen miles to Lee. The camp and guides were all that could be asked for, but they "struck the deer hunting at precisely the wrong time." The leaves were off the trees, or falling, and the rustling of every footstep was sufficient to startle any deer living. Deer came very near to their camp and they got very near to them, but the deer was always first to discover the hunter. Mr. Lewis soon gave up hunting as a bad job, and devoted his time to resting, of which he stood much in need. One of the guides crawled on his hands and knees into a swamp beside a runway, and lay there till a fawn came along. This he shot; so they had venison in camp. Neither hunter got a shot at deer, and the partridge shooting was disappointing by reason of the falling and fallen leaves.

Smelt fishing is in high favor with a good many Boston merchants, especially those who live in the outlying towns where the smelt rivers are. Mr. F. A. Rein, with Schlegel & Fottler, lives in Milton, and he visits the smelt rivers many an evening. His son, 11 years old, is more fond of the sport than his father. Half a dozen smelt and a dozen tomcod were the result of the other evening. They fish with a snood and two hooks. Shrimp are in favor as bait, also worms. They have taken smelt this season weighing 6 and 8oz.

James McCumstock, of New York, is reported to have killed a monster moose at Wild River, Me., near Camp No. 9. He came suddenly upon the monster, and for a moment they stood eyeing each other. The hunter fired at rather close range. The animal was hit, but not severely enough to bring him down. With a bellow he is reported to have charged upon the hunter. Darting behind a tree, he had a chance for other shots, and the moose was slain. He weighed when dressed 685lbs. His antlers spread over 6ft.

The Maine papers say that a couple of girls have ridden their bicycles from Portland to Caribou, 374 miles, since Oct. 1, arriving on Saturday, with both wheels in good order. Riding through stretches of woods it was no uncommon thing to start partridges, some of which were very tame. They also saw deer on several occasions. Moose and bear tracks were seen.

One Boston would-be hunter says that he believes that it is easier to get a deer in Maine than to get the dollars to go with. Dr. Daintree is very proud of the mounted head and antlers of his moose, killed at Norcross this fall.

Nov. 2.—Here is the biggest deer story of the season, or rather, the story of the biggest deer of the season, if not of almost any season. I met a gentleman yesterday just from Bangor, Me. He came down the day before on the train with Mr. Crosby, the well-known taxidermist. That gentleman told my friend of an enormous deer he had just received or seen. It was a buck and weighed 351lbs. Such weight of a deer seems almost incredible, but from the authority through which it comes to me I am inclined to think that it is correct. Perhaps Mr. Crosby will inform the readers of the FOREST AND STREAM more exactly as to this matter. The deer came from somewhere beyond the Katahdin Iron Works, and my informant understood that it was shot by a member of the staff of the Governor of Maine. The deer had a wide spread of antlers, but the horns were not as finely branched as is sometimes the case. But his neck was most remarkably thick and strong, resembling that of a 2-year-old domestic bull. I have also just received a report of a buck weighing 300lbs. killed somewhere in the Rangeley region.

For a few days there has been a letting up of the accounts of deer killed. Doubtless the condition of the woods—covered with fallen leaves—has something to do with the fact. It seems that so far the proportion of does killed is much too great. In going through Faneuil Market the other day I counted twelve deer at the different stalls, and there was not a single deer that had horns in the number. Among all the deer in the markets here this fall I have seen but two or three bucks. SPECIAL.

IN PENNSYLVANIA FIELDS.

ALLEGHENY COUNTY, Pa., Oct. 30.—*Editor Forest and Stream:* FOREST AND STREAM is always excellent and is continually springing pleasant surprises on its readers, and the last number is no exception, being full of variety and goodness. I have read every number, beginning with the first, and have so grown with it that it seems like a part of my existence, and I shall probably read it as long as I live. I have looked earnestly for local contributions, but in vain. I have wondered if the local hunters' luck is as poor as mine, and I guess it is, for I hear of no game being killed in this vicinity.

I have been out frequently since the season for squirrels and ruffed grouse opened, and have not fired my gun at anything yet. Quail season opens Nov. 1, but quail are so scarce that it would be a sin to kill any. I know of but one small bevy of nine, and they are in danger of being potted any day by the army of boys and Dagos who prowl around in and out of season, shooting anything they can. I wish this lot might be preserved for seed, but I fear they will not. I have found a place containing a few grouse and got them up several times, but the place is so hard to hunt and the cover so dense that I could not see them nor shoot if I did, on account of the ground being so steep that it was hard to keep a foothold.

The other day while in this place I heard a gray squirrel across the hollow. The leaves on the ground were so dry that I could not move without making a noise that could be heard a long distance, so I sat down, hoping it would work its way nearer. Half an hour passed, and hearing it no more I arose to move on, when it or another one scampered away not more than 50ft. from where I had been sitting, and at the same time a grouse got up only a little further away. I followed the direction of the grouse a few hundred yards and stopped to listen. When I moved again, his grouseship got up not more than 20ft. behind me, hurtling through the foliage so quickly that it was out of sight before I could raise my gun. I flushed several more, but at such distance and in such dense cover that I could not see to shoot.

I have patrolled the back river, where there are splendid resting retreats for ducks, three or four times without seeing any, and one with less patience than mine would be discouraged; but to-night there is rain and a strong wind is coming up, and I am going again to-morrow morning. If ducks are moving south some may come to the back river and give me a shot. After looking for the ducks I shall try the grouse hollow again, and if I get nothing for my pains but the tramp and a good appetite for dinner, I will not yet be discouraged; for I love the woods, and believe my love for them is growing stronger as I grow older.

When I was a little tot, so small that I could not climb the fences without help, my grandfather used to get me out of bed before daylight and take me with him to the woods a short distance away to hunt squirrels. I was an ardent pupil, and insisted on carrying the six or seven black squirrels that he was sure to get over my shoulder home, much to the amusement of my grandfather, who frequently had to carry me and my load over bad places; and the praises I received from my grandmother while she fried them for breakfast, and the joy of my good mother at seeing me home safe, did much to ingraft the hunting instinct within me. And I believe that this love for the woods has been the means of prolonging my life and making a well man of me, for at the age of 20 I began to show signs of that dread disease consumption. I was advised to take outdoor exercise and as much of it as I could stand. Naturally I took to the woods. I hunted day after day in good and bad weather, climbing hills that would make me tired now, sometimes reaching home so tired and weak that I did not expect to be able to get out of bed next morning. But at length the exercise and pure air began to have its effect and I grew stronger day by day until my old friends marveled at the change, and to-day I have a pair of lungs which almost astonished the insurance medical examiner a few days ago, who pronounced me in first-class physical condition.

Those good old days, when there were no magazine or breechloaders, when the game had as much chance as the hunter, are gone forever, and a few years hence a poor man will have no use for a gun. The rich man will have the land preserved and what is left of the game corralled. Even now hunting where there is game is almost out of the question for the average poor man who lives in the East, for he cannot afford the time and expense to go where it is. In FOREST AND STREAM the game shooting is confined mostly to the far West and brother Hough's favorite South. Ten and fifteen years ago where there

was plenty of it there is no sign of any now, and the game laws were as good then and enforced as diligently as now. Sometimes I think the breechloader and rapid firing magazine guns are as much to blame for this as anything else, and I wish there was never a breechloader made. The game was going fast enough with the old tools, and I am sure that my hammerless does not afford me the same pleasure the old muzzle loader did.

While going to town the other day three Italians sat beside me in the trolley car. Their clothing, full of nettles and burs, as well as their single-barrel breechloaders, indicated that they had been hunting, probably down the river along which the trolley runs. One had a grain bag half full of something soft, and fresh blood oozing from it looked suspiciously like rabbits, and another of them kept his hand on his side coat pocket, apparently trying to keep something in that wanted to get out, which looked suspiciously like ferret. The law on rabbits is not off until Nov. 1 and is never off on ferrets, but that makes no difference to the Dago.

A young woman who used to work for my wife, now married, called at our house a few days ago to show the madam her baby. Seeing me putting my gun away, she told me that "Larry" had been hunting a great deal last summer and this fall, and had killed "lots of rabbits and squirrels, but she didn't like rabbits, they look so much like cats." This looks suspiciously like violation of the game law, and partially accounts for the scarcity of game in season, and a man who is lawful and waits for the season is pretty sure to get left nowadays.

One day, while hunting squirrels near the West Virginia State line last September, I questioned a native who told me there were no squirrels there then. Said he: "The West Virginny fellers come here and shoot 'em before they're ripe," and added that they came all summer and killed young ones wherever they found them. "There's no use sayin' anything about it, as they skip over the line and ye can't do nothin'."

There is very little game in the Pittsburg market so far this season and some of it looks like last year's, a few prairie chickens and squirrels being the most I have seen, unless we count coon and 'possum, which seem to be in great demand by other coons, and roasted raccoon is mighty good eating, as I can testify. J. H. B.

POTOMAC SHOOTING NOTES.

WASHINGTON, Nov. 2.—The outlook for turkey and pheasant is quite good, and the mountains of the Virginias are expected to furnish good sport to our gunners during the present season. On the other hand the reports from the fields as to quail (partridges) are discouraging. Farmers having 500 acres or more tell us that very few birds are to be seen, in some cases but a single covey has been noted.

The great and unusual scarcity of quail is said to be due to the almost unprecedented freeze of last February, when, it will be remembered, we had several weeks of bitterly cold weather.

As to rabbits, plenty of cotton-tails are reported. The cold does not kill them off like the poor birds, owing to their habit of burrowing under ground.

The ortolan season here was rather longer than usual, several very good bags were made quite late. Early in October, about the first, McCormick and Sherwood shot fifty-three in the vicinity of Four-Mile Run, being guests of the club bearing the name of the run.

A party of three gentlemen from this city took a day off yesterday and spent it in the "wilds" near Quantico, Va. They left here on an early morning train with dogs, guns and liberal supplies of ammunition, including shot of all sizes from bird to buckshot, the latter in case they should meet bears or deer, of which animals these particular woods might be, but are not, full of—and were early on the more or less famous hunting grounds of old Virginny. Well, to make a long story short, after tramping fully forty miles through brush and brier in which they could make but one mile an hour, they discovered—yes, discovered—no game, but that they were lost. The plot thickened, imaginings of wild beasts of the forest brought on despair, and Goldy, ever brave and courageous Goldy, fell in a faint. The bang of a comrade's gun, by which he shot a poor (lean) unsuspecting blackbird, the first game scented by the dogs, somewhat revived Goldy, and to the utter surprise of his companions he too raised his gun and brought to earth five blackbirds from a flock passing. Home at 9 P. M. Car fare and lunches, $10. Game bagged, six blackbirds. Quantico is a resort easily reached from Washington, and Goldy will cheerfully give information as to finding game, etc.

Ducks have been reported fairly abundant on the lower Potomac and Patuxent rivers, but near the city very scarce. Poor shooting has been the cry of those not lucky enough to have steam launches, and the majority of our gunners are bitterly opposed to the use of the launches, as they claim that the ducks are chased so hard that they hardly get time to light on the water, never time to settle right, and are consequently kept very wild, making it impossible to get within gunshot by use of small boat.

Messrs. Bowman, Smith, Webb, McKenny, Capt. Blake and others were out ducking in early October and had fair shooting. They reported plenty of ducks on the Patuxent.

Squirrel shooting has been very poor this year. Parties gunning far and wide report very poor results. Even up on the Carroll Manor, Maryland, where squirrels are usually plentiful, hunters have had no success this season. This state of affairs, as in the case of the quail, is ascribed to the cold weather of last winter, parties claiming that the squirrels even were frozen in their tree holes.

BART.

Ducks in Manitoba.

WINNIPEG, Oct. 26.—*Editor Forest and Stream:* Duck shooting has been very poor here this fall, and unless means are devised for their better protection, our duck shooting will be as scarce as good whisky at High Point, and this to an easy drinker is a calamity indeed.

THOMAS JOHNSON.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

WINTER DUCK-SHOOTING ON LAKE ONTARIO.

METHODS of hunting the same kind of game differ with the location and the season. There is no mode of duck-shooting that is so novel, or attended with greater discomfort and danger, than winter shooting on Lake Ontario. The ducks that make their home in these icy waters are whistlers, broadbills, coots, sheldrakes and old-wives. The three latter kinds are fish ducks, and on the coast are strong and inferior in flavor, for they there live on fish and sea food. But the lake usually furnishes each autumn several cargoes of barley and wheat that are wrecked and scattered along its shores. Thither the ducks congregate, and after many weeks' feeding on the water-soaked grain their flesh becomes fat and fine flavored.

They feed with ease in water that is 12 to 15ft. deep, diving to the bottom and remaining under water an incredible time. It is often amusing to shoot at one or two ducks swimming about, and the next instant to see the water broken in all directions by the birds popping up from underneath where they have been breakfasting. Now is the time for alertness, for if the gunners are busy enough they may slaughter many before they have made a change of elements.

Ice forms in the shoal water many yards from the shore. Anchor ice and frozen spray are piled upon this in wild confusion, until it looks like the surface of a glacier with hillocks and crevasses. Frequently sprout holes are formed, out of which the water, forced upward by the waves dashing underneath, leaps for many feet in the air, and freezing as it falls forms a cone like those in the crater of a volcano.

The outer edge of this ice reef is formed into a line of ice cliffs and battlements, containing caves of wondrous beauty, and little coves and fjords like a miniature Norway coast line.

The hunters are clad in garments of white duck, white caps covering the hair, and white masks. Even white covers are used for the guns. These are arranged to be easily slipped off when the time for action arrives. An excavation is made on the edge of the ice, in which the hunters are to conceal themselves. The decoys are anchored at a convenient distance, and the boat, drawn into a little cove of the ice, is covered with a white cloth. One does not have to wait long for a shot, as the ducks fly in great numbers. The cold is often intense and the frozen spray stiffens the clothing and covers everything with an icy armor. A wind break of blocks of ice is often an absolute necessity. But despite cold and discomfort it is sport and everything goes.

Large numbers of ducks are shot in this way, but not all the slain are retrieved, for the launching of a boat in the wintry seas is a dangerous operation and a capsize is something to be carefully avoided.

OLIN B. COIT.

OSWEGO, N. Y.

Wild Turkeys on View.

NEW BERNE, N. C., Nov. 1.—To-day the shooting season opens here for turkeys and quail, and I am pleased to say that there will be an abundance of both. The owners of a 1,000-acre forest tract on Island Creek, ten miles from New Berne, are throwing out bait to-day so as to attract the turkeys and hold them for FOREST AND STREAM'S patrons, when they come down. It is claimed that there are 200 turkeys at least in that neck of woods. Down near Maysville, which is accessible by rail from New Berne in forty minutes, there are many large gangs of turkeys, as well as at Riverdale, where Dr. Roosevelt and his friends got three birds last spring.

Quite a few gunners are out to-day prospecting for quail. A good rain yesterday brought the insects to the surface of the ground and will hold the scent for the dogs.

I saw a fine bunch of mallards, teal and bald pates brought in last Tuesday by two Baltimore gentlemen who are here with their families to spend the winter. Some nice bags of snipe and doves have also been made. There are excellent snipe marshes close by New Berne, on Trent River and Bachelor's Creek. As many as forty doves have been brought in by a couple of shooters after a day's sport. The Hotel Chattawka has just completed a set of dog kennels with abundant yard room, which will be convenient for guests who shoot. There is also a professional guide and two setters connected with the house.

Owing to eight weeks of drought, the rivers have not been flushed for a long time, so that the water in the harbor is now brackish, and in consequence is now swarming with myriads of young fat bucks or menhaden about 4in. long. There are also many bluefish present.

Sea and River Fishing.

DOES TRUE SPORTSMANSHIP EXIST?

Editor Forest and Stream:

I have been pondering, deeply pondering, as to whether we have any genuine sportsmanship in this country.

That there is much pretense of sportsmanship I will admit, but a large part of it is sham. It is natural that it should be so, for our people, traditions, national development and practice are all against true sportsmanship.

While loudly professing sportsmanship in the close season on one hand, on the other the practice is to violate the game laws or to kill without limit.

"The game belongs to the people," and each man with a gun considers himself the people. What belongs to the people has no very definite boundary or title or protection, as we see in the depredations on the great public pine forests, on the game birds, fishes and large animals. It is natural that it should be so. And why?

Sport only becomes possible after the necessities of life are satisfied. The Indian catches a fish or kills an animal to supply his need for food. It is a necessity. There is no more sport in it than in the work of the farmer who goes forth to dig his potatoes or husk his corn.

After a time, when the individual accumulates sufficient wealth so that a supply to his needs is assured independently of his personal seeking, he then makes a sport of what to him previously was an occupation.

Thus we have the wealthy man who equips himself with the engines of death, sallies forth and kills something, or if he is of a more languid or merciful taste, he grows corn or potatoes for sport.

Many wealthy city gentlemen have a farm which they run as a side matter for the pleasure it affords and not for the profit.

In any case, the necessities of life are always assured before sport can begin. If the stomach or pocketbook is empty, the hunter naturally and properly thinks of what a savory dish the game would make, or what its market value is when sold.

Our national development is opposed to sport. This nation began as a nation of poor people, toilers and hunters. Pursuit of game was necessary to existence. Life was too serious for any kind of sport.

As population increased, the game decreased. As game decreased, agriculture increased. The latter in time gradually became the main reliance for supplying food to the settlers, hunting contributing but a part. Gradually, as agriculture became more fixed, ownership in land more defined and permanent, and game scarcer, more and more people abandoned the uncertain occupation of hunting and took up the more fixed and certain occupation of agriculture. Only the few who either were too lazy or too awkward to work followed the chase as a means of livelihood.

Man, when he follows any occupation a long while, needs a diversion. If his business affords him a surplus beyond his actual needs, he can leave his business for a longer or shorter time to seek diversion.

He may ride horseback and call it sport; to the cowboy or mail rider it is not sport, it is work.

He may row a boat for sport; to the professional boatman it is work.

He may grow flowers or potatoes; to the florist or farmer the same is work.

He may fish or shoot for sport; it is only sport because he has abundance already to supply his needs.

Thus a man must have his wants supplied beyond a doubt before he can engage in any branch of activity as a sport.

Out of our entire population the ratio of the rich to the poor is very small, therefore the ratio of sportsmen to the men who hunt for material results is very small.

Wealth is essential to sportsmanship. Still wealth does not of itself make sportsmen any more than it makes gentlemen. From habit and avarice, some men never cease striving for gain, whether their wants are supplied or not.

The effects of our old development still prevail. The natural effects of a poor population, where pocketbook and stomach are both needy, having free access to the game supply, are in action. It is asking too much of a hungry man to make sport of his dinner, or his means of obtaining one.

Sportsmen are a class, not a people. To define sportsmen, there must be class restrictions. To perpetuate them, they must have class privileges. The latter is the game preserve which excludes the hungry man, or his who is seeking a livelihood.

Who says nay? DICK OF CONNECTICUT.

AN ADIRONDACK TRIP.

THE Dominie and Scribe had been visiting the Adirondacks for years. For years George had been serving them as guide when they needed one. To the three it was a great pleasure to initiate a tenderfoot, and many a hard tramp and rough camp had been enlivened in that way.

Two years ago a wealthy friend and confirmed dyspeptic found his way to one of the large hotels near which our trio were domiciled. He had "never been camping"—he had heard much of its benefits—he would like to try it "just for the fun of the thing," and especially for the sake of his boy "Stevey." Accordingly an initiation trip was planned, George was engaged, and on a hot afternoon boat, tent, duffle, guns and men were placed on a lumber wagon and started down the stage road, the heavy work-horses never going faster than a walk. As the Irishman said when a mob was riding him on a rail, "If it wasn't for the name of riding I would about as soon have gone afoot." But the hot dusty ride came to an end and it was a relief to shoulder guns and packs and plunge into the forest.

A mile brought us to "the flow," where it was again a relief to throw down our burdens. Here were plenty of trout in the stream, deer fed on its borders, an old lumber camp would afford shelter, and last, but not least (in numbers) mosquitoes so abounded that neither hunting nor fishing could grow monotonous. We halted for the night. The tenderfeet rested, the Dominie tried the pool and called the scribe to help catch trout for supper. The trout were hungry, the men more so, the mosquitoes most of all—they must have been starving since the lumbermen went away. Did you ever know one of these tuneful birds to neglect an opportunity? If so, it must have been a "Jersey bird" down with chills and fever. The Adirondack birds are exempt. Their opportunity had come. They literally drove us from the pool, but not until we had caught enough trout for supper, and the Scribe something more. In walking out over the water on a log he steadied himself by a projecting pole; alas, his confidence was misplaced—he clambered out and returned to camp a wiser and a wetter man. The fire was welcome, so was supper, and in due time rest.

We spread our blankets on the chamber floor of the old house and tried to sleep while George and the Dominie went out for a deer. In vain! The night was cold, the fire out of doors and our expectant ears too eagerly listening for the shot. It came at last—sudden, heavy, awful—as it broke upon our drowsy senses amid the stillness of the night. Then a long waiting and the heavy tramp of feet approaching.

"Did you get him?"

"I don't know; I don't see how I could have missed him, but he ran quite a distance and then we heard him fall; we shall know in the morning."

We found him, a nice 2-year-old buck, lying dead about ten rods from where he had been shot directly through the heart. In his honor we named this first stopping place Buck Camp. The name of our next camp was equally appropriate, though forced upon us. While George and the others went on the Dominie and Scribe slung the deer on a pole and packed him out to the stage road, where, after waiting an hour, a wagon driver came along and agreed to carry the deer to our cottage at the lake. Having thus planned a pleasant surprise for the friends at home, we retraced our steps and met the party at T Pond.

Another deserted lumber shanty offered shelter, so it

AN ARTIST'S CAMP ON THE PENOBSCOT.

was again decided not to pitch the tent. It was the Scribe's turn to hunt that night. Putting fresh-cut balsam boughs on the old and roughly-made bedsteads, he soon occupied one, but not to sleep—myriad crawling feet disturb him; repeated examinations reveal an unknown presence. He calls the Dominie, "Come up here! What are these?"

The Dominie (who is an old soldier) looks at them, picks one up, smells of it and laconically remarks, "Bedbugs." We pitched the tent, but that place is known in our annals as Bug Camp.

Meanwhile our friends are getting on famously. The boy has broken my fly-rod and the father has, temporarily at least, broken his dyspepsia. The woods are a constant wonder to him—he is a greater wonder to himself. "Well, sir, this is wonderful. At home I would not think of touching bacon—nothing but the lightest bread toasted or a little oatmeal most carefully prepared would do me for breakfast, while here I seem to be able to eat anything, and the strangest part of all is that I enjoy it." If only all realized how great a sanitarium is afforded by the Adirondacks, and that the exercise, air and fun of camp life are better than medicine, the Empire State would take better care of her forests and—though the drug trade might suffer somewhat—her people would be far better off.

Our next, Bean Camp—so named because we cooked them there—saw our friend eating beans with a relish and seemingly digesting them with the proverbial facility of an ostrich. Had the trip continued we all might have rivaled the eating of that famous bird. But time was up and we returned to the lake to share the venison "gone before." J. C.

A CAMP IN MAINE.

WHEN I was in camp at Lake Millinocket, Maine, in September, I saw a card posted over the door of an old log hunting cabin with these words, "Report your luck to FOREST AND STREAM." Inclosed you will find a photo sketch of pickerel caught at Lake Millinocket, fifteen on a rock; the largest, in the center, weighs 3lbs.; the others will average 1½lbs. All were caught with a piece of salt pork skipped over the water, and those are not one-quarter part of all we landed. We saw deer every day on the old tote road that skirts the lake shore; but those long, big ears are made to hear a man with a Winchester rifle, who is smart enough to see them, pointed in his direction. That was my experience.

The trout photo was taken at a small pond on the West Branch of the Penobscot; part of a catch of fifty-two in a few hours' time one afternoon. They were the clearest of color of any trout I ever saw, with bellies and sides of a creamy golden hue, varying to olive-green and purple. I painted a good specimen in oils before leaving the pond.

The other photo sketch is an artist's camp upon the beautiful and noble West Branch of the Penobscot. It is an artist's dream to float down in a canoe on that river some fine September morning, with the great white birches overhanging the water, and its ever-changing colors of the brightest of hues, with now and then in a bend of the river a glimpse of rugged Katahdin looming up in purple mists. The artist in camp is A. D. Turner, of New York city. He has built a birch bark camp twenty-five miles from Norcross, and with the exception of the Indian guide, Joe Francis, who brings him supplies once in two weeks, is alone, living with nature. He enjoys a glorious view of Katahdin across the river. His camp is a frame covered with large sheets of birch bark. Within is a large, open fireplace, and it is fitted up as an artist only can give that artistic effect to birds' wings, feathers and skins of different kinds, with sketches here and there; these and the rough setting of birch bark give it an effect nowhere else to be got. It is a spot long to be remembered. J. W. BEDELL.

The Castalia Trout Stream Case

TOLEDO, O., Nov. 1.—*Editor Forest and Stream:* The supreme court of this State has just rendered a decision in the celebrated Castalia trout stream case, reported in full some time since in the FOREST AND STREAM. It will be remembered that the Cleveland Trout Club at Castalia sank a well on its grounds which tapped a subterranean stream which fed the waters of the Toledo and Sandusky Club located near by. The result was a spouting well which discharged so immense a volume of water as to materially lower the water of the upper (Toledo) club, and virtually ruin its fishing. Suit being brought in the circuit court, the Cleveland club was ordered to close their well and restore the stream its normal condition, and this finding has just been sustained by the highest tribunal of the State.

JAY BEEBE.

Missouri Interests.

ST. LOUIS, Mo., Oct. 26.—*Editor Forest and Stream:* I send you the *St. Louis* report of the meeting held on Wednesday night to devise means to assist Game Warden Henry in the enforcement of the laws for the protection and preservation of game.

Among those who were present were: Mr. John A. Long, president of the St. Louis Kennel Club, under whose auspices the meeting was called; Mr. J. B. C. Lucas, treasurer of the same, and Wm. Hutchison, secretary; Alexander H. Smith, president of the Knobel Fishing Club; Marshall F. McDonald, Wm. E. Field, James Hagerty, Theodore Tompkins, J. A. Jennelle, W. C. Merry, Wm. Nagel, George Wilkens, Geo. E. Burrowes, G. W. Steininger, Lawrence Owens, L. B. Kunkel, W. T. Bobbitt, C. F. A. Mueller, M. C. Billmeyer and Chas. Kunz.

On motion of Alex. Smith, Mr. Lucas was called to the chair, and Mr. Hutchinson's work in getting up the meeting made it natural that he should be chosen secretary.

Mr. Lucas briefly outlined the object of the meeting. It was to assist the game warden to prosecute violations of the game law. We have a game warden, but the Legislature made no appropriation for his support, and he has to rely on the contributions of sportsmen. A serious condition confronts us. Our fine streams—the Gasconade, Osage, Black, Cache and Current rivers—are being depopulated of their fish. Once it was that one could go out on the Big Piney and catch fifty to seventy-five fish in one day, but now he must be satisfied with a mere fraction of that quantity. It is so with game. Such has been the destructive work of the hunter that in many localities the game bird is a thing of the past. We have come together to assist Game Warden Henry to bring about a more satisfactory state of things.

Mr. Henry said that last winter the sportsmen got a law passed authorizing a game warden, but it was utterly impossible to get the Legislature to appropriate a dollar for his support. He has, therefore, to rely on the contributions of sportsmen. Some money has been received and several deputies have been appointed, and in the aggregate they have done a respectable amount of work. A good deal has been accomplished in the way of removing nets and blasting dams by dynamite. One deputy blew up six dams on the Gasconade on one trip. Frequently the parties come back in the night and repair the damage, so that to do the work effectively a deputy would have to sleep on the spot. It takes money to do this, and the difficulty is aggravated by the fact that the country does not take kindly to law, and the people generally sympathize with the violators of it. It is therefore hard to get juries, and harder to get convictions.

Mr. Henry said that the most important case he had had to deal with was in Christian county, where the prosecuting attorney, the county clerk, the city marshal and twenty-three other leading residents had been arrested for violating the fish laws. The feeling ran high, and his deputy, who happened to be a constable, was arrested twice for carrying concealed weapons.

Mr. McDonald thought that the solution of the money question lay in the State's imposing a license, say of $1.50 on resident sportsmen and $10 on outsiders. He was sure that the true sportsman would not object to a small tax when it would insure him a full day's sport when he went out.

Mr. McDonald said that there was another reason for action. Missouri is one of the handful of States, not more than four or five in number, that does not impose a tax on sportsmen. Dakota imposes a tax of $25, and our neighbors, Illinois and Arkansas, both have a law taxing hunters and fishers. The result is that Missouri this season is going to be overrun with hunters from other States, and the situation is made worse by the fact that, owing to the storms of last winter, the quail were destroyed in many sections. The northern part of the State has been nearly stripped of its small game. Now, with a short supply of game and with a great rush of hunters from other States, it is manifest that our game is to be depleted. If we don't take steps at once we shall have no game in Missouri.

Mr. Lucas: "Mr. McDonald's idea of a license involves delay. But we can't wait two years to get a license law. Something must be done immediately to prevent our streams and woods being depopulated."

Learning that the meeting had been called for the purpose of raising money to aid the game warden, Mr. McDonald subscribed $25 and he put down $25 in behalf of the president of the Meacham Arms Co. Mr. J. B. C. Lucas and Mr. Alex. H. Smith also each subscribed $25. He outlined what he thought the Knobel Fishing Club would do. His club had just finished its club house and the treasury was low, but he said that in season it would make a substantial

A CREEL OF PENOBSCOT TROUT

contribution. Several smaller contributions were then made.

Mr. McDonald pledged the support of the Osceola Club, at Hatchie Coon. He also suggested that all the clubs in the State should be called on in their club capacity.

Mr. Henry said that it was his hope to get enough from the sportsmen of the State to make a showing to the next Legislature with the hope of getting an appropriation at the next session. He wanted it understood that he gets no salary and every dollar he obtained from subscriptions would be used in the payment of deputies and for other expenses.

Mr. McDonald: "It would be a good thing to have several deputies-at-large."

Mr. Henry: "It is all a question of expense."

Mr. Bobbitt gave his experience in Illinois. He holds or controls some 4,000 acres, and when he went for his chickens a few days ago, he found only one flock and learned that the rest had been killed in July.

Mr. McDonald moved a committee to solicit subscriptions from clubs as well as individuals. This prevailed, and the following were appointed: J. B. Lucas, ex-officio chairman; J. A. Jennelle, railroads; W. C. Merry, breweries; E. B. Wolff, real estate; William J. Baker, architects; Alfred Vallat, real estate; Mr. F. McDonald, lawyers; Albin Mellier, merchants; C. F. A. Mueller, real estate.

Mr. Brandenberger, of Jefferson City, spoke of Mr. Henry as a born sportsman, and a man who would fearlessly enforce the law if he had the means. Mr. Brandenberger said that the present law was framed by men who knew what they wanted, and he doubted if the next Legislature would do much to change it. He did not think that it would ever adopt Mr. McDonald's idea of a license. The farmers wouldn't consent to tax themselves and their boys for the privilege of going out hunting.

Mr. McDonald said that the license is the logical and practical way out of the difficulty. It would provide the game warden with a steady income.

Mr. Henry said that the farmers could be made to see it only in the light that it is a movement to protect their own game and fish, so that they might have food for themselves. He had found this the most effective argument he could use.

Alex. Smith said that we ought to get an appropriation next year.

Mr. Hutchison, secretary of the committee appointed on Wednesday night, has promptly called a meeting of the committee for Saturday at Mr. Lucas's office, at the Citizens' Bank. Mr. McDonald has already prepared the circular he agreed to prepare, and we present it below:

To the Sportsmen of St. Louis:

DEAR SIR: The last Legislature enacted a new set of laws for the protection of game and fish in this State, and created the office of game and fish warden.

These laws are very comprehensive, and will, if enforced, effectually prevent the destruction of fish by means of nets, traps, seines or dynamite, and will stop the unlawful killing and shipping of game out of season.

The warden and deputy wardens appointed by authority of this act must serve without salary or emolument of any kind, and no fund was appropriated for their use, nor was there any means of creating a revenue for that purpose provided.

The failure of the Legislature to thus provide a means of enforcing the laws leaves our streams at the mercy of those who commit depredations upon our fish by the use of dynamite or other explosives, or by the use of the trap or net, either or all of which, if allowed to go unchecked, will in time result in complete and utter destruction of our fish; and it will also afford the pot-hunter and those engaged in the unlawful killing and shipping of game a free license to pursue their calling without check or hindrance.

Upon this act taking effect the Governor appointed as game and fish warden the Hon. Jesse W. Henry, of Jefferson City, Mo., a gentleman of integrity and ability, and a thorough sportsman, whose familiarity with the condition of the fish and game of the State and the requirements necessary to its protection will enable him to bring to the discharge of his duties a knowledge that peculiarly fits him for that office. Mr. Henry, however, has no money with which to defray the expense in and about the enforcement of these laws, and unless given aid in this respect the laws will practically become a dead letter.

Mr. Henry recognizing this fact at once placed himself in communication with the leading sporting clubs of the State for the purpose of interesting them in raising a fund to assist in carrying out the good work he has already begun. To this end Mr. Henry visited the city recently to meet and confer with the St. Louis Kennel Club and other organizations of like character. A largely attended meeting of the above named club was held at the office of President Lucas on Wednesday last, at which time Mr. Henry explained the necessity of raising funds, and detailed fully the various steps already taken and those he proposes to take in the future toward the complete and effectual enforcement of the law. The result of that meeting was the appointment of a committee of nine by President Lucas, to visit the merchants and professional men of the city for the purpose of soliciting subscriptions to this fund.

This committee, or some one of its members, will call upon you in the near future, and we trust that you will contribute something, at least, toward this fund. It is to the interest of every true sportsman to have these laws strictly enforced, and as this cannot be done without money, the burden must fall upon those who are interested in such matters. Nearly every State immediately adjoining us has passed stringent game and fish laws, imposing a license upon all those who hunt or fish within their borders. The result of this will be that our State will be completely overrun with foreign hunters and fishermen this season unless some very stringent measures are adopted at once to prevent it, and our game will be utterly destroyed and our streams depleted of their not too abundant supply of fish.

Missouri, by reason of her climate, her beautiful streams and vast forests, ought to be the ideal hunting and fishing grounds of the United States, and it needs but an intelligent and united effort on the part of her sport-loving citizens to make her such, and we appeal to the loyalty and liberality of this class to lend our game warden a helping hand, and in all probability by the time our next Legislature meets we can procure an adequate appropriation for this purpose.

Respectfully,

J. B. C. LUCAS, Chairman,
WM. HUTCHISON, Secretary,
J. A. JENNELLE,
MARSHALL F. MCDONALD,
WM. C. MERRY,
WM. J. BAKER,
AL. VALLAT,
C. F. A. MUELLER,
E. B. WOLFF,
} Committee.

"That reminds me."

"IF ever a man had buck fever, Reagan had when he killed his first deer," said Duke.

"Several of us young fellows were out in Potter county hunting, and some had never seen a deer. I was walking through the woods when I heard ahead of me the report of a rifle several times in quick succession, and you bet I got there mighty quick, for I thought some of the boys had run on a bear. Well, when I got in sight there stood Reag pumping his old Winchester .44 and not a shell in it. When I came up he let a yell out of him, and said, 'I'll wear the feather now.' We had an old feather, and whoever killed the last deer wore it. There must have been a dozen bullets in that deer, and he couldn't tell anything about how it happened, only that he tried to shoot as long as it kicked." JIM.

COON HUNTING IN WESTERN TENNESSEE.

Editor Forest and Stream:

I was returning from a three weeks' duck hunt at Reelsfoot Lake on a damp, misty day, when my nerves were completely shocked by being compelled to assist in rescuing an unfortunate hunter who had the ill luck of having himself knocked overboard by the recoil of his gun, and the consequence was that his boat was overturned and he was hanging across the bottom hallooing for dear life when our small bateau and a fishing skiff came to his rescue. He clambered into the skiff half frozen and scared almost to his wits' end. He was rowed off to the club house, leaving his gun at the bottom of the lake and boat afloat bottom side up.

After seeing him well on his way we started again, and after paddling for some three hours from the time we left the Canvas Back (the cabin boat in which we had bunked), we arrived in safety on shore, with a number of apparent hair-breadth escapes.

Those of you who have been at Reelsfoot Lake will understand what I mean when I make mention that there were three of us in a small bateau with my hunting case and a quantity of extra baggage, loading it down to within 3 or 4in. of the surface.

I left my baggage in charge of the storekeeper on the bank, and we meandered up one of the ravines or hollows about one and a half miles to a saw mill. There at the office of my friend Murry I intended to spend the night. It was then about 5 in the evening.

While at the supper table I was informed that a coon hunt was the programme for the evening, and was given an invitation to join the party, to which I gave immediate assent, wishing to add another chapter to my volume of experience in western Tennessee before I decamped for my more northern abode.

About 7:30 o'clock we left the office. The first jump, from the back yard fence, I landed in the top of a fallen tree. It seemed to me that it was just a little the darkest night I had ever seen. I crawled out as best I could, and the next thing was to ascend an incline of about forty-five degrees or less for nearly fifty rods. When once on top of the rise we groped our way along the summit of a ridge that was scarcely wide enough for a two-horse vehicle to be driven along, and entirely wooded with forest trees. After going, it seemed to me, two miles or more—which, however, had diminished to less than a quarter by daylight next morning—we saw a light glimmering through the trees, which in itself brought relief. I was informed that it indicated the party waiting for us before they started on the evening's hunt.

There were five or six men with axes, torches, dogs and lanterns. My friend Murry had shouldered his gun when we left the office. We started, with the master of the dogs about a hundred yards in advance. After wandering about the ridges for an hour the dogs struck a trail. They barked and howled for some time in different directions from where we were standing. Every one in the party was still as death, excepting one thin-faced, pale, somewhat sallow-skinned native, who had been lately married, and he put one in mind of a dried herring without the smoke. But his lungs were in good repair and air was free and plentiful. Some one suggested in an undertone that he yell for the dogs. Then a peal broke through the woods that an ordinary apple peddler on the street would have been proud of. I could hardly tell at first what he said, but in a moment it was repeated: "O, he! Bring 'em in, Jack. Ho, he! Fetch 'em home, boys!" and such like. It was astonishing to compare the volume of his voice with the avoirdupois of the man. The dogs would echo and reëcho the sound as they pushed themselves through the brush, over ridges and into valleys.

Soon the thin-faced man said, "Treed!" How he knew they had treed was a mystery to me, for I could hear no difference in the barking of the dogs. But the word was sufficient; it was no sooner uttered than everybody broke into a run down hill and through the brush, like a flock of sheep escaping from a pack of wolves. With some difficulty I managed to stay close enough to the light to keep my center of gravity; but I can hardly say as much for some of the party. One man swore his "coon hunts" would be few and far between in the future. We soon got to the bottom of the hollow and found the dogs at the root of a small hickory tree. Our torch, which consisted of a bunch of waste tied on the end of a pole and saturated with kerosene, was then lighted, and every one began to examine the top of the forest generally, but with an "eye single" to the hickory, but no coon could be found. Some one said, "Shine his eyes." So the torch and one lantern were put out, and the other was used by the skillful hand of one of the natives, while my friend Murry followed him around with his gun. Still no coon. The next step was to cut the tree, which Joe soon did. When the tree fell the dogs rushed to the top, tore through the limbs and brush like a hurricane in a canebrake, but the result was just the same as before. There was one redeeming feature, however, connected with the falling of the tree that allowed us in some degree to pacify our blasted hopes with regard to the object of the hunt. The boughs in the top of the tree were interwoven, as many of them are in that section, with grapevines, and these hung full with grapes. It is true the grapes were somewhat skinny and filled principally with seed at this late season of the year, but they were stowed away at a wonderful rate by the entire crowd.

A short time after we left the tree I felt as if I had emptied a few loads of duck shot into my stomach. Grape seeds are marvelous for their ability to remind one of their presence when confined to the domains of an ordinary stomach. Still, all I could do was to make faces in the dark and grunt on the sly, for I should likely have had mental torment added to what was only physical suffering had I revealed to the party my feeling and the cause of it.

But soon my attention was drawn in another direction. The dogs set up such a terrific barking that it startled even the sturdy hunter who owned the wiry canines. Some one said, "Treed on the spot!" No one seemed to know what it might be. It certainly was something out of the usual line of accomplishments on an ordinary tour for cover. Some of the party seemed to hesitate, but of course they were not afraid. It was only some peculiar feeling that happened to possess them at that peculiar time. Low and unwonted remarks were made concerning a panther that had been seen in the neighborhood, and of bears that had been driven across the river from Arkansas by forest fires, and numerous other things of like sentiment were muttered as we went cautiously to where the dogs were holding something at bay. We came upon them in a moment, when one of the men, with a lantern which he held above his head so as to see at the farthest distance possible what might be attracting the unwavering attention of the dogs, yelled out, "It's an old sow and pigs!"

The boisterous laugh of the crowd rang through the woods, and the old hog made a savage dart at the dogs, who fell over logs and other trash in their hasty retreat, glad, however, to have escaped with their lives. In fact every one seemed as well pleased as the dogs that it was nothing more dangerous than a parental swine with her family, who certainly felt it an intrusion to be disturbed by a couple of dogs and a gang of wild-eyed hunters in the hour that nature intended for rest.

It was a long while before we heard from the dogs again. But our time was occupied by haps and mishaps until our leader called to us from an adjoining hollow to come in his direction. This seemed the worst gully we had yet found. It was so filled with undergrowth and *débris* of fallen trees that it appeared almost impossible at first for one to get through, but there was one thing very much in our favor, and that was the steep incline we had to descend; when once started it was a case of run or tumble, just as you liked. In fact, the undergrowth became at times the only source of security. This lasted only part of the time, however; there was necessarily an ascent after the descent which took some time, with labor correspondingly great. These were all accomplished with the dexterity of a hound pup on his first chase, with an occasional pell-mell feature to give variety to what was already not monotonous in the highest degree.

It was getting along toward midnight and we had already turned our faces toward home, when the loud and long bellows of the dogs reached our ears. Quick as a flash the thin, pale-faced man, who by this time looked as if he ought to be beneath his parental roof instead of wandering about through the woods on a rainy night, yelled out, "Oh! bring 'em home, boys!" Then the bellowing of the dogs began in earnest. Up and down the ravine they went, held close to their work by the stimulating yells from the little man. This lasted until our patience was worn to a feather's edge and we were on the point of going home and leaving the dogs on the trail. But while this was being discussed, we were again startled by the word "treed." Like a boot-black at the alarm of fire we all started. We had gone only a little way when the foremost man stopped, held his lantern a little in front of him for a moment, then disappeared like a stage in a mine shaft. The next man went down and another followed until it became my turn. It was a jump off about 8 or 10ft. into the bottom of the gully. But there was no going around. It was always a straight run, no matter what intervened. When once at the bottom of the ravine, there stood in front of us an embankment four times as high as the one we had just come over, almost perpendicular, with no trees and but few sprouts growing upon it, and wet by the previous rains; but the thought of how we should get up seemed never to have entered any one's mind. Up we went as best we could, slipping and falling on our knees and crawling from one twig to another until eventually we reached the summit, covered with mud and panting for breath.

A few rods further on we found the dogs at the foot of a small tree which bent itself over another ravine. It was soon determined that the tree should be cut; with a few strokes from our noble axman the tree went crashing across the hollow, but the result was nothing. However, the owner of the dogs, while taking me to the railroad station next day, said the dogs "stayed by that thare limb all night and I'd sware that the coon is in that limb yit."

We returned to our bunks about 1 o'clock, well worn physically and our moral condition very much impaired. I have ever since had my individual opinion concerning those dogs as coon hunters, but it would not likely be pleasant to mention it to their present possessor.

ONION, Tenn. KLING.

MEET OF THE DIXIE RED FOX CLUB.

THE meet of the Dixie Red Fox Club, which was held near Rowland, Ala., beginning Oct. 21, brought together a large number of celebrated hounds and more prominent sportsmen than was ever before seen in the United States.

The country surrounding Rowland is ideal for fox hunting. Topographically it is a gently rolling plain, embracing an area of about ten miles square, that for the most part is covered with open forests of hard wood. There is no fencing to speak of, and it is easily accessible from all points.

Unfortunately, a severe drought had prevailed for two months; everything was parched and dry, and at this season of the year there is practically no dew in the South—every condition unfavorable to the chase.

Owing to the large number of hounds at the meet, it was decided to limit the entries for the Derby to four from each pack, and the stake was nominated as follows:

Avent & Hitchcock 4, Francis J. Hogan 4, Howard Tracy 4, W. I. Spears 3, O. L. Hennigan 3, Hardie & Lee 3, R. C. W. Gregg 2, and H. C. Trig 2; a total of 25, and all splendid puppies under 21 months of age.

Capt. John A. Turner, master of foxhounds, ordered the hunt for 4 A. M. Monday. Numerous cold trails were struck, but none could be covered for any considerable time, and at 10 o'clock the hounds were ordered up The feature of the day's work was the trailing done by Bright Eyes, one of Avent & Hitchcock's entries.

Tuesday morning there was a little dew, and atmospheric conditions were somewhat improved over those that obtained the day before.

The start for the hunting grounds, five miles away, was made at 5 o'clock. On the way to the grounds a cold deer trail drew off a few of the puppies and threw them out of the race for the day.

About sunrise a fox trail was crossed and rapidly carried to the north, along the L. & N. R. R. tracks, a mile to the jump. The hounds were badly scattered, and seven dogs, belonging to Spears, Avent, Hardie and Gregg, made the drive of a mile and a half to the track before the rest of the pack harked to the cry. Judges and spectators were equally at fault with the dogs, Mr. R. C. Reynolds, one of the judges, and Mr. J. M. Avent alone seeing the fox, a lusty old gray, as he crossed a small open just after the tack.

Here, however, a series of dodges and turns in a thicket of scrub oaks brought all to the front, and the next straightaway run of a mile was the charge of a roaring torrent of huntsmen that threatened destruction to the trail or the puppies or to both in its madness. Indeed, nothing, not the hole and the subsequent kill, so tested the breeding and training of the dogs in the race. That they were able to carry the trail with the horses around them—some of them trampled, in fact—was a marvel to every beholder.

The hole, in a pipe under the railroad embankment, was made in little more than an hour from the jump, and marvelous to relate, all of the puppies that were in at the jump were still well to the front.

Some of the owners of dogs insisted that a kill should be made, and with great reluctance the judges finally ordered the hounds confined on the railway and the fox routed out for another try for his life. When Reynard was well in the brush the dogs were unleashed and in twenty minutes the kill was accomplished.

Mr. R. C. Reynolds, the hard riding judge, was first at the death and made a desperate effort to rescue the fox, but Bright Eyes had tasted blood, and Ajax and others were too close behind her, and together they tore him in pieces.

Mr. Hardie, Uniontown, Ala., was second at the death, and in compliment to the difficulties he had surmounted, riding a side saddle with a lumbering mule for a steed, Mr. Reynolds generously awarded him the brush.

Owing to the fact that the fox was a gray, the judges declined to make the awards, saying there can be no test of red foxhounds except upon red foxes.

This decision was, in the opinion of the writer, a serious mistake, especially when the scale of points under which the race was made is considered, as may be seen by the following:

Hunting, 20—the hunting was marvelous under the circumstances; trailing, 20—trailing was superb; speed, 20—a grander exhibition of speed was never witnessed in foxhounds; endurance, 20—there was no great test of endurance, but nothing to doubt its existence in anyway; giving tongue, 10—enough for a hundred decisions, as was equally true of intelligence and judgment, valued at 10.

The race, as a whole, was grand—wonderful for puppies, and should have been counted; the decision was accepted by the handlers with the best grace possible, and the Derby was continued for another day.

Wednesday there was no change in the weather for the better, and at 5 o'clock A. M. a start was made for the grounds designated by the master of foxhounds, seven miles—another unfortunate mistake, that resulted in nothing but a little trailing, especially when it was known that there was plenty of game within a mile of camp.

Wednesday night the club concluded to abandon the trials for the present, and it was decided to hold the next meet beginning the second Monday in December, 1896, at the same place.

Dr. I. F. Delaney was re-elected president for the ensuing year, with Mr. W. I. Spears for vice-president. Mr. J. H. Wallace, Jr., the efficient secretary-treasurer, was also named his own successor.

Among the 200 hounds present, and attracting general attention, were Banjo, the winner of All-Age Stake of the National Fox-Hunters' Association, 1894; Avent & Hitchcock's celebrated old Hunter, conceded by all who have ever seen him afield to be the grandest strike and trail dog on the continent; Messrs. Walker's Big Strive and Pearl Strive, winners of many firsts on the bench, and Mr. Spears's well-known Julys, Willis and July.

Messrs. Howard Tracy and Francis J. Hogan had in their string about twenty of their own and of the Walker hounds: big, bony dogs for the most part, apparently capable of good work. This pack was by no means uniform in color and not of the true American type.

The Avent & Hitchcock dogs, sixteen in number, were, with one exception, clean, racy-looking black and tans, with plenty of snap and vim.

Col. H. C. Trigg had eight hounds said to have caused the death of many foxes. They were fine lookers for the most part, but not uniform in type.

Hon. R. W. C. Gregg's pure-bred shaggies, next to the Avent & Hitchcock pack, were the most capable lookers at the meet.

W. I. Spears had three puppies out of an Avent bitch, by a July dog, that were racy-looking youngsters, and, so far as type goes, a great improvement on the pure Julys.

O. L. Hennigan's three youngsters were of no particular type, but looked like capable workers that may yet be heard from.

In the dozen other packs there were some good individuals, especially Ajax in that of Hardie & Co.

Before the close of the meet there was a match arranged between Messrs. J. M. Avent and Howard Tracy for a stake of $200 a side, that will be looked upon with great interest everywhere. The test will be for endurance between packs of from six to eight dogs, and will be run off at Hickory Valley some time in December.

The general public, however, will be disappointed to learn that the match will be in the presence of only six invited friends of the principals; and is, in this particular, unfortunate.

In conversation with the writer, Mr. Avent expressed a hope that Mr. Tracy would consent to invite Mr. Luttrel, of Georgia, to enter the stake. If it can be so arranged, this would bring together the three most noted packs in the United States.

Among the noted sportsmen present and not previously mentioned were Hon. Ross Smith and Hon. John McGyueen, Birmingham, Ala.; Maj. Val. Young, Waverly, Miss.; Capt. Wm. Bankhead and Mr. Mark Gilchrist, Courtland, Ala.; and Hon. R. H. Lowe, Huntsville, Ala.

To Capt. Hartsell and his family, Dr. I. F. Delaney, president of the club, and Mr. John H. Wallace, Jr., the sec'y-treas., all who attended the meet are indebted for much kindness. Nothing was left undone for the comfort and pleasure of anyone that they could accomplish.

Of the meet it is probably true that it was the largest and most representative gathering of hounds and huntsmen ever held upon American soil. WILL SCRIBBLER.

The N. E. F. T. Club's Trials.

THE trials of the New England Field Trial Club began on Oct. 29, at Assonet Neck, Mass. There were but six starters, drawn as follows:

SETTERS.

P. H. Powell's black dog Dan (Sport— ——)

with

Oakland Farm's black, white and tan bitch Our Pet (The Corsair—Tchula). A. R. Sharp, handler.

H. D. Keyes's black, white and tan dog Montel (Marks Mack—Katie B.)

with

W. C. Baylies's black, white and tan dog Tennessee Vandal (The Corsair—Effie Hill).

D. A. Goodwin, Jr.'s, black and white bitch Gladys (Bradley—Matchless IV.)

with

Hobart Ames's black, white and tan dog Jockey (Claude —Mollie Dale).

The drawing took place in the morning at the grounds, and the start was made at 9:15. The weather was perfect, bright and with a light frost, the wind blowing gently from the northwest. We found very few birds, but they were placed so that we managed to get along very well. The grounds were in good condition. The leaves having fallen, we had no trouble to keep track of the dogs.

The dogs were a very nice lot to manage, quick to mind and very well broken. The handlers deserve a great deal of credit for the way their dogs were fitted and the manner they were handled. I cannot recall a single instance where there was any loud whistling or calling. It was truly very gratifying to see how easily well-broken dogs can be managed at a field trial.

The winner of first, Our Pet, is a medium-sized black, white and tan bitch, with plenty of speed, very intelligent range, good style on point, and handles quickly and pleasantly. Had she been run in her younger days at the larger trials, I am sure she would have made a good showing.

Tennessee Vandal is a medium-sized black, white and tan dog, fair range and speed, rather headstrong in his work. He handles his birds well. He has not so pleasing a way of hunting as the winner of first, neither does he compare with her in intelligence, speed, range, nor in style on game.

Montel, winner of third, is an evenly marked black, white and tan of nice size, and put up right for a nice going dog. In fact he is a very beautiful moving dog, and as he quarters his ground he makes you feel as though he was ready at any moment to point a covey. He ranges fast, and plenty wide enough for cover shooting, and minds promptly without more than a low whistle. He shows a lack of experience on birds, but no timidity. He does not seem inclined to back, but I imagine with another year's experience on game he will go higher up the score.

Dan and Our Pet were cast off at 9:15, Dan handled by his owner, Mr. P. H. Powell, and Our Pet by Mr. Arthur R. Sharp. Both dogs went away fast and ranged nicely, beating out stubble and cover equally well. In this brace we had two distinct types of dogs—Dan, low carriage of head and stern; Our Pet, high head and stern. Dan went quite as fast as Pet, but not so intelligently. He was a very interesting dog to watch. We hunted out a lot of ground before finding any signs of birds. Pet, crossing low ground into thick bushes, stopped to scent of covey; Dan, brought up to back, did so to order. Mr. Sharp failing to put up birds the dogs were ordered on and worked the trail nicely across another field. Dan pointed, Pet backing nicely. Mr. Powell put up birds and shot. Pet steady; Dan jumped a stone wall and chased. Sent on single birds, Pet made a nice point; steady to wing. Sent on, no birds were found for some time; in thick cover both dogs got among the birds and put them up. Dogs up at 10:10.

Montel, handled by H. B. Tallman, and Tennessee Vandal, handled by A. R. Sharp, were cast off at 10:15. The dogs ranged about alike. Montel had the best style, and somewhat the quicker dog and the easier to handle. We hunted through stubble, low, swampy meadow, bushes, over high ground, then crossed to the opposite side of the valley just across the bottom. Montel pointed a covey well, Van crossing behind and to the left, made a good point on same covey. Mr. Tallman put up birds; dogs steady to order. A crippled bird being left, it ran squealing in front of Montel and he tried to catch it. In the scuffle a ruffed grouse flushed from the bushes and crossed the open. Mr. Sharp put in a shell and made a nice kill at fifty or more yards, and broke shot to retrieve the birds, both dogs getting badly rattled at his action. Soon after, in thick pine, Montel made a point on single birds, left his point, jumped in, flushed and chased the birds. Vandal, in broom sedge, made a good point, Montel refusing to back; Van steady to wing. No more birds were found in this heat. Dogs up at 11:12.

Gladys handled by Mr. Ellis, and Jockey by Mr. Teen, were started at 11:16. They covered a lot of country before finding any birds. Jockey gave a nice exhibition of going over smooth ground, reminding me of Tony Boy—about his size and the same pretty way of going—but when he struck cover he was through, and did nothing but try to find good easy places to get about in. Gladys acted puppish, and did not get out to hunt, as she very likely will when she has more age and experience. Dogs up at 12:27, having done no work on birds that amounted to anything. Our lunch was a great success, and enjoyed by all.

Second Series.

Four dogs were kept in.

To Dan and Vandal I gave about an hour, Van showing himself to be the better in style of hunting, pointing, etc. Dan kept up his reputation for being unsteady.

Our Pet and Montel had a long run, I should judge one hour and a half, without finding birds. In this heat Montel rather had the best of it in speed, but in no other way. Found large bevy, Pet getting some point work. Montel rather unsteady.

I then put down Jockey for about ten minutes on single birds to see how he would act alone, but he would not hunt in briers. He made one point, but it proved barren.

I then decided, placing Our Pet first, Tennessee Vandal second, Montel third. N. WALLACE.

Among other items, Mr. Sharp sent us the following, but as Mr. Wallace's report is quite complete, we present only this.

Judge, Mr. N. Wallace, Farmington, Conn. Between forty and fifty interested sportsmen followed the dogs. Mr. Wallace's decisions gave satisfaction and were in no way questioned. A. K. SHARP, Sec'y.

Field Trial Handling.

IT is a pleasure to note a growing desire on the part of handlers, or some of them, to improve the training of dogs at field trials, and also to have the matter of training more specifically considered in that connection. That wide-awake and sound writer, Mr. W. W. Titus, in a private letter of recent date touches on the matter of backing, and his views are so sensible and pertinent that they deserve publication for the improvement of a noble sport. He says:

"I have always thought it very unjust to an honest dog to allow credit for a find to his competitor, the dogs being out of sight when the find was made, even though said competitor be on a point, if he has shown a disinclination or refusal to back the honest dog when in plain sight of him.

"I believe in a rule to the effect that all dogs must show positively that they are honest, reliable backers, remaining stanchly in backing position without coaching or steadying, as long as the pointing dog remains motionless, otherwise the judges will have a right to take it for granted that their backing is purposely left unfinished in order that when they come on a dog pointing out of sight of the judges they thievishly steal the point, and assume the position of the find. The judges are allowed to place such construction as they deem proper with full knowledge of the dog's qualities in this respect, in order to protect a good searcher from being robbed of the credit of his finds.

"A dog should, in a true interpretation of thorough training and finished performance, be just as reliable on a back as a point, and a dog that will not back a pointing dog except by command of his handler will make no pretensions toward backing when the handler is not present to give that command.

"A dog of this kind can commit piracy enough in each field trial meeting to place him well to the front, if not at the very top. In horse racing, such as trotting, a square fair trotter is protected from being robbed by a horse of mixed gait, and it is time that an honest, hard-working searcher should not be at the mercy of such 'pirates' as I have described. At the same time it would tend to bring into disrepute bad training, and encourage all trainers to be more thorough in all the detail of training.

"I am not complaining of a 'bugbear.' All practical men have realized the extent to which an honest dog can be worked to its disadvantage by a dog cunning in and watching for opportunities to steal points; and some loafing dogs will get to be so expert that one often hears them spoken of as having so much sense, that without hunting hardly any they can find more birds than a hard hunter, which or[illegible]ets around to back—which often means that the 'loafer' gets around in time to steal a point.

"This [illegible] enforced with the utmost rigor in a champi[illegible] dog that is not an honest, reliable backer, as stanch on back as point, has no place nor right to be considered.

"I think it is not due to scarcity of birds which makes finding at Newton so difficult, as I have the same conditions here: no rain for two months and dry as tinder. The cornfields or in fact all fields will burn as freely as in the warm days of spring. Naturally birds seek the cool solitude of impenetrable thickets, near some creek if possible where water is to be had, or if not they drink the dew in early morn, and stay in cool places, where their thirst will not be excited. I am hammering away by getting up at daylight, and locating birds by their calling, or whistling, which they do as roosters crow at day-break. It gets so hot at 8 that I lay up till late in the evening, in fact the same *modus operandi* as is used on the prairies.

WHEN THE LONG ISLAND RABBIT SEASON OPENS.—*See page 401.*

FIELD TRIALS OF THE BRUNSWICK FUR CLUB.

THE Brunswick Fur Club held its seventh annual field trials at Barre, Mass., beginning Oct. 28 and ending Nov. 1. The hunting grounds were as well suited to the purpose as any the club has tried. There are many hills from which a good view of the surrounding territory can be obtained, and there are large tracts of cleared land where the hounds could be seen running for a long distance. The greatest drawback to the region for field trial purposes is the numberless stone walls and the rocky pastures, where a fox could go for miles without touching his foot to the earth. This latter objection, however, is not an important one, for with such a pack of hounds as was entered at these trials the fox had no time to pick his way; when the driving conditions were good he had to flee for his life.

The pack unquestionably contained more high-class hounds than were ever brought together in New England previous to this meet. Most of them were of the same type and many were similar in markings, and the difficulty of distinguishing one from another is obvious. To remedy this each hound had a large letter painted upon his sides in bright red paint. In this way the hounds were easily distinguished, and the plan will be adopted in the future trials of the club. The judges were able to identify the hounds easily, and there was no danger of mistaking one for another.

During the four days of the trials the judges did an immense amount of hard work. Judging such a pack is no easy matter on horseback, and where the work must be done on foot the difficulties are greatly increased. Luck must always enter into such competitions to a certain extent, and hence it was a source of gratification to the judges to know that their awards were generally indorsed by those who had followed the hounds during the week.

Jay Bird and Torment, the first and second prize winners in the Derby, are remarkably good hounds for their age. The former is built for speed more than endurance, while the latter has the form and substance of an English hound. Both displayed intelligence and perseverance in all their work, but Jay Bird ranged wider, and when at fault cast further than Torment. Polly, the third prize winner, will improve with experience.

Dan, the winner of the highest honors in the All-Age Stake, is a stylish hound of wonderful endurance, fine nose, great speed and intelligence. He was bred by W. S. Walker. Big Strive, well known on the bench, made a record to be proud of in winning the second place in such hot competition.

Among the visitors at Barre was Howard Tracy, of Louisville, Ky. He is the first sportsman from that State to enter his hounds at these trials, and it is hoped that his success in winning the Derby and the second place in the All-Age Stake will induce him to come again and bring his friends with him. Others present were Dr. A. C. Heffenger, W. A. Bragdon, Portsmouth, N. H.; L. A. Tunley, Boston, Mass.; Wm. H. Perkins, L. A. Fisherdick, Ware, Mass.; Solomon Bennett, Providence, R. I.; A. B. McGregor, Poland, Me.; A. B. F. Kinney, W. E. Hapgood, G. A. Goddard, J. A. Williams, Guy C. Whidden, W. R. Dean, Worcester, Mass.; H. H. Shields, Bennington, Vt.; O. F. Joslin, George B. Appleby, Oxford, Mass.; E. L. Brooks, Brattleboro, Vt.; J. H. Gafney, Petersham, Mass.; R. D. Perry, Portland, Me.; E. J. Hill, Phillipston, Mass.; S. B. Mills, J. William Jones, Needham, Mass.; George E. Carr, Holliston, Mass.; F. G. Stewart, New York, N. Y.; L. E. Conant, L. O. Dennison, Waltham, Mass.; Bradford S. Turpin, Roxbury, Mass., and a number of others.

Most of the sportsmen arrived on Monday and a club meeting was held in the evening. Howard Tracy, Louisville, Ky., was made an honorary member and the following gentlemen were elected active members: H. H. Shields and W. A. Viall, Bennington, Vt.; Jas. H. Gafney, Petersham, Mass.; L. Fisherdick, Ware, Mass.; Geo. A. Goddard, Worcester, Mass. The Derby closed with the following entries and the meeting adjourned.

Derby Entries.

TORMENT—Dr. A. C. Heffenger's b., w. and t. dog (Redstone—Nell). Maupin—Robinson strain, whelped, April, 1894.

BUCK—John M. White's b., w. and t. dog (Logan—Aggie). Pooler strain, whelped July, 1894.

BESSIE—John M. White's b., w. and t. bitch (Logan—Aggie). Pooler strain, whelped July, 1894.

POLLY—H. H. Shield's b., w. and t. bitch (— Molly). Goodman—Walker cross, whelped Ma[illegible]

POPE'S FRISKY—White Oak Hill K[illegible] and t. bitch (Pealer—Flirt). July—Good[illegible]oss, whelped May, 1894.

JAY BIRD—Walker & Hagan's b., w. and t. dog (Sam—May). Kentucky hound, whelped August, 1894.

Tuesday—The Derby.

Clouds covered the sky in the early morning and threatened rain, but the sun broke through by 7 o'clock and a fairly good hunting day resulted.

The Derby entries were cast off a mile west of the village at 6:25. They packed well and all seemed anxious and willing to work. Jay Bird, Polly and Torment showed greater hunting sense than the others and did practically all the work of the day. No track fresh enough to be worked was hit till about 9 o'clock. Then Jay Bird struck a skulking fox, and with Torment and Polly carried the track for more than two miles. Finally they got on running terms with the quarry and Torment and Jay Bird ran him prettily for an hour or more. Polly unfortunately was thrown out and did not get into the chase. The other youngsters refused to hark to the driving hounds and Torment and Jay Bird had the race to themselves. Jay Bird was the better, though Torment was a good second. The fox was finally lost near Swift River.

The judges were: R. D. Perry, J. Wm. Jones, W. A. Bragdon, Geo. E. Carr, S. B. Mills and John A. Williams. They gave first prize to Jay Bird, second to Torment, third to Polly.

SUMMARY.

BARRE, Mass., Oct. 29.—Brunswick Fur Club Derby open to all hounds whelped on or after Jan. 1, 1894; entry fee, $2; first prize, 50%; second, 30%; third, 20% of entry fees; six starters:

First, Walker & Hagans's Jay Bird; second, A. C. Heffenger's Torment; third, H. H. Shields's Polly.

The entries in the All-Age stake were made on Tuesday evening.

All-Age Entries.

DIAMOND K.—John M. White's w., b. and t. dog (Logan—Wild). Pooler—Wild Goose cross, 3yrs.

FLY—John M. White's b., w. and t. bitch (Crook—Bessie). Walker hound, 4yrs.

PIPER—W. A. Bragdon's w., b. and t. dog (Strive—Fly). Walker strain, 2yrs.

DOCK—W. A. Bragdon's w., b. and t. dog (Strive—Rate). Walker strain, 2yrs.

SUNMAID—White Oak Hill Kennels' w., b. and t. bitch (Traveler—Flash). July strain, 3½yrs.

CLAY—White Oak Hill Kennels' w., b. and t. dog (Scully—Bessie). Goodman strain, 7½yrs.

BANJO—Tracy & Hagan's b., w. and t. dog (Barbour's Spot—Tracy & Hagan's Rose). Kentucky hound, 3yrs. 2mos.

BIG STRIVE—Hagan & Walker's b., w. and t. dog (Striver—Sall). Walker strain, 2½yrs.

JULIETTE—O. F. Joslin's w. and t. bitch (Sam King—Daisy). July—Walker cross, 2¾yrs.

DAN—O. F. Joslin's b., w. and t. dog (Boston—Nell). Walker strain, 2yrs. 1mo.

RODES—O. F. Joslin's b., w. and t. dog (Brewer—Mag). Walker strain, 2yrs. 2mos.

SIM—O. F. Joslin's b., w. and t. dog (Jake—Cricket). Walker strain, 2yrs.

ROCK—Geo. E. Carr's b., w. and t. dog (Smitha's Logan—Muse). Maupin—Robinson cross, 4⅝yrs.

DRIVER—G. W. Pierce's b. and t. dog (Turk—Lake). Goodman strain, 2yrs.

JENNIE REDSTONE—G. W. Pierce's b., w. and t. bitch (Redstone—Jenny). Goodman strain, 2yrs.

HUSKIE—R. D. Perry's b., w. and t. dog (Troupe—Blinkie). Walker strain, 2yrs. 5mos.

TRAILER—R. D. Perry's b. and t. bitch (Bonnie—Maggie). Conant strain, 3½yrs.

TREAD—W. A. Viall's b. and t. dog (Bonnie—Maggie). Conant strain, 3½yrs.

JOE J.—Geo. A. Goddard's b. and t. dog (Adam—Wild). Native—Wild Goose cross, 4yrs.

BARNEY—Sandy Spring Hunt Club's gray, t. and w. dog (Sport—Hester). July strain, 4½yrs.

BEULAH—Sandy Spring Hunt Club's b., w. and t. bitch (Boston—Jule). July strain, 3yrs.

MARQUIS—Noel E. Money's w., t. and gray dog, Welsh hound (imported), 2yrs.

Wednesday—The All-Age.

A white frost, no wind and a cloudless sky promised great sport on the first day of the running of the All-Age Stake. But the promise was not fulfilled.

At 6:30 the twenty-two entries were cast off at the same place where the Derby was started on Tuesday. The hounds found a track within two minutes and within ten had two foxes up. One led away toward the west driven by four or five hounds, and the other hotly pursued by the rest of the pack started south. The scent was perfect and the speed terrific. The fox proved to be a "liner" and away he went without a turn. As ill luck would have it, however, he was headed and turned sharply back. The pack over-ran badly and it was some minutes before the hounds hit it off again. Some of them were thrown out altogether and others were so far behind the leaders that they became discouraged and finally gave it up. The fox crossed Sherman Hill, ran to Thousand Acre Swamp and then took a turn toward Petersham. The pack was out of hearing by 9 o'clock and it was not till 1 that judges Mills and Williams learned the whereabouts of the hounds. Seven were still working, picking a track slowly along, with Joe J. and Driver doing the greater part of the work. While the chase was hot it was simply impossible for judges or spectators to come up with the pack near enough to distinguish the individual hounds. The judges worked hard and covered mile after mile on foot only to find the hounds still ahead of them. Such work was extremely tedious and unsatisfactory.

The M. F. H. was busy till late in the evening searching for lost hounds. He brought in all but Marquis—the odd looking Welsh hound—Driver, Piper and Huskie.

The judges were S. B. Mills, J. Wm. Jones, J. A. Williams, Guy C. Whidden and Bradford S. Turpin. The following hounds were spotted out: Fly, Barney, Sunmaid, Juliette and Jennie Redstone. All these hounds are capable of good work, but they failed to run in their usual form to-day.

Thursday.

Again the club was favored with good hunting conditions. In the early morning the ground was covered with white frost and there was no wind. Later in the day, however, a cold easterly breeze sprung up, making the day the most comfortable one of the week for sportsmen.

Huskie, Marquis and Piper were still missing when the hounds were ordered out at 6 o'clock. Consequently the pack consisted of but fourteen. Judge Whidden was unavoidably absent.

The M. F. H. ordered the hounds cast off at 6:40. They quickly found a fresh track and carried it prettily and at great speed for a couple of miles and then jumped their fox. Every hound was on and the fox for an hour and a half was pressed hard. Fortunately he was not an "old liner," such as was started on Tuesday, and he furnished rare sport for those who were so lucky as to be present. After making a couple of turns about the hills where he was started he led away for a large swamp. Here he skulked for some time and very nearly succeeded in throwing off the pack. But the hounds finally jumped him a second time and once more the chase was on. The speed up to this time had been terrific, but now the ground became drier every moment and the scent lay badly. The fox began to take his own time, and after making a long swing to the southeast he turned back toward the starting point.

At 10:45 he was twenty minutes ahead of the pack, and by 11 the hounds had lost him altogether. At the finish there were only eight hounds driving—Dan, Sim, Diamond K., Big Strive, Beulah, Joe J., Rodes and Tread. All the others were either thrown out or had quit and gone home. Dock had lost the pack, but later had started a fox alone, and drove him for some time with Driver.

During this great day's sport nearly all the hounds had some good work put to their credit. Among those seen in the lead were Clay, Dock, Rodes, Big Strive and Dan; but the latter was there more than any other hound, and at the close of the day was as fresh as any hound in the field. Clay in the early morning ran in the same splendid form that he showed in the trials of '92, when he won the highest honors. Rodes showed great speed after the fox was up, but he took no interest in starting the game.

The day was a most satisfactory one, as the judges had many opportunities to see the work of the hounds. In the evening they decided to order out all the hounds on Friday that were out to-day.

Friday.

Hard rain fell all night, but at sunrise there were indications of pleasant weather, and by 9 o'clock the sun was out. As the clouds drifted away the wind began to rise and was soon blowing a gale, making it very difficult to keep track of the hounds.

The rain had washed away all the fox tracks, if indeed any had been made during the night, and the only hope of getting a run was in jumping a fox. Accordingly the hounds were put in at the edge of a promising swamp and worked to windward. For two miles or more they beat out the swamps and covers without finding a track. Then by good luck they ran directly upon the game and a splendid chase followed, though the sport was marred by the high wind. The pack, in drawing for the fox, had held together wonderfully and all the hounds were on at the jump. For two hours they ran the fox over the hills and through the valleys, and in all that time there were but two hounds thrown out—Rodes and Beulah. The others packed perfectly, running in a bunch from start to finish. The fox finding he could not escape on the uplands took to a large swamp and threw off the pack without great difficulty. Just before the finish the hounds crossed a brook, and Diamond K. was so unfortunate as to be caught between two logs in such a way that he could not escape. He was saved from drowning by one of the hunters who happened to be in the vicinity.

This chase ended the work of the meet. In the evening the judges posted the awards as given below:

SUMMARY.

BARRE, Mass., Oct. 30–Nov. 1.—Brunswick Fur Club All-Age Stake; open to all foxhounds. Entry fee to all classes, $3. First prize in each class 50 per cent., second 30 per cent. and third 20 per cent. of the entry fee. Twenty-two starters.

HUNTING CLASS.

First, O. F. Joslin's Dan; second, George A. Goddard's Joe J.; third, O. F. Joslin's Sim.

TRAILING CLASS.

First, O. F. Joslin's Dan; second, Hagan & Walker's Big Strive; third, White Oak Hill Kennels' Clay.

SPEED CLASS.

First, O. F. Joslin's Dan; second, Hagan & Walker's Big Strive; third, G. W. Pierce's Driver.

ENDURANCE CLASS.

First, O. F. Joslin's Dan; second, W. A. Bragdon's Dock; third, Tracy & Hagan's Banjo.

TONGUING CLASS.

First, White Oak Hill Kennels' Clay; second, Geo. A. Goddard's Joe J.; third, Hagan & Walker's Big Strive.

STYLE CLASS.

First, Hagan & Walker's Big Strive; second, White Oak Hill Kennels' Clay; third, O. F. Joslin's Dan.

SPECIAL PRIZES.

American Field Cup, highest general average medal, O. F. Joslin's speed medal, Dr. A. C. Heffenger's hunting medal to Dan.

H. A. P. Smith's tonguing medal to Clay.

A. B. F. Kinney's $50 for fox killed by the hounds was not awarded.

On Friday evening a club meeting was held, President Heffenger in the chair. R. D. Perry, O. F. Joslin and S. Knight, Jr., were empowered to select the place and date of the winter meet. Solomon Bennett, Providence, R. I., was elected a member of the club. The meeting then adjourned and a fox-hunter's ball brought a week of good sport to an end. J. A. F.

Entries for the Beagle Trial.

THE field trial committee of the National Beagle Club of America held a meeting at 55 Liberty street, Tuesday, Oct. 22. The members present were Messrs. H. F. Schellhass, J. W. Appleton, A. D. Lewis, George Laick, N. A. Baldwin and Geo. W. Rogers. The entries received numbered twenty-nine against seventeen in the same classes last year. Among them are a number of dogs which will compete in the New England Beagle Club trials at Oxford, Mass., beginning Nov. 5, which have been nominated by H. S. Joslin and W. S. Clark, the president and secretary of the New England Beagle Club. Among the other nominators are George F. Reed, who won the Derby last year at Hempstead, L. I., with Nell R., and in 1893 at Nanuet, N. Y., with Sport R. C. Staley Doub, who has one of the finest packs in the South; N. A. Baldwin, D. F. Summers, William Saxby and the Somerset Kennels, all frequent winners with their strains at beagle trials, have made entries. The list is as follows:

OPEN CLASS A.

For dogs, all ages, 15in. and under, that have not been placed first in any open class at field trials held in America.

Awashonk Kennels' black, white and tan dog Zeno (Deacon Tidd—Daisy).

H. S. Joslin's blue ticked dog Snyder III. (Snyder II.—Nancy).

A. C. Pickhardt's Jester II.

George F. Reed's black, white and tan dog Spark R. (Keannelly's Lee—Skip).

OPEN CLASS B.

For bitches, all ages, 15in. and under, that have not been placed first in any open class at field trials held in America.

Walter Randall's black, white and tan bitch Bell (Fitzhugh Lee—Baby Deane).

W. S. Clark's white and tan bitch Sunbeam (Buckshot—Nell R.).

Waldingfield Beagle's black, white and tan bitch Lufra (Imported Orator—Lonesome).

N. A. Baldwin's black, white and tan bitch Ada B. (champion Frank Forest—Zellah).

C. Staley Doub's black, white and tan bitch Triumph (Imported Chimer—Welcome).

William Saxby's black, white and tan bitch Dime (Judge—Baby).

D. F. Summer's black, white and tan bitch Lucy S. (Frank—Jip).

Somerset Kennels' black, white and tan bitch Marvel (Bounce—Ferol).

George F. Reed's black, white and tan ticked bitch Nell R. (Ned—Haida).

F. W. Chapman's Marguerite (Fitzhugh Lee—Sido).

OPEN CLASS C.

For dogs and bitches, all ages, 13in. and under, that have not been placed first in any open class at field trials held in America.

George F. Reed's black, white and tan bitch Skip II. R. (Buckshot—Jute).

Daniel F. Summer's black, white and tan bitch Summer's Kit (Trubble—Lucy). S., also tan and blue ticked dog Talor (Royal Forest—Beauty C.).

F. H. Bolton's black, white and tan dog Young Royal (champion Royal Krueger—Midge).

Walter Randall's black, white and tan bitch Lola Lee (Fitzhugh Lee—Parthenia).

C. F. Prouty's black, white and tan bitch Becky Bates (Fitzhugh Lee—Parthenia).

William Saxby's black, white and tan bitch Bessie (Judy—Baby).

George Laick's black, white and tan dog Laick's Rattler II. (Laick's Rattler—Flirt).

DERBY—CLASS D.

For dogs and bitches, 15in. and under, whelped on or after Jan. 1, 1894.

Awashonk Kennels' black, white and tan dog Baronet Daunter—Rocklass).

W. S. Clark's white and tan bitch Sunbeam (Buckshot—Nell).

Waldingfield Beagle's black, white and tan dog Phœbus (Potomac—Belle of Woodbrook).

C. Staley Doub's black, white and tan bitch Pisen (Wanderer—Spinaway).

George F. Reed's black, white and tan bitch Spinaway (Laick's Rattler—Spot R.).

J. Q. Bourne's black, tan and blue ticked bitch Jute II. (Buckshot—Jute).

William Saxby's black, white and tan bitch Dime's Daisy (Clyde—Dime).

James L. Kernochan has made entries for Class G, Brace Stakes, and Class H, Pack Stakes.

GEO. W. ROGERS, Sec'y.

U. S. F. T. C. All-Age Entries.

TRENTON, Tenn.—The entries for the All-Age Stake of the U. S. F. T. Club, Newton, N. C., number twenty-nine: fourteen setters, thirteen pointers.

ENGLISH SETTERS.

LADY MILDRED—Hobart Ames's b., w. and t. bitch (Antonio—Ruby Girl).

ROD'S TOP—P. M. Essig's b., w. and t. dog (Roderigo—Topsy Avent).

TONY'S GALE—Fox & Seiler's b., w. and t. dog (Antonio—Nelly G.).

REVENUE—C. N. Powers's b., w. and t. dog (Antonio—Nelly Hope).

MINNIE T.—W. W. Titus's b., w. and t. bitch (Dick Bondhu—Betty B.).

SAM T.—W. W. Titus's b., w. and t. dog (Luke Roy—Betty B.).

HARROL SKIMPOLE—W. H. Beazell's b., w. and t. dog (Whyte B.—Nettie Bevan).

CYNOSURE—N. T. Harris's b., w. and t. bitch (Roderigo—Norah II.).

DIXIE'S FLAG—N. T. Harris's b. and w. dog (Wun Lung—White Wings).

TONY BOY—N. T. Harris's b., w. and t. dog (Antonio—Laundress).

TORY DOTLET—F. R. Hitchcock's b., w. and t. bitch (Count Gladstone IV.—Tory Della).

GLEAM'S PINK—Manchester Kennels' b., w. and t. dog (Vanguard—Georgia Belle).

BLACK ROCK—T. P. Lewis's l. and w. dog (Ray O'Hope—Lulie).

PALOMA—P. Lorillard's b., w. and t. bitch (Eugene T.—Lou).

POINTERS.

RIDGEVIEW REGENT—F. A. Hodgeman's liv. and w. dog (Beppo III.—Bloomo II.).

ELGIN'S DASH—F. W. Dunham's l. and w. dog (Kent Elgin—Mack's Juno).

LAD'S LADY—L. W. Blankenbaker's liv. and w. bitch (Lad of Rush—Lady Margaret).

TORY BARON—Thomas Hitchcock's liv. and w. dog (Duke of Hessen—Westminster Ina).

JINGO—N. T. De Pauw's liv. and w. dog (Mainspring—Queen II.).

VON GULL.—Ashford & Odum's liv. and w. dog (Kent Elgin—Fanny V. Croxteth).

TORY JOE—F. R. Hitchcock's liv. and w. dog (Kent Elgin—Fanny Heath).

TICK BOY—Stoddard & Kidwell's b. and w. dog (King of Kent—Bloom).

TAMARACK, JR.—H. K. Devereux's liv. and w. dog (Tamarack—Maud Graphic).

KOMUS—G. Cnisholm's liv. and w. dog (Clip Graphic—Mack's Juno).

REX FAST—C. Coolidge's liv. and w. dog (Rex—Mosy).

LA BELLE—Geo. F. Gray's liv. and w. bitch (Vandervort's Don—Winnie Tribulation).

RANCOCAS BELLE—P. Lorillard's liv. and w. bitch (Rip Rap—Maud). W. B. STAFFORD, Sec'y.

A Twice-Told Tale.

THE *Stock-Keeper* (England), in its issue of Oct. 18, publishes an open letter bearing the date of Sept. 27 and the signatures of Messrs. Jas. Watson and A. P. Vredenburgh, the committee appointed in accordance with the resolutions passed at the September meeting, "That Messrs. Watson and Vredenburgh be appointed a committee to write an open letter for the purpose of refuting the published statements of Mr. James Taylor, of England, respecting the American kennel world."

As the letter embodies, in the main, matter which has been gone over to a wearisome extent several times before, it is unnecessary to publish it *verbatim*. To show the position of the A. K. C. in the matter, it will suffice to publish the following excerpts from the letter mentioned:

Undoubtedly, the awards in the classes in which the Messrs. Woodiwiss exhibited were altered on Wednesday, and without the slightest consultation with Mr. Taylor, who had no more reason to be heard in the matter than if he had never left England.

The facts are these: The dogs belonging to Messrs. Woodiwiss did not arrive at the show building till Wednesday, the second day of the show; Mr. Taylor had not then judged these classes, but did so on that day. He awarded certain prizes to these dogs, but an objection was lodged because of late arrival. The show committee had no option, under the rules, but to disqualify the belated travelers; but, in order that their owners might not feel aggrieved at the enforcement of the show rules, Mr. Terry offered, on behalf of the club, to let the awards stand as "extra prizes" and pay the amount won, irrespective of the dogs' disqualification in their classes, and Messrs. Woodiwiss said they would prefer plate. The amount won was $90 (equal to £18); but, not content with voluntarily paying that amount twice over, the club purchased plate to the value of £22, and forwarded it to Messrs. Woodiwiss. Such are the facts as they are known to us, and it is our appointed duty to place them before your readers. * * *

Finally, let us ask English readers whether they can conceive a club committee disqualifying any dogs, and then paying the prizes over again for the purpose of committing a fraud, or indeed can they, in the history of the entire kennel world, find a duplicate to the generosity of the Westminster Kennel Club in presenting to the English exhibitors £22 worth of plate to which they had no legal right. Mr. Taylor is singularly silent on this point.

You may depend that if there had been any truth in the intent of Mr. Taylor's charges we should have heard of them here. The intent of Mr. Taylor's charge has been that a fraud was committed at our leading show, and your readers would, therefore, be led to the belief that it was a habit of our show managers to do so.

To this letter the *Stock-Keeper* appended the following: "A definite charge was distinctly made in our columns on May 3 this year. Mr. Taylor stated that the executive changed his dachshund awards, and that charge is admitted in the above letter. The explanation given is that Mr. Woodiwiss's dogs which received prizes were ineligible to compete, and were on that account disqualified, and in the natural course of dog-show events their disappearance from the prize list should have allowed each of their beaten competitors to move up a peg, that is to say, a third dog take second prize, a reserve dog take third prize, and so on. We should not have called that altering the awards, but what we do call altering an award is jumping up the bitch Weasel, which the judge only highly commended, into the prize list. In a general move up she should have been promoted to vhc., but the New York executive skipped the vhc., reserve and third prize steps, and put her second. We contend that the executive in this case exceeded their rights; they had no right to decorate with the second prize card an animal that the judge could appreciate no higher than hc."

The following appears in the *Stock-Keeper* of Oct. 25:

Although hitherto I have refrained from making any comment on the remarks which have appeared in print about my brother and myself at the late Westminster Kennel Club show at New York, I now feel it my duty to state the real facts, which were as follows:

On the morning of the first day of the show, the boat carrying our dogs and kennelman had neither arrived nor been reported; however, in the evening I received a telegram saying she would be in dock at 8 o'clock the next morning, so I at once took this telegram to Mr. Mortimer, and he said if we could get the dogs in before their classes were judged they would be all right (I may here mention the judging at this show was not finished until the evening of the second day; all our dogs were benched between 2 and 3 o'clock on that day, and the dachshunds were not judged until about 5 o'clock); therefore, our surprise was great when we were told later on that objections had been lodged against the awards being given to our dogs, that in consequence of the said objections they would receive extra prizes instead.

Now, to go to the subject of the plate, which we were alleged to have asked for and received in preference to the prize money. The whole of this is an utter fabrication. My brother never applied at the office for his prize money at all, but I went for mine and was offered checks amounting in value to about £16 or £17, which I refused to take, being much annoyed at the altering of the awards, viz.: by inserting the word "extra," and moving up dogs of inferior merit to the position mine by rights should have occupied. I especially noticed that the special prize for best team of dachshunds, which my dogs were awarded, remained unaltered in the catalogue; therefore, in place of the $15 for this said special, I asked Mr. Terry if he would send me a gold medal up to that value (or less).

This he agreed to do, and the word plate was never mentioned, nor have we received any, much less the gold medal; therefore what Messrs. James Watson and A. P. Vredenburgh mean by the paragraph, "The dogs belonging to Messrs. Woodiwiss did not arrive at the show building till Wednesday, the second day of the show. Mr. Taylor had not then judged these classes, but did so on that day. He awarded certain prizes to these dogs, but an objection was raised because of late arrival. The show committee had no option, under the rules, but to disqualify the belated travelers; but, in order that their owners might not feel aggrieved at the enforcement of the show rules, Mr. Terry offered, on behalf of the club, to let the awards stand as 'extra prizes,' and pay the amount won, irrespective of the dogs' qualifications in their classes, and Messrs. Woodiwiss said they would prefer plate. The amount won was $90 (equal to £18); but, not content with voluntarily paying that amount twice over, the club purchased plate to the value of £22, and forwarded it to the Messrs. Woodiwiss," which appears in your last issue, I am quite at a loss to understand.

E. SYDNEY WOODIWISS.

Continental Field Trials off.

INDIANAPOLIS, Ind., Nov. 4.—[*Special to Forest and Stream*]. On account of scarcity of birds at Newton the governing committee at a meeting held in Chicago to-day declared the Continental Club trials off.

P. T. MADISON, Secretary.

In Manitoba.

WINNIPEG, Oct. 29.—Prairie fires are raging all over the country, doing us no end of damage. The weather remains delightful—no snow yet. G. B. BORRADAILE.

POINTS AND FLUSHES.

Mr. R. B. Morgan has left Akron, O., his home of so many years, and settled permanently in Humboldt, Tenn., where he has stayed during the past three or four winters training dogs. He has rented several thousand acres of game preserve, and is very popular already, the local paper bestowing most cordial praise and welcome to him. We wish him every success.

The field trial committee of the National Beagle Club have extended the time for the closing of entries in Class C, Brace Stakes, and Class H, Pack Stakes, until the evening of Nov. 11.

Mr. H. W. Lacy is now on the editorial staff of the *American Stock-Keeper*, of Boston, an atmosphere more congenial to his tastes than that of the West. In a card Mr. Lacy explains that the failure of the *Kennel News* was due solely to the failure of Mr. Anderson's personal business of printer and publisher, and that at the time of the failure the journal was prospering.

The Muckross Kennels, Springfield, Vt., write us as follows: "We have had a phenomenal demand for our stock, and have sold everything in the way of a setter that we have got to sell. Your excellent paper has had its full share of credit for this. We have sent challenge Henmore Shamrock to Billy Tallman to be handled in the coming Irish setter field trials."

The following letter, says the Syracuse (N. Y.) *Standard*, has been sent to every pastor in Syracuse, and favorable answers have been received from several of the pastors, and it is believed that all will comply with the request:

"DEAR SIR: Believing that every good work that is a step toward spreading God's teaching and making it a practical influence should have the sanction and active aid of the church, we, the ladies of the Woman's Auxiliary to the Prevention of Cruelty to Animals Society, come to you, the head of the church, for your sanction and help. We believe that now in the formation period of this society an urgent appeal from you will awaken the minds of your people to the realization of the

ignorance and thoughtlessness that cause so much unnecessary suffering among animals. Believing concerted action most effective, we ask you to give one service on the last Sunday of October to this subject of justice and mercy.

Respectfully submitted.

WOMAN'S AUXILIARY S. P. C. A.
By order of committee. MRS. ARTHUR J. WELLS.

The following from the *Pioneer Press* shows that the wolf still holds the championship.

"ABERDEEN, S. D., Oct. 21.—The wolf hunt Sunday was so near a success that three or four were sighted, but proved too much for the dogs in the chase. The prairie wolves are monsters, much larger and heavier than the largest greyhounds, and were masters of the situation. Only one hound came in contact with a wolf, which after a short encounter was glad to give up. Wolfhounds have been sent for, and the sport will be resumed about next Saturday."

The premium list of the Bridgeport Kennel Club is now ready for distribution, and can be obtained by addressing Mr. Edward M. Oldham, Supt., 185 Warren st., Bridgeport, Conn. The judges are Dr. Jas. E. Hair, Bridgeport, Conn., pointers, English, Irish and Gordon setters and beagles; Gorman Hopkins, Hempstead, L. I., all terriers, foxhounds, greyhounds and whippets; R. K. Armstrong, Highland Falls, N. Y., all other classes. The entrance fee is $1. The dogs at this show will be benched by Spratts Patent, and fed on their meat fibrine dog cakes (with beetroot), and the show will be disinfected by The Imperial Hygenique Fluid Company. The managers wish it to be distinctly understood that, although this show cannot be given under the published rules of the American Kennel Club, they being copyrighted, all matters in regard to the management of the show which they cover will be governed thereby. Any changes in the premium list will be announced in the sporting papers. A good list of special prizes have been promised. All who are interested in dog shows should to the best of their ability give these smaller shows their material or moral support. They do an excellent work as educators. They reach classes which the larger shows cannot; thus they stimulate healthy emulation, which redounds to the benefit of the larger shows by direct and increased support to them. If they meet with the approbation which the managers hope for and which they really merit, more shows will be given throughout the country next year and possibly another show in December.

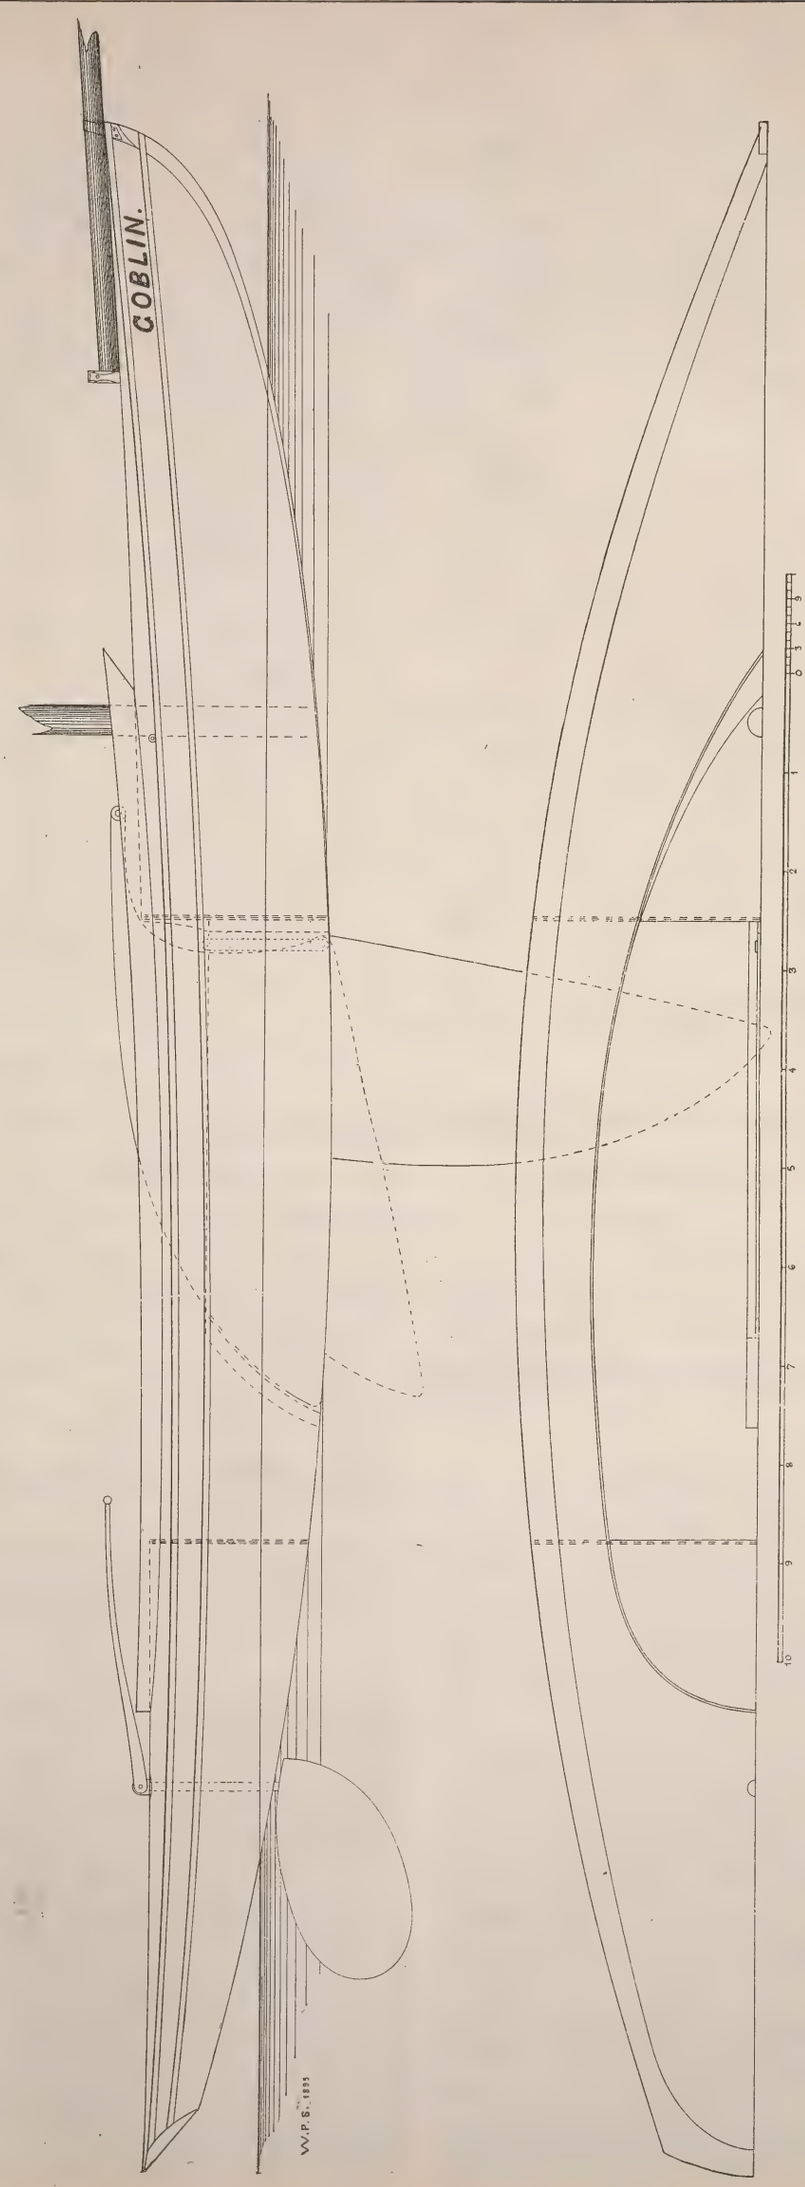
A correspondent, writing to a Leeds paper, says he can believe almost anything about the dog. For instance, one of his big brothers had a little dog. He was a valiant fighter, but his soul was bigger than his body. One day he met another dog and came home badly mauled, having limped a distance of more than a mile. "He was observed to undo the watchdog's collar, and the two went off together. Next day a neighbor called to complain that two dogs had come over to his farm, and attacked and killed his. On being questioned, he stated that he had seen his own dog worry the little one the day before."—*British Fancier.*

An individual locally known as "O'er-time Tom," on going his rounds in the morning to wake people who work in the mills at Burnley, was, a few mornings since, about to knock at the door of a house when his eye fell on a little terrier dog asleep on the ground below the window. The animal filled Tom's heart with terror. Being awakened by a strange noise outside, the people of the house came to the windows to find him calling at the top of his voice: "Hey up! Does to hear? If tha doesn't call thee dog in I shan't wakken thee."—*British Fancier.*

Mr. C. E. Buckle writes us under date of Oct. 30: "It has been the driest fall I ever saw, and work has been very unsatisfactory, but my dogs are all well broken and advanced. Tippoo is going like a top and going well and is quite a bird finder."

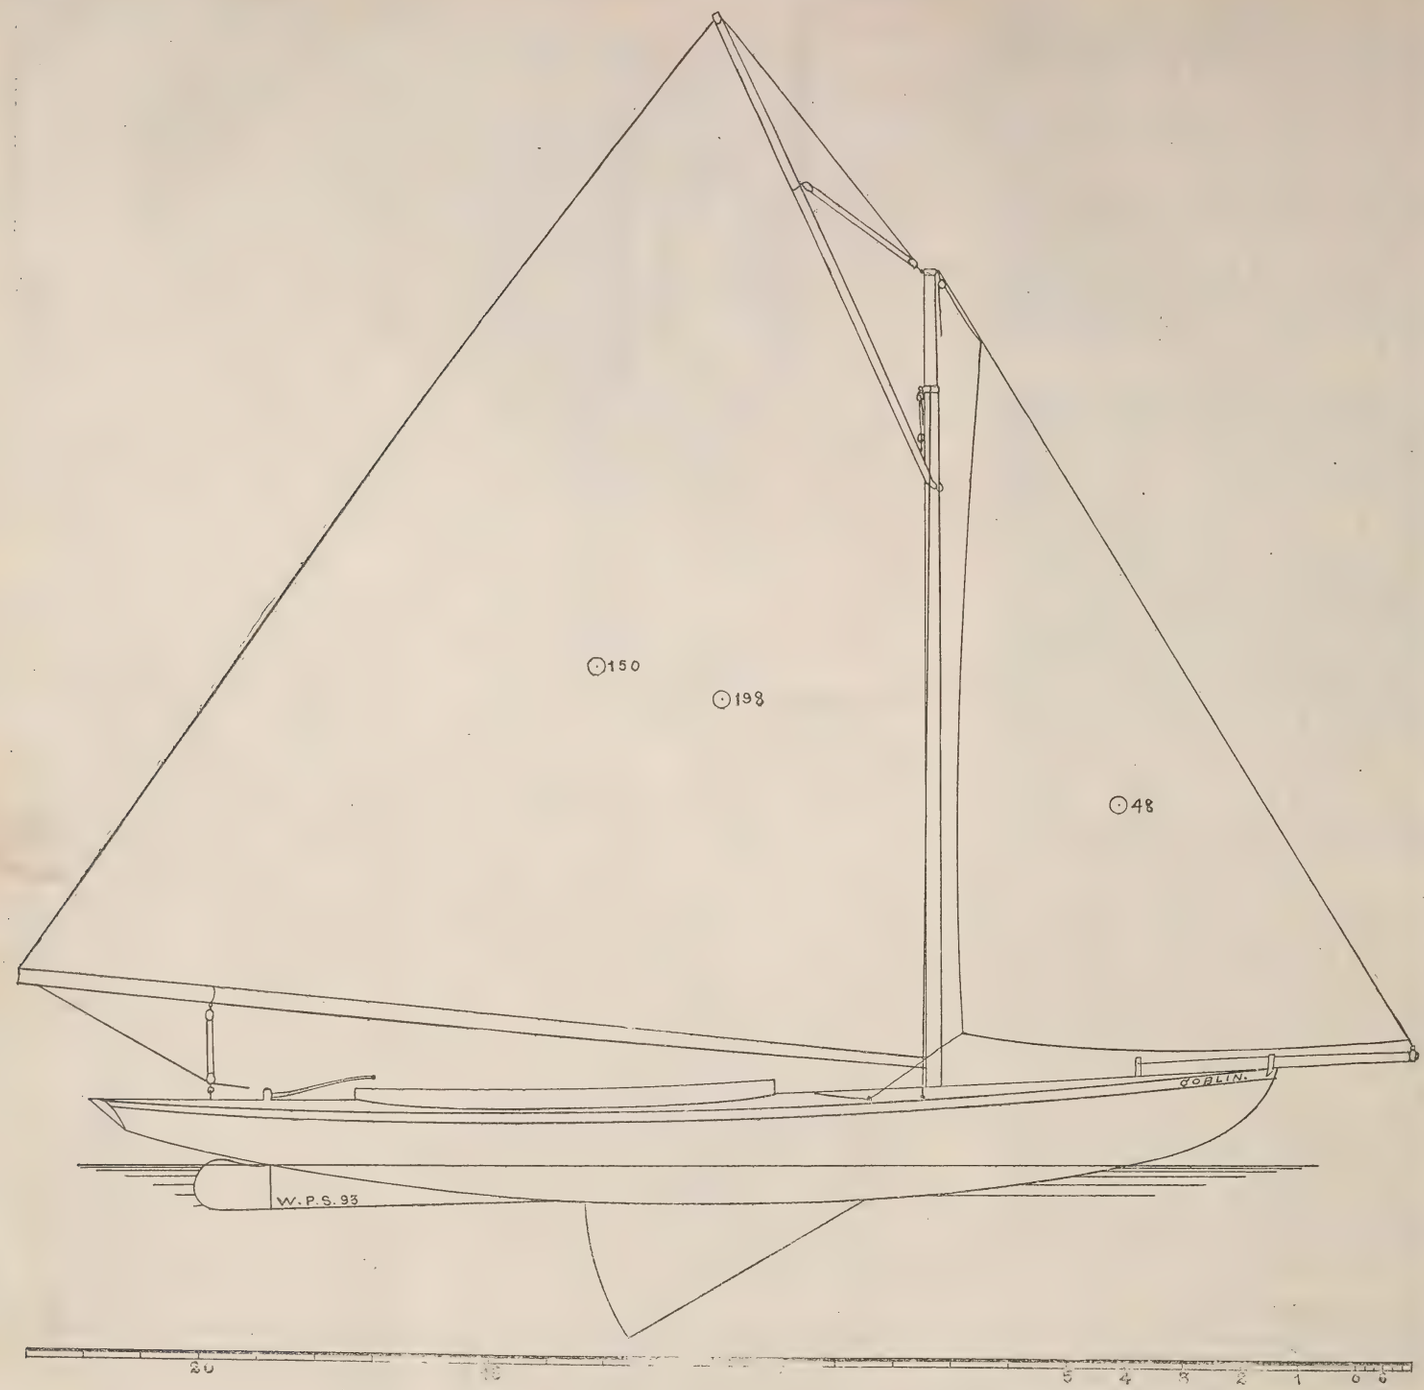
Mr. A. P. Vredenburgh, secretary of the A. K. C., leaves for San Francisco on the 7th inst., chiefly to confer with the clubs of the Pacific coast and officially gather such information as will lead to a better understanding of their needs and better relations with the main governing body. There is to be a meeting of those clubs at San Francisco on the 14th inst. in accordance with the purposes aforementioned.

At the meeting of the Metropolitan Kennel Club, held at Delmonico's on the evening of Oct. 31, the old officers were continued till the election to be held in the week of the Westminster Kennel Club's show. A constitution and by-laws were adopted. The meeting was well attended.



Mr. E. M. Oldham, who has shown rare skill in conducting shows, has been engaged to superintend the Mascoutah Kennel Club's next show.

Mr. Geo. H. Thomson, secretary of the Irish Setter Club, writes us under date of Nov. 2 as follows: In a letter from Dr. William Jarvis, Claremont, N. H., received a few days ago, he says: "I will give an Irish setter bitch, and a good one, by Signal out of Romayne, to the winner of the All-Age Stake."



The officers of the Bridgeport Kennel Club are: Dr. James E. Hair, President; Thomas Burke, Secretary; H. C. Learn, Treasurer. E. M. Oldham and the officers of the club are the bench show committee. The prize list foots up between $700 and $800, more than what is required for recognition by the A. K. C. to qualify in respect to a prize list.

Works on Sunday—

Talks business seven days in the week—a "Forest and Stream" Kennel Special advertisement.

15-FOOTER GOBLIN.—DESIGNED BY W. P. STEPHENS, 1893.

GOBLIN—SAIL PLAN.

Yachting.

BEYOND a vague and improbable rumor that the Prince of Wales has ordered a yacht from Mr. Watson and will challenge for the America's Cup, there are no new developments in international yachting this week. Valkyrie still lies at the Erie Basin, and though it is not clear how such an end may be made possible, we hope that before another of these costly and useless toys is built some means may be found of sailing a series of test races between her and Defender in order that the exact merits of the two may be fully determined. Both are capable of better work next season than in their first year, and in the interests of yacht designing we sincerely hope that they may be raced together, whether for the Cup or in the regular season's races.

EVERY American must take pride in the rapid progress in naval design and construction which the United States have made within the past ten years, and in the remarkable qualities of some of the new war vessels. Considering, however, that the designing and construction of the larger warships are at best, with all nations, but experiments that may result in failure, it might be safer, as well as in better taste, to wait for each new vessel to speak for herself through her performances. The following extracts from the New York *Herald* of two adjoining days show the risks which attend a premature bragging. We understand that the designs of the Maine were made some years ago, and before the present staff of naval constructors were in charge; and the defects, if they really exist, are probably due to a defective system by which the work of designing was divided among many departments. At the same time there is something very ludicrous in the publication of the two conflicting statements so close together:

SATURDAY, Oct. 26, 1895.—Why our cadets are barred out: It is announced that Great Britain will no longer permit the United States to send naval cadets to the Royal School of Naval Architecture, at Greenwich, to learn the business of designing ships. Current gossip concerning the reasons for this action has not called general attention to the most obvious one—namely, the folly of teaching our naval constructors how to design better ships than the English themselves turn out.

Not only has it been usual for our cadets at Greenwich to take the first place in the classes there, but they have been so successful later as ship designers that they have secured results in battle ships and cruisers far beyond those attained by their English contemporaries.

Under these circumstances it is not surprising that the British Government should decline to give us further assistance in making the United States Navy superior to Great Britain's. This action is probably a wise precaution, but it is also a confession.

SUNDAY, Oct. 27.—Grave defects in the Maine. Owing to a blunder in her design she draws 3ft. less aft than forward when she is ready for sea. Just brought to light. Having taken aboard all her stores, ammunition and coal she is down by the head. Apparently a radical fault. She also has a list to starboard that may indicate another equally serious misfortune. Officers are reticent. A court of inquiry may be needed to determine who is responsible for the bad design.

Goblin.

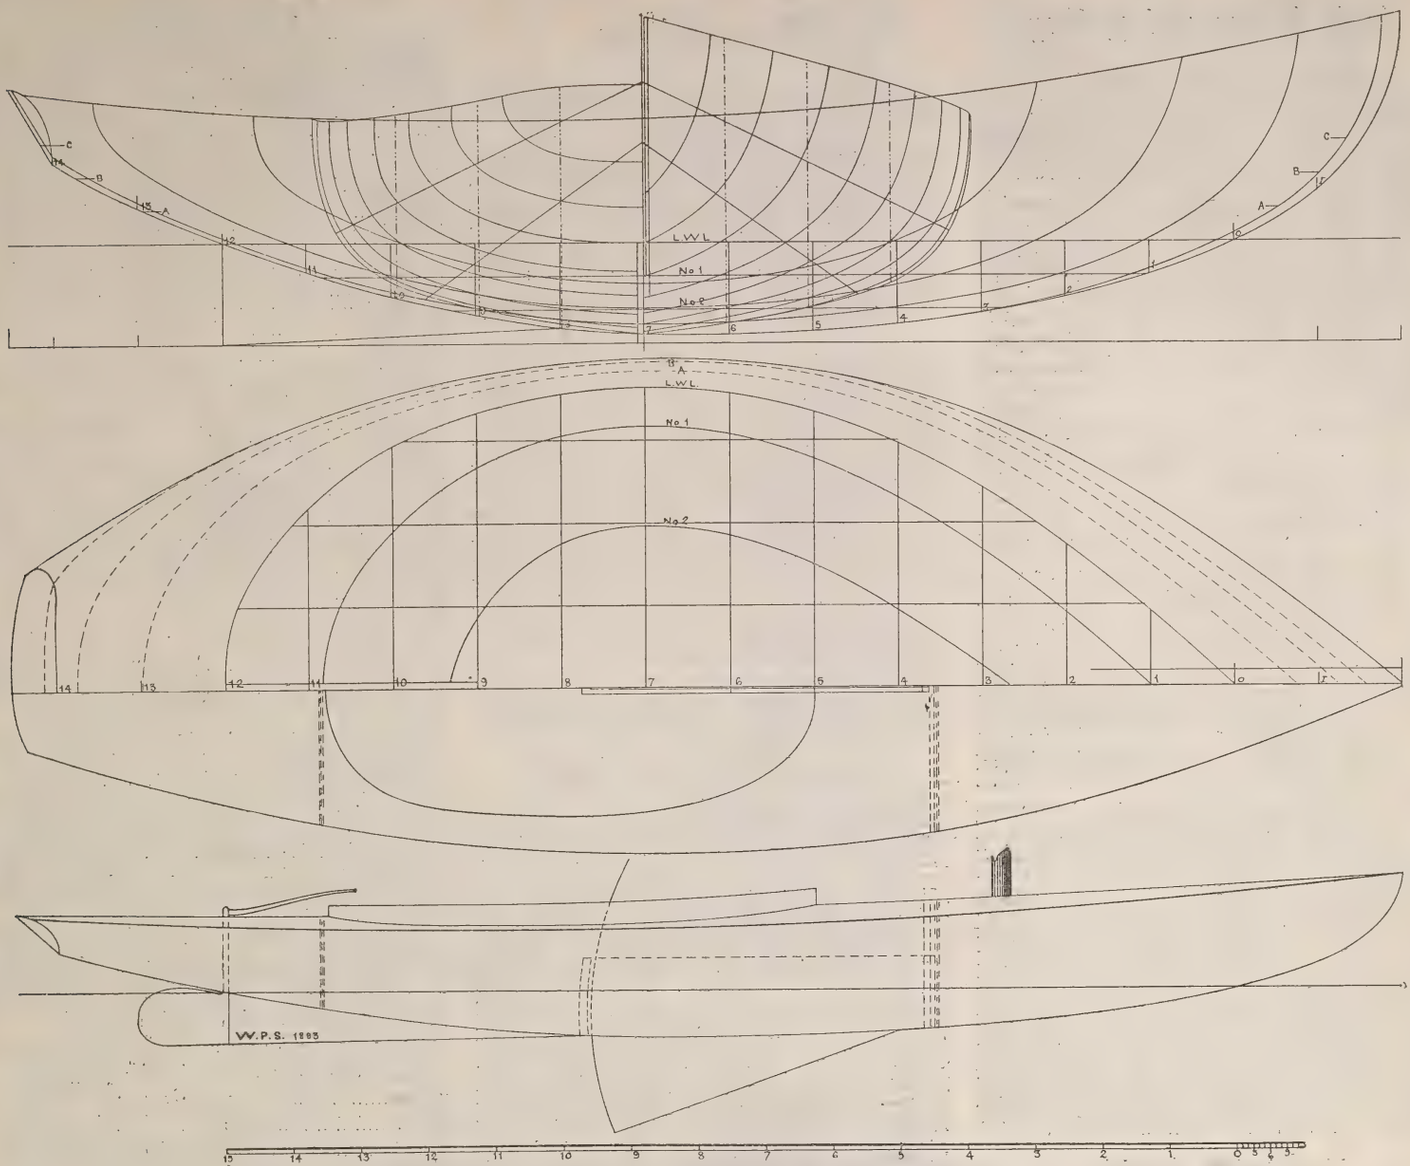
15FT. SAILING BOAT.

THE 15-footer Goblin was designed by W. P. Stephens for W. S. Elliott, of the Marine and Field Club, and was built by Samuel Ayers, now of Nyack, N. Y., in 1893. She was intended for sailing about Gravesend Bay and lower New York Bay with no thought of racing, there being then no class, but merely as a more comfortable and powerful craft than the sailing canoe with its sliding seat. To this end, largely single-handed work in open water, a sail plan of but 200sq. ft. was given her, and this she carried easily with a centerboard of galvanized iron of about 100lbs. weight and 300lbs. of inside lead. She will carry three easily, but can be sailed by one at any time with this rig and even less ballast. As the boat was wanted in a hurry in the busy season, the design was made from one that was already carefully worked out for a larger boat, by taking the offsets of the body plan with a larger scale than the original, and then spacing the sections a little further apart to make the required length of waterline, 15ft. The ends too were altered, the fore overhang being lengthened to suit the wishes of the owner, and in fact, in building, the stem was finally extended 3in. more than the drawing shows. The offsets, as taken from the original drawing, were plotted and the design newly faired by a "contracted" drawing, the breadths and heights being plotted to a scale of 2in. to the foot, while the length is reduced one-half. In this way all of the curves of the fore and aft lines are made much rounder and fuller, and any errors are greatly increased, so that they may be readily perceived and rectified.

The "contracted" method of fairing, as it is called, is often used to advantage where there is not room on the floor or the drawing board for the full length of a design, or where the vessel is very narrow and shallow, as in a shell boat; the curves being so nearly straight that it is difficult to fair them. The true proportions of length, breadth and depth are shown in the lower part of the drawing, with the arrangement of mast, well and bulkheads. The boat was intended to be beached or housed readily, being used a good deal in the shoal water about the Highlands and Pleasure Bay, consequently the ordinary scag and rudder were used, with a plain triangular centerboard. While never raced, Goblin proved a particularly smart little craft, in spite of the moderate rig and cruising fittings.

This design was used to a certain extent as the basis for that of Ethelwynn, two important changes being made; the displacement was greater than required for racing, and in cutting it down the round was taken out of the bottom and a flat V section substituted; and, as Ethelwynn was intended to be raced with a crew of two as ballast, the sides were extended 7in., making over a foot more beam to give as wide a deck as possible for the crew to sit out on. At the same time other considerations led to longer overhangs at each end. The design as it stands, however, should make quite a fast 15-footer, and we have shown the necessary changes in board and rudder to adapt it for racing. The arrangement of the well and coaming is the same as in Ethelwynn, there being two water-tight bulkheads with deck hatches, these hatches being placed just inside the coaming, which is extended over the deck. The centerboard may be of manganese bronze or steel, about ¼in. thick or even heavier if it is preferred to use it as ballast. The displacement is quite large enough to admit of the boat being sailed well inside of the 15ft. waterline.

The details of construction of this class of boat are fully described in the previous articles on La Gloria and Scarecrow.



The dimensions are:

Length, stemhead to taffrail	20ft. 8in.
l.w.l.	15ft.
Overhang, forward	2ft. 6in.
aft	3ft. 2in.
Beam, extreme	4ft. 10½in.
l.w.l.	4ft. 5¼in.
Draft, hull only	8¼in.
with board	3ft.
Freeboard, lowest	11in.
Sheer, bow	9¼in.
stern	2½in.
Displacement, lbs.	1,100
Fore end, l.w.l to—	
midship section	8.75ft.
C. B.	8.07ft.
C. L. R. with ordinary board.	10.07ft.
C. E.	7.30ft.
mast	3ft. 6in.

The stem is sided 2in., the keel, of oak, is sided 6in. at middle, tapering to 2in. at ends, and 1in. thick at middle, tapering to ½in at transom. The bedpiece is of oak, 3in. deep and 2½in. wide, with ½in. slot for board. The frames are sided ¾in, moulded 1⅛in. at heels and ¾in. at heads, and spaced 9in. The planking is in full lengts, to finish ½in. thick. The bulkheads are of two thicknesses of ¼in. pine or cedar, crossing diagonally, with canvas between. The clamps are 8×¾in. amidships, tapering to 1½×½in. at ends.

The spars for the all-around rig, all solid, are:

Mast, from fore end, l.w.l	8ft. 6in.
diameter at deck	3½in.
deck to truck	14ft. 2in.
hounds	12ft.
Bowsprit, beyond l.w.l	4ft. 11in.
diameter	2½in.
Boom	15ft. 9in.
diameter	2¾in.
Gaff	8ft. 6in.
diameter, oval	2½in. × 1¼in.

15-FOOTER GOBLIN.—DESIGNED BY W. P. STEPHENS, 1893

GOBLIN—TABLE OF OFFSETS.

Stations spaced 1ft. 3in. Waterline spaced 3in. The fractions in table are eighths of an inch.

The New Y. R. A. Rule.

In connection with the comments on the class limits under the new Y. R. A. rule which we quoted from the *Field* of Oct. 19, Lieut.-Col. Buckwill takes up the question in his vigorous and straightforward manner in the following issue of the *Field*. The method and figures suggested by him are obviously correct. Other letters in the same issue of the *Field* echo the complaint over the increased sizes of the two smaller classes:

Editor of the Field:

I am glad to find from your paragraphs on the new 1-raters, published in the *Field*, that you are commencing to point out some of the unfavorable results which will be produced by the new rule, classification, etc. I will not weary your readers by any further fault-finding concerning the rule itself, which I regard as anathema, but a few remarks on the new classification may be of service. Our yacht designers, who say they took such care before drawing up their proposals, most certainly came to grief over the classification. They endeavored to arrange the new classes so as to include most of the existing yachts in each class, apparently being under the impression (very erroneously) that the old boats might then race with some chance of success against boats specially designed for the new rule. This, no doubt, was a good intention, and, like most others, is utterly worthless, except to assist in forming that celebrated pavement in another place. Had they really given careful consideration to the matter they might perhaps have discovered that, the new rating being linear and the old rating cubic, the only way to arrive at classes similar to the old classes is to make them vary as the cube roots of the old ratings.

Had this been done the new classification would accord with column 4 in the following table, and the difficulties which have been invited by the adoption of the classes (see column 2) would have been avoided.

Old Classes Y. R. A.	New Classes Y. R. A.	Proportionals to the Cube Roots of Old Ratings.	Nearest Numbers for Classes.
0.5	18	14.85	15
1	24	18.71	19
2.5	30	25.40	25.5
5	36	32.00	32
10	42	40.32	40
20	52	50.80	51
40	65	64.00	64
60	73	73.26	73
80	78	80.12	80
100	84	86.86	87
160	100	101.59	102

Moreover, if it be desired to adhere as far as possible to the old time scale, a classification like the one in column 3 would lend itself best to such treatment. But this is a matter still under consideration, and it would appear more correct and reasonable to employ the square roots of rating lengths as a time scale (like the American) than to perpetuate a cubic time scale by an attempt to bring it in line with a linear rating and classification.

If columns 2 and 4 be compared, it will be seen that all the small classes up to 5-rating have far too large an equivalent in the new Y. R. A. classification, and the good intentions of our yacht designers have thus put a finishing touch to the slaughter of the innocents, not that any further bullet was necessary. The new rule alone was amply sufficient for their total destruction as racing vessels in our waters.

THALASSA.

Spruce and Ethelwynn.

WITHIN the past week the two racing 15-footers Spruce and Ethelwynn have changed hands, the former being sold by J. Arthur Brand to Charles H. Allen, of Lowell, Mass., president of the Country Club and a member of the Vesper B. C. Spruce has been lying at Abrams's yard, Cold Spring, but she will be shipped by steamer to Norwalk and thence by rail to Lowell. Mr. Field has sold Ethelwynn to Crosby and E. F. Leonard and Alex. Thompson, young yachtsmen, who will race her next season.

Mr. Brand has made since the races a trip to Niagara, Toronto, Montreal and Philadelphia, meeting the yachtsmen of both the Canadian cities. In Philadelphia he attempted to ride a bicycle for the first time, and injured his right hand in a fall. Last week was spent in New York, and on Nov. 2 he sailed, with Tom Wade, his "crew," on the Umbria. The steamship company which brought out Spruce IV. proposed to charge a much higher freight for the return trip, and as the boat would be of little value in England, being completely outclassed under the new rule, Mr. Brand parted with her at a very low figure—$300—rather than pay a high freight to take her home. He has already challenged for next year, but expects to have two or three other members of the Minima Y. C. associated with him.

YACHTING NEWS NOTES.

Hermione, steam yacht, under charter through the season by Robert Goelet, has been purchased by Henry L. Pierce, of Milton, Mass.

A regular meeting of the New York Y. R. A. was held on Nov. 1 at O'Neill's, Com. Prime presiding. The sum of $115 was appropriated for prizes for the annual regatta.

Mary, racing catboat, has been rigged as a yawl, with jib and mizen, and on Oct. 31 sailed from Bayonne on a cruise to Florida. On board were her owner, Wm. Elsworth, his cousin, Philip Elsworth, and Philip von Buskirk. The yacht will follow the inside route.

Davis & Sons, yacht builders, of Kingston, Ont., have in hand a 70ft. steam yacht for A. E. Knopt, of New York. The yacht will cost $6,000, with a guaranteed speed of 12 miles; and will be named Miltonier, after Milton Island. Mr. Knopt is also building a very commodious houseboat, from plans made in New York.

The yard at Marblehead, formerly run by H. V. Partelow, has been purchased by Wm. B. Stearns, of Boston, who has improved the property, erecting a building shed. Mr. Stearns graduated from Harvard in 1892 and has since been at Glasgow, studying at the Naval College and working in the Scotch shipyards.

Canoeing.

The Regatta Committee Report.

IN addition to the full official record of the races and donors of prizes, the report of the 1895 regatta committee is as follows:—Owing to the absence of two of the regularly appointed regatta committee Mr. E. M. Fulton was appointed a substitute. Mr. Fulton very kindly placed his yacht Gadabout at the disposal of the committee for the entire meet, of which we take this opportunity to express our appreciation. We also desire to thank Messrs. James A. Smith and Percy F. Hogan for their services as clerk of the course and starter respectively; and Mr. Carpenter for the use of his yacht and assistance in logging courses, placing buoys, etc., and the Rochester Canoe Club for the use of their cannon for starting races. Several letters are herewith submitted, from members who have been good enough to favor us with their opinions concerning a modification of the sailing rules. In consideration of these expressions, and of the general sentiment of our members, so far as we have been able to learn, we beg to suggest the following changes:—

First. In rule 1, lines 7 and 8, strike out words "except the unclassified boats, to which class the limits of length and breadth only shall apply."

Second. In rule 1, lines 24, 25, 26 and 27, defining the dimensions of cruising canoes, make such changes in size of well and restrictions to centerboard as shall meet the requirements of the improved modern cruising canoe.

Third. Provide a rule that shall limit the length of the sliding seat, for all races, to not exceeding the beam of the canoe

Fourth. Provide a rule that shall make the limit of length and beam of canoes for club fours sufficiently larger than the dimensions of the regular limits to meet the requirements for such races.

And we would further suggest that the executive committee recommend to the incoming regatta committee that they provide races similar to event 9 (limited sailing) and event 21 (swimming) on the programme of this year; and that they consider the advisability of continuing the classification as used in events 7 and 8.

(Signed) MORTON V. BROKAW, Chairman,
FRED. A. NICKERSON,
H. K. TILLEY,
E. M. FULTON,
Regatta Committee.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at latest by Monday, and as much earlier as practicable.*

Rifle Range and Gallery.

Revolver Shooting in England.

OCT. 16.—The final competition for the North London Rifle Club toward the revolver championship scores resulted as follows:

Twenty yards, stationary target: Walter Winans 41, Macdonald 40, Comber 40, Maj. Palmer 38, C. F. Lowe 38, Lieut. Richardson (rifle champion of the club) 38, Comber 37, Brading 37, Carter 36, Knapp 36, Capt. Earle 35, Franzman 34, Howe 34, Bashford 32, Denyer 32, Lieut. Howard 32, Luff 31, H. J. Andrews 30, Lieut. Evans 30, Ward 27, Britton 27, Garrud 25, Allman 23.

The season has now closed and has been the most successful one ever enjoyed by this club, there being more shooters and better shooting. The result of the revolver championship of the club competitions is now published. The report says: "Mr. Walter Winans again takes the revolver championship, and his grand aggregate score of 411 points out of the highest possible 420 must rank among the best things he has done with that weapon, and is an indication of the marvelous form he has shown in the club competitions this year."

Revolver championship, North London Rifle Club, 1895:

Winner of championship, club gold championship jewel and $5, Walter Winans (S. & W. revolver, U. M. C. ammunition).

Twenty yards scores: 42, 42, 42, 42, 42, 41—251 out of a possible 252.

Alternate hands score at 20yds.: 41 out of a possible 42.

Twenty yards disappearing target: 42 (the first highest possible made in competition).

Fifty yards target: 38, 39—77 out of a possible 84.

Total, 411 out of a possible 420.

Second prize, silver jewel and $5.

Major H. Munday, H. A. C. (Colt revolver, Walsrode powder, Eley case).

Twenty yards: 40, 39, 39, 39, 39, 39—235 out of a possible 252.

Alternate hands, 38 out of 42.

Disappearing target, 39 out of 42.

Fifty yards: 37, 36—73 out of 84.

Total, 385 out of 420.

Third prize, bronze jewel and $5.

Major H. Paer (S. & W. revolver, Eley's ammunition, black powder), 371.

The following receive $5 each.

Comber (Colt, Eley's ammunition, black powder). Score, 370.

Carter (Colt, Eley's ammunition, black powder).

Lieut. Richardson, who is rifle champion of the club (Colt, Eley's ammunition, black powder). Score, 346.

Luff (Colt, Eley's ammunition, black powder). Score, 350.

Gould (Colt, Eley's ammunition, black powder). Score, 297.

Evens (?), score, 295. Treadwell (?), score, 222.

The above is the rough preliminary score published but, there seems to be some mistake about Mr. Treadwell, being in the prize list as Mr. Knapp, but for omitting to enter at the right time should be fourth (using a S. & W.) with the score of 377, Capt. Earle eighth with the score of 336, and several others higher than Mr. Treadwell who we do not remember as shooting out his full number of entries. Anyhow the three top men are certain.

Mr. Winans's total is by far the best on record for England, having six highest possible scores out of the ten. He was unfortunate in the weather the last month or would have almost certainly improved it some three points more.

Oct. 23.—A revolver match was shot to-day at Ilford between teams consisting of the committee of the North London Rifle Club and the rest of the club. The conditions were: Mr. Winans, Capt. Cowan, Mr. Carter and Mr. Skilton to shoot on the committee side; Capt. T. W. Heath, Lieut. Howard and Messrs. Howe and Comber to represent the club; eighteen shots each man at 20yds., with one shot first allowed for sighting purposes.

Capt. Heath and Mr. Winans were drawn to shoot against each other first. The first six shots Mr. Winans scored 39 to Capt. Heath's 32, giving him a lead of 7 points, which Capt. Heath could not make up in his remaining shots, Mr. Winans winning with a score of 112 to Capt. Heath's 107. Capt. Cowan next shot against Mr. Comber, beating him by 4 points, scores 98 and 94 respectively. Howard and Skilton shot next, Howard making 91 to Skilton's 72. This virtually settled the match in favor of the club, as Mr. Carter, though he got up to within 1 point of Mr. Winans's score, making 111, was still run too closely by Mr. Howe, with a score of 107, to be able to make up for Mr. Skilton's poor score. Mr. Winans made another highest possible of 42 immediately afterward in the usual revolver 20yds. competition. This gives him a record of all highest possibles at 20yds. and 1 point more in the revolver championship of the club, bringing it up to 412 out of a possible 420 as far as actual shooting goes, but unfortunately this last 42 is not allowed to count owing to the shooting year being over; but of course it does not practically bar the record. This is the twelfth highest possible he has made in competition this year to compare with the next best of two made by Mr. Rand last year.

Wants Lighter Cartridges.

NEW YORK, Oct. 30.—*Editor Forest and Stream:* In these days, when everything pertaining to rifles is constantly changing, I, in common with a lot of other riflemen, have been looking out for the change we all expected when we first heard tests of the new high power powder had been successful, but that change has not yet arrived.

When it was first explained that we we were going to have these new powders, it was also explained, and has since so appeared, that the same amount of work would be done by them as was the old ones, although only half as much powder, counting by bulk, would be used. Consequently we who are used to the old .45-70 and .45-90 hoped to see a cartridge shooting the old ball with the same old twist of rifling, and with the same or very little increased velocity, which cartridge would be much lighter and smaller than the present .45-70, so that where we formerly carried with ease fifty cartridges we could now carry about eighty. Now we see the .45-70 loaded with smokeless powder, but they are just as large as ever, and the weight of the shell is practically the same; just as bulky and heavy as before, because the smokeless powder has been carefully made of a special brand to occupy about the same bulk as the black.

Is there no prospect then of our seeing the cartridges we are looking for? Do you not think that your influence would be used in a good cause if exerted to further the production of such a shell? A .45-70 loaded with a high power powder, it seems to me, would be, as nearly as I can calculate it, about the size of the old favorite .44-40, or possibly a little larger. A rifle to shoot it could easily be made very light, having if necessary a nickel steel barrel.

Of course the present .45-70 rifles could not shoot such a cartridge, but as a vast number of sportsmen will buy and are buying the new .30 calibers now so much in vogue, it is to be presumed that the same class or an equally large one will be only too anxious to buy such a weapon as I name. The experiments in the manufacture of rifles should tend to improvement, and should not be entirely conducted to meet the demands of old timers, and there is no doubt in the minds of many thousands of sportsmen that the old favorite rifles, .40s, .45s, etc., will hold their popularity even in the face of the new small calibers. Therefore such an improvement as the reduction by nearly half in weight and size of the cartridge, without at the same time any loss whatever of power, trajectory or accuracy, will be an onward step in favor of those who will shoot those arms from well-considered preference.

The Marlin Company it seems have just put on the market one of their regular rifles shooting one of these cartridges, and it seems to me that they miss the opportunity of a lifetime in not making the cartridges in the new form. In the same way every old favorite cartridge could be reduced in size and weight from a third to a half. .25-20s could be carried in the pocket by hundreds, and .38-55s could be carried in one's vest pocket, and the comfort and ease of supply to riflemen using these favorites for all times would be greatly increased. It is to me the greatest surprise that no company has thought of making this change. For, although those who already have rifles chambered for the present style of .45-70 cartridge, and not being in a position to buy new weapons, would not buy them, still the vast number of riflemen who do buy new guns and keep up with every change of the times which is a step in advance would purchase them by thousands.

That this change would come was the first thing that occurred to me as well as to many of my friends, when we first knew that the high power powder was a sure success, and that it has not come has been a great disappointment to many as well as to myself.

FRANK LAURENCE DONOHUE.

Target Match at Rome.

ROME, N. Y., Oct. 29.—Dr. W. L. Kingsley and R. M. Bingham, two of the best shots in this city, shot a match to-day at 100 targets per man. At the half-way mark the Doctor was 7 targets to the bad, but by breaking 24 out of his next 25, and 22 out of his last string, he ran out an easy winner, as his opponent only scored 29 out of his last 50. The full score was as follows:

Kingsley	1001000111110100011001110	
	1110011011111100110011101—80	
	1111111111111111111111011

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Nov. 5-7.—KEWANEE, Ill.—Annual tournament of the Kewanee Gun Club; added money and merchandise prizes. L. C. Huckins, Sec'y.

Nov. 7-8.—WELLINGTON, Mass.—Annual fall tournament of the Boston Shooting Association. H. M. Federhen, Sec'y.

Nov. 12.—NEWARK, N. J.—All-day shoot of the South Side Gun Club; New Jersey Trap-Shooters' League contest at 11 A. M. W. R. Hobart, Sec'y.

Nov. 20 21.—IRONTON, O.—Holiday tournament of the Iron City Gun Club. H. E. Norton, Pres.

Nov. 26-28.—DES MOINES, Ia.—Tournament of the Des Moines Gun Club; live birds and targets. C. O. Perkins, Pres.

Nov. 28.—CANAJOHARIE, N. Y.—Thanksgiving tournament of the Canajoharie Gun Club; live birds and targets. Chas. Weeks, Sec'y.

1896.

Jan. 4-5—PHŒNIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the auspices of Texas State Sportsmen's Association and management of J. M. George and O. C. Guessaz (Texas Field).

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; $1000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2 000 added money.

May (second week) —MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

May 12-14.—DAYTON, O.—Annual tournament of the Ohio Trap-Shooters' League. Ed. Taylor, Sec'y.

May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. H. Durkee, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 8-13.—BUFFALO, N. Y.—Thirty eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

The following are the handicaps of the members of the New Jersey Trap-Shooters' League who can compete for the Winchester gun at the South Side Gun Club's grounds, Newark, N. J., on Tuesday afternoon next, Nov. 12, the handicaps being framed from the records the shooters made in the league shoots this year: Van Dyke, 50; McAlpin, Ivins and Apgar, 51; Capt. Money, Drake and W. Sigler, 52; Miller, Yeomans, N. E. Money and A. Sickley, 53; Whitehead, Collins, Hoffman, E. Sickley, Crevelling, Hyde and Hesse, 54; Breitnall, Krebs, Outwater, Geoffroy, Darby, Warren Smith, Charlie Smith, Greiff, Keller and Parker, 55; Huck, E. M. Cooper, Simpson, Hollister, Crosby, J. P. Cooper, Swody, Henry, Thomas, Hebbard and Williams, 56; Woodruff, Throckmorton, Manning, Lenone, Dan Terry and Heritage, 57; Richmond, Brantingham, Quimby, Hobart, Herrington, Astfalk, Proctor and McPeek, 58; Dr. Jackson, Wanda, M. F. Lindsley, J. M. Taylor, J. Cooper, Jr., P. A. Jeanneret, P. Daly, Jr., and E. Edwards, 59; G. Piercy, Strader, Sullivan, Van Iderstine, Unterever, Mehl, Dustin, Bergen, Hughes, Woolmington, White, Batsch, Underwood, Shaw, Laurence, Cromwell, Rodgers, Folsom, Frye and Waller, 60.

After Gilbert had won the handsome trophy presented by the Du Pont Powder Company for competition at the recent shoot at Baltimore, Eddie Bingham came to us and said: "Don't forget that Gilbert's shells were loaded by Montgomery Ward & Co." And yet we did forget it, but try to make amends by giving Eddie the credit in this issue.

W. G. Clark, of Altoona, Pa., spent last week in New York city. Although "Wopsononock Bill" has paid several visits to New York previous to the one in question, he says that he never became so well acquainted with the city as he did while on this trip. Why people should starve in New York, where the free lunch counters are so bountifully supplied, is more than he can understand.

It is stated that Jordan L. Mott, Jr., of the Country Club, Westchester, N. Y., the patentee and inventor of the Mott disappearing live-bird trap, bet George Work a good round sum that he (Work) could not kill 85 out of 100 selected birds, trapped from the Mott traps. The trial came off at the Country Club's grounds on Tuesday, Oct. 29, Work losing the wager, as he only scored 80 out of the 100. Mr. Mott's traps are very fast, but we think that Work would have the best end of it were he to try again.

Elsewhere we publish a letter from H. E. Norton, President of the Iron City Gun Club, Ironton, O., in which he refers to a change of dates for his club's holiday tournament. In a personal communication which accompanied the letter Mr. Norton says: "We are not out for the two cents a bird, but for the fun of it and for the name of giving good shoots. As soon as we take in enough to pay for the birds, we put in the rest as added money." If that's the way the Iron City men are going to run their shoots, they will never have much occasion to drum up shooters to take part in their tournaments.

There's a good deal of life in live-bird circles in Pittsburg, Pa. Members of the Herron Hill Gun Club are holding weekly shoots with a good attendance at each one of them. There is also a rumor that a series of three 100-bird matches may be made between Messner and W. G. Clark, the matches to be shot in the near future. As both men are shooting in good form, the races would be well worth watching, the winner being a hard matter to pick.

Who is going to challenge Gilbert for the Du Pont trophy? Why not send a good man from the East and try and get it back here so as to keep things alive?

In answer to numerous inquiries, we can state that up to the present time the management of the Interstate Association has arrived at no decision as to where to hold the Grand American Handicap of 1896. It is announced to be held at New York, and there seems no reason to doubt that, following its usual course, the management will decide upon some grounds in the vicinity of that city.

The opening of the game season always makes things dull in trap-shooting circles. Here, in New York, we have also had two wet Saturday's out of the last three to put an actual damper upon the regular Saturday afternoon meetings.

Members of the New Jersey Trap-Shooters' League will find that Secretary Hobart, of the South Side Gun Club, of Newark, N. J., has provided them with a good programme for the all-day shoot of that club on Tuesday next, Nov. 12. The contest for the Winchester repeating shotgun commences at 11 A. M.

Mr. G. M. Waldron, secretary of the Missouri State Fish and Game Protective Association, writes us that his Association claims the dates of May 20-24, 1896, in place of May 13-16, as stated in our issue of Oct. 26. The Association has taken this action so as to avoid clashing with Memphis.

The live blackbird shoot at Elkwood Park, N. J., Oct. 30, did not draw many shooters together. Those who were present found that blackbirds were not so easy to hit as they had expected, no one being able to make a long run.

Our illustrations this week, showing the positions assumed at the score by a few of the contestants in the Du Pont handicap, will be appreciated by those who make a study of easy attitudes.

Rolla Heikes loomed up again very largely at the San Antonio Gun Club's shoot. There was nobody near him. It begins to look as if we'll have to make a special class, with Rolla as its sole member.

Lou Erhardt announces that he will hold his "thirteenth open-to-all and second annual manufacturers' amateur tournament" on April 14 to 17, 1896. He will add $1,000 in cash, in addition to which a large list of manufacturers' prizes will be shot for.

Ralph Trimble, Kentucky's best target shot, won fresh honors last week at Peoria, Ill. With Rexvoat and Powers, both men from Illinois, he divided up a good share of the money. EDWARD BANKS.

Buffalo Trap Notes.

BUFFALO, N. Y., Oct. 26.—B. F. Smith held a field day at Audubon Park to-day. The main event on the programme was No. 4, for the championship of Erie county. The trophy was won by E. Andrews, of Sardinia, N. Y., who broke 42 out of his 50. Philips had a good show for it at the end of his first string, but fell down on his last 25 targets. The scores made to-day, were as follows, 29 shooters taking part in the day's sport:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	10	15	20	50	10	15	Targets:	10	15	20	50	10	15

Oct. 29.—F. Porter and Pete Smith shot a match to-day on the Audubon Park grounds with Wm. Daw and Geo. McDonald, the conditions being 50 targets per man, one man up, everything known, gun below the elbow, $50 a side. Notwithstanding Daw's 24 out of his first 25 the other party won easily, breaking 72 to 61. Daw and McDonald have made another match, a forfeit being posted, but no date named as yet.

Otto Besser and B. F. Smith shot a live-bird match on Nov. 7 at the Audubon Park grounds, the match being 100 birds per man, $100 a side, A. S. A. rules to govern.

Scores of to-day's shoot were as follows:

F Porter	11011011011001011111111101111111111111011111011111101—40
Pete Smith	00011111010110111111001011011111011111011111100—32—72
Wm Daw	11111111111111011111111110110110110110110011011—40
Geo McDonald	00001101001110001010100100001000110110110100001—21—61

A 10-target sweep, 75 cents entrance, followed the above match: E. C. and B. F. Smith 10, McArthur 9, Daw and Porter 8, McDonald 7, Pete Smith 6, Killinger 3.

This was followed by two matches at 5 pairs, E. C. and B. F. Smith being the contestants. No. 1 resulted in a victory for E. C. by 7 to 6; No. 2 was a tie with 7 each. The tie was shot off at 3 pairs, E. C. winning by 6 to 5.

Oct. 30.—The small attendance to-day was due to the weather, there being 6in. of snow on the ground. Kirkover shot very well, making a clean score up to his last (twenty-first) bird, which he lost dead out of bounds. An interested participant was Richmond F. Kingman, president of the Pneumatic Torpedo and Construction Company, of New York, who shot over the traps for the first time, doing good work for a beginner at trap-shooting. In addition to the live-bird events two target sweeps were shot, each at 10 targets:

No. 1: Kirkover 9, McArthur and Brown 8, Rebstock 6.

No. 2: Kirkover 9, McArthur 8, Brown and Dr. Daniels 7, Rebstock 5.

Live-bird scores were as follows, Nos. 4 and 5 being miss and out, $1 entrance, and the others 5 birds, $2.50 entrance:

	No. 1.	No. 2.	No. 3	No. 4.	No. 5.
Kirkover	11211—5	12121—5	12121—5	121—3	21• —2
McArthur	02221—5	21200—3	•2121—4	...	.....
Russell	:01•0—2			...	.....
Brown	022••—3	00111—3	1110•—3	...	.....
Daniels	12201—4	12120—4	01211—4	220—2	112210—5
Kingman *	12022—4	21001—3	12112—5	0 —0	111221—6
Rebstock	.....	00111—3	2•121—4	...	.....

* In No. 5 Kingman missed his first bird and re-entered.

Snap Shots at the Du Pont Tournament.

WHILE the Du Pont Smokeless Powder handicap was in progress at Baltimore on Oct. 24, 25, FOREST AND STREAM'S kodak was busy taking snap shots of the men at the score. The accompanying illustration gives some results of that work. Of the sixteen men whose attitudes are here given, Clark and Ivins are the only two whose positions at the trap have been previously reproduced in our columns. In the case of Ivins he is shown in this picture to be in the act of firing at a right-quartering towering bird that left No. 5 trap, the recoil of the gun, as in Charlie Grimm's photograph, somewhat marring the clearness of the outline. Jackson's attitude is a strained one and likely to handicap him on fast birds.

Gilbert the winner, and MacAlester the runner-up, occupy the center of the second row; both are good types of easy attitudes, although MacAlester's is better fitted for quickly catching sight of the bird as the trap is pulled. Claridge, a corking good shot by the way, braces himself in a manner that is somewhat unusual in really good shots, yet his attitude reminds one somewhat of Sim Glover. Wellington (W. Heplar), of Harrisburg, Pa., handles his gun well and assumes an easy position at the score. Charlie Grimm's picture is scarcely a fair one, as the shutter was snapped just a second too late, catching him in the act of firing his first barrel after he had assumed a different attitude to that which he affects when giving the word "pull."

The pictures of Shepard and Bingham were obtained after they had retired from the struggle, those gentlemen kindly consenting to pose for FOREST AND STREAM'S gallery. Melot, Budd, Denny, Cooper and Corning all have distinctive attitudes and will be readily recognized by their friends and by those who have seen them shot. Woodruff, the south-paw shot from Elizabeth, N. J., has an easy position which enables him to kill his birds quickly and in good shape. Clark's position does not differ at all from that which we registered for him in this year's Grand American Handicap souvenir—with one exception: in the photo we took of him on that occasion we caught him "inching," half of his left foot being over the 30yds. mark, quite a gain when one considers the size of that foot.

As several of those who took part in the Du Pont handicap may wonder why their photographs do not appear in conjunction with those given here, we have to inform them that a misfortune overtook a roll of over two dozen negatives, thus depriving us of some valuable additions to our gallery.

South Side's Saturday.

NEWARK, N. J., Nov. 2.—Notwithstanding the heavy rain that fell to-day, we had quite a pleasant afternoon's sport, throwing 800 targets in the several events. Warren Smith's team defeated Thomas's team by 3 targets, scoring 85 to 82, Smith and Geoffroy breaking 49 out of 50 shot at. Scores:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

J. O'H. Denny.	C. M. Grimm.	B. W. Claridge.	A. L. Ivins.
W. Hepler.	Fen. Cooper.	G. Corning, Jr.	W. T. Jackson.

The San Antonio Shoot.

SAN ANTONIO, Tex., Nov. 1.—The sacred precincts of the swamp at Lakeview were invaded by a number of enthusiastic trap-shots on the 27th of October, and for three days thereafter the crack of the shot-gun made the water hens recede to deeper cover. When Rolla Heikes and Jimmy Elliott came on the scene with their deadly pump guns all the feathered webfoots and semi-webfoots sank out of sight in the murky depths. But one unlucky flock of redheads, being of an inquisitive turn of mind, carelessly swam to the San Antonio Gun Club's side of the pretty lake to feed on the succulent seeds that abound on the banks. The readers of FOREST AND STREAM should have seen that Kansas City man collapse like a jack-knife and make a sneak, dragging his gun after him. Jimmy never made such a shot in his life. Three times the Winchester spoke, and three luckless ducks dropped out of the flock; there is no telling how many more might have succumbed had not the multitude fallen on the gunner and swiped him. That same evening the epicuran pair and their friends discussed the toothsome birds, and made pleasant remarks about the curious country where one could shoot inanimate targets and at the same time try a hand at the webfoots. John Ellis, who has become one of the devotees who worship at the shrine of the pump gun, also had a fit of shooting out of his turn; but John's game was a hawk which mistook the black targets for live things, and came down from the clouds to take a square meal.

The visiting shooters consisted of Harvey McMurchy, representing the Smith gun; Rolla O. Heikes, of Dayton, O., and J. A. R. Elliott, of the Winchester Repeating Arms Co.; H. G. Wheeler, of Marlboro, Mass.; C. A. Damon, the Burgess gun man; J. Maxey, of Pueblo, Col.; John Ellis, W. F. Stewart and G. B. Hutchings, of Galveston, Tex.; E. Foy, of Paris; J. W. Morris, of Wichita Falls; W. G. Sergeant, T. R. Kinmouth, of Joplin, Mo.; L. W. Hoffman, of Galena, Kan.; T. J. Liles, of Aurora, Mo.; K. M. Moore, of Farmersville, Tex.; W. H. Wheeler, of Hempstead, Tex.; Miles and Wallace Miller, of Austin, Tex. Mr. J. E. Richards, representing Abbey & Imbrie, and J. Hildredth, in the interest of the Winchester Arms Co., were also among the visitors, but they did not shoot. Messrs. Haney and Dupuy, of Houston, Tex., came on the third day, the latter gentleman shooting under the name of Smith.

The flight of the targets was erratic, as the wind came directly against the flight and in the face of the shooters, making it hard on the eyes. The live birds were a fair lot. The wind also kept them back and made easy birds out of a great many that might have proved hard ones.

The tournament was held under the American Shooting Association rules, revised by C. W. Dimick. They were not, however, adhered to as strictly as they should have been. In the sweepstake No. 2 at 7 live pigeons, one of the San Antonio shooters shot at a bird with the first barrel and neglected to give it the second. As the bird reached the ground the referee announced "dead bird." The shooter left the stand and the bird, more scared than hurt, proceeded to place as much Texas ozone between itself and its enemy as the swiftness of its pinions and the velocity of the wind would permit. It did not take it long to be out of bounds and then it was different. Veith (the shooter) claimed the bird on the ground that the referee's decision must go. So it should. But then the rules state positively that a bird must be retrieved before it can be scored. Hence the referee in a live-bird contest should not announce his decision until the bird is in his hands and he is satisfied by the shot marks thereon that the shooter is entitled to the bird. The bird was finally allowed the shooter and he was made happy. The management, however, reversed the decision of the referee that same night and should be credited with doing the right thing.

Then some one suggested "Chimmy" Elliott for referee, and the Kansas City crack agreed to serve provided some one else was selected to referee while he (Jimmie) was shooting. Then came something funny. There is always something funny after Jim and Noel Money or Tom Divine, anyhow. Jim came to the score and his referee put both eyes on the sportsman from the Kaw Valley. Jim's bird hopped up, saw him and changed its mind, hopped back, and as its red legs touched *terra firma* that terrible gun fairly blew him into smithereens. "Dead bird!" sang out the referee. "No bird!" roared Jim; "Elliott shoots another bird!" And so he did amid the plaudits of the populace. Jim faced the audience, made a regular after-making-a-home-run bow and killed out his 7 straight.

Rolla Heikes came in for the lion's share of the money as usual, closely followed by H. G. Wheeler, of Massachusetts; J. A. R. Elliott, Dupuy, McMurchy, Sargeant, the Miller brothers, Damon and Hoffman. Of the local shooters Piety and McCormack led.

Of the local shooters twenty-three entered some of the shoots, but only three shot through the entire target events on the programme: Messrs. Piety, McCormack and G. A. Chabot. The last two named shot clean through, live birds and all, and shot very well, considering their experience at the trap.

Targets shot at: First day, 4,160; second day, 3,525; third day, 7,125; fourth day, 530; total, 15,340.

The following are some more interesting figures:

Number of live birds used, 1,088.
Number of ducks killed, 6—Jim Elliott, McMurchy 3.
Number of doves killed, 1—McMurchy.
Number of hawks killed, 1—John Ellis.
Pigeons shot by bushwhacking, 1—Jim Elliott.

A condensed table of the powders used shows 21 men shooting E. C., 16 Du Pont, 2 Walsrode, 2 Schultze, 1 Blue Ribbon.

The table showing the scores and averages made each day are as follows:

First Day.

Vernon	120	86	71.6	E. C.	20	Kessler.
Hummel	45	25	55.5	Walsrode.	16	Kessler.
Veith	60	38	63.3	Du Pont.	12	Smith.
Coon	15	4	26.6	Schultze.	12	Smith.
Pancoast	45	35	77.7	Du Pont.	12	Smith.
Schryver	195	150	76.9	E. C.	10	Greener.
Scott	95	60	63.1	E. C.	12	Smith.
Moore	295	233	79.3	E. C.	12	Smith.
Heikes	295	277	93.9	E. C.	12	Winchester.
Elliott	295	244	82.7	E. C.	12	Winchester.
Parker	216	122	56.4	E. C.	16	Parker.
H G Wheeler	150	138	92	E. C.	12	Parker.
Smith	150	124	82.6	E. C.	12	Parker.

TEXAS FIELD.

The Fountains Won the Cup.

THE Fountain Gun Club, of Brooklyn, N. Y., put a team of five men in the field on Tuesday and Wednesday, Oct. 29 and 30, that was able to defeat two similar teams from the Emerald Gun Club and a team each from the North Side Gun Club, Parkway Rod and Gun Club, Hell Gate Gun Club, New York German Gun Club, Coney Island Rod and Gun Club and the Idle Hour Gun Club The occasion of the meeting of the above teams was a contest for a cup presented by the proprietor of Dexter Park, L. I., for competition among the clubs that hold their monthly shoots at his grounds.

The winning team was composed of Louis Duryea, C. Furgueson, Jr., Dr. Wynn, W. Lair and A. Eddy. This team sounds as if it was a representative team of the New Utrecht Gun Club, of Long Island, but all the members of the team were members of the Fountain Gun Club before they joined the New Utrecht Gun Club. As a matter of fact, there are so many clubs on Long Island with meetings only once a month that it does not satisfy the majority of shooters to belong to one club only, and in consequence they become members of other clubs. The result is that on the date above named shooters who belonged to several gun clubs found themselves fighting for the cup against two or three teams of their fellow members in another organization.

The weather was very favorable and the birds were a good lot. Jordan L. Mott's patent traps, with his automatic pulling apparatus, had been placed in position on Monday, Oct. 28. The sudden but quiet disappearance of the trap when pulled disconcerted many of the shooters, who had been accustomed to the King's patent traps so generally used. With the Mott trap in use and with a fast lot of birds it is dollars to doughnuts that no man can kill much over 90 per cent. right along. On the first day of the match the birds seemed far better than on the second; asking them all through they were a good lot, but they ran unevenly, first a lot of hot ones and then several slow ones—just the birds to fool anybody. In speaking about the Mott trap to Billy Mills, the trapper, he said: "You can say from me that they are the best traps I ever put birds into."

Eight clubs were represented, the Emeralds entering two teams, making nine teams in all. The manner of shooting the match was as follows: A man was selected from each team, thus making a squad of nine men; this squad shot out its 20 birds per man, and was then followed by a similar squad. At the close of the day three men on each team had shot out their scores, the results for the day's shooting showing the Fountains to be two birds to the good, with the Emerald No. 1 and the North Sides a tie for second place, and the Emerald No. 2 in third hole, one bird behind. The scores for the 60 birds shot at were: Fountain 52, Emerald No. 1 and North Side 50, Emerald No. 2 49, Parkway 43, Hell Gate 40, New York German 35, Coney Island 33, and Idle Hour 25. This left affairs in a decidedly interesting condition for the opening on Wednesday morning. The Fountains had Dr. Wynn and A. Eddy to help them out, while the Emeralds had Schortemeier and Pfister to shoot for their No. 1 team, and Dr. Hudson and W. Levans to help out the second team. The North Sides relied on Chris. Meyer and Harry Heyer to do the trick for them. As it stood, it looked like a good race.

Thanks to the steady work of Wynn and Eddy, the Fountains landed in first place by the smallest possible margin—one bird; Schortemeier and Pfister having killed 37 out of their 40 to the Fountain representatives' 36. Dr. Hudson was clearly out of form—a fact that may be attributed to his gun having broken down, compelling him to use a strange weapon.

When the first squad of nine had fired at their 20 birds on the morning of the second day, it was found that the Fountains had gained 1 on the Emerald No. 1, 3 on the North Side, and 4 on the Emerald No. 2; Wynn killed 19, Phister 18, Heyer 16 and Levans 15. The other clubs were not in it at this stage of the game, as the scores given below will tell. The leading teams were represented in the last squad as follows: Fountain, Eddy; Emerald No. 1, Schortemeier; North Side, C. Meyer; Emerald No. 2, Dr. Hudson; Parkway, H. Bramwell. When Schorty lost his 4th bird dead out of bounds, placing the Fountains 4 in the lead, it looked any odds on them; but by good, steady, uphill work Schorty actually forced Eddy to kill his last bird to win.

The high scores were made by Gus Greiff, Schortemeier and Wynn with 19 each. Phister, Fessenden, Justus von Lengerke and W. Lair each killed 18 birds. Greiff was the only one to kill 19 on the first day, and his work was unquestionably the best of the whole shoot, and was a good advertisement of the killing properties of Schultze powder in a Francotte gun. Lair made some excellent kills on very fast birds in a poor light, his work at that stage of the shoot doing a good deal to win the cup for his team. Schortemeier and Fessenden made the longest runs, each man killing his last 16 birds straight. Wellbrook, of the New York Germans, missed 3 out of his first 5, and then ran his last 15 straight. Greiff is credited with a run of 14 straight, while Lair and Wynn had runs of 13 and 12 respectively.

It should be said that all shooters stood at the same mark, with the exception of eight who shot 10-gauge guns—Wellbrook, Moore, Hughes, Jennings, Botty, Boemmermann, Elfers and Kroninga. These eight stood at 30yds., all the rest at 28. The scores in detail, showing the flight of each bird, are as follows:

EDWARD BANKS.

Championship of Kentucky.

LOUISVILLE, Ky., Oct. 25.—On the grounds of the Kentucky Gun Club at Louisville, Ky., on Oct. 23, the match for the championship of the State was shot, resulting in a victory for W. W. Watson, who has been shooting so well for the past year or so.

The conditions of the match were 25 pigeons, $25 entrance, American Association rules, 28yds. rise, the club presenting the winner with a handsome silver cup valued at $150.

There were but eleven entries, which would indicate that few men in Kentucky aspire to championship honors. Should a handicap event be pulled off during the winter many a man would enter who hardly feels equal to some of the Louisville talent. There is no gainsaying that the Kentucky Gun Club traps many more pigeons during the year than any other dozen clubs in the same State, and being fully equipped and prepared for all such shooting it is only natural that its membership should contain the names of some excellent shots.

Bland Ballard, who did such fine shooting in the East, and lately at Louisville, is only one of half a dozen men who shoot pigeons about as well as any one, and although he scored but 22 in the championship event yet all admired his clean work and easy style of shooting. With him there is no effort; indeed, he appears to be carelessly indifferent as to the result, although such is far from being the case.

W. W. Watson, who won the cup, has been shooting in grand form for about a year and may fairly be ranked as one of the leading shots in the South. He has killed 117 out of 120 pigeons and made some good runs on targets, so to classify him as above is well inside the limits.

Sam Hutchings is one of the very best pigeon shots in all the South, and only a very trifling scale removed from the very best in America. No one kills his bird quicker nor does it in better style than he.

On the 24th targets were shot by those who were indifferent to the weather, for although not at all a bad day, yet to stand about scantily clad shooting targets in a raw wind is anything but agreeable.

J. D. Gay made the highest average, closely followed by Hutchings and H. J. Lyons.

A curious coincidence in the champion event is that Watson, Hutchings and Du Bray, who tied for first, all shot Parker pigeon guns, U. M. C. Co. Trap Smokele s shells, and E. C. powder.

Norvin T. Harris eclipsed all his previous efforts by killing 24 and scoring 23. Considering the limited amount of shooting at the trap this gentleman has had, his score is remarkable and deserving of special mention. Harry J. Lyons, who won last year on 23 kills, reached the same number this year, but was unfortunate to have a bird fall dead out of bounds which would have placed him in the 24 hole. J. D. Gay actually killed his 25, two falling dead out. Allen shot right along until close to the homestretch, when by some hook or crook he came to grief, and so it goes in pigeon shooting.

Ballard	1111112112121201112111001—22
Gay	1112121111221111e2211•22—23

Shoot off at 5 birds:

Hutchings	22222	02221	22012
Du Bray	21220	.....	.....
Watson	21111	21120	11221

Dr. Alexander acted as referee, and Mr. Goodloe as scorer.

The Kentucky Gun Club will have many interesting events shot on its grounds this winter. A more pleasant or more comfortable place for such events could not be found. GAUCHO.

A Team Race at Mountville.

MOUNTVILLE, Pa., Oct. 21.—The return match between Tell and Pennypacker on the one side, and Kready and Hershey on the other, was shot off on the Mountville Gun Club's grounds to-day. The first match was won by Kready and Hershey, but to-day's went to Tell and his running mate, so the score now stands one each. The matches are for $100 a side, 15 live birds per man, 30yds. rise, 50yds. boundary. The score in the second race was as follows:

Trap score type—Copyright 1895, by Forest and Stream Publishing Co.

Tell	1 1 1 1 1 2 0 1 1 2 0 1 2 1—13
Pennypacker	1 2 1 1 2 2 1 0 1 2 1 1 2 0 2—13—26

TELL.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Oct. 20.—The only shooting of any interest this week has been a 2-men team race shot this afternoon on the grounds of the Rochester Rod and Gun Club. It was the outcome of an assertion made recently by Perry that he was of the opinion that he could select a man who, with himself, could outshoot any other two members of the club. When the challenge was accepted by E. D. Hicks and Charles Rissinger, Perry selected E. C. Meyer as his side-partner. As the following scores will show, Perry did not have the cinch that he expected:

Rissinger	1111111111—10	Meyer	0111111111— 9
Hicks	1111101111— 9—19	Perry	1110111101— 8—17

The losing team was not satisfied with the above result, but at once issued another challenge, that was accepted as promptly as it had been offered. The result of this match was an even more decisive victory for Hicks and Rissinger than the first one. Scores:

Rissinger	1111111111—10	Meyer	1001111110— 7
Hicks	1111111111—10—20	Perry	1101118111— 8—15

DE WITT.

Lynchburg Gun Club.

LYNCHBURG, Va., Oct. 29.—Below are the scores made at the regular weekly shoot of the Lynchburg Gun Club this afternoon. A dark afternoon and a high wind worried the shooters not a little. Scores:

F. M. D.

Trap at Michigan City.

MICHIGAN CITY, Miss., Oct. 25.—Trap shooting is nearly over for this season, as the boys are in pursuit of the festive quail, but when the season opens you will see the Michigan City Gun Club to the front and the familiar word "pull" will be heard quite frequently. The last shoot of the season was a handicap shoot for a medal, handicaps ranging from 50 to 70. The winner unexpectedly turned up in Mr. Brown, of Jackson, Tenn. Charles W. Tway was the favorite, but was away out of form, just recovering from a spell of sickness. The scores were very poor on account of the shooting being very hard. Below find scores in detail:

No. 1, 10 targets: Brewer 6, Hosford 3, Tway 9, Mitchell 8, Brown 6, Prewitt 6.

This was a preliminary event for the handicap and the shoot was called on conclusion of this event. The competitors who faced the trap were Hosford, of Jackson; Prewitt, of Grand Junction, Tenn.; Brewer, of Lamar, Miss.; Mitchell, of Grand Junction; Tway, of Michigan City, Miss.; and Brown, of Jackson, Tenn.

The number of entries did not nearly come up to expectations. Scores with handicaps:

Hosford (60)	0000001110000011010010100110111110100000001000100 1111111101 —26

TRAP SHOT.

Herron Hill Gun Club.

PITTSBURG, Pa., Oct. 29.—Members of the Herron Hill Gun Club had a good shoot to-day at Brunet's Island. Two handicap shoots were shot off. Proceedings were brought to a close with a miss-and-out. In the first sweep A. H. King, J. O'H. Denny, Cleveland and Jacque were high with 9 each. W. S. King, Thorn, Wall and Dick scored 10 each in the second, five others scoring 9 apiece. John Shaffer and Wall divided up the pot in the miss-and-out, $2 entrance. Entrance money in Nos. 1 and 2 was $5, birds included. Scores:

Iron City Gun Club.

IRONTON, O., Oct. 27.—The dates for the holiday tournament, to be given by the Iron City Gun Club, have been changed to Nov. 20 and 21. This will be one of the best tournaments ever given in southern Ohio. The club has inclosed its gun house and put in a heater, so the shooters are assured of a comfortable place. The following well-known shots have promised to be on hand: Heikes, Young, Dando, Rayman, Rike, Bacon, Timber, Waddell, Hill and quite a lot of others. The programme will consist each day of seven events of 15 bluerocks, and three events of 20 bluerocks, entrance respectively, $1.50 and $2; targets 2 cents, four moneys. We invite all to come and promise them a good time. For information and programme address

H. E. NORTON,
Box 275, Ironton, O.

ANSWERS TO CORRESPONDENTS.

AZTEC.—1. Is there any relation between the depth of the grooves in a rifle and the temper of the bullet—*i. e.*, do shallow grooves require a soft bullet? 2. In a general way, as the proportionate weight of powder to lead in a rifle cartridge is increased, should the bullet be made harder or softer? Ans. 1. The depth of grooves in rifles is governed by a number of conditions, among which are the charge of powder, weight and shape of bullet, number and width of grooves, angle of rifling and kind of powder to be used. It is thought that hard bullets give best results in shallow grooves, if of proper shape. Soft bullets and medium charges it is thought give best results in deep grooves and slow twists. 2. As a rule when the charge of powder is increased the bullet should be made harder. The depth of groove, number and shape, of same fit of bullet in barrel and inclination of twist all influence the temper of the bullet.

J. N. B., Needham, Mass.—Will you kindly inform me which Winchester repeating rifle cartridge of proper caliber to use for moose has the least trajectory? Ans. .45-90, model 1886.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

GENTLEMEN: I have used Imperial Hygenique Fluid, and have found it an excellent disinfectant and pleasant deodorizer. THOMAS G. SHERWOOD, M. R. C. V. S.

(From MR. FRANK F. DOLE, Chapel Street, New Haven, Conn.)

DEAR SIR: I have very great pleasure in bearing testimony to the efficacious manner in which your disinfectant does its work. I have used it both in the kennels and the house, and I consider it the most pleasant and most powerful disinfectant I have ever used, and shall recommend it to all my friends.

Yours respectfully, FRANK F. DOLE, President American Bull-Terrier Club.

Used at National Cat Show, Madison Square Garden. To be obtained at all Druggists, Fifty Cents and One Dollar per Bottle, or of

FOREST AND STREAM PUBLISHING CO.

The Spaniel and Its Training.

By F. H. F. MERCER To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price $1.00.

The chapters are practical and sensible. There is no theory in them. Here is a man who trained his dogs; learned by experience how to do it; and now has put down that experience for the benefit of others. We predict for "The Spaniel and Its Training" that wide popularity and favor which of right belong to practical books by practical men for practical men. In addition to the chapters on training there are descriptions of the several varieties of spaniels, with portraits of typical specimens; notes on the spaniel in America, and the standards adopted by the English and American spaniel clubs.

FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

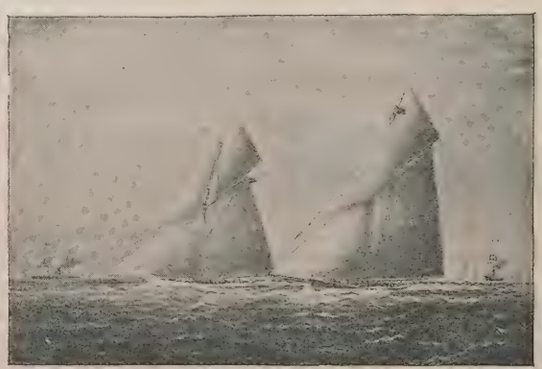
AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19 in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, **$5.**
Forest and Stream *6 months and any two pictures*, **$3.**

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.



Copies of them may be seen at this office, and inspection is invited.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

CONCERNING ORACULOUSNESS.

IN the old days—and measured by years they are not extremely long ago—every sportsman was more or less a law to himself in the theory and practice of his special sport. It was an idiosyncrasy of the guild that, while each one was a sportsman, each one was possessed of the most superior knowledge and method. The knowledge might have been derived from a limited experience in every detail; the method might be that employed by his great-grandfather—such in nowise shook his faith nor lessened the ardor of his advocacy.

His own science and art were the best, and he promptly and openly opposed them to all others. If he claimed that a hornet's nest made the best gun wadding and possessed some inherent virtue for that particular purpose, and that the correct manner of measuring a load of powder was in his open hand, or a load in the gun was to be measured with his fingers, notwithstanding that four, five or six fingers conveyed no definite information unless one had a personal acquaintance with him or had a diagram of his hand, he was slow to accept any argument against it.

His more advanced confrere, who cut gun wads out of cardboard with a wad cutter and who measured his powder in a graduated measure attached to a powder flask, was considered finicky and impractical.

There was quite as much, or more, to sustain in the *amour propre* of the individual as in the soundness of innovations. The exaltation of the individual was first; the progress in art was as it might happen.

Each one of the old-time sporting mystics was a person of note in his community, a possessor of knowledge unshared by his neighbors, a man who could shoot "birds flying," who knew their haunts and habits, and could train dogs to point; or he knew when the fish would bite and the only bait that would lure them, and in what waters they could be found; or he knew where the big game frequented and could travel through the forests without compass or guide. He had supersensory powers. Argument served not to convince so much as to irritate him.

Long sought as wise in his craft, in the days before discussion became rife, he hesitated not to set himself up as the oracle and sole arbiter on any question concerning his hobby, whether it was in regard to dog or breeds of dogs; or powders, hard or soft, coarse or fine; or guns, big or small bore, light or heavy; quick or slow twist in a rifle; round ball or cylinder; muzzle or breechloader; trajectories, point blanks, drifting and "holding up;" rods, reels and lines, poles and bait, and so on *ad infinitum*.

In short, what at the present day is only determined by the most delicate scientific instruments in long and comparative tests by scientific experts, was a few years ago determined empirically in a short time without comparison. It mattered not that a man had tried but one kind of powder, one kind of rod or gun, one kind of shot, or one kind of the many implements of sportsmanship, his own preference was better than all others and his dictum was final—to himself at least. Having success with his own selection, was not that sufficient proof of its universal superiority?

Or if he tried some other make of gun, or powder, etc., and his success then diminished, was not that a proof of its inferiority? His own physical conformation—a matter of importance in the use of a gun—the success which comes from long habit and familiarity in using one gun or powder or rod, etc., were never considered as factors in his conclusions against others.

His own idiosyncrasies were never considered as having any effect for better or worse; they were in his mind a universal and unvarying unit of measurement.

If such claims had been granted, all progress would have ceased; for if he had the best and was himself the oracle, what was there beyond the best knowledge, skill and product? There might be opposed to him many other men who asserted that a part was equal to the whole, ones whose claims were not less opinionated, but whose experiences might have been different. It mattered not.

But the sportsman's journal afforded a medium for more intelligent and impartial investigation. It spread the knowledge derived from intelligent experiment and research and inventive talent. The old order of things has been largely swept away in the march of progress. Instead of individuals arrayed against each other with the bitterness of wounded pride, and cherished hobbies rudely assailed, there are now whole classes who have the same beliefs and who adopt the same methods.

The spirit of investigation has been stimulated, not discouraged. Men are more cautious in claiming an exalted superiority for their own ideas or their own preference.

Still, among men there are some who are of lighter fiber than others, who fear not to claim that what they use is the best in the world, although they may not have seen the whole world nor its products.

It is a sad commentary that there are a few who can see excellence in a product above all other products if it be a gift from the manufacturer or dealer, the moral question of the matter being entirely eclipsed by the satisfaction of immediate gain.

Then there is still with us the man who has the best in the world, believing honestly in his claim, yet belonging to an age in the vague past. The men who have seen but a part of anything and know that, because it is themselves who saw it, it is therefore better than all other parts, are becoming few.

Intelligent discussion in the press has dissipated much that was ignorant, obstructive and unpleasant. The oracles have been dethroned; the empiric in sport has drifted into the past with his methods, and true art and science hold sway.

Nevertheless, it is fit and proper to praise the excellence of any favorite, but it is neither fit nor proper to make comparisons against the products of the world until one has had experience with all of them.

MORE DUNRAVEN.

THE New York papers of Nov. 9 contained more or less extended extracts, received by cable, from a communication covering some four columns of the London *Field* of the same date, in which Lord Dunraven reviews the late races. The offensive tone of the article has awakened much criticism in this country, but until the complete paper arrives, about Nov. 16, it would be useless to attempt any thorough review of it. The most important point of Lord Dunraven's statement is a direct charge of foul dealing against Mr. C. Oliver Iselin, managing owner of Defender, on the ground that ballast was placed aboard Defender after measurement on Sept. 6 and removed prior to remeasurement on Sept. 8. The manner in which the charge is worded, to the effect that, probably without the knowledge of her owners, Defender drew at least 4in. more water on the day of the first race, Sept. 7, than on the preceding and following days, in no way mitigates the accusation of cheating; it is perfectly plain that such a change of trim could be brought about only by the addition of at least twelve tons of ballast, and that this could not possibly be done without the knowledge of Mr. Iselin, who has had personal supervision of every detail about the yacht since she was launched.

If Lord Dunraven had had any evidence whatever in support of such a serious charge it should have been laid before the New York Y. C. at once; before a second race was started. This not having been done, there is no possible justification at this late day for a wholesale and utterly unsupported charge of foul dealing against the owners of Defender. Lord Dunraven has placed himself in a most unenviable position; in default of that conclusive proof of his charges which it will be impossible for him to present, he must answer to the whole world of sport for the false and slanderous accusation he has launched.

SNAP SHOTS.

To the inhabitants of cities, and especially of large cities, there are few subjects of greater interest than the care and improvement of their public parks. It is on such breathing places that the health of the public largely depends, and to them that a majority of the people—the very poor—must resort for much of their rest and their recreation. For the care of such parks the very best men ought to be secured—men who care more for the good work that they may accomplish in such a position than for any honor or emolument that may attach to the office. The people of New York are to be congratulated in special degree on the appointment as Park Commissioner of Mr W. A. Stiles, the editor of *Garden and Forest* who exactly fills these conditions. While eminently a practical man, Mr. Stiles is an able botanist and a student of landscape decoration, and has given much careful attention to the subject of our public parks. His special studies have thus been in the very direction to fit him for the office to which he has now been appointed. He is beyond question the most competent man for the position in New York city.

The November number of the *North American Review* has a paper by Professor Boyesen, written in the last months of his life, on the "Plague of Jocularity." The common tendency to make a joke of everything, even of those things which are sacred, Professor Boyesen regards as a national characteristic of the American people. The cause of the phenomenon he thinks must be found in the climate; for he has noted that even "the European immigrant, who at home would scarcely have made a joke once a year, finds himself gradually inoculated with the national virus, and surprises himself by attempts at wit which are probably more gratifying to himself than amusing to his listeners."

There is doubtless much reason in the view taken that the jocular flippancy which so largely prevails is something to be deprecated. Nevertheless much might be said of the utility and saving grace of humor as easing those burdens and lightening those difficulties and discouragements which are all the more readily borne, endured and triumphed over because they are met with the American sturdiness which so commonly finds expression in jocularity. To allude to an example which must of itself occur to everyone, take the case of President Lincoln. By his critics, opponents, enemies, and even by friends who misunderstood him, Lincoln was denounced as a joker and teller of idle and of sometimes coarse stories. Yet had humor ever for itself better defense since the world began than when in the years of gloom it helped this man to bear the tremendous responsibilities with which he was oppressed?

But we have referred to Prof. Boyesen's protest because it gives us occasion to remark upon what we have long noted, the common tendency of the jokers of the humorous columns of the press to crack jokes on the subject of death and bereavement. There is hardly any phase of this experience—which sooner or later comes to every household—which is not at some time or another taken hold upon by the humorous paragraphists as fit material for their coarse flippancy. Certain of our professedly religious exchanges are particularly prone to originate or to clip from other wits for their own funny departments the current jokes about death. The conductors of newspapers may count their responsibility in such a matter so trivial as to be unworthy of consideration; and yet common decency would seem to require that a paper which makes its way into a man's house should not bear with it the power to wound the sensibilities of the home by thoughtless and irreverent jokes upon those things which are most tender and most sacred; for in proportion as a journal's circulation is extended, copies of it must every day or every week fall into the hands of readers to whom the proffer of jokes which find their inspiration in death and bereavement is more cruel than blows. The FOREST AND STREAM does not set itself up as squeamish, but it has always considered the avoidance of death jokes as good journalism, and by that conviction has been governed in its dealings with its readers.

The sixth annual meeting and banquet of the Vermont Fish and Game League will be held at Burlington on Wednesday of next week. The League has accomplished much for fish and game protection in Vermont, and we take satisfaction in noting its continued prosperity and usefulness.

These are the days when earth and air and sky unite to beckon one into the field, and these are the days when every man who won't go shooting should be fined. Something of this was suggested last week to a veteran sportsman. "Yes," he said, "but make an exception in favor of the man who would if he could, but can't. If his heart is all right, remit the fine. You wouldn't find me here in this office on Broadway if I could break the links."

Go if you can. If not, do the next best thing—read FOREST AND STREAM.

The Sportsman Tourist.

IN JONES'S BAYOU.—IV.

I HAVE not space to describe the one-hundredth part of this year and a half in the swamp. I will give one more description of a bear hunt with hounds and then close the Jones's Bayou stay. About two weeks after Uncle Taylor and I had killed the bear at the water hole Uncle Zack Jones and Uncle Martin organized a big hunt. Uncle Taylor was too old to follow the hounds, as it is very hard work and requires an active man to crowd his way through the cane. On this hunt we had the combined packs of Uncle Martin and Uncle Jones. We were to hunt for several days, as the Jones boys had found a great deal of fresh bear sign three or four miles back of their place and the bears had killed quite a number of calves and hogs for the settlers. We were to hunt with Uncle Martin's pack of twenty-two hounds the first day and Uncle Jones's pack of twenty-seven hounds the second day. Jim Pyron, myself, the four Jones boys, Uncle Martin and Uncle Zack Jones composed the hunters. The two Beaver boys had to haul some cotton to Greeneville and could not accompany us. Jim Pyron told me that if I wanted to kill the bear I would have to get one of the Jones boys and tip him pretty heavy, and then I would get a shot. Otherwise one of the Jones boys was sure to kill the bear, as they were young and strong and knew every trail and short cut through the cane and would beat me to the bear invariably. I told him that I was something of a woodsman myself, and would try my luck with them.

We all started about daybreak and by sunrise were in the bear country. We were all armed with Winchesters, and each man carried a hunting knife and a machete or cane knife, also a horn in case he got lost in the dense canebrakes. After a little trailing by all the dogs in different directions, old Ring, Uncle Martin's leader, opened up in full cry with his deep bass voice, and in a moment the whole pack was in full cry. Now, I have heard Gilmore's special artists, the Mexican Band of seventy pieces in the city of Mexico, Adelina Patti and a few other real artists in the musical world—but for genuine, unadulterated music give me the chimes of a pack of hounds in full cry. Now, don't say "Pshaw! fool! crank!" Maybe you "ain't built that way," but if you were, you would say, "Bravo, old fellow; I'll see you one and go you one better!"

Well, to come back to the real facts of the case, the dogs now began to make it pretty interesting for bruin. Do you know, kind reader, that a bear, as big and awkward and slow-looking as he is, will just make a good horse hump himself to keep up with him for a short distance? And if you ever get into a close place with Brother Bruin, don't you try to outrun him, but just face him and stop him somehow. You might just as well try to outrun a good hound as to undertake to outrun a bear. A bear is very swift for a limited space of time, but cannot hold his wind.

We now began to hear great brawls, the smashing of cane, the snapping and snarling of the hounds, and every now and then a hound would yelp with pain. It did not require any great amount of experience to tell me what that meant. The dogs were overhauling the bear every now and then, and when they came up with him the entire pack would cover him. Old bruin would fight them a moment or two, then shake off most of them, and run over the remainder and start out again. Then there would be a lively race for 200 or 300yds., and the same thing over again. Finally the dogs will get the bear thoroughly aroused, hot and mad, and if it is a young one it will take a tree; but if it is an old grandpapa or grandmamma "there is going to be a fight, and razors am a-flyin' through the air."

The hunters can tell by the baying of the dogs and the general sound of the battle whether the last stand has been made or not. When it comes, then there is a general rush for the scene of conflict. The old hunter always loves his dogs, and the bear will kill them all if he does not arrive on the field and take a hand. Now comes the tug of war. It is an easy matter to follow the general course of the bear and hounds by getting into the open bed of a bayou. One can almost go at a gallop on horseback. But when the final stand and last fight come, you must leave the bayou beds, and go right through the matted canebrakes and jungles to get to the dogs. This stage of the game has now been reached. We can all hear, about a half mile distant, the battle raging, and never were more gallant charges made at Marathon, Balaklava, or Marengo than this noble pack of hounds made upon the infuriated beast at bay. We all dismounted and scattered through the woods, each seeking to get there first; Jim Pyron and I kept close together, as Jim said it was best not to tackle that bear alone. We pushed, and shoved, and chopped with our hack knives, and crawled upon hands and knees, trying to penetrate that almost impenetratable jungle. A bear always makes for the very thickest jungles in reach, in the vain hope that the dogs cannot follow him. The sound of the fight became more and more distinct and we were both in hopes that we would reach the ground first. We were much chagrined, however, when within about 300yds. of the battle, to hear the report of a rifle, then another and another. When all was still excepting the occasional bay of a hound, or the constant whine of the wounded dogs. Jim brought out an oath that would make Pluto blush, and said, "I told you so!" "Them durn Jones boys air eheu hogs every one of them!"

Sure enough the Jones boys had been too swift for us, and when we arrived we found a large dead bear, three dead dogs, two wounded ones and the ground "tore up." My! what a fight there had been right in a dense canebrake. The cane was smashed down, broken and smeared with hair and blood for three rods square. John Jones, the oldest one of the Jones boys, assisted by his brother Jim, had killed the bear. The bear had been opened and the hounds all fed on the offal. That is customary, as the hounds expect it, and it encourages them to hunt and fight the next time.

We now counted up the dogs and examined the wounded ones. One was dying and John Jones shot him to end his misery. The other we carried home on a litter made of cane laid across two poles and tied with strings and strips of bark. I would have carried that dog ten miles myself rather than see him die of starvation out in that jungle after fighting so nobly. We were glad to find that none of the best trailers or leaders were hurt—just the fighting dogs were injured. That cut Uncle Martin's pack down to eighteen dogs. It was a pretty severe blow to the old man, but he "'lowed that he had plenty of pups coming on, so he reckoned he would have to stand it."

We now fell to work, all hands strung out in a line and cut a broad trail through the cane out to the horses. We loaded the bear on the largest and strongest horse, and after strapping the bear to the horse and the dog to the litter we started out. We had gone not a half mile when old Ring slipped off from us, and in a few moments was in full cry again. The whole pack sprang into the cane, and the music opened up again. We stopped and listened, and in a few moments heard the dogs baying in a long and continued bay, such as you have heard a dog howl at the moon. Uncle Martin said, "Treed, by gravy!" and all hands again struck into the cane. I noticed that I did not see John Jones, and I knew that he had slipped away from us without saying anything, and that he was then in all probability about to shoot the bear. In a few moments I heard a rifle and I said to Uncle Jones, "It seems to me that John does not want any of the others of us to get a shot."

Old Uncle Jones grunted and said, "Wal, John alus wus a durn flop-yeared hog about everything. He hain't satisfied 'thout the tother boys an' gals too gives him the chooze of everything. But I guess I ought not to grumble, 'kaze John is a mighty powerful good hunter, an' has saved me many a fine houn'."

When we got there we found that John had shot the bear out of a tree. It was a young one and hardly half as large as the first one. We cut a trail to the horses again and were soon on the road toward home. We arrived at Uncle Jones's house about noon without further incident. Here we all had dinner, and after skinning the two bears and dividing we went home. I only took a small part of the meat and some of the claws and teeth as trophies. Uncle Jones and Uncle Martin divided equally and each sold his share at the railroad camps before the sun went down.

We slept soundly that night and at break of dawn were all mounted and ready to start from Uncle Jones's house again. We were to hunt with Uncle Jones's pack that day. Allow me a few words to describe the dogs. Just five years previous to this fall a rich cotton factor from St. Louis had come to Jones's Bayou and had hunted three solid weeks with Uncle Jones over on the Yazoo and Sunflower rivers. When he went home he sent Uncle Jones two fine beagle puppies, a male and female. He sent collars on the pups, and on one was engraved, "Mark Anthony," sired by so and so, dam so and so and so and so. On the other was engraved "Cleopatra," sired by so and so, dam so and so and so and so. Anyway, the gentleman, in return for the sport he had enjoyed in participating in the killing of nine bears and a number of deer and turkeys, had made Uncle Jones the present of a fine pair of pedigreed, registered beagles. Uncle Jones could never have bought such a pair of dogs, as I guess they cost up in the hundreds. To say that he was proud of them and loved them is to put it mildly. That gentleman could have had all nine of Uncle Jones's sandy-haired gals if he had wanted them, and he would almost have been willing to have thrown in his old woman for good measure. To come to the point, the whole of Uncle Jones's pack was the offspring of this magnificent pair of hounds. He had crossed his fighting dogs with bloodhounds until he had as fine a pack of bear hounds as there was in the State of Mississippi. Old Mark was getting old, but he still had lots of spunk left in him and a nose that any hound could be proud of. Old Cleo had been killed last year in a bear fight, so Uncle Jones had an especial love for Mark, as he considered him his "lead hound" and taught all the puppies under his especial guidance.

Now you understand what we were hunting behind. None of your mongrel pack of curs and rabbit dogs.

Before we started I quietly slipped a five-dollar bill into John Jones's hand with a hint that if he wanted any future favors from me I must kill the bear that day. John went off and held a consultation with his three brothers, and from that moment he was my slave. The truth is, they all of them frequently borrowed small sums from me which I never took the trouble to ask them for, and I knew this threat or very plain hint would bring them to time. The boys did not have the same principle that their father had. Old man Jones was a "diamond in the rough," and had a very high sense of honor; so did Uncles Taylor and Martin.

Well, we are now on the road; the hounds are jumping and yelping, and it keeps Uncles Jones and Martin both busy watching them and blowing them in, they are so eager to hunt. Uncle Jones has to scold old Mark more than once; he will lead the other dogs off into the cane, instead of trotting on behind the horses, as we wish them to do, until we get into the bear country. The dogs have not hunted since last year, and are far more ardent for the sport than the hunters. So we have to watch them to keep them in, for fear they will go racing off after a deer or varmint of some kind, entirely forgetting their well-taught manners; that is, to hunt nothing but bear. We at last reach the bear country, somewhere within a mile or two of where we had been before, judging from the direction we had been traveling and the time on the road. Old Mark has now picked up a fresh trail, which has crossed, during the night, the bayou bed we were following. The whole pack is off in full cry—the deep bass of old Mark down to the fine yelp of the youngest puppy who is out on his initial hunt. Great Jupiter! I know if thou couldst sit upon thy throne on Mount Olympus, and, gathering all thy subordinate gods and goddesses round about thee, listen to such music as this, thou wouldst crown Diana queen of all! Yea, even the beautiful and seductive Venus would sink into oblivion and be lost from thought and sight while such music held the soul enchanted. But enough of such soliloquy. We were off down a bayou bed in the direction of the dogs as fast as we could go. The party now divided, one-half going down the bayou bed and the other half taking a direction at right angles to the course we were following. Experience, the day before, had taught us that the dogs were in fighting trim, and it was necessary to get to them as quickly as possible when the bear was brought to bay. In this way, if the bear doubled back on his track, as they often do, the other party would be able to reach him sooner than we could retrace our steps. John Jones told me to keep right by his side if I wanted to kill that bear, and as I had invested $5 worth already in bruin's hide, I took his advice. We were soon far in advance of the others of the party. John was big and strong and broke the way through the cane, and although I had all my clothes torn off of me, and nearly had my eyes jabbed out a dozen times, I managed to keep up with him. John is the best bear hunter I have ever seen. Stanley ought to have had him in his party in making his explorations of darkest Africa. John would have run some of those Jing-ga-hoos or Kin-ka-poos out of their holes, I'll bet you.

The dogs were wrestling manfully with old Bro. Bruin. John said he was a "son of a gun"—said he could tell by the fight he was putting up. We got nearly to the scene of battle several times, but just before we could see them the bear would break through the dogs and go again. Finally we heard just ahead of us the awfulest, most blood-curdling row that man's ears ever listened to. John started on a run. "Come quick," he said, "they have got him cornered, and he is mad as a Mexican bull by now, and will kill every dog in the pack if we don't git thar in a hurry." I instinctively stuffed two or three more cartridges into the magazine of my rifle and followed. Somehow when you are preparing to tackle a *mad bear* you like to know that the magazine is full, as well as one in the barrel. We had to get down flat on our stomachs and crawl along for 100yds. before we got to the fight. The cane was so thick and stiff and matted up with vines that there was no getting through it; so we followed the path or swath broken down by the bear and hounds. As the bear is not very tall when running, we had to crawl to follow him. We finally emerged into a little clearing or place where fire had burnt out the heavy cane and it had grown up again in switch cane. It was in this circle or arena that the dogs had bayed the bear.

As soon as we emerged from the cane John gave a whistle. "Ge whiz! what a buster!" he said. I could see at a glance that we had an unusually large bear to deal with. The circle in which the fight was going on was not more than 30yds. across. The combat was raging near the center; so John walked around until almost opposite to me, just enough to one side to keep from shooting each other. I understood his motive as soon as the first shot was fired. When two persons are shooting into a bear from opposite directions he is apt to become confused and not charge either. The dogs were all over the bear, on both sides, on top and under him. John shouted to me to pick my chances, and not shoot the dogs.

This I fully intended to do, but circumstances always make cases and mould one's actions. I watched for a chance for several minutes, when finally the dogs broke away and left the side next to me clear of obstruction. I am quick with a rifle, so in a second I had planted a ball in the foreshoulders. I wanted to cripple those terrible forepaws of his if possible. There was a howl of rage; the bear bit his shoulder several times, then turned directly toward me prepared to charge me. John shouted, "Look out! look out!" I yelled back to him, "Shoot, you infernal fool! Are you going to stand there and see him eat me up?" John laughed, but did not shoot. By this time I had another cartridge in my rifle barrel, and made up my mind that I was going to kill that bear if I had to shoot every ball through a hound. I don't say that I was not scared, for I was; but I did not lose my head. The danger seemed to steady my nerves. There was no possible chance to run and no tree to climb within reach. The bear had his mind made up to annihilate me, and I knew it was only a matter of about three seconds for him to cover the 30ft. intervening between us. John would not shoot to attract his attention in another direction, so shoot I did, and at a 2:40 gait, too, I tell you. It did not make any difference whether a hound popped in between my sight and the bear just as I was pulling the trigger or not. After my rifle had belched fire four times, and there were two hounds dead on the ground from the bullets, and at least three of the balls had taken effect on the bear, he rose on his hindfeet and started for me. My jaws closed like a steel trap. I have never had my nerve tried quite so hard since that time, and I don't hanker after it any more, either. I was like a person drowning—I thought of everything mean I had ever done since I was born. Well, just as the bear started to me old Mark Anthony sprang in front of him and grabbed him by the throat. Now John got excited; he sprang forward like a tiger to save old Mark, but he was not quick enough. The bear snapped at him once with his vise-like jaws, but could not reach him, as Mark had a death grip on his throat. Then, with a quick slap of his powerful forepaw, he sent old Mark a bleeding, mangled mass into the edge of the cane. John had by this time arrived close to the bear, and both of us, leaning forward until our rifle barrels almost touched him, fired. The bear rolled over as dead as Hector, after Achilles had dragged him four times around the walls of Troy. John had blown the whole top of his head off, and my ball broke his neck. Eheu! eheu! eheu! wasn't I glad? The cold sweat was standing out in beads all over my face. I was scared, and "scared bad" too; but I had held my nerve, and neither John nor any one else had a chance to laugh at me. I do really believe that cold-natured fellow would have let that bear hurt me if he could only have had a great big joke to tell on me for being a coward.

We now cut the old fellow open and fed the hounds, which were clamoring for their share. The poor beasts were really hungry, as old hunters always starve their dogs for a day or two before they go hunting. They say it makes the hounds hunt better and fight harder than if they are full.

By this time all the other hunters have arrived, and the sight of old man Jones bending over the dead body of Mark crying like a child was really pathetic. I did not until then know that a man ever formed such an attachment as that for a dog. The old man said, "I hed a powerful sight sooner a give the whole balance o' the pack an' a kept this one dog."

The mortality was terrific. Five dead hounds and two badly wounded. That was a dear bear. Two of the hounds had been killed by my bullets, three had been killed outright by the bear and two wounded. I offered to pay Uncle Jones right on the spot for the two dogs I had killed and told him it was necessary to save my life. He would not have a cent, but he gave John a terrible abusing for not trying to save the dogs and not taking a hand in the row sooner. John said that I "hed gi'n him a bran new $5 bill for the 'tunity to kill that bar and he wanted me to get my money's wuf." John wanted to get the laugh on me, but he didn't get it and lost five hounds trying it.

Now came a repetition of yesterday, chopping a road out to the horses and getting the bear out. The bear was a large one and very fat, and it was all the strongest horse could do to carry him. We arrived at Uncle Jones's house about 3 o'clock with the bear, the two wounded hounds and the body of old Mark, which Uncle Jones wanted to bury in his garden by the side of Cleo. I had to remain out in the cane until Jim Pyron rode to Mrs. Beaver's and brought me another pair of pants, as I had left in the woods all excepting the waistband and pockets and a ruffle around each leg at the top of my boots. I was a sight to behold, and feared lest my gentle Sallie Jones and the sweet widow at Uncle Taylor's might not like the sight of my anatomy, and thinking that Don Quixote had arisen from the dead, cut short all my future protestations of undying love and affection.

Well, I fear I bore you, kind reader, with the length of this rattle-brained article; so, thanking you for your patience in following it so far, I bid you farewell. I remained twelve months longer in the swamp and participated in many more bear hunts, as well as the killing of deer and turkeys and ducks by the score.

A. B. WINGFIELD.

A MICMAC TRADITION.

LATE in the autumn of 1862, when living in New Brunswick, I was informed that caribou were to be found within a few miles of a small station on the railroad between St. John and Shediac. I obtained ten days' leave of absence from military duties, hired two Micmac Indians and traveled to the station, where we passed the night at a small hotel. Our baggage consisted of a frying-pan, three tin vessels fitting one inside the other, some flour, salt pork, tea and coffee, an axe, ammunition and blankets. These were packed on a buckboard, upon which we rode to the last farm in the clearings and then walked about seven miles through the bush, stopping to encamp at a large beaver meadow. This was more than a mile long and from a quarter to half a mile wide. A sluggish stream of water ran through it, and the ground was covered with coarse tall grass and sedges. The dam, which had been cut through many years before, was overgrown with willows and other shrubs.

The weather on the first day was delightfully calm and sunshiny, but the Indians appeared to expect a change, for they at once commenced building a substantial hut, making a cone-shaped frame of fir poles, the lower ends of which formed a circle about 9ft. in diameter. This was covered with sheets of birch bark, leaving an opening as a doorway and a hole at the top of the cone for the smoke to escape through. There was plenty of room for a fire in the center, and we placed a deep layer of sprigs from the balsam fir all round the wall for sleeping upon. It was fortunate that we made the hut, for rain fell in torrents during the greater part of the time we stayed there and the nights were very cold.

I had never before encamped in the bush, and I found the life intensely enjoyable. The grandeur and gloominess of the forests, and beauty of the plants on the caribou barrens, were a never-failing source of delight.

We saw many tracks of caribou, but they were all too old to be worth following, until nearly a week had elapsed, when, shortly before sunset, we found a barren which a small herd had left, apparently not more than half an hour previously. It was then too late to follow the tracks, and early the next morning a telegraphic message was brought to the camp requiring my instant return to St. John, as the troops were leaving for Canada.

The Indians had a small dog, half terrier and half spaniel, that was very clever at finding and putting up ruffed grouse, and I had shot a sufficient number of these and Canada grouse to enable us to live sumptuously during our whole time in the bush. My gun was a double 14-bore muzzle-loader by Beattie of London, made very heavy (8¼lbs. weight) in order that it might carry bullets accurately. For all practical purposes it was quite as good as a rifle up to 60yds. The Indians often expressed surprise at the long distances at which it killed the grouse, although loaded with only two drams of powder and an ounce of No. 7 shot. One of them, named Stephen, had a light single-barrel 14-bore, and, as his charge of powder seemed very large, I measured it, out of curiosity, with the top of my flask, and found it to be six drams. I asked him if he always used that quantity and he replied, "I put in that for rabbit and pattridge, but when I shoot duck I put in *leetle* more." "But Stephen," I said, "your gun must kick very badly."

"Waal," he replied, "it do kick some."

Notwithstanding the recoil, he held it steadily when firing with bullets. One day we tried a couple of shots in camp at a small blaze with a black spot in it about the size of a silver dollar, which the other Indian made on a tree.

Stephen judged the distance to be 70yds., while I thought it not more than 60, but the ground was so covered with fallen trunks that it could not be paced. I rested my arm on a branch, took careful aim and cut into the edge of the black spot with the bullet. Stephen took the same rest and sent his bullet into the exact center of the spot.

Stephen spoke good English, and one night, while we lay round the fire, related the following tradition of his own tribe:

"'Bout one hunderd year ago Mohawks came from Canada to make war with Micmacs, and one band of Mohawks found hut in bush, where Micmac Indian live with squaw and three childern. Mohawks look every which way, and see that Micmac gone hunting and nobody there 'cept squaw and three childern. They take them and hide them in bush. Then Mohawks hide leetle way from hut, and when Micmac come back they catch him and tie his hands. Then they all start back to Canada.

"And first night they camp Mohawk chief he say, 'I alway like leetle pig for supper.' Then he take one Micmac child and throw him on fire, and when he cook they all eat him. And next night Mohawk chief say, 'I alway like leetle pig for supper.' Then they cook 'nother child and eat him. And next night he say same thing and they eat 'nother child. And next night, when no more childern, Mohawk chief he say, 'I alway like ole sow for supper.' Then they kill Micmac squaw and cook and eat her.

"After that Micmac Indian very mad and one strong Spirit go into him, so he might punish Mohawks. And when they come to Mohawk village, in Canada, they all sit round with Micmac in middle and put big pot of oil on fire to boil Micmac in it. Then Micmac say to Mohawk chief, 'What very brave man you be! you kill children, you kill squaw; you no can fight man like me.' And Mohawk chief very mad and make cut with axe at Micmac. But that Spirit turn axe one side, so it hit one Mohawk on hade and kill him. Then Mohawk chief more mad and make 'nother cut at Micmac; but that Spirit turn axe one side and kill 'nother Mohawk.

"Then Spirit fix all Mohawks where they sit so they no can get up, and Micmac take axe and kill chief and kill all other Mohawks 'cept one man. And he say, 'You go to all Mohawk villages and tell what I done.' Then Micmac come back from Canada and live here."

I. I. MEYRICK.

AN UNSUCCESSFUL TRIP.

THE pleasure and profit of a tramp to woods or waters are not always to be measured by the tangible results. I appreciate the thrill of joy and the sense of well-earned ownership which accompany success with the gun and rod, and I do not underestimate the satisfaction derived from the recollection of those supreme moments when the big trout was at last landed, the whirring partridge brought to earth, or the antlered buck laid low. Nevertheless I venture to describe a trip which my guide called an unsuccessful one, but which I found to be full of such things as pleasant reminiscences are made of.

I had arrived at that somewhat unsatisfactory stage of my vacation when a man finds himself counting the days of freedom yet remaining to him, and although for ten days I had been making strenuous efforts to get a shot at a deer, I had burned no powder. Something had to be done; and when my guide suggested that we go into camp for a night at Train Pond, seven miles from the primitive little hotel which constituted our headquarters on the St. Regis River, I was soon stowing my duffle in a pack basket, while its mate was being loaded with provisions and cooking utensils. A very knowing old white horse was brought into requisition, and, with a pack basket swung on each side, he followed along independently and with such an obvious air of comradeship that we would scarcely have been surprised if he had occasionally ventured a remark. Leaving the main road a mile from the hotel, we struck into an old trail, cut years before for the purpose of getting supplies into a big lumber camp, four miles away. It was largely overgrown with underbrush, and the corduroy bridges were treacherous and weak with age. Occasionally it was necessary to cut a passage for the horse through a fallen treetop, or pause to get our bearings when the trail "thinned out." But it was a glorious tramp through the forest in the stillness of that August noon. The sunlight sifted down through the mighty trees and glorified everything it touched. The air was laden with the odor of raspberries and ripening ferns, and at every turn some charming bit of scenery presented itself. Indications were not wanting that the forest was inhabited. A red fox ran across the trail; now and then a rising partridge startled the silence, and the numerous deer tracks in the soft, moist places suggested possibilities of a shot at any moment. Once an enormous hedgehog ambled into the bushes in front of us, almost oblivious of our presence and evidently relying upon his defensive armor to protect him from undue familiarity.

At length we emerged from the woods into a small clearing thickly set with log houses. It was almost startling thus to come upon a "deserted village" in the midst of the wilderness. The buildings were still in a good state of preservation, and it will be many years before the great hemlock logs of which they were constructed will crumble away. Traces of former occupants and their vocation were scattered about: broken axe heads, old moccasins, shriveled and mice-eaten, and wooden appliances which had been fashioned to meet some pressing want. In two or three places iron hoops and staves showed where the pork barrels had fallen to pieces and formed salt licks, which the deer had visited until they had fairly eaten holes into the earth to get the precious saline particles hidden there. A faded jack-of-spades and several empty bottles led me to infer that even in this out-of-the-way place some time had been given up to revelry.

Right here I wish to say that I have changed my mind as to the permanent damage done by lumbermen in the wilder portions of the Adirondacks. I had supposed that they left the country bare and desolate where they had worked, and that deer hunting could never be the same as of old after the sound of the axe had profaned the solitude; but, as a matter of fact, it is often an advantage to the hunter to have been preceded by the lumberman. Little arteries of travel are established through what would otherwise be an unbroken and well-nigh impenetrable wilderness, and inasmuch as the lumbermen only cut the spruce trees above 10in. in diameter, the wounds they inflict on the forest heal rapidly and leave no permanent scars. Even the forest fires, for which these men are sometimes responsible, are not an unmixed evil, from the sportsman's standpoint. Ground which has been burnt over makes a natural clearing. The grass and shrubbery spring up when the daylight is thus let in, and here the deer are sure to come and feed, offering to the hunter good opportunities for that best of all sport, still-hunting.

Our old horse seemed to realize that he had reached the end of his journey. He cropped the grass complacently and peered into the big sheds as if to decide which one he would occupy in case of rain. He had occasion to seek their shelter before he left them. Felling a tree across the trail to prevent his leaving in case he became homesick, we transferred the pack baskets from his shoulders to our own and started on a two-mile jaunt over a wild and picturesque trail which no horse could well follow. The country grew more savage and rugged as we advanced, and it took a long hour's hard tramp to bring us to the little bark "lean-to" near the shore of Train Pond.

O, the pungent, spicy recollections of such camps as that! What tonic in the air! What Sabean fragrance in the balsam boughs on which the tired hunter sleeps! What savory emanations from the coffee-pot and frying-pan! Who that has spent nights in a forest camp can ever forget the weird charms of its surroundings? The crackling, glowing fire, beyond which stands a wall of mysterious gloom; the sighing of the wind through the trees; the light footfall of the midnight prowler; the laugh of the loon, and the discordant concert of the owls. It is the memories of these things which constitute a large part of the value of a forest outing and stimulate a keen desire and a yearning to repeat the experience.

Who next occupies that bark Pantheon will find—done in charcoal on its interior—a bill of fare which will set his appetite on edge and make him think he has forgotten something. I believe in going well provided on these short trips. Carrying in a few extra pounds of provisions doesn't signify, because you never have to bring them out.

After an early supper, which would have driven a boarding house into bankruptcy, we followed the trail—if such it could be called—down to the pond, pulled the boat from its hiding place and paddled quietly out in the hope of getting a daylight shot. The pond is not a large one, and is covered with lilypads from shore to shore. Through this watery meadow the deer had crossed and recrossed, leaving on its surface distinct trails in every direction. Here was a feeding ground of the choicest kind; the shores were tracked like a sheep yard, and it seemed as though our bloodthirsty instincts would surely be satisfied. But this was not our day. The deer were off attending some camp meeting of their own, and the only thing we secured was a view which will abide in my memory forever; the setting sun giving its good-night kiss to the seven peaks which guard the eastern approach to this wild spot. When night had fairly shut down upon us we lighted the jack, and for four hours the boat glided like a ghost along the shores. Once the cracking of sticks gave us hope that a deer was coming down to the water, but it turned out to be a pair of hedgehogs on their nocturnal rounds. Whether they were quarreling or making love I could not decide, but such grunting and wheezing and coughing and snuffling I never heard before. One of them crawled out on a dead spruce lying in the water and commenced gathering lilypads. A stroke of the guide's paddle sent the boat up to him and I couldn't resist giving him a punch with the gun barrel. With a vehement grunt of astonishment he immediately assumed a globular shape, looking more like a gigantic chestnut burr than anything I can think of. By this time the jack weighed several hundred pounds, the seat of the boat had turned to flint, and I ceased to care whether I ever killed another deer. So we returned to camp empty in every sense of the word, ate another supper and turned in.

The next morning we decided to remain over another night, the only objection (always a serious one in the woods) being that we had no meat. To supply this need we started out for partridges, the guide with the rifle and I with the shotgun. We soon flushed two birds and they both came down, to the amazement of the guide, who is a star of the first magnitude with the rifle, but not accustomed to wing-shooting. Later on we put up another covey, one of which fell to my gun and two more tumbled out of the trees, with their heads cut off by rifle bullets. These five birds reposing in the frying-pan, with an offering of salt pork laid on their saintly bosoms, made the finest gastronomical sight it was ever my good fortune to witness.

When we returned to camp—and within 20yds. of the same—we found fresh deer tracks on top of our own! From this and numerous other signs I am inclined to think that during our stay at Train Pond a large herd of deer were continually following us around, but were never quite able to overtake us.

Well, we tried for them again that afternoon, and floated for them until midnight. Then the very elements turned against us. The rain poured down in torrents, and the wind roared through the forest like the sound of a mighty waterfall. It was inspiring, but it was also damp. The cold air clutched our bones and penetrated the marrow, and so we started for camp over the most diabolical piece of wet trail that two unlucky hunters ever traversed in the dark. Slippery logs, twisted roots, jagged rocks, ponds and pitfalls, which were not there in the afternoon, had all come down into that trail and arranged themselves with fiendish ingenuity to block our passage. The distance was not great, but there was more traveling done, and more fancy steps were executed, in that short piece of so-called trail than I expect ever to indulge in hereafter.

So ended our quest of deer—in a blaze of electric glory, and with peals of thunder for our applause. We went home next day with all nature smiling upon us in derision, and with fresh deer tracks all around us. The herd had evidently lost trace of us in the night and were making desperate efforts to run us down. Three days later I found they were still pursuing me, but I managed to kill two of them before they got near enough to do me any bodily injury.

Now there may be certain effeminate and thin-skinned sportsmen who will say that this excursion lacked the elements of pleasure. To all such let me say that I now remember this unsuccessful trip as the pleasantest part of my vacation.

ARTHUR F. RICE.

Mr. Robinson's Books.

IT is surprising that Mr. Howells himself should recently have written, in *Harper's Weekly*, as if there were a French-Canadian "dialect" of English. Incidentally he referred to Mr. Maclennan's work in such sort as to indicate to himself a belief that the Montreal writer was the pioneer in that "dialect" field, a credit which Mr. Maclennan would, I am sure, be quick to disclaim. The pioneer was, so far as I know, Mr. Rowland E. Robinson, a Vermonter, whose French-Canadian Antwine, in "Uncle Lisha's Shop" and "Sam Lovell's Camps," is perfectly represented as to his racial peculiarities, his broken English, and his individuality, which is one of the most lively and amusing, I venture to say, in American literature.

I am the more desirous that justice should be done to the Vermonter in this matter, because I regard him as an American writer who has nothing like the honor he deserves in his own country. His books, published by the Forest and Stream Company and by Houghton, Mifflin & Co., disclose a variety of Yankees so interesting, so amusing, so lovable, and so fond of the open sky and the fairness of Nature in their own land, that one is inclined, for their sake, to love Yankees in general—suspecting them to be truly kin to Mr. Robinson's delightful people. He is a true humorist of rare quality, whose spontaneous work may well be cherished for generations after the books of the *farceurs* of the hour shall have vanished in the limbo of old masks and old moons.—*Edward W. Thomson in the Literary News.*

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Natural History.

THE BLUEBIRDS.

ST. AUGUSTINE, Fla.—*Editor Forest and Stream:* The bluebirds seem to be creating a good deal of interest just now, and I've very little doubt that they are either becoming scarce or for some reason are not so often seen as formerly around our Northern homes. Isn't it possible that the universally hated little cuss, the English sparrow, has something to do with it? During the early part of my life at the North it was a rare thing to find a house in the country without its bluebird boxes, and the cheery and delightful notes of their tenants were among the principal charms of spring. But with the advent of the sparrow these delightful sounds became a thing of the past, for it was useless to fight against the army of little pests that assailed them on every side and occupied every box and every place where a nest could possibly be built. If the bluebirds were forced to the woods to find deserted woodpeckers' holes in which to build, they would be likely to find themselves ousted by a stronger bird, for the supply of these holes does not, by any means, equal the demand.

That they have been driven away from their old haunts I have very little doubt, but where have they gone? The sparrow has not reached Florida yet, and all through the winter the bluebird is found in numbers through the pine woods; but whether they remain here during summer I cannot say, as I seldom have the occasion to tramp through the woods except in winter, when quail are ripe.

DEDYMUS.

[A friend in South Florida tells us that contrary to the customary order of things the bluebirds remained there during the summer this year, nesting in great numbers. It will be remembered that Texas correspondence in these columns has recorded the appearance in that State of unaccustomed hosts of small birds. May not these observations point to an abandonment of Northern haunts for those in the South?]

BLOOMINGTON, Ill., Nov. 2.—*Editor Forest and Stream:* In your number of Oct. 12 I see a short article on our dear little messenger of spring, the bluebird, by Mr. W. R. Gorman, of Paschal, Ga.; and I will report in regard to this locality. When spring came everybody began to look and speak of the little fellow, but he came not. We live just on or in the edge of this little city; we have quite a good deal of ground and many trees, and for years three to five bluebirds have always built and raised their young here, and the same nests are always used—mostly holes in dead limbs of trees. If I mistake not, two broods have been raised, but I am not certain, nor do I know if the same old birds return and build in their old nests. But as I say, this spring they came not; nor did we see any for a long time, though some persons said they had heard them, also I believe seen them; though neither my brother nor myself had seen any until a few weeks ago, when we took a little .22-cal. Stevens and went into the woods to look for squirrels and to see how the nuts were. On the way, sure enough there were our bluebirds—the first I have seen this summer—and there were several of them too.

We missed them more in the spring, for though many birds build here in our trees, the bluebird and the chatterbox wren are our favorites—they become so tame.

My brother mounts a great many birds during the year and we enjoy very much our trips after specimens. We have one very fine case of them in our parlor, and many skins ready for setting up.

I often sit here in our little workshop dreaming of the past, from hunting buffalo in '71 on the plains down to little Bob White and doves. We came to Bloomington in 1854, when I was four years old. From my memory as a boy, I think I never saw nor heard of such a country for game as this, with deer, turkeys, geese and ducks and chickens by the thousands. The first shot I ever made with a gun at game I killed three prairie chickens sitting on a fence. On one trip I took when a boy we were gone three days and two nights, got five deer and 160 geese and brant.

S. E. BELL.

OREGON NOTES.

Weather.

NOT a drop of rain or a cloud since the middle of September! How is that for the "Webfoot" State? If it doesn't rain within the next three days (and there is no prospect for rain), the records will show an October in Oregon without rain. Selah!

Ducks.

The inference that would naturally be drawn from such weather conditions would be: no ducks; *non sequitur*, in this instance. Ducks of all the trash varieties are quite plentiful. Fair shooting has been had all along the Columbia. Monteith, Bills, Williams and others on Deer Island report good shooting; the boys over on Columbia slough are well satisfied, while Mead, Swift, Garrett and Hall at Jewett's Lake on Sauvie's Island have averaged more than twenty-five ducks to each gun every shooting day since the season opened. Canvas, swan, geese and cranes are beginning to come in, and the full moon storms near at hand will doubtless bring fine sport.

Bluebirds.

Every sportsman must have read with feelings of sorrow W. R. Gorman's note on the "Extinction of the Bluebird" in FOREST AND STREAM of Oct. 12. Can it be that the great storm of last February in the Southern States so thoroughly demoralized bird life in general and so nearly annihilated the dear little bluebird as that letter would indicate?

Let us hope that the destruction has not been so complete as he suggests. Bird life this side of the Cascade Range was not affected by that storm of course, and, answering his query so far as this part of the North is concerned, I am glad to state that the bluebird is with us just as of yore.

"Uncle Lisha's Outing."

The first chapter of Mr. Robinson's story has filled me with anxiety. I'd like to bet that Jozeff's anticipations anent the tick full of feathers will not be realized, and that M'ri will be heard from in no uncertain terms when the boys return. We've all been there, Jozeff, and sad experience has taught most of us that such dreams don't materialize,

S. H. GREENE.

PORTLAND, Oregon, Oct. 28.

A MAINE SKUNK FARM.

THE Rumford Falls, Me., *Times* gives an account of a skunk farm as it is farmed in Mexico, a town not far from Rumford Falls. Henry Ladd is the farmer:

"When we arrived at the height of land we saw the skunks gamboling in their pasture. As we drew near the house we heard the proprietor talking to his stock in language more forcible than polite.

"As we neared the premises the odor was wafted toward us which left no doubt that there were skunks in any quantity in the near vicinity. We found Mr. Ladd in the shed busily engaged with a pelt which he had recently taken from a carcass. Hanging on the timbers above his head there were numerous pelts, while hanging on the walls were several peltless carcasses which showed that they had recently been relieved of their covering. Mr. Ladd turned one skin which he had removed from the stretcher. It was a prime pelt, with two small stripes of white running back to the shoulders, the remainder of the body was a pretty black. The skin was as pretty a specimen of 'foreign sable' as ever a lady's cloak was trimmed with. After examining the pelts he had taken off, some thirty-five in number, we were conducted to the skunk pasture, where fifty of those animals were either at play, fighting or eating. They were in an inclosure 100×320ft. The fence was made of poultry netting with a board at the bottom resting on the ground, while another some 2ft. from the ground kept the animals from crawling up the wire. In making this pasture a trench was dug around it about 2ft. deep, which was filled with stones and the posts set in them. The grounds are supplied with a number of kennels, and only one burrow has been made, which is under a rock where several live, but they are not a happy family. The whole colony are quarrelsome and occasionally they kill one of their number in a family 'jamboree.' To cover up their cussedness they all fall in, cannibal fashion, and make a meal of their slain comrade.

"Mr. Ladd and his son Willis started their enterprise in September, since when they have caught eighty-five skunks. The ones caught were placed in the pasture, where they have been fed on scrap meat and fish offal which has been procured for them at the markets. Some of those that have been fed are very fat. One was killed last week that yielded about two quarts of oil. His pelt was prime and very large. In the pasture are two perfectly black, excepting a small V of white on the head.

"In catching these animals they use small steel traps and a dip net, both of which are on poles about 10ft. long. When one is found in a trap, one of the men attracts his attention from the pole, which is fastened to the trap, while the other takes hold of the pole and lifts the animal from the ground. When in this position they cannot scent. The man who has the dip net, which is made of a bran sack, then walks up and holds it under the victim, loosens the spring of the trap and lets him drop into the bag. He is then taken to the wagon, which holds a big box with a trap door in the top, which opens into a compartment, partitioned from the rest of the box, with a doorway connecting the rooms. The trap door is opened and the net turned over it. The skunk drops into the box and at once passes into the main part, where he is followed by others. Several have been caught in the nets. Mr. Ladd, to illustrate how they caught them, took a net and went into the pasture and scooped up one, which was 'a big cuss, fit to kill.' After he was caught he was carried to a brook, where he was drowned. In killing them in this way they are never scented.

"Mr. Ladd said that he was always afraid of a skunk and would not go near one until last year. His son, who was doing considerable trapping last fall, caught several of these animals, and he got used to them. This summer when they caught the first one they got him into the pasture without his scenting. They then went back to the hill above the house, where they found another. Mr. Ladd, senior, went at him very boldly, to show how he could handle him; but, well—the old gentleman dodged to escape getting it in the face, while the young Ladd was convulsed with laughter.

"In addition to the above game they have caught several foxes.

"A neighbor of Mr. Ladd's, Thomas Weeks, and Frank Bailey, who is stopping with him, have caught four foxes, eight minks and twenty-three skunks. These gentlemen wintered either seven or nine skunks last winter. The two females each gave birth to six little ones last spring."

Rattlesnakes' Fangs.

ST. AUGUSTINE, Fla., Oct. 29.—*Editor Forest and Stream:* If your correspondent Mr. J. W. Schooley, in your issue of Oct. 26th, would examine any other rattler he would find several, usually five, small fangs on each side, which lie flat behind the main fang and only come into use if the large fang is lost, when the next one grows and takes its place. Some large rattlers have more than others, perhaps from having lost more in being unable to withdraw them after striking, as a bee leaves its sting behind in the wound. One of the supernumerary fangs is often at the side of and nearly as large as the main fang, but is not connected with the poison sac.

DEWITT WEBB.

A House Full of Coons.

UP the creek from Linlithgo Station, N. Y., about three miles, there stands an old, deserted house. Three or four of our hunters had discovered numerous signs of coons, which they could not locate. One day, while we were taking a walk along the creek, we happened to enter the old house, which stands near the creek, perhaps 40ft. from it, and, seeing paths leading to the house from the creek, we knew we had found their home. Near the creek in the bank there were several holes. Two days afterward we were there by daylight with two hounds, old, large dogs.

As soon as we entered the house the dogs began to give tongue, and they ran through the rooms. We stove holes in the ceiling, and soon the fun was fast and exciting. The dogs soon had one out, and then it was a fight in earnest, two to one, but the game was even.

We killed this one. The dogs caught one old one in a room. We shut the doors and let them fight; four men, two dogs, one coon, in a room 14×14—coon, men and dogs in one grand reel. We got six young and four old ones, about 170lbs. of coons.

W. M.

Game Bag and Gun.

THE SEASON'S GAME.

WASHINGTON, D. C., Nov. 4.—*Editor Forest and Stream:* I have just returned from the waters of the Upper Potomac, where I had great sport after the smallmouth black bass. In a few days I shall start for Knox county, Indiana, where I shall greet my brothers, John and Sam, and shall put in all the time till January after the game little bird. As to the scarcity of birds, I am of the opinion that the severe winters in the Northern States and lack of vegetation for food and shelter have done the work. For instance, at our place in Knox county, Indiana, I have just been informed that we have more birds this year than last. In fact, the winter never affects the birds there, as the ground is so rich that there is always a good crop of vegetation, which furnishes ample food and shelter.

If birds are scarce in the South it must be on account of the States failing to enact proper game laws and seeing that the same are enforced. I have seen birds that had been trapped brought in by hundreds in towns in North Carolina, for sale and shipment. While at Lexington, N. C., last year, I was informed that one dealer had shipped thousands of birds. And as there are dealers in almost every town in the State, it is plain what becomes of the birds. Another great evil, that destroys numbers of birds annually, is the carelessness of the owners of dogs in permitting them to roam at large over the fields during mating and breeding seasons. I believe that this agency alone in many localities destroys more birds than the gun.

JOSEPH H. HUNTER.

MEADVILLE, Pa., Nov. 6.—*Editor Forest and Stream:* Concerning the number of game birds raised, it has been my observation that the weather very materially effects the supply. In the first place if we have long continued and cold rains when the birds are nesting and hatching, these cold rains wet and chill the eggs and destroy part if not all of them. If the cold rains come later, after the young birds are hatched, and last several days or more, the young birds become chilled and die from the effects. Consequently a warm and dry spring has a tendency to secure a greater number of young birds than a cold and wet spring. A drought or heavy rains after the young birds are able to fly has less effect upon them than in the earlier stage of their existence.

You may safely judge the supply of young game birds by the supply of domesticated turkeys, for they are affected similarly. If young turkeys have flourished, game birds are likely to have flourished accordingly. Although the last winter was a very severe one in western Pennsylvania, a fair supply of game birds wintered well and the conditions of early spring were favorable to a good supply of young birds.

EDGAR HUIDEKOPER.

TANGIPAHOA, La., Nov. 4.—*Editor Forest and Stream:* This is a particularly good season for partridges, with more birds than for a number of years. There was a large number of birds left at close of last season (Feb. 28). The summer, although wet, was in continuous showers, without floods, and no birds were destroyed from this. The coveys are very large. No rain fell here in September and October, which either made some birds nest again, or the eggs in first nests had been destroyed. I came on two coveys a few days ago with birds so small that they pipe among grass and could only fly 20 or 30yds.; both coveys within 200yds. of kennel yard.

There was a few hours' rain on last day of month, but ground yet much too dry to get good work from dogs. The season opened on 1st inst., and I have not yet been in open piney woods, so I don't yet know if there are many of those very young coveys there.

R. S. NICHOLSON.

DETROIT, Mich., Nov. 5.—*Editor Forest and Stream:* I do not think the drought has affected our game birds on land in the least. The hard winters are what affects our quail crop the most. But the drought has certainly affected our crop of marsh ducks—mallard, wood duck and blue-winged teal. The waters of our Great Lakes and rivers have lowered so in the last few years that the wild rice marshes where even last year you could punt a boat you can now walk all over with a pair of ordinary walking shoes. In fact, most of our marshes have become snipe grounds, and the above condition of our marshes will drive the ducks to other breeding grounds. The quantity of open water ducks—canvasback, redhead, bluebill, butterball and whistler—does not seem to diminish any. Large bags of the last-named species are being made every day.

There have been lots of snipe with us this season, but no large bags have been made, as the low water allowed the birds to work all over the rice beds, where a little water gave them plenty of chance to feed, and made almost inaccessible walking.

JOHN PARKER.

WAVERLY, Miss., Oct. 27.—We have, I rejoice to say, had this evening a most refreshing rain, and heavy clouds still hang in the west, which promise a repetition of the most needful before morning.

Mr. George Richards had Little Ned and another dog out, exercising them this morning by the flat in front of the well, when Little Ned came tearing down the opposite side from toward Capt. Billy Young's place, and he wheeled very snappily into a very stylish point. George called my attention to it, and then he walked in and flushed a very large bevy of full grown quail which flew across the road into the sedge among the pines.

Maj. Val Young has returned from the Rowland Fox Meet and reports that it was so dry over there that no awards were made at all. Maj. Val was one of the judges.

W. W. TITUS.

FLAGSTAFF, Me., Oct. 31.—From Oct. 1 until the present day there have been killed here fourteen deer, seven of which were fine bucks. The largest antlers were of ten prongs, and spread 29in. A white deer was shot by Mr. J. Atwood, of Philadelphia. Moose signs are plenty, but as yet we have had no snow, so we have delayed moose and caribou hunting until the snow shall fall. We still have vacant cabins and can accommodate a goodly number of sportsmen. Not a single sportsman who has visited

Spring Lake yet has failed to get this game, although some amateurs have had to shoot at their ninth deer before they could claim one as their own. A. B. DOUGLASS.

VINCENNES, Ind., Nov. 4.—*Editor Forest and Stream:* The number of bevies of quail seem cut down over one-half. We think it was owing to the severe weather and deep snows last winter, a thing unusual for us, and I think it will take several years before we get back to our usual status. ALBERT G. SLOO.

INDIANAPOLIS Ind., Nov. 5.—*Editor Forest and Stream:* In the northern and central parts of Indiana there are but few birds, but in the extreme southern portion they are quite plentiful. The field trial grounds at Bicknell have their usual crop, owing I think to the fact that the grounds are protected from shooters. The protection of the birds at Bicknell this season will insure plenty of birds for the Continental Field Trials Club's trials next year. P. T. MADISON.

BLUE MOUNTAIN, Miss.—*Editor Forest and Stream:* Quail in this section are quite plentiful, more this season than there have been for the last three years. I attribute their increase to the fact that the game law has been more respected the last two years than it has ever been here before. Then the season has been all we could expect for them, except the last two weeks of June, which were excessively wet, and no doubt drowned a great many young. Since then we have had but few light showers, which has made it exceedingly favorable for the later hatchings, consequently two-thirds of the quail are of the late hatching, only about three-quarters grown. Our first rain this fall was on the 27th of October; the 28th was the first day a man or dog could hunt with any comfort. Therefore there has been very little hunting done this season. All other game is scarce. S. N. AYRES.

CHICAGO AND THE WEST.

Two Peres.

CHICAGO, Ill., Nov. 1.—Several years ago, before the fishing was spoiled in the Chicago River, this used to be a great country out here, around the Great Lakes and the Father of Waters. It was inhabited, as nearly as I can learn, mostly by pères and Indians, who nearly always did well together and liked the same sort of places. There was Père Hennepin and Père Marquette, for instance. They were two pères hard to beat, in their time (though I have seen two pères beaten since then). They seem to have hustled around a great deal in this country. The former had the drainage canal idea in his head, and intended to connect Chicago with the Illinois River by means of a canal, but he never built it, so he founded the Hennepin Shooting Club instead. Père Marquette is well known to have been the architect of the Marquette Building in Chicago, and the founder of the city of Marquette, Mich. He was also the first man to paddle from Montreal to Indiana in a canoe. Duty compels me to admit that he paddled mostly by proxy, for the ancient pères could always hypnotize the Indians, as for instance see the irrigating ditches, gardens, missions, etc., which the *Indios reducidos* did in Texas and California. The Northern red man had to work just as hard, only paddling does not leave the imprint on the century that piling up stone does.

Père Marquette got in his boat—a grand birch bark it must have been—at Montreal. He paddled up the St. Lawrence and probably made a portage at Niagara Falls, though history does not say anything about it, and hence the fact is doubtful. He kept on paddling, close in shore all the time, of course, for the lakes were wild waters we may be sure, until he came to the narrow waters of the Mackinac Straits. I don't know how he knew that Green Bay was on ahead, but he checked his baggage on through just the same. He paddled all night and he paddled all day. When the lark arose in the morn he must have been paddling, and when the cows came home in the evening he must still have been paddling—that is, the Indians must; or else he never would have got there. He went up the big waters, and came to the Wolf River of Wisconsin. I don't know how he knew that this stream would lead him within two miles of Indiana, but he still went on. He followed the Wolf up into Lake Winnebago, starting myriads of wildfowl, frightening myriads of fish, most of the descendants of which have since gone into cold storage. He followed the stream on through Winnebago water, knowing that that shallow sea was only one of the jewels strung on the string of this wonderful stream. He kept on paddling, through the Butte des Morts marshes, where the wings of the wildfowl were like the thunder of the waves on the shores of the big lakes. He passed through more expansions of this stream, Fox Lake, Puckaway Lake, Swan Lake, etc., changing the name of his river from Wolf to Fox, just for luck. He stopped little, even on this stream, wonderful for smallmouth bass, but pressed on into the head waters of his stream. He was now below the edge of the pine country. His journey, since leaving the great marshes of the lower part of this river, had been through a lovely oak-opening country. The hardwood trees were tender in their spring colors, brave in their fall colors, sad in their winter colors. There were vast islands of timber, with long tongues of grass lands running in between. The marsh still clung to part of the stream, but it was narrow. Père Marquette, tired with sitting in his boat, and tired of eating fish and duck, called a halt. The Indians went out and killed some rabbits, some squirrels and some ruffed grouse in the woods. They were at the end of the road. The conductor called out, "Far as we go," set his bell punch back to 0, counted his change, swung the trolley around to the other end and started back to Montreal for the next Père.

But Père Marquette, glorious man in a glorious time, sat upon the grassy bank of the little lake at the head of the stream, and his face was still toward the West.

Père Marquette had proved you could paddle to Indiana all but two miles. He made, here at the head of his faithful river, the trifling portage which separated the great lakes from the Father of Waters. You might think that a great wall of hills and rocks must uprise here, separating the east-bound Fox from the west-flowing Wisconsin, but such is not the case. The snipe marsh seems to run almost from the one stream to the other. What glorious snipe shooting Père Marquette must have had! The divide is easy, gentle, unnoticeable. Yet, just to the west the noble Wisconsin River, still almost fretful after its passage through the rock gorges of the dells, was flowing then as it is flowing now. Pardon. Not as it is flowing now. At this time we have sawdust in our rivers, and at the mouth of each there is a log boom and a cold storage house.

So here they built Portage City. And seeing a good chance to spoil a snipe marsh without doing anybody any good, the Government spent $1,000,000 in building a canal across this little portage. Two locks of 4ft. each, and there you are. You no longer need to put your birch bark on your head. If you have a schooner, or anything much bigger by way of a boat, you would better start over with it the way Père Marquette did; but it is a good canal for canoes, and it was very kind of the Government to pave the way, so to speak, for any future pères who might want to go from Montreal to Indiana.

Père Marquette's face was set toward the west. He followed the noble Wisconsin, reached the vast Mississippi, followed down till he found the Illinois River, pressed up it to the Kankakee, and so through much fever and ague reached South Bend, Indiana. Here he portaged to the St. Jo, near which stream he ended his voyaging forever. What a journey, through what a country! What a land was this that day! Ah! Père Marquette, Père Marquette, would I had had blessing at your thin and saintly hands! Would that the mellow call of the wild goose woke us all of mornings now, and not the brazen trumpetings of this that we call Industry! Alas! Père Marquette.

At the Portage.

This week a friend and I stopped for a few hours at the portage of the old Indian waterway. "Where was it that they made the carry?" I asked of a leading citizen at the depot.

"What carry?" he said.

"Where they made the portage over from the Fox into the Wisconsin?"

"Who did?"

"Why, Père Marquette, you know."

"Who was he?" asked the leading citizen.

"Oh, a Frenchman."

The leading citizen shook his head. "Must have been a long time ago," he said. "I've been here over twenty years myself. You can look right through the canal all right. Nobody never carried anything acrost here as I ever knew of."

But none the less my friend and I, as we looked out of the windows of the train which bore us from Portage City down to Horicon, had glimpses of the same river, the same lakes, the same oak openings and wide grass lands which must have gladdened the eyes of the good priest, wearied with gazing out over the waters of the lakes. Even to-day the region is one loved of the wild creatures. If you wish ducks, bass, snipe, squirrels, rabbits, ruffed grouse, follow the old waterway to the divide and hunt in the country there and immediately to the south. If you be of reasonable turn of mind you can have sport to please you. Especially is this a ruffed grouse country. I do not at this writing know of any better. Père Marquette's water trail, singular to say, passed through the very best shooting and fishing country of all this part of the West. It is only a shadow now of what it was, but I give the above tip for what it is worth.

Beagles and Birds.

My friend and myself were up at the beagle trials at Columbus, Wis., about seventy-five miles northwest of Milwaukee, last week, and it was thus I found we had blundered into a very fair shooting country. The evening we got there a shooter had seen some woodcock flying about right in the town. A bag of twenty-one snipe had been made along the Crawfish River that same week. Squirrels were mentioned as often numerous and we were told that ruffed grouse could be found in good numbers. In the course of the beagle trials we put up several grouse and about twenty-five rabbits the first day, and every day we saw some game. At the close of the beagle trials we found the rabbits all frightened into the ground for the time, but Henry Hiller gave us two fine beagles to use (one of them Duke, winner of first in the Derby), and with these we got two good hunts right near town. On one of these days old Mr. Hiller took out the beagles, and Mr. Grout, our landlord, went with us. We struck some very dense cover, and found the shooting extremely difficult, but the little hounds made the merriest sort of music for us, even though we had only five rabbits to show them in return for their singing. But we had also two squirrels, and best of all, a nice bag of ruffed grouse. We struck in all over a dozen of these birds, and I had four shots myself, more than I have fired at grouse for years. I thought I was lucky to bag two of these screechers. Mr. Grout was still more fortunate and got four to his own gun. We prized them very much, as the shooting was under the hardest of conditions.

One of my grouse was killed in a peculiar sort of way. It sprang without any warning at the foot of a tree about 8yds. from me, and started across a little break in the cover about 10yds. in extent. It had gone only about 5yds. when I fired at it, and I thought it was blown to pieces, though my gun was a cylinder with about the most scatter of any gun I ever saw. On picking up the bird I found its head cut clean off and missing. Both the wings were broken at the butt, with not a feather touched between there and the tips. I think the bird must have had its wings upright above its back at the instant the charge struck it, and that its head was carried on about the line of the butts of the wings, and a little up. The lower neck and shoulders were not touched. It would be a hard shot to repeat with a cylinder-bore gun. This shot, and one in which I killed a running rabbit in the brush with a .32 rifle, gave me a great deal of comfort, so that I was ready to quit and go home. Candor compels me to say that I did not hit the rabbit in the head, but in the hindleg. In fact, I hit him twice running, for the first shot did not stop him, though it cut his leg clean off. We all discussed the fact that a rabbit will take a lot of shooting with a rifle, whereas if you hit him with a pellet or so of shot he keels over at once. I prefer to let my reputation rest with this rabbit, and shall not state how many I missed with the shotgun. There is no use spoiling a good story. Mr. Grout got most of the game. My friend said that he would not go into such cover to shoot, and one could get no shooting any other way. He stayed at the wagon, and ate apples and made pictures. The weather was so glorious it was a pleasure just to be out doors and to breathe.

There are a few prairie chickens around Columbus yet, I found, much to my surprise. Opening day sees some very fair bags—a dozen or so to the gun very often. We saw a couple of flocks flying across into the marshes. There are also a few trout streams near there, where a dozen trout or so may be taken of a day in season. One gentleman of Columbus, Mr. Brill, has some artificial trout ponds fed by an artesian well, and here he runs a little hatchery of his own. We saw several 3lb. and 4lb. trout darting around here. The Chippewa affords fairish bass fishing too, they tell me, though of course not to compare with that of the Northern Fox, over on the old Père Marquette trail.

We intended to go from Columbus up to Berlin, which is in a good grouse country west of Oshkosh. We found that there is good grouse shooting along the St. Paul Railroad running north of Portage City. We went northwest about thirty miles to Portage, then went about sixty miles southwest from Portage. Here we found ourselves at Horicon, the station for the Horicon duck clubs. We thought for a while of going out for some ducks, but finally concluding we had enough fun, started south for Chicago, about 150 miles or some such matter. We saw enough to make me believe that one who is fond of upland fall shooting can get into very pleasant surroundings at any one of a dozen points in the section of country of which the Portage is the center.

Getting Close.

The quail and bear season in the South is getting mighty close, and one could be forgiven for getting uneasy at the invitations which keep coming in to head for Dixie. I have already mentioned the latchstring of Dr. Taylor, of Brownsville, Tenn., who has two good dogs, a big house and a million quail. I don't see how one can stay away from there. And now comes further mandate from Mr. T. H. Glover, of San Marcos, Tex., who schedules "three fair dogs, two good horses, three Parker guns, three Marlin rifles, a .38-55 Winchester, a few deer, two buggies, several vacant rooms, a lot of smoked venison hams, a tolerably good cook, and a 60-year-old father who kills nine out of ten shots all day long and can walk the legs off the best of us." Moreover, Mr. Glover has a friend with a meat dog, which latter compares very well with his own blue-blooded dog, that does not always show stability of character in the field. Mr. Glover voices a popular feeling in saying, "when I have put money and beefsteak and confidence in a dog I expect it to understand that *noblesse oblige*."

Game Cases.

The Kewanee freezer case, appealed, comes up for trial soon, and was expected to be called this week, though no word has yet been received by the sportsmen's attorneys here.

The case of Williams, the proprietor of the Lakeside restaurant here, who was arrested last summer for serving illegal game, came up for trial this afternoon. The attorney for the sportsmen not being at first on hand, the prosecuting warden acted. Defense called for a jury, and in five minutes had one—one probably of "regulars." Attorney Baird then appeared for the prosecution, and the case was dismissed without prejudice. It will be taken up next week before Judge Bloom, in another division of the city.

The case of Mason, one of the Fox Lake "sooners," is expected soon to be brought up at Waukegan.

The cases of Beckwith and Nelson, arrested for shooting from an open-water blind, are to be tried next week probably, at Antioch, Ill.

Fowl in the South.

Geese, ducks and swans are this week in thousands on the Waponaca Club marshes on the St. Francis River, opposite Memphis, but the water is so low they can hardly be gotten at, but remain out in the middle of the inaccessible open water. Shooters in the upper portion of the South have had some rain, but are crying for more. Texas has had a fairly wet season.

Fowl in the North.

Never in the history of the country has the wildfowl shooting been so poor in all this section as it has this fall. Our sportsmen are entirely discouraged. This is the second dry year, and the waters are unprecedentedly low all over Illinois, Wisconsin, Minnesota and most of the Dakotas. No game of consequence is reported this side of North Dakota. Snow geese in thousands came in on the Devil's Lake waters three weeks ago. Chicago duck shooting now means good club shares or a journey of a thousand miles.

Poachers recently shot two of the Tolleston Club watchmen with heavy shot. The wars of that club with the poaching element would fill a book if recounted in full. The shooting in the last case was done after dusk by unknown parties, who escaped. E. HOUGH.

909 SECURITY BUILDING, Chicago.

A FAMILY AFFAIR.

HELENA, Mont., Nov. 2.—*Editor Forest and Stream:* It has been my custom for a number of years past to indulge in an annual hunting and fishing trip in the Rocky Mountains. This season, early in September, I was taken with the hunting fever, which must be contagious, for to my dismay my wife was stricken with what I considered an insane desire to go too. In vain I described the hardship of sleeping on the ground in a tent, with mice and bugs and possibly snakes for bed-fellows, and the plague of flies, mosquitoes and yellowjackets in the daytime. To all of this she turned a deaf ear, and simply said she was going. So the next morning, when Mrs. T. and four chips of the old block climbed into the wagon, there was hardly room left for the camp outfit and provisions for a two weeks' trip for a family of six.

The first night out we camped in the Belt Mountains, a spur of the Rockies, and we did not have to dine on "Missouri chicken" either (a Western term for bacon), for I had picked up six grouse along the road. The following day we reached the mouth of Sheep Creek, a tributary of Smith River, and there we enjoyed some of the best trout fishing to be had in Montana. We remained several days in this camp, and one evening while we were eating supper just outside the tent two deer came down to water and stood about 100yds. distant looking at us. They were so tame that I had time to get my rifle, which was under the wagon and unloaded at the time. An instant later I had shoved some .38-55 cartridges into the magazine of my

Marlin and sent a ball through the shoulders of one of the deer, which gave a jump or two and fell dead. My wife and youngsters forgot all about supper and reached the place where the deer had fallen as soon as I did. It proved to be a 2-year-old blacktail doe, and the next morning we had venison steak, grouse and mountain trout for breakfast—not a bad spread for Rocky Mountain appetites, you will agree. This was the only deer I shot on the trip. It was too early in the season for successful deer hunting. The flies being very troublesome the deer keep in cover during the day and fed only after it became too dark to hunt them. Grouse, although fairly plentiful, are not nearly as abundant as they were last season. This is probably due to the late frosts and heavy snows, which chilled the eggs and destroyed nearly all of the young birds.

Contrary to my expectations my wife and children enjoyed the outing thoroughly, employing the time fishing and picking berries, and I have promised to take them to the National Park next season. I will take a kodak along if you think it would be sufficiently interesting. I shall furnish you with a description of the trip, with views of our camps and objects of interest. G. A. T.

BOSTON MEN IN THE WOODS.

WHEN a Boston marketman finds it necessary, in order to get venison to sell his customers, to go to a sporting goods house asking that returning sportsmen may be told that he is more than anxious to take any surplus meat off their hands at a good price, it would appear that the Maine law was at last affording efficient protection. This request was made at one of our prominent stores last week, and in my opinion is a decided compliment to the vigilance of the Maine officers who have the enforcement of the law in their care. The Maine officials were free to say after the new laws were passed that a close watch would be kept to prevent the shipping out of deer to the markets in quantities, and although it was generally supposed to be idle talk, it looks now as though they were sincere in their professions. Every lover of game protection will indorse their efforts in this direction, and if continued they can undoubtedly do much toward stopping this illegal practice, and make it very uncomfortable for the men who make a business of doing it.

Besides being a splendid sporting country, the Mt. Katahdin region promises to become noted as a sanitarium for the relief of hay fever sufferers. F. J. Lewis, of Washington, D. C., a sufferer from that annoying disease, has just returned from a four months' visit up there and found complete relief in the bracing air. He speaks very highly of the fishing and shooting, and made several trips to the outlying ponds during the fishing season, having fair success on all of them. In company with F. W. Crane, general manager of the Bangor & Aroostook R. R., he made one trip of a hundred miles. The two gentlemen started from Greenville, going up Moosehead Lake to Northeast Carry, and then canoed down the west branch of the Penobscot. They had excellent fishing, saw a big moose, and enjoyed every moment of their outing. As an illustration of the panic which strikes terror to the heart of the average sportsman who finds himself lost in the woods, Mr. Lewis recites an instance which occurred shortly before he left for home. One man in a party of four who were camping out became separated from his friends and could not find his way back to camp. Circling around until nightfall, he became exhausted, built a fire, and laid down on a brush heap to rest his tired frame. In the morning he resumed his wanderings, and continued them until found by his friends later in the day. On being questioned, he stated that he had not seen the slightest evidence of a path or road since his wanderings began, and yet his camping place of the night before was found to have been located on a plainly marked old tote road, and furthermore he kept his fire up with logs taken from a corduroy section of this same road. Had he followed it up in either direction it would have led him to safety in a short time.

A friend just returned from the town of Wales brings the best reports of woodcock shooting that I have heard from any section of Massachusetts. The birds have been fairly plentiful in that section for some time, and two Connecticut shooters while on a flying visit succeeded in bagging thirteen. Considering how extremely scarce they have been throughout the State this fall, that is doing pretty well. He also brings the pleasing information that the Sunday law, compelling a close time on that day, is being strictly enforced out there. It may be remembered that I made mention in a recent issue of FOREST AND STREAM of the non-enforcement of this law in southern Massachusetts and Rhode Island. It is therefore very pleasing to hear that they have officers in some of our country towns who recognize their duty well enough to post notices in public places, declaring the practice of Sunday shooting to be illegal, just as the statute reads. In many places Sunday shooting could be carried on without any special detriment to the birds, simply because the men doing it would be satisfied with a very moderate number. They are gentlemen, know what is right, and would not abuse the privilege, but as class legislation would not do at all, the law should be firmly applied to all, this being the only way to stop the slaughtering and banging expeditions which start out on each succeeding Sunday from many of the factory towns and cities.

There passed through Boston a short time ago, *en route* to their home in Chicago, a gentleman and his wife who provide about as fine an example of ideal companionship in all that pertains to true sportsmanship as it would be possible to find. They are Mr. and Mrs. Lyman Blair. Ever since June they have been in Maine, spending most of the time in the vicinity of Moosehead Lake. Mr. Blair has a summer home at Greenville, to which he takes his horses each year, the driving around that interesting country forming an important feature of their enjoyment. After the shooting began this fall they made a trip into the Allegash country, taking with them Indian guides who were expert moose callers. Near Churchill Lake Mrs. Blair killed a moose, and while engaged at it had the delightful experience of having a cartridge stick in the magazine, the block failing to bring it up. With great presence of mind she corrected the fault and fired the finishing shot. Not many ladies would have the coolness displayed by Mrs. Blair in an adventure of this kind, and it certainly marks her as one eminently qualified to take care of herself in the woods. Mr. Blair also killed a moose, but was so elated over the achievement of his wife that he had little to say regarding his own adventure.

C. A. Kilham, of Boston, has lately been down to Pockshire Lake, near Middleboro, Mass., duck shooting, and in the interesting way it is done in that section Mr. Kilham says the fun cannot be surpassed. Two brothers living there have a comfortable house on the shore of the lake. Attached to it is a pen containing many tame ducks which are used for decoys; when the wild birds are seen flying over, even at a great distance off, three or four decoys are thrown over the fence, and by their loud quacking soon attract the wild ducks to destruction. The decoys are easily brought back to cover by an ingenious method of feeding corn to them, thus leading through a crooked opening in the fence. Sometimes they are put out over night with a string and piece of lead around the leg. If any wild birds are in the neighborhood they are quite sure to be found in their company in the early morning.

An albino surf scoter, or, as gunners call it, skunk-nose coot, was recently sent in to Frazer, the Boston taxidermist, for mounting. It proved to be an unusual specimen, having white eyes instead of the regular pink eyes belonging to the albino. The bird was killed at Bourne, Mass., by a Boston shooter not many days ago. Frazer has also received from Newfoundland four or five caribou heads with antlers that are something marvelous for their great spread and uniformity. The frontal plates project out about 6 or 8in., and extend quite to the edge of the nose. For beauty and size they far exceed any specimen I ever saw coming from Maine.

The regular winter exodus of Boston people to Florida has begun early this year, one party, consisting of Mr. B. F. Dutton and Mr. and Mrs. Edwin Morse, having started a few days ago. They have gone to Homosassa, and will stop at Palmetto Cottage, Mr. Dutton's winter home. It is the intention to stay about a month, and shooting and fishing will be the main feature of the trip. Business engagements compel Mr. Dutton's return then, but he will probably go South again after the holidays for a much longer time.

L. D. Chapman, secretary and treasurer of the Megantic Club, with his friend Horace S. Dame, both of Boston, leave on Nov. 7 for a trip to the Megantic preserve. Mr. Chapman will carry in 2,000 young landlocked salmon to place in the waters of Big Island Pond. It is also his intention to look over the hatchery there, and to see what has been done regarding the stripping of fish which has been under way about one month. At Chain of Ponds he will select the site for a new and elaborate private camp, to be owned and used by a few members (Mr. Chapman included) who have banded together for this purpose. After all these matters have been attended to, the two gentlemen will make an heroic effort to get some big game shooting, devoting fully a week of the trip to this purpose.

Mr. Walter Spear, a well-known sportsman of Cohasset, Mass., has been having a good time on Cuttyhunk Island, off Martha's Vineyard. Despite the fact of this little piece of land being well out to sea and surrounded by salt water, Mr. Spear found good fresh-water fishing for black bass in a small landlocked pond. He was away about two weeks, and in addition to the black bass had excellent tautog fishing and some luck with the striped bass. Cuttyhunk is a noted place for these last-named fish. The New York Bassing Club have a club house there, and have erected several fishing stands at the best points for the accommodation of members. HACKLE.

A DAY ON LAKE ST. FRANCIS.

ST. LAMBERT, Que., Oct. 17.—An invitation from my friend J. N., the well-known Montreal stockbroker, to go for a few days' duck-shooting on the preserves of the Pointe Mouillée Gun Club, together with J. L. P., the banker, was eagerly accepted, and I can assure you the time hung heavily until our departure, as good bags were reported by each member as they came back, and a telegram from Pepin, the guide, that "birds were in by the thousands," hastened our going; so gathering our traps we started a day or two sooner than we intended, as we could not afford to lose the sport even if business suffered.

Jumping on the afternoon train we soon arrived at our destination and found the men awaiting us. Hastily putting guns, etc., on the buckboard, we started for the "Cabanne," snugly ensconced within 300yds. of the feeding grounds, and what a sight met our eyes—hundreds of ducks feeding inshore and thousands more out in the lake. It did not take us long to get into our gunning togs, to try for a brace or two before sundown, but it being late when we arrived our success that evening was a duck's egg, only a poor miserable snipe falling to your humble servant's gun.

Our hopes ran high, however, as the wind was from the proper quarter, and if it only continued on the morrow, our success was assured. Wending our way homeward we were soon in the "Cabanne" enjoying a tenderloin and a good cup of Indian tea that warmed the "cockles of our hearts." E. L. P. supervised the cooking and he "did it and did it well." After supper out came our briars, which we whiffed for an hour or so, and then "lights out," and in a few minutes we were as "snug as a bug in a rug," dreaming of ducks galore. I had only dozed off, it seemed, when whir-r-r-r went the alarm clock, but louder still rang out our host's sonorous bass voice with *en roulant ma boulé roulant*, and with one bound all hands were up, as no time could be lost, the wind being just right. After some bacon and eggs and piping hot coffee the welcome "all aboard" was sounded, and away we hied to our allotted blinds.

The birds were so plentiful and hungry that we had hardly placed out our decoys before they came pitching in, even as we were standing up in our boats fixing our blinds. However, we hustled for all we were worth, and then began the fun. First a double, then a single, then a double, till our barrels got so hot that gloves were necessary for comfort's sake, and the only rest we got was from our man Pepin, who kept continually saying (when flocks of twenty or more came in), "Wait, wait, don't shoot; chase dem away, come back soon in small families and you kill de whole gang." We heeded his advice only too often to our sorrow, and instead of fifty-two birds that day we should have bagged a hundred; but he has his reward and we our revenge, for he now goes by the name of "Wait."

Our *chef de la cuisine*, E. L. P., was stationed about a mile from us, with Tom, the other guide, and rare sport they had; and for every shot we fired they went us one better, but they lost a golden opportunity by having only No. 4 shot on that most wary of game birds, the Canada goose. Nevertheless they tickled him enough to make him cry *honk, honk, honk* in a minor key, and had they followed him up might have secured him, as we could see he was badly crippled.

The birds are more plentiful this year than for some time back, and the Ontario law prohibiting spring shooting is having the desired effect, for ducks know something, and when not molested in the spring on the feeding grounds come back in the fall to their old haunts; and until the Quebec authorities see their way clear to abolish spring shooting, we in this Province can't expect anything more than we are getting—poor luck.

Our outing was in every respect a most pleasant one, and the hospitality we enjoyed from the members of the club was such as to be ever remembered.

Two other members, Messrs. D. R. and P. S., were shooting over the snipe grounds, and they bagged in two days seventy snipe and four ducks, one being that most prized bird down here—the mallard.

The welcome they gave us when they came in that evening was such as only gentlemen of their caliber can proffer, and may their shadows never grow less.

The club house is beautifully situated on the margin of the lake and is built for comfort. They have also a fine boat house adjoining, well stocked with boats, decoys, etc.—in fact a regular sportsmen's den. The guides are of the "ever-ready kind" and chock full of tales, and could I tell you of the side-splitting stories told by Pepin in his broken English, you would no doubt suffer from sore sides, as we did.

We were loath to leave such pleasant quarters, but business must be attended to sometimes, and home we must go; so placing our traps in the wagon we gave one last fond look at our "happy hunting grounds," and with a "bon jour, Pepin," "good-by, Tom," I sang impromptu these four lines, which raised a loud hurrah:

"Bon jour, les guides,
Bon jour, Cabanne,
Bon jour, les canards,
Bon jour, la gang."

With light hearts, but with heavy bags, we were soon at the station, and in a short time speeding homeward, well pleased with everyone and the world in general.

B.

THE BEST DAY OF THE SEASON.

OCT. 21, 5 P. M. First snowstorm of the season—a good starter, about 10in. Last night the west wind sang a mournful requiem foretelling the storm of to-day, and all day long the snow has fallen and the wind has added its share to the general unpleasantness without, but within in my cosy den, before a cheerful fire, alone with "our paper" and the recollections of the "best day of the season" (last Thursday), the day has been neither dreary nor unpleasant.

For the last half hour I have been laziiy watching a vast army of crows flying in the utmost confusion past my window. East and west, up and down, verily the storm puzzles them; but even as I watched them my thoughts were far away, and went back through many years, their aimless flight reminding me of a day when I had stood with a dear old comrade on a duck pass in Minnesota and watched an army of ducks in just such an aimless flight. We had shooting that night. And again I thought of a vast prairie in North Dakota, in the midst of a blinding snowstorm, how acres of white brant flew and circled around us, and fell easy victims to our guns.

It's not all of shooting to shoot. The pleasure gained to-day is not simply a part of that day, taking wings with the going down of the day's sun; but it lives on with us always, and some day, when we have nothing but "memories," some little trifle brings to mind some other happier day, and it is lived over again and brings sunshine and gladness and loosens our "chains."

Times there are that come to all of us when life seems an "empty endeavor." Our friends one by one have left us, some forever, some for a time; others have grown cold, others false, and we sit by the fireside alone. Our eyes grow dim trying to look into the beyond, but the clouds are too dense and hide hope, even from our vision. We have nothing left then but "memories," and the old happy days will come back to us then and will be worth more to us than the glitter of the gold we have hoarded or the honors reaped. Let us all, then, take that good old motto and learn its lesson well: "While we go through life let's live by the way." We'll not "be sorry by-and-by," be sure of that.

But this is not telling you of that last "best day." Thursday four of us—no, I beg pardon, six—would you have me leave out the two best dogs in this neck of the woods? Nate and Ben, forgive me. Well, then, six of us started for woodcock. We planned to hunt about all the woodcock covers on the east side of the river, after finishing the "basset ground" on this side, but we didn't have to; it wasn't necessary, and we didn't have time. We found enough right there to keep us busy all day. It wasn't an ideal day for shooting; it rained a little, snowed just a trifle and the wind blew a gale, but we got them just the same. The forenoon was characterized chiefly by poor shooting all around, and even the fat man who does not usually have to shoot more than once had more misses to his credit than he could easily account for, still when lunch time came we had a score of twelve birds to our credit, and felt that the world held blessings for us yet. After lunch we decided that there were still two or three more birds there that we ought to get, so back again to the cover we went. No one, not even the scribe, missed now, and the birds went down in one, two, three order. Darkness came early, and we had no time to go to other grounds at a distance. A small ground just across the river was reached by boat, a little 9-year-old girl taking us across and handling the paddle like a veteran. Three birds were found here, two of which were killed. We had added eight more to our bag on the first ground after our lunch, making a total of twenty-two, not a very large score for four guns, but the shooting this year has been very poor, and when we stopped we knew of but one bird that had "got away." Verily, it was "the best day of the season." EVERETT.

ADIRONDACKS.

YELLOWSTONE PARK GAME.

YELLOWSTONE NATIONAL PARK, Nov. 3.—*Editor Forest and Stream:* The month of October was the most delightful as to weather to travel through the mountains, with no flies or other bothersome insects; warm, sunny days and cold nights. As the usual Park travel was over and all work on the wagon roads was finished for the season, Capt. Anderson, the superintendent of the Park, made quite an extended tour or rather scout and inspection. He found that many of the Park buffalo had gone to the west of the Park and into Idaho, where they are killed by hunters located there. The remains of two were seen, and from appearances the whole specimen was taken for mounting, leaving only the bones not usually used by taxidermists. The skeletons were west of the Park boundary and possibly killed three or four months ago. Lieut. Lindsley, with another scouting party, found three more not far from those found by Capt. Anderson; only the heads of these had been taken, and from the appearance the buffalo had been killed within a month or less. All five were in Idaho, a State, I believe, whose laws give no protection to the buffalo, and the only State bordering on the National Park reserve whose laws do not prohibit the killing of buffalo or bison.

The trail of one band of about twenty cows and calves was seen going toward their winter range, and the tracks of odd ones going the same way. Every effort will be made to protect them while in the Park and to keep them here. Hunters now located in the country mentioned have boasted that they will have every buffalo in the Park before Christmas. We are in hopes here that before such a misfortune the buffalo will be inside the new pasture, safe for a while from extermination.

Four beaver and quite a number of birds have been collected for the National Zoölogical Park in Washington. Other animals will soon be added.

The Park has been very dry, but fortunately no fires to speak of have been started. One on the north line burned a little green timber. The light fall of snow on Oct. 25 checked the fire from doing more damage.

The winter stations have been well supplied with provisions, so that snowshoe scouting parties will have no trouble making trips except the usual hard work and expense.

There has been very little poaching in the Park for large game, but I'm sorry to say I think that the beaver have suffered at the hands of the trapping poacher. They, as a class, are very difficult to find or get any trace of. They can do their work without horses or much camp outfit, and what is very important from their point of view—no noise. They do not have to travel much either, except along the creeks, where they can keep well hid in the brush and willows. The beaver are not as important, however, as the buffalo. They do not travel all over the country, so they cannot be exterminated; and when more important animals are safe can be looked after, as there will always be enough to restock all the streams. H.

FOREST AND STREAM CLUB.

BELLEVILLE, Ont., Nov. 6.—There was a fairly attended meeting at the club room of the Forest and Stream Club last night, when the annual distribution of prizes won by the members in the club competitions took place.

Mr. W. H. Biggar, M.P.P., the president, who presided, made a short but practical address. The law, he said, as it stood at present, was perhaps as good in most respects as could be framed without the division of the Province into districts. It was, he believed, the intention of the Minister (Hon. J. M. Gibson), who took a warm interest in the great work of having our game protected, and who had met with great difficulty in securing funds for the enforcement of the law, to propose this at the next session. He also referred to the apparent hardship on our St. Lawrence frontier of seeing residents of the United States killing ducks in spring on the other side of an imaginary line in the river, while our people were restricted from doing so. The club, he was pleased to learn, had enjoyed a successful season, and had, he assured them, often exerted material influence in the framing and amending of the game law. He hoped to be able next year to participate in some of their sports, particularly the rifle shooting, of which he had always been very fond. He then distributed the prizes.

Mr. R. S. Bell concurred with Mr. Biggar in his remarks as to the Minister, who was known not only as a thorough sportsman, but as one of the best rifle shots in Canada. The wide extent of our province, from east to west and from north to south, rendered a division into districts necessary because of the widely differing climatic conditions. As to the spring shooting of ducks across the imaginary line between our province and the United States, not only, as the president stated, on the St. Lawrence, but on the St. Clair and Detroit river borders, it no doubt seemed unjust to our people; but let us stick to our good example, and if, within a reasonable time, our neighbors do not legislate as we believe they ought to do, other measures might be taken, such as concurrent legislation by the Legislatures of the Province of Ontario and the States of New York and Michigan. Perhaps it might be better to stop the sale of ducks, as had been done in the case of partridge and snipe, and by this means lessen the slaughter and give sportsmen a chance to get some game by abolishing professionalism in duck shooting, which gave very small returns to those now engaged in it. He would like to ask Mr. Biggar how it happened that mink, marten, fisher and skunk—all valuable fur-bearing animals—were no longer mentioned in the law and were therefore not now protected. Mr. Biggar replied that he had not been aware that such was the case.

Mr. Crysler suggested a change in the season for hares, and Mr. Biggar replied that he would make a note of the suggestions and would be glad to receive others.

On motion of Mr. Bell, seconded by Mr. W. Roote, Chief Newton took the chair and votes of thanks were passed, amid applause, to the officers for their efficient discharge of their duties and to the gentlemen who had donated prizes to the club for competition. President Biggar and Mr. Jos. Templeton, the efficient secretary, made neat replies.

The secretary stated that he had a letter from Maj. Casswell, who donates the sums which he won in the club's competitions for next year's competitions, and urges that steps be taken toward preventing the over-netting of the bay with gill nets and seines—particularly the former—whereby the bay will be entirely depleted of fish within a few years.

The club then adjourned until the 26th inst., when the deer hunters, who are now out, can give information as to the working of the law this season. The prizes were as follows:

TRAP SHOOTING.

Corby prize of $10.—First, H. Day, $7; second, R. S. Bell, $3; third, L. Hamilton, $2, club prize; fourth, M Jamieson, 100 shells.

Biggar prize of $10.—First, J. Phippen, $7; second, H. Hamilton, $3; third, H. Day, $2, club prize; fourth, M. Jamieson, $1, club prize; fifth, R. S. Bell, $1, club prize; sixth, H. Hope, 100 shells.

RIFLE SHOOTING.

Club prizes, 50yds.—First, W. P. Clarke, rifle, value $8; second, J. H. Mills, rifle, value $5.

100yds.—First, W. P. Clarke, pair of trousers, value $6; second, J. H. Mills, $4; third, R. S. Bell, $2.

200yds, prize ot $5.—First, F. C. Clarke, $2.50; second, W. B. Riggs, $1.50; third, W. P. Clarke, $1.

Specials, 4 boxes of cigars.—First, Jos. Templeton; second, T. Nightingale; third, John Newton; fourth, W. Roote.

ANGLING AND TROLLING SPECIALS.

Ritchie prize of $5 for heaviest catch with fly on July 3 or July 5.—First, W. Ormond, $3, weight 10½lbs.; second, W. Crysler, $2, weight 7lbs.

Largest pickerel, felt hat, value $3, won by W. P. Clarke, weight 6½lbs.

Largest pike, pair of kid gloves, won by C. Sulman, weight 10½lbs.

Largest black bass, umbrella, won by Col. W. N. Ponton, weight 4lbs. 5oz.

Second largest black bass, box of cigars, won by J. Haslett, weight 4lbs. 2oz.

Three heaviest bass, $5 rod, won by J. Haslett, weight 11lbs. 7oz.

Heaviest basket of fish, all kinds, taken with rod and line on any one day between July 1 and Oct. 15, $5.—First, $3, Tisdale and Haslett, weight 40lbs.; second, $2, Weese and Ketcheson, weight 22lbs.

Largest maskinonge, fishing creel, value $1.50, won by A. N. Reid, weight 19½lbs.

CLUB PRIZES FOR BASS FISHING.

First competition, July 19.—First, largest catch, $3, won by Major Casswell and W. Ormond; second, second largest catch, $1, won by Tisdale and Haslett; third, largest fish, $1, won by Tisdale and Haslett.

Second competition, Aug. 9.—First, largest catch, $3, won by Casswell and Ormond; second, second largest catch, $1, won by Tisdale and Haslett; third, largest fish, $1, won by Tisdale and Haslett.

Third competition, Sept. 13.—First, largest catch, $3, won by Clarke and Cronk; second, second largest catch, $1, won by Casswell and Ormond; third, largest fish, $1, won by Clarke and Cronk.

SOME BOSTON HUNTERS.

BOSTON, Nov. 8, 1895.—One of the easiest deer hunts of the season has just come to my notice. Mr. J. Hurd Hutchins, a gentleman who has hunted deer in Maine almost every season for some time, has lately returned to Boston, with considerable success to relate. He went to Norcross, on the Bangor & Aroostook Railroad, and from that station back into the woods to Lake Umbajegis. Here he met a couple of friends—M. L. Pratt, of the Boston Athletic Club, and Arthur Wattles. These gentlemen had been in camp for a week, but had taken no deer. One of them offered to paddle him up to a good point on the lake to watch for deer. Being fresh from the city and ready to hunt, Mr. Hutchins decided to go that afternoon, his first in camp. His friend paddled him up to a favorable point that looked out over a swamp or opening of low bushes, and went on further himself to another point. Mr. Hutchins went ashore in a rather indifferent sort of manner, and finding a log where he could sit down and have a fairly good look over the little opening, he lit his pipe and prepared to take hunting easy—the first day at least. Smoking away in all comfort, he soon thought he heard the rustling of a deer. In a moment he was sure of it. He thought he would be hunter enough to remove his pipe, as the scent of the burning tobacco might alarm the deer. He looked the little barren over carefully, but saw no deer, though the rustling continued. Again he looked, turning his head and body carefully, so as not to alarm the deer, which he was pretty sure saw him. In a moment he saw the head and shoulders of a doe. The creature was eyeing him through some bushes. He raised his Winchester and fired. The smoke clearing away, by the time he had another shell in place he saw what he thought was his first deer still standing and watching. Again he fired, and was quite sure his deer dropped. He went to the scene of action, when instead of one deer he had shot two—a doe, killed by his first shot, and a spike-horn buck that had not been alarmed enough by the firing to run away. Such luck Mr. Hutchins thinks will do for his first day in camp. He had shot his legal quota, and there was now nothing to do but to eat venison in camp and hunt with his friends, both of whom got bucks a little later. Mr. Hutchins says that there are deer in that country without end.

A gentleman just out from Jackman, a little village on the Canadian Pacific, over fifty miles north of Skowhegan, and above the forks of the Kennebec, speaks in the highest terms of that town as a central location for hunters. It is on the old military road, and was formerly reached by way of Skowhegan, Bingham and the Forks, but the advent of the Canadian Pacific has changed all of this. The cars now land the hunter at Jackman, and there he may well conclude that he is in the midst of the big game. But he will find this fall that the lumbermen are there also. Ten lumber firms are making Jackman their point of supplies, and their roads will lead away in almost every direction. Yet an old guide tells my friend that within a radius of thirty miles from Jackman there are more sporting camps than in any other section of Maine. My friend got his deer up there, but saw no moose, hunt as hard as he might.

What may justly be termed a newspaper hunting party leaves Boston for Andover, Me., to-day. The party includes Mr. E. M. Gillam, commercial editor of the Boston *Advertiser;* his brother, A. M. Gillam, sporting editor of the Philadelphia *Record;* and E. L. Bean, city editor of the Cambridge *Chronicle.* The weather is very warm, and there is not a particle of snow in the woods, but the Gillams are excellent hunters, and they will be likely to get deer, even without snow. They have shot deer before the hounds in New Jersey, where they are as wild as anywhere in the world. Mr. Bean is a hunter with the military rifle, and somewhat afraid that his gun may kick. His friends all advise him that if he sees a deer to shoot and not be afraid of his gun. His venison is all engaged. George H. Cutting will be one of the guides. They will hunt for a week.

Nov. 9.—If ever the shooting and fishing of a State was thoroughly advertised, that State is Maine. Thus I thought as I passed down State street to-day, and by the door of a saloon were hung the carcasses of two very handsome buck deer. Both were labeled, "Shot by Harry E. Haines, near Eustis, Me." They both had fine heads, with four-pronged antlers of symmetrical shape. The united weight of the two, after being drawn as to their entrails, was 328lbs. Well may Mr. Haines be proud of such luck. But oh, the appreciation of the ordinary bystander! And what advertising is coming to the railroads and transportation companies from such displays and the reports that the newspapers—first and last, the FOREST AND STREAM—are giving. Every deer displayed in a store window and labeled from the State of Maine is worth many dollars to the Maine railways and transportation companies, and every time the newspapers take up the refrain many dollars more are called into the coffers of those companies. The ordinary bystander is always at hand and was there in crowds. He undertook to volunteer some information for me, as I quietly made a note of the labels on the deer. "They came from Maine, mister. The woods are full of them down there. I was a big fool that I took my vacation so early. I might have gone down to Maine and shot a couple of deer just as well as not, if I had only waited. I am not much with a gun. Never shot any game in my life, but the deer are so thick down there. Why, sir, they come right up into the dooryards. They are everywhere. Ever been down there, mister?"

So it goes. The shooting in Maine is certainly most remarkable, and it is being advertised for all it is worth. The railways and transportation companies are making the money. The Bangor & Aroostook Railroad is out with an astounding list of big game already forwarded over its line this season, and of stations with game shipped from each. SPECIAL.

An Albany Man in Maine.

Editor Forest and Stream:

My friend, Capt. Joseph Taylor, proprietor of the Albany-Bath ferry line, has just returned from a five weeks' trip in the Maine wilds, and reports excellent success. He had for his guide Joe Francis, and brought out with him the heads of two fine bucks and the head and skin of a magnificent caribou. Both Capt. Taylor and the guide estimated that there were not less than fifty caribou in the herd from which the one shot was selected. If this estimate is anything like a correct one, the size of the herd is remarkable. They saw sixteen moose while on the trip, but not a single good head of horns, and Capt. T., like the thorough sportsman he is, refrained from killing that for which he had no use. This will appear the more commendable when it is known that he has yet to kill his first moose, and had several opportunities while on the trip to kill young bulls. His guide succeeded in calling a large bull quite close to him on one occasion, but the smell of the decaying carcass of a moose killed some time previous by another party frightened him off. He, however, got six snap shots at a young bull and a very large cow moose standing together in a small stream that empties into the West Branch, also several snap shots at a cow and calf.

These shots were taken with a 4×5in. kodak and have not yet been developed, but I trust that they may come out all right and in the near future embellish the pages of FOREST AND STREAM. Capt. Taylor reports deer and small game unusually plentiful; and the moose he saw, especially the cow and calf mentioned, remarkably tame.

This he attributes to the prohibition of hounding and a general absence of dogs in the large game districts, and thinks that the game laws of the State are fairly well enforced. The Captain has, however, called my attention to a gross violation of the Maine game law by a prominent United States ex-official, who is reported by some of the newspapers of that State and Vermont as having killed two large bull moose, one or both of which were killed out of season. Perhaps the gentleman has not been correctly reported in the newspaper items; at least let us hope so. A party in Maine is trying to ascertain the facts in the case, and if the statement is found to be correct the matter will be sent to FOREST AND STREAM. The alleged violator is a wealthy and prominent resident of the State of Vermont. S.

TROY, N. Y., Nov. 2.

The Maine Game Record.

THE number of deer and moose killed on the line of the Bangor & Aroostook Railroad in Maine this year during October, the first month of the season, exceeds a half of the total number sent out in the three months of the season last year, as is shown by this list, which has been sent to us by Gen. Pass. Agt. Geo. M. Houghton, of Bangor.

Adirondack Deer.

ITHACA, N. Y.—Geo. Hill's party, consisting of six members, last week returned from a fortnight's outing in Lewis county. The party killed six deer and one bear. A member of the party was located on a runway watching intently for venison, when he was suddenly confronted by a quartette of bears—two old and two young ones. Without stopping to take his temperature or count his pulse-beats he began working his Winchester so effectively that he succeeded in killing one of the old bears.

Mr. Hill has visited the Adirondacks in previous years, and he declares that an unusually large number of deer have been killed in that region this fall. M. CHILL.

A Declaration of War.

ST. PAUL, Minn.—*Editor Forest and Stream:* The English sparrow must go. Each city and town should appoint one or two men, during the breeding season, whose duty would be to destroy the nest and eggs of this bird. This would do away with broken windows, noise, danger, poison and other objectionable features (the results of offering a bounty) and would soon exterminate the bird.

E. W., JR.

SEPTEMBER IN THE MOUNTAINS.

Sept. 10, 1895.—We—Fay, Walt, Dock, Charles and Bill—left Chicago over the C., B. & Q. R'y for Parkman, Wyo., for a hunting trip in the Big Horn Mountains, after whatever might fall in our way, either chicken, blue grouse, deer, elk, bear or wildcat. After a very pleasant trip of about forty-eight hours we arrive at Parkman, and were received by Harry Huntington, who is to be our guide. Parkman is situated about twenty-five miles northeast of Sheridan, Wyo., in a valley between the Big Horn and the Wolf Mountains. It is about 5,500ft. above the sea level, so that really we were quite a distance up when we arrived there. We pitched tent at 7:30 o'clock P. M. of Sept. 12 for the first time. Sleeping on the ground was new to all of us—except Dock—and we did not rest quite so well as usual, particularly on account of the hard ground and on account of Fay's snoring.

Sept. 13.—Up early and had breakfast by 7 o'clock. We all took a drive over Huntington Brothers' ranch. While out we shot ten prairie chickens, which were enough to eat, and returned in the afternoon to prepare for our journey.

Sept. 14.—Up and had breakfast by 7:30 o'clock and started on our trip. The party was made up of Dock, Walt, Charles, Fay and Bill from Chicago, and Harry and Halla Huntington and Fritz, the cook, from Parkman, besides seven saddle horses and four team horses hitched to a large spring wagon, also the bird dog Rodger, belonging to Fay. Just after the start Fritz's horse, Towser, ran away with him and ran about six miles before he was able to stop him. We stopped for lunch on Pass Creek. Had fresh trout, caught alongside of the wagon, for lunch, together with other good things. In the P. M. we rode fourteen miles, which together with eleven in the A. M. made twenty-five miles in one day. The last ten miles the roads were something awful. No person would believe that a wagon could be taken over them if they did not see it done. We camped that night on the Little Horn River and after a very late supper were all willing to retire by 9 o'clock.

Sept. 15.—Up early and found that all had slept well, although the ground was hard and rocky. After a fine breakfast of prairie chicken, trout, biscuit, potatoes and coffee, we started out—Dock and Walt to fish, and Fay, Charles and Bill to shoot chickens. We returned about 11 o'clock; total, ten chickens and five trout. Dinner to-day was fine, with all the delicacies of the season to eat and the finest water on earth to drink. Broke camp at 2 o'clock, and after a fine ride of eight miles pitched our tent on the Lodge Grass Creek. During the evening Halla Huntington was taken sick with cramps, but after several doses of sage tea and other medicines he improved so as to go to bed by 10 o'clock.

Sept. 16.—Halla all right this morning. Breakfast fine, with the usual bill of fare, cooked as Fritz can cook. During the night Fay thought he heard a snake in the tent, but it proved to be only his imagination. Had good luck hunting chickens to-day, but not very good fishing. Broke camp at 1:30 and moved about five miles to Spring Creek. For supper we had "Missouri quail," trout (that Dock caught), biscuit, potatoes, coffee, cheese and crackers. Retired by 9 o'clock.

Sept. 17.—Every one up by 4 o'clock A. M. Breakfast by 5. Broke camp and started up the mountains by 6:30. Wagon arrived at the top by 11:30 pulled by nine horses. It was a long—six miles—strong pull. On the way up we passed an unknown cave, to which we gave the name of "Parker's Hole," and as the guide said the mountain we were climbing did not have a name, the boys named it "Nash's Butt." From here we could see the streams of Big Horn, Little Horn, Lodge Grass, Rotten Grass, Soap Creek and others; also Custer's battlefield in the distance. Here we found a pretty flower called the Absoike queen. After a light lunch we traveled about five miles over awfully rough roads, when we met two trappers, who told us that there was no water within ten miles. So we made our first dry camp, and the Huntington boys started to drive the horses back about three miles to a spring for water. They also took pails, bottles and rubber pillows with them to fill with water for cooking and to drink. Had a bed on top of a lot of pine boughs to-night for the first time. Did not make it thick enough, but it was better than the ground. Shot our first blue grouse this evening—fine bird—large and meat fine.

Sept. 18.—While the rest were asleep last night Charles and Walt thought they saw some kind of an animal stick its head into the tent, but the rest think it was like Fay's snake. Breakfast at 8 o'clock and started over very rough roads; and after a three-hour drive at the top of the Big Horn Mountains, where we could look to the west and see the Shoshone Mountains, which form the eastern boundary of the National Park, and part of the Rocky Mountains. We could see the Big Horn Basin, which is about 125 miles wide here. The Shoshone Mountains do not seem to be over twenty miles away, but are really from 100 to 125 miles away. They were covered with snow, while the Big Horn Basin between them and us was bare of snow. From here the Huntington boys, with the help of Dock and Charles and their three horses, took the wagon down the western slope about 1,000ft., where there was fine water and good feed for the horses. If anyone had told us that a wagon could be taken down that hill, most of us would have been willing to bet our last dollar to the contrary. But they got it down all right, and we would have lost. Here we intend to make a permanent camp. While at the last camp Dock found a large dry goods box and in it was a carpenter's spirit level and several pieces of scrap iron. From the box we have made a table and seats. While on the road this morning Charles had a shot at three blacktail deer at about 300yds. Although he came near to them he did not hit them. Just above us there are lots of blue grouse. Walt shot enough for a few meals while the wagon was coming down the mountain. During the evening around the camp-fire we discovered that Halla has a great remedy in sage tea for everything.

Sept. 19.—Party with exception of Bill started early—after light breakfast—after large game. Bill started after grouse for the camp. All returned by 4 o'clock. Walt shot one deer, blacktail, weighing about 150lbs., and Bill shot four grouse. Had deer liver fried for supper and it was fine. Went into the tent about 6 o'clock to escape the cold wind. Had a fine time telling stories until 9 o'clock. All asleep by 9:30 who were not kept awake by the snorers. Fay voted captain at that.

Sept. 20.—Awake about 5:30 and found about 3in. of snow on the ground. Had a fine breakfast of venison steak, baked potatoes, hot biscuit and coffee. Fay and Halla started off down the cañon about three-quarters of a mile from the camp, and after about an hour we heard them shoot four or five times; but they returned without any game, as did Charles, Walt and Dock, who had gone in another direction. Halla, Walt and Bill started out in the afternoon over the same ground that Halla and Fay had gone in the forenoon, and in just the same place where they had seen deer in the forenoon. Bill was lucky enough to kill a deer, the first he had ever seen wild. The Huntington boys say that the shot was a scratch, as he did not use his Lyman sight, but just blazed away as he would with a shotgun. All the same he got his deer. Although they saw many more tracks, they saw no more deer. All arrived at camp about 4:30. It was so stormy that we ate our supper in the tent and went to bed by 7 o'clock to keep warm. It was the worst night that any of us ever saw. Our camp was not well protected and the wind was blowing a hurricane, and snowing and getting colder all the time. Those who had regular beds were warm, but could not sleep for fear the wind would blow the tent away, and those who slept in sleeping bags were so cold that it was impossible to sleep. Bill got in with Dock about 9 o'clock and in that way kept warm, but Fay, Charles and Walt in their bags were nearly frozen.

Sept. 21.—A little after daylight we all got up, and taking with us what we could carry, started for the timber, about quarter of a mile away. We had a great time getting there, the two Huntington boys leading the way and the rest following in single line. The thermometer was down to zero and the wind was blowing a gale, and the snow was so thick we could not see over 100yds. ahead of us. The snowdrifts in some places were 4 and 5ft. deep; and we all fell down from ten to a dozen times before we reached the timber. After floundering around about a half hour we found a fair place and proceeded to get breakfast of venison, bacon, biscuit and coffee. Our potatoes had frozen during the night, so from this on we shall have to go without potatoes. After breakfast we started to build a kind of brush cabin. At our backs was a bunch of pine trees. With these as a wind-break we began by digging out the ground about 2ft. deep and about 12ft. square. Over this we put a cover of pine boughs and around the sides hung our saddle blankets, and filled in small boughs back of them; then we cut small boughs and put them all over the floor. About 10 o'clock Halla and Harry started out with a string of horses to break a road over the summit so as to get the wagon over for fear the snow would get so deep that it would be impossible to do so later on and the wagon would have to stay all winter. They returned about 2 o'clock and reported snow deeper on the east side than here; in fact, we can look down from here into the Big Horn Basin and see the ground all bare; but they found a good trail and will try to move the wagon to-morrow. Dock, Charles and Walt started out after dinner to try for a deer, but came back disgusted on account of the deep snow. They shot five times while they were out and the rest of us thought they had shot a deer, but they were shooting grouse. That night Harry, Halla and Dock slept in the tent at the old camp and the rest of us slept in the bough camp. It was a very cold night. The brook—which was very swift—froze all over. Water in a bucket within 6ft. of a big fire froze solid.

Sept. 22.—The boys arrived at our bough camp early this A. M. They had been cold during the night in the tent, but we fellows—Dock, Charles, Fay and Bill, who had sleeping bags—would have frozen had it not been for Fritz, who sat up until nearly 3 o'clock and kept a big fire going. Whenever we got cold we would get up and go out and join Fritz and get warmed up, then go back to bed. Bill got up at 12 o'clock, 2 o'clock, 5 o'clock, and we all got up at 7 o'clock. After breakfast we all started out for the tent and with the help of two horses brought over the tent and most all of the things needed here. The weather, although not as cold as yesterday, is still cold; but it has stopped snowing. Still water will freeze 8 to 10ft. from the fire. We dug down a small hill to make room for our tent. We made a fire all over the ground to dry it out, then covered the ground all over with pine boughs. Over those we put our saddle blankets and our beds on top of those. To-day we spent mostly around camp, although we did not do much work. Thanks to Fritz's good cooking, we ate three hearty meals and retired to bed about 9 o'clock.

Sept. 23.—We all slept late, until Fritz had breakfast ready, which was fine—ham, venison, biscuit, onions and coffee. Dock, Charles and Fay started out one way and Walt another—Bill at camp—while the Huntington boys took the wagon over the divide. They all showed up for dinner about 3:30 o'clock. Dock and Charles tracked a buck for about three miles. Although they saw him, they did not get a shot. For dinner we had two kinds of pie, venison, ham, cabbage, new biscuit, coffee, corn, tomatoes, crackers and cheese. After dinner Halla and Dock started out after the buck and tracked him until dark, but did not get sight of him. We all retired about 9 o'clock.

Sept. 24.—Arose about 8 o'clock and after a good breakfast all started out after the buck the boys saw the day before. Charles and Halla saw four deer, three does and a buck, at about 60yds., but both seemed to have the buck fever, as neither shot at them. Fritz says they were stage-struck—great Fritz! All returned about 1 o'clock for dinner. In the afternoon all went out after the four deer, but returned—Dock had a mishap—without seeing any deer. After supper we sat before the fire and told stories, and Fritz sang to us until 9 o'clock.

Sept. 25.—Arose about 7:30. During the night Fay thought he heard a bear, but it was only Harry snoring. All started after deer on horseback except Fritz and Bill. They were after the buck near camp. They tramped uphill and down for three hours, but with no success. Fritz and Bill had lunch at 12:30 of pancakes with maple syrup, which was fine. Both parties returned about 6 o'clock. Each had great success. Dock and Charles each shot a deer, both does, and Walt and Fay together shot an elk and tracked a bull elk all day, but did not get him. We all start out to-morrow to try and get him. Everybody hungry and everything good for supper. All up until 9 or 10 o'clock around the fire telling stories.

Sept. 26.—Up at 6:30. Every one, except Fritz, started after elk, but after tracking them until noon we gave it up. We saw several deer, but were after elk, and did not stop for the deer. We were sorry afterward that we did not, as we came home empty-handed after being out all day. A good supper awaited us. Although we had a nice camp-fire and were warm and nice, every one was in bed before 9 o'clock.

Sept. 27.—Up at 8 o'clock. Everyone except Fritz and Bill started out for the last day's hunt from this camp. To-morrow we break camp and move back toward Parkman. Bill is the only one in the party not provided with rubbers of some kind, and as he does not relish having wet and cold feet every day he stays at home some of the time. It also gives him time to write up the diary of the trip. After being out all day the party returned with great stories of the game and game tracks they had seen, but no game. We had a nice dinner for our last one in the permanent camp. Early to bed—8:30 o'clock.

Sept. 28.—Up and started to pack by 6:30. We had a great time packing our goods on the horses, but after several hours' work—with several mishaps to the goods caused by the bucking of the horses—we started and arrived at the wagon by 12 o'clock, and after a light lunch started on the trip down to the Rotten Grass Valley. We traveled about six miles into the finest deer country we had yet seen. We made a dry camp about 6 o'clock and after making explorations discovered that the trail down was blocked by a windfall. To-day the boys have seen eight or ten deer, and although they have shot and hit four or five of them, did not get any of them. We do not think much of a dry camp, as our store of wet goods disappears too fast at such times. In fact we are getting very low in that line and are now at least fifty miles from the base of supplies.

Sept. 29.—An early breakfast and started back over yesterday's trail by 7 o'clock and made the longest day's travel of the trip. We made at least twenty-five miles and landed at 6:15 on the Rotten Grass all dead tired and very willing to eat supper and go to bed. The difference in temperature at 9 P. M. between here and up in the mountains is at least 40 degrees.

Sept. 30.—Arose at 8 o'clock and had a fine breakfast of trout with other good things. Dock is our fisherman and he caught a dozen nice trout for our breakfast. Started at 12 o'clock and arrived at Lodge Grass at 5:30 and made camp in our old camping place. We noticed that the storm we went through in the mountains had been very severe here, as a good many trees were broken down. Late to bed—10 o'clock.

Oct. 1.—Up early and started for Pass Creek. Lunch on the Little Big Horn, about five miles below our first camp on that river. In P. M. and after a ten-mile drive arrived at forks of Pass Creek. We have made about twenty miles to-day and have passed through the finest chicken country we have yet seen. We picked up twelve or fifteen chickens during the day, which made a good change from venison and ham. Up until 10 o'clock.

Oct. 2.—Up early. Had some fine chicken shooting and arrived in Parkman about 10 o'clock. All went to work at once to fix up—unpack our soiled linen, to repack the clean in our grips and to shave and take a bath. Although we had taken a bath two days before in the Rotten Grass, but to-day we could have the luxury of a tub and hot water. Walt got packed up in time to take the 6:25 train for Idaho, where he has mining interests. The rest of the crowd—after several visits to the Gold Dust—went back to the tent in the rain. We found good beds, as we had plenty of hay to lay our beds on. We all slept well, although it rained and the wind blew all night.

Oct. 3.—It was still raining when we awoke. All went to the hotel for breakfast. After bidding good-by to all our friends in Parkman, we took the train at 2:30 for home. Dinner in Sheridan, and after saying good-by to our friends there we traveled on, arriving home Oct. 5 at 8 o'clock A. M. all O. K.

What we missed most while away was a small sheet iron stove for the tent, a thermometer to tell how cold it was and a kodak to take camp scenes. The cold for about two days was intense—anywhere from zero to 10° below. I should advise anybody who thinks of coming to this country to get a good bed first—the bed to be made of about three pair of heavy blankets and to go over and under those a heavy tarpaulin. Then be sure and have plenty of clothes also rubber boots and arctic overshoes, besides at least two pair of good heavy shoes. Although they told us that they often had snow here by Sept. 15, we did not expect over 3 or 4in., instead of which it was about 3ft. and in some places drifts 4 and 5ft. deep. It was impossible for any of us to do the same amount of work up here that it was at home on account of the rarity of the air. It particularly affected Fay and Bill. Our greatest height was about 9,500ft.

Moose Killed with a .22 Bullet.

NEW BEDFORD, Mass.—*Editor Forest and Stream:* While I was hunting in Maine this fall my guide (Frank McKinney, of Patten), during the afternoon of Oct. 26, went out to get some partridges, taking for the purpose a Frank Wesson's 12in. barrel single-shot .22cal. pocket rifle, using short rim-fire cartridges, and loaded with smokeless powder. He got back home about an hour after sunset, having fallen in with and killed with this weapon a bull moose over 38in. across the horns. It happened thus: On the way back to camp, say an hour before sunset, he thought he would have time to go out and get a saddle of deer we had hung in the woods. He had got within 50yds. of the deer and was making no pretense of hunting or of going still, when over the ridge came a rustling of leaves and smashing of branches which put to shame the little noise he was making, and out came a good-sized bull moose with hair pointing the wrong way. The moose came up to within 25ft., turned broadside to and looked at him. Frank proceeded to open fire with his pigmy rifle. He fired seven shots before the moose concluded things were getting too hot, and started off. But at about 150yds. he fell. Frank crawled up to within 15ft. and got in three more shots, when the moose started off; but this time he only went about 30yds., and lay down. Frank again crawled up to about the same distance as before and put in five more shots, when the moose gave a last shake of the head and died. On opening him we found that several of the bullets had gone through his lungs and lodged in the meat on the opposite side from where they entered. WILLARD NYE, JR.

Going Bear Hunting with Bobo.

NEW YORK, Nov. 12.—Warner Miller, the Republican statesman, was in Spalding's yesterday purchasing some ball-loaded shotgun cartridges. It is said that he is making preparations for a hunting trip along the Sunflower in the region so graphically described by Mr. Hough in his "Sunny South" articles last spring. J.

Mongolian Pheasant in Pennsylvania.

PHILADELPHIA, Nov. 8.—*Editor Forest and Stream:* I received from a friend on Monday, Nov. 4, for the purpose of being mounted, a cock Mongolian pheasant, shot near the Top-rocks, on the Delaware River, Bucks county, Pa., Nov. 1. It was a magnificent specimen in fine plumage—very large and heavy (not weighed), had fed on wheat with a few kernels of corn. No others are reported to have been seen in the vicinity. Where could this bird have come from? FRANK ROBINSON.

Cayuga Lake Ducks.

ITHACA, N. Y.—Varn Van Order, of the steamer Frontenac, was at the village of Cayuga during the closing days of October, and on the marshes north of there he bagged twelve wild geese in one day. Van Order affirms that there are acres of ducks on Cayuga Lake this fall. At Union Springs he saw a great flight of redheads. Geese and brant in unusual numbers have lately been seen here. M. CHILL.

The Ins and the Outs.

THE plaint of Tode, of Providence, in FOREST AND STREAM of Nov. 2, is but the prelude to many more such which will be given publicity more and more as the preserves multiply and outsiders protest. It is a natural effect of a natural cause, just as the indiscriminate slaughter and consequent extermination of game is a natural cause of the game preserve. His reference to the "English park system" is not at all pertinent to the matter, nor is his deduction that "we will soon have poachers and sneaking pot-hunters arising from the ranks of those who don't believe in that sort of thing now," a sound deduction or wise saying. Tode unwisely concealed that those who became poachers were law breakers, and often lost their liberty by poaching. Also, in the English park system, many of the birds are raised in domestication and are the property of the landlord quite as much as are his other domestic fowls. The game preserve is but a natural result of indiscriminate slaughter and extermination, in the effort to supply the demands of an insatiable market. Stop the sale of game and the game preserve is unnecessary. Let the sale go on and the game preserve is a certainty throughout the land. Great changes have great causes, and the same impulses which impel Tode to lay in a season's supply of coal are the same, differently directed, which impel a sportsman to lay in a supply of game. Each has a want which he endeavors to supply in an orderly and certain manner; and after legally gaining possession, Tode does not care to have any poacher invade his coal bin, nor does the sportsman care to have the poacher in his game preserve. If a man were to take his coal Tode would call it a harder name than poaching, yet the principle is the same in either case.

DICK OF CONNECTICUT.

Sea and River Fishing.

FIVE OF A KIND.

NEW BEDFORD, Mass., Nov. 5.—*Editor Forest and Stream:* An old Nantucket captain said to his wife during the civil war that he would rather hear it thunder any darn time than to listen to her scrape the bottom of the sugar pail. This eccentric and wise old sea dog is much like the scientific sportsman of to-day who would rather hear his click reel buzz than eat.

But to make your reel spin legitimately is the question which troubles most of the latter-day fishermen.

The photo which accompanies this letter is a piece of art in itself, and the owner is justly proud of it.

The "five of a kind" which it reproduces show both the patience and product of two hours' fun on July 16, 1895. The fish were taken by a Cincinnati gentleman, Mr. Henry Stetinius, one of the many enterprising members of a most successful club. Now about the bass, the largest one on the left astonished the scales to the tune of 42lbs.; the next 32, 29½, 25½ and smallest 10lbs. making a grand total of 139lbs., all landed safely with a 12-thread Irish linen line, Vom Hofe reel, aided by an expert with gaff, as per photo.

Do you wonder these two fishermen feel proud of their extreme good luck? who wouldn't? But just think of the weather; it was raining horribly, and old Vineyard Sound was in her most rugged mood, two conditions which are very essential to proper bass fishing.

These beautiful specimens are the five largest fish ever caught at one time by any single member of the club.

Menhaden is the bait used principally, although lobster at times proves effective. The best fishing is generally found in September, but the weather must be as bad as possible to make the large fish come out of the deep water and feed.

The club builds a number of fishing stands every spring; they are composed of a number of single planks which rest on iron spindles driven into the boulders until the depth of 30ft. is reached to fish in.

Each fisherman has a chummer, as he is called, to bait the fish around and also stand ready to gaff the gasping and flurried fish when it is skillfully brought within gaffing distance.

Mr. A. B. Dunlap, of New York, holds the record for the largest fish, which was caught by him on Sept. 21, 1867, and weighed 62lbs. Mr. Dunlap is still an active member of the club and occasionally tests his nerve and luck by indulging in this most manly sport.

The club is in a very prosperous condition, with forty-five members; J. Crosby Brown, president, and John Scott, treasurer, both of New York.

Mr. Stetinius, it may be said, was all of twenty-five minutes landing the largest fish in the photo.

E. A. DE WOLF.

Large Iowa Black Bass.

CHARLES CITY, Ia., Nov. 3.—*Editor Forest and Stream:* I take the liberty to note a fishing experience I had last week, which, though perhaps nothing wonderful, is a little extraordinary for this locality. I live in the city, on the bank of the pond which is formed by a dam across the Cedar River.

On Monday I caught with hook and line, with minnow bait, two black bass weighing 3½ and 5½lbs. Two days later I caught two more, one weighing 5½lbs. and the other 6lbs. 9oz. I hooked another and failed to land it in boat, which I think was mate to the last one mentioned. I have lived in this vicinity thirty years and have never seen but one bass that weighed 5lbs., and that I caught five years ago. To say they were lively fellows to handle does not express it. Along in September I caught sixteen wall-eyed pike that weighed 52lbs., an average of 3¼lbs. each; one of them 6lbs. and one 7½lbs. The large bass went to Marion, Ia., to compete for 40 per cent. of a $25 prize offered by a sporting club at that place for largest bass caught in Iowa waters—$25 if caught in Linn county. The above weights are correct, not fish stories; can be verified. S. G. PICKETT.

FIVE OF A KIND
Pasque Island Bass taken by Mr. Henry Stetinius.

ONE DAY'S FISHING.

PORT ARTHUR, Ont.—I arrived at Missanabie Station on the Canadian Pacific Railway, about 675 miles west of Montreal, on a Wednesday night. I stayed that night with the Hudson's Bay Co. trader, next morning he got me two Indians and a canoe. I bought some provisions in his store, and we started about 6 A. M. for Stoney Portage, at the head of Michipicoteu River, about ten miles down Missanabie Lake, about two hours' canoe ride. At the foot of the lake there is a narrows which leads into the river. This is on the route from St. James Bay to Lake Superior. The speckled trout fishing commences at the first portage. It is about 100yds. long. We landed about 8:15 A. M.

I put my rod together. I used strong tackle, for I had been told that the trout were large-sized. I put two flies on my leader. It was a bright day, so I tried the silver doctor, which took well. I tried the stream above the falls and got a rise to my second cast. You know the feeling that comes over you when you hook a large fish. This was something extra, I was guessing it at 6lbs. in my mind. I called for the Indian David to bring the landing net, he ran down below me, I played the fish and it gave me lots of fun for a few minutes. I brought the fish over toward where the Indian was standing. He commenced to laugh and landed the fish. Instead of a 6lb. trout, to my disgust, they were two pickerel, one on each fly. I unhooked them and threw them into the bush. I left and went below the falls. This proved a success, for the first fish I caught was a 3lb. speckled trout—a beauty, as red as a prairie sunset on a summer evening. I caught several more in this pool and lost some. Then the Indian, Johnnie, came across the pool with the canoe for me to come to dinner. He had cooked the two pickerel, made some tea, boiled some potatoes, and with bread and butter and fried bacon I made a good dinner, for I was hungry. After dinner we went further down the river; I had fine sport in Stoney rapids; on our way down stream in the calm water I caught some pickerel with fly. They came down stream from the lake above, and once below the falls they cannot return; the trout drive them from the rapids into the calm water. The pickerel are so plentiful that the Indians caught twenty in about thirty minutes with a spoon bait I loaned them; they trolled from the canoe.

For two hours after noon I took a rest and watched the Indians catch pickerel or wall-eyed pike. I quit fishing about 6:30 P. M.; we had supper and returned up the river, through the narrows and across the Lake to Missanabie. At the Hudson's Bay Post I weighed sixteen of the largest trout, which weighed 42lbs. I had a splendid day's fishing. I then took the train for Port Arthur that night. I often call to memory that day's fishing at Stoney Portage on the Michipicoteu River.

J. E. NEWSOME.

P. S.—If any of the readers of FOREST AND STREAM want any information about the fishing in the district I shall be only too glad to furnish them with it. J. E. N.

POOR FISHING IN MISSOURI STREAMS.

Editor Forest and Stream:

It has been many years since fall fishing has been so poor as it has been this fall. This is the report from all the streams in the State. Even in the St. Francis River, which heretofore has furnished excellent sport nearly the whole year round, fishing in a flat failure. The only reason which can be ascribed for this condition is the extreme lowness and clearness of the rivers. There was no high water in the spring at the usual season when fish run up and there has been but little high water any time during the year. There was some fishing in the spring, but as the season advanced it became poorer, until now anglers are thoroughly disgusted. The natural condition of most streams in Missouri is a semi-turbid condition, so that fish are pretty well protected. With the extreme clear water which has prevailed, it would seem that the fish became frightened and have gone down the stream until they have reached deeper waters, or have gone into the Missouri and Mississippi. In the streams in the North, where clear water prevails the year round, the fish are not so wild and are not frightened at their own shadows.

As an instance of how low the water is, a party of four enthusiastic anglers recently shipped their boats to Knob Lick with the intention of floating down the St. Francis River to the club house at Chaonia. When they reached the river they found there was not enough water to float the boats, and they hired wagons to take them seventeen miles down the river below Silver Dam, where it was thought there would be plenty of water. When they got there they found the same conditions prevailing, and hir-

ing additional teams they kept on traveling until they had gone about forty-five miles before they found sufficient water. Then they had about a day's run to the club house.

This is probably about the most unique instance on record of anglers floating down stream on wagons. They feel pretty sore over their adventures, and are not inclined to brag about their great catches.

The only places where any fish are being caught are the sloughs which connect with the Mississippi and Missouri rivers, and at the mouths of the streams which flow into these larger and turbid bodies of water.

The clause in the Missouri game law prohibiting shooting by non-residents is a dead letter, and in fact there is little compliance with any parts of the law as it now exists. The game warden has no funds, and is not in a position to enforce the statutes. ABERDEEN.

ST. LOUIS, Nov. 6.

A MOUNTAIN LANDSLIDE.

MR. GEO. L. POTTS, of Appleton, Wis., has returned from wo weeks' outing in the Cascade Mountains of Washgton, and the Appleton *Crescent* gives this account of n experience which comes to few men: "Mr. Potts spent wo weeks in the mountains. While in the mountains they carried no tent, simply rolled up in their blankets and slept comfortably. No rain fell while he was in Washington and the weather was delightful in every way. They lived on the fat of the land, such as salmon, deer, antelope, quail, wild geese, etc. George had some wild goose shooting that was quite exciting and caught half a dozen salmon in fifteen minutes. He used a spoon hook and hand line and hauled out a fish every time he threw in the spoon. The fish ran from 5lbs. to 20lbs. and were very vigorous fighters. The fish were taken in the Columbia River, near Elkwood, Wash. The river was full of fish, none apparently less than 5lbs. in weight. He saw them leap over high falls; all the fish were moving up the river, probably to spawn. Many salmon are netted by hanging nets like hammocks over the falls. The fish endeavor to leap the falls going up and tumble into the nets—a very easy way of taking fish.

"One of the most wonderful sights that Mr. Potts saw during his trip was a tremendous landslide. The party were one day a couple of miles up the side of a steep mountain, a deep cañon divided them from another mountain opposite. They were suddenly startled by a peculiar rumbling, crashing noise which grew louder and louder. The eyes of every one in the party were riveted to the mountain opposite, where they could plainly see immense rocks and boulders larger than any building in Appleton rolling and bounding and crashing down the side of the mountain to the narrow cañon below. The point opposite where the rocks were moving was about two miles in a straight air line from where they were standing, and in the clear mountain air small objects were plainly visible. The great rocks would crash into tall trees and shiver them into splinters in an instant and the noise of the crashing was perfectly distinct. Huge boulders of many tons weight would strike an obstruction and bound high in the air, or striking rock formation would be broken to atoms, making a report like a cannon. As they stood spellbound watching this play of nature they beheld a sight afforded few men. A part of the side of the mountain, 4½ miles in length and nearly 2 miles in width and probably more than 200ft. in depth, slid from its ancient foundations down to the valley below. This great mass moved over a mile before its momentum was stopped in the bottom of the cañon. It seemed as if the world were turning inside out. The landslide caused the earth to tremble even where they stood, and the uproar was so deafening they involuntarily held their hands over their ears for protection from the terrific sounds. Mr. Potts says he never heard a thunderstorm cause such deafening sounds. It was a wonderful and most awe inspiring spectacle and one which they will never forget."

Fishing on the Tombigbee.

WAVERLY, Miss., Oct. 27.—*Editor Forest and Stream:* Capt. Billy Young has just got back from a camping trip on the upper Tombigbee River embracing about 200 miles distance. He reports a great time and says fishing was so good it was really no sport at all. I will give an extract from his story told us to-day:

"Dropping down the river, I came to where a cypress tree had fallen into it and a skiff had lodged against the lap of the tree so the gun'ale was just even with the top of the water.

"I throwed in, and my cork no sooner straightened than it went under, and I pulled out a very large white perch, and so it continued until I had caught seventeen whoppers.

"Dr. G. coming along in his boat then, I remarked to him I could shove up my cork and put on a bigger minnow, and fish deeper and get my tackle tore all to pieces, 'I would do it sure,' he replied.

"I shoved up my cork and told Jeff (my boatman) to put on a big minnow, and the cork had scarcely straightened before I had a strike. I had a pretty lively time for a few moments and landed a big black bass; then I caught a big grinell, and then two or three more bass, and then two blue cat and a gar, and then I got a strike, and when I fastened whatever it was started right down under the boat. I was fishing with a big stiff bamboo trolling pole, and held it hard on him, thinking the spring of the pole would stop him, but he kept on until 3ft. of my pole was under water, and then about 5ft. of it broke off; but the line was fastened well down toward the butt of the pole, and I still thought I would get him, but nothing stopped it. It kept right on, breaking my line between hook and sinker.

"I rigged up what was left, put on another hook, and to make a long story short, when I quit I had 4ft. of line left, and a piece of pole not much longer than a walking stick."

W. W. TITUS.

DURING the recent blizzard a large bass belonging to Thomas G. Krebs, a saloon keeper of Reading, Pa., was found frozen in a solid mass of ice. The fish was cut out in a block, which was thawed, whereupon the bass recovered and appeared to be as lively as ever.—P. S. A trifle out of season, perhaps, but will do to put away for winter.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Camp-Fire Flickerings.

"That reminds me."

The Tale of a Rattle.

Editor Forest and Stream:

Seeing that rattlesnakes have been a great topic in your paper for some time, allow me to contribute an experience of mine which, although it is against myself, is too good to keep. At least so a fisherman and brother angler told me to whom I related it some few weeks ago at the fireside of a well-known fishing inn. "Why don't you send it to FOREST AND STREAM?" exclaimed my listener when I had finished, and so here goes.

About six years ago, toward the end of April, I journeyed with a friend of mine toward the Bushkill, in Pike county, Pa., in quest of trout, which at that time abounded in that lovely stream. I was then a recent importation into this land of the brave; and at the end of our railroad trip, and while waiting at the station inn for the team that was to take us into the mountains, I was told by some well-meaning native to look out for the rattlesnakes.

I felt a queer sensation at this information and made very careful inquiries about their habits and the best way to avoid them. Up to then I never had heard of rattlesnakes, except through books, and the possibility of having to face one made me feel somewhat unsettled in mind and rather dampened my ardor after trout. However, my companion, a full-blooded Westerner and not easily troubled by such small matters, reassured me, and after a drive of a couple of hours we arrived at our destination early enough to tackle up, go down to the stream and whip it over for an hour or so before dark.

On the stream we soon separated, and about 6 o'clock, when I thought I had had enough—not of trout, but of casting—I started back slowly toward the house. Between it and the stream was a small thicket which I had to traverse, and just as I reached it my thoughts involuntarily reverted to the dreaded rattlesnakes. What if I should meet one now? It was just beginning to get dark, and it would be very difficult for me to see any that happened to lie in my path, and if inadvertently I stepped on it I should certainly be struck. However, there would be the buzzing noise to warn me off. I would walk slowly and keep my ears open. I kept crawling along very cautiously and listening intently, all the while execrating the dry leaves that rustled at my every step, and might drown the warning buzz that I expected to hear at any moment.

Hark! That was a rattle! I stood still, petrified, and listened with all my might. I could hear the beating of my heart, but nothing else. I strained my eyes to see if I could notice any movement on the ground, but nothing was to be seen; I was sure, however, of having heard the rattle. After waiting I cannot say how long, but what seemed to me an age, I decided to move on again.

At the first step I took another buzz struck on my ear. It brought me to a second stop as quick as lightning. I believe my hair stood on end, my blood froze, my tongue and throat were parched, and my breath came in short gasps. It was evident to me that I had stepped into a whole nest of rattlers, that I was surrounded by them, and that there was no way out of it.

After I had sufficiently recovered from this second shock I again looked around very carefully—of course without stirring from the spot to which I was rooted. I tried to find out where the reptiles lay; and if I discovered their position I intended to make a sudden dash for freedom in the opposite direction. I could not see anything in the twilight—at least I could not distinguish any objects on the ground—and this of course made my position all the more gruesome, as it was impossible to tell on which side the danger lurked. In my despair I decided to take an extreme step. In my left hand I was carrying my fishing rod. If I poked the butt into the leaves in front of me the snakes would undoubtedly move or make a dart at it, and this would give me an opportunity to locate them and to make off in an opposite direction. I felt I was taking desperate chances in so doing; but it would also be my only hope of salvation.

I braced myself well for the ordeal, set my teeth and moved the rod forward. The same buzzing noise struck on my ears again, but at the same time I felt a tightening of the line, which told me that it had caught in the brush; and in an instant the whole truth flashed through my mind. In walking through the brush my line had caught and pulled on the click-reel. It was this which in my nervous state of mind I had failed to recognize, and taken for the rattling of a snake; and of course each forward movement would produce a repetition of the dreaded sound.

The mystery was solved. I loosened the line and proceeded on my way to the house very much ashamed of myself, but at the same time mightily glad that it had not been snakes.

Since then I have spent each succeeding spring from four to fourteen days on the Bushkill, and although I have tried to find rattlesnakes and looked for them in their dens I have never come across one alive, though the country undoubtedly harbors quite a few. In fact, two years ago a native took me to a spot where the day before he had killed three. I saw them there, 4 to 4½ft. long and around the body nearly as thick as my wrist, and when I looked at them I felt extremely grateful that it had been my reel and not real live rattlers that had frightened me on that memorable evening. C. B.

NEW YORK.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

The Kennel.

FIXTURES.

BENCH SHOWS.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show. John L. Lincoln, Sec'y.

FIELD TRIALS.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H Thompson, Sec'y.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.

Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.

M. V. G. AND F. P. ASSOCIATION'S TRIALS

THE inaugural trials of the Monongahela Valley Game and Fish Protective Association were held on their grounds in Greene county, Pa., beginning on Wednesday, Oct. 30, and concluding Friday, Nov. 1, 1895.

The Derby had four starters. This small number no doubt was the result of the late announcement of the club to hold trials this fall, there not being sufficient time to prepare young dogs, those starting not showing much preparation.

The All-Age Stake had thirteen starters and proved a much better stake, requiring some time to run, owing to the scarcity of birds. The grounds had been stocked in the spring, but owing to the continued dry weather cover was very light; in fact, not enough to shelter the birds, and they were found mostly in the woods and thickets. This made work for dogs quite difficult.

Roger O'Mara won first in the Derby, and deservedly so, proving himself best; Tick of Kent second, and Whyte third.

In the All-Age Stake Nellie Bly was clearly first, Galert C. and George Croxteth dividing second honors, while Mex got third place.

The awards were well received and heartily indorsed by those in attendance. W. S. Bell, of Pittsburg, judged the trials.

The attendance was large, and as the dogs had to be followed on foot it was surprising to see how many followed the entire running, exhibiting a keen interest to the end. Next year's trials should bring out an increased attendance, and from expressions of handlers and owners we predict a much improved stake.

Those in attendance were Chas. H. Ganier, A. Wallace and F. S. Hawkins, of Waynesburg, Pa.; Henry Christ, Belmont, Ohio; G. O. Smith, Wheeling, W. Va.; J. Shaw Margerum, Washington, Pa.; George Battison, Youngstown, Ohio; Wm. Frew, Massilon, Ohio; A. Cummins, Louis McGrew, G. W. Lang, W. D. Henry, Chas. H. McIlvaine, W. McKennan, Jr., W. S. Bell, S. B. Cummings, R. S. D. Hartuck, W. Pontefract, Richard Bennett, Major Hammer, H. Straub and A. L. Peterson, Pittsburg, Pa.; F. D. West, Wm. Daugherty, W. J. Fisher, F. Crawford and W. V. Winans, of Brownsville, Pa.; Jack Bell, Carmichaels, Pa.; Wm. Harrison, Monongahela City, Pa.; A. C. Peterson, R. C. Stenger, J. Baird, of Homestead, Pa.; Dr. S. W. Hart and C. Schramm, of McKeesport, Pa.; with quite a following of those living in the vicinity.

Nellie Bly, winner of first in the All-Age Stake, is a grand bitch, with good pace and range, going to her game promptly and in good style; very staunch and obedient, and her winning in the class of dogs that ran stamps her as a high class bitch. All four dogs placed in this stake are good dogs; to mention each one would take more time than I now have at my disposal.

The Association did not offer a stipulated list of prizes, but ran a sweepstake event, dividing the entrance fees in 50, 30 and 20 per cent., thus making three prizes.

The Derby.

This stake had four starters as follows: Roger O'Mara with Spot, Whyte with Tick of Kent. The day was warm, with light wind and very dry.

G. W. Lang's black, white and tan English setter dog Roger O'Mara (Roger Boy—Nana Mahoning), handled by George Battison, and Lewis McGrew's liver and white pointer dog Spot (McDowell's Spot—Flirt Hessen), handled by owner, were cast off at 8:20. Both started at good speed, but in a short time Spot narrowed down, while Roger O'Mara kept out at his work, neither dog having an opportunity on birds. As the ground hunted over proved barren, dogs were ordered up at 9:10—to go down on game.

G. O. Smith's black and white setter dog Whyte (Whyte B.—More's Clara), handled by owner, and S. B. Cumming's liver and white pointer dog Tick of Kent (Spot of Kent—Bows Fly), handled by J. W. Phillips, were cast off at 9:20. After a run of about an hour a bevy of birds, was flushed by the judge which were marked down in the woods. The dogs were ordered on the single birds, but owing to the very dry weather they would not lie, flushing wild. Tick pointed; no bird found. Tick again pointed, moved on, when two birds flushed, the balance of the bevy flushing wild. The dogs were worked in the direction the birds had flown, but neither found; ordered up at 10:40.

A move was now made to other grounds, and the first brace of the All-Age Stake was put down and ran from 11:20 until 12 o'clock without finding, when they were ordered up and the party went to lunch—this brace being run to give the Derby dogs time to rest. After lunch the judge announced the second series.

Roger O'Mara and Tick of Kent were cast off at 12:27 and ran until 12:55, when they were taken up and a move made to other grounds. Cast off at 1:15, hunting through stubble and a thicket; the judge again flushed a bevy, which both dogs passed. Marked down in the edge of woods, the dogs were ordered on the single birds. Roger flushed, steady to wing. Roger pointed, backed by Tick. Tick pointed; no bird found, it having flushed a moment before. Ordered up at 1:55. Both had fair speed and range; Roger the better.

Whyte and Spot were cast off at 2:03 in open stubble. Crossing a ravine they worked in briars and through cornfields. A bevy of birds being flushed and marked down in woods, the dogs sent on; Whyte pointed one indifferently, moving on to a flush; Spot flushing twice. Ordered

up at 2:30. The judge announced the winners as follows: First, Roger O'Mara; second, Tick of Kent; third, Whyte.

The Association's first annual Derby was for pointers and setters whelped on or after Jan. 1, 1894; $5 to enter and $5 to start.

The All-Age Stake.

Thomas Herriott's lemon and white pointer bitch Joy (Rapid Don—Rachel), handled by Henry Christ, and G. O. Smith's black, white and tan English setter dog Fred Hope (Gath's Hope—Lulu Hill), handled by owner, were cast off at 11:20 and ran until 12 o'clock without finding birds. Both showed fair speed and range. Both to be put down again on game.

McDowell & McGrew's liver and white pointer dog Spot (Dick Swiveller—Vixen), handled by McGrew, and F. S. Hawkins's liver and white pointer bitch Lou of Kent (Lad of Kent—Oneida), handled by Wallace, were cast off at 3:40 and worked through cornfields and stubble. At the edge of briar thicket Spot pointed a bevy, a trifle unsteady to shot. Lou refused to back, going ahead, flushing the bevy. The birds were marked down in woods; dogs ordered on, Lou flushing two singles. Ordered up at 4:12. Speed and range of both were ordinary.

W. D. Henry's liver and white pointer dog George Croxteth (Don Croxteth—Mollie Scott), handled by Wm. Frew, and Louis McGrew's black and white pointer dog Hessen Boy (Duke of Hessen—Barmaid), handled by owner, were cast off in pasture field at 4:15, and hunted through stubble without finding, both showing good pace and range; George Croxteth best; in fact, he excelled any dog yet down, remaining out at his work and hunting out the ground with good judgment. Ordered up at 4:45, to go down again.

S. B. Cummings's orange and white setter dog Galert C. (Duke of Princeton—Ione), handled by owner, and Chas. H. Gainer's black and white setter dog Spark (Gladstone II.—Blue Lorna), handled by Wallace, were put down in open fields at 4:47. Galert showed excellent speed and range, while Spark was slow, with very contracted range. They ran 45 minutes without finding. Up at 5:30, this ending the day's running.

Thursday.

The day was cloudy, with a cold, drizzling rain falling almost all the time. The rain not being heavy enough to interfere, a start was made at 8:45.

A. C. Peterson's orange and white setter bitch Nellie Bly (Ben Hill—Daisy Hunter), handled by Jack Bell, and F. D. West's lemon and white pointer dog Mex, handled by owner, were cast off at 8:45 in stubble field. Both had good pace and range; Nellie better. Ordered up at 9:35 without finding.

The next brace being absent, the bye dog was put down to run, while the absent dogs were sent for.

Smoky City Kennels' black and white setter dog Dash, handled by H. Christ, was cast off at 9:40 in grass fields and hunted through stubble. Again the judge put up a bevy that the dog and handler passed by. Worked toward the scattered birds, Dash started in by a point, moving in to a flush and chase. Next he pointed; no bird found. He next chased a bird flushed by some spectators, most of the time working beyond the control of his handler, Mr. Christ explaining afterward that he had the dog less than two weeks. Ordered up at 10:15.

Dr. S. W. Hart's black, white and tan English setter bitch Miss Pick (Gladstone's Boy—Lady Marg), handled by Schramm, and G. O. Smith's black and white English setter dog Whyte (Whyte B.—More's Clara), handled by owner, were cast off at 10:20 in orchard, and worked into stubble field. Range and pace of both were very limited; in fact, so much so that the judge repeatedly cautioned the spectators not to press the dogs. Worked now toward the scattered birds. Miss Pick flushed one; a little further two flushed wild. Moving on, the handlers flushed several birds the dogs had passed by, and both should have pointed as they were in open stubble field. Turning to the left, Miss Pick indicated scent, and hesitated an instant; moving on, her handler coming up flushed the bird which she should have located. Whyte did nothing. Ordered up at 10:55.

This ending the first series, the rain still continuing, a move was made for a house, where lunch was served. After lunch, the rain having increased, running was postponed until 3:30, the judge having announced the second series as follows: George Croxteth with Galert C.; Joy with Spot; Fred Hope with Mex; Nellie Bly with Hessen Boy.

The rain having ceased, a start was made with George Croxteth and Galert C., they being cast off in pasture field and worked through cornfield and stubble. Galert flushed a bevy. George next pointed a single and Galert backed—a beautiful piece of work. Bird flushed by Frew; both dogs a bit unsteady to shot. Galert pointed; George failed to back, going in and sharing point; bird flushed by Cummings, and both dogs breaking shot and chasing. Ordered up at 4:45, both having sustained their pace and range throughout.

Joy and Spot were cast off at 4:46 and worked in the direction of the single bird. Spot pointed, Joy backing; bird flushed by McGrew. Joy pointed, Spot refusing to back, going in and pointing; bird flushed; both steady to wing. Spot pointed a single; Joy backed; both steady to wing. Joy pointed; Spot backing to order; no bird found. Spot flushed twice and Joy pointed a single in fence row. Ordered up at 5:27, this ending the work for the day.

Friday.

This morning was clear and cool, an ideal day for work, the rain of yesterday making everything damp.

Fred Hope and Mex were cast off at 8:35 in a cornfield. Crossing fence into grass, Mex pointed a bevy. Fred Hope coming up refused to back, moving in and flushing birds. After a run of 45 minutes the dogs were ordered up.

Nellie Bly and Hessen Boy were cast off at 10:35 and worked one hour and ten minutes, Nellie pointing two bevies and one single. Steady to wing and shot. Hessen Boy backed Nellie and made one false point. Both had good pace and good range, Nellie working her ground best and always keeping the gun in view, yet staying well out to her work. Up at 11:25.

Third Series.

George Croxteth and Mex were put down on scattered birds. Mex pointed; George backed. George made an excusable flush down wind and dropped to wing. Up at 11:57.

Galert C. and Nellie Bly were cast off at 11:57 and worked until 12:40, little work being done by either dog, both sustaining their range, Nellie working ground with better judgment, while Galert excelled in pace.

Hessen Boy and Fred Hope were put down at 12:43 and worked until 1:25. The only work done was a flush by Hessen Boy.

This ended the third series and stake, the judge announcing the winners as follows: Nellie Bly first, Galert C. and George Croxteth dividing second, Mex third.

The All-Age Stake was for pointers and setters never having won first in any recognized field trial, $5 to enter, $5 to start; entrance divided 50, 30 and 20 per cent.

[This report was kindly made for us by Mr. W. S. Bell, but arrived too late for publication last week.]

FOX-HUNTING IN ENGLAND.

As the opening of the fox-hunting season comes around each year, the London *Field* publishes a table showing the packs of hounds of all kinds then in existence, giving also the changes in ownership, etc., as well as the personnel of the hunt, *i. e.*, the names of the huntsmen, whips and kennel huntsmen.

In England and the other portions of Great Britain and Ireland this table is scanned closely in country houses, farm houses and in the clubs too. To dwellers in the old country homes of England fox hunting means much; it makes life in the country just so much the more endurable during the gloomy winter months. With partridges wild and unapproachable, and with the pheasant covers shot over, fox hunting is the only means of amusement left to those who live in the country, outside of a few stray days with the gun. To the farmer also fox hunting means a great deal. His oats and hay find a ready sale within easy reach of the farm on which they were raised, while it pays to raise a good colt or two that can go across country. There is perhaps less antagonism on the part of farmers toward hunting men than we on this side of the Atlantic are led to believe, but antagonism does exist. In an editorial on the prospects for the coming season the *Field* says:

"The farmer and fox-hunting question is an old one, and is practically no nearer solution than when it first arose in days gone by. As we have often stated, the remedy lies far more with the hunting man than with the farmer. The former is bound to have regard for the interests of the men over whose land he rides; the farmer is not compelled to yield up every one of his rights; in fact, there is no reason at all why he should be asked to do so. When people give express or implied permission for hounds to cross their land, they know th at a certain amount of damage must accrue; but the smaller farmers, many of whom are struggling hard for a living, do not care about putting up with needless damage; and this is just the gist of the whole matter. If hunting men will refrain from inflicting upon farmers an injury there is no need for them to bear, any friction that may now exist would very soon pass away. The men who really ride to hounds do virtually no damage at all. To keep with the pack they must jump the fences cleanly. The harm is inflicted by the third and fourth-rankers, who cram their horses through as many fences as possible, in preference to jumping them; make up for their want of nerve and decision by taking short cuts over seeds; and leave gates open through which stock escape, and give the farmers' men an afternoon's work in recovering them. To avoid these things should not be difficult for anybody. A step in the right direction has been taken in the Quorn country, by making the second horsemen keep to the roads and bridle paths; and it would be no bad thing if some of those who are apparently unable to tell grass from clover, and who have not mastered the arts of jumping a fairly easy fence or shutting a gate, could be compelled to join the second horsemen."

Depression in agricultural circles during the past ten or fifteen years in the British Isles has had the natural result of materially reducing the incomes of the country gentlemen from whose ranks the M. F. H. (master of foxhounds) is usually recruited. To keep up a pack of hounds costs money, and even when a pack is supported by subscription the greater portion of that subscription comes out of the pocket of the master. Hence it is now no easy matter to find a master for a pack of hounds, except in the most favored countries. To this cause is attributed the disappearance during the past summer of one or more packs of hounds in England.

In America people are so accustomed to look upon England as a small portion of land so densely settled that people elbow one another round in their efforts to move from one spot to another, that the statement that there are in England 152 packs of hounds kept solely for the purpose of fox hunting is a startling one. On this subject the *Field* says:

"As compared with last year's figures the number of packs in our present list is less by five than in 1894, the totals being 209 and 204, respectively, excluding harriers and beagles. Last year there were seventeen packs of English staghounds, six packs of Irish staghounds, 156 packs of English foxhounds, ten packs in Scotland, and twenty in Ireland.

"This year shows sixteen packs of English staghounds and six in Ireland. English foxhounds have dropped to 152, but those in Scotland and Ireland remain at their last year's total. The missing pack of staghounds in England is that for several years kept by Mr. Giles, in Herefordshire, which has now been given up; while in Ireland the North Tipperary pack has been dispersed, but the number remains the same by the establishment of the South Westmeath. The death of Col. Cowen, and the inability to find a new master, has caused the Braes of Derwent to fall into abeyance; the Eskdale have been given up for reasons already stated in the *Field;* the Eggesford country is cut up among neighboring hunts in consequence of no master coming forward to take it; and Sir John Thursby has given up his hounds."

The greatest number of hounds in any one kennel is credited to the Duke of Beaufort, whose kennel list shows 75 couples of hounds. The total number of hounds in the 152 packs is something over 11,000. Harriers—that is, packs of hounds kept for the purpose of hunting hares—number 146, 110 of them being located in England or Wales, 3 in Scotland and 26 in Ireland. Beagles show up well with 44 packs, all told. Inclusive, therefore, of staghounds, foxhounds, harriers and beagles, there are 337 packs of hounds now in existence in the British Isles. The returns show that the total number of hounds kept in the harrier kennels of England and Wales amounts to 1,853 couples—3,706 hounds.

When one comes to estimate the amount of money spent in keeping up this really enormous number of packs of hounds, with the attendant expenses of hunt servants' wages, the money invested in horseflesh for these servants to ride, the keep of the horses themselves, and the hundred and one little items that are bound to figure in an expense account at the end of a year, it hardly looks as if the hard times had pressed very heavily upon the people of England.

There is one fact, however, that has been looked upon as ominous by the hunting men of England—the failing numbers in the ranks of hunting farmers. The stagnation in affairs agricultural in England, above referred to, has hit the farmer hard, and he now rarely finds himself able to spare the time or afford the money to join the hounds at the coverside, unless he has a promising "young one" to sell. As long as farmers followed the hounds across country there was no fear of any danger to fox hunting; but with the farmers forced to give up hunting from lack of means, there is apparently a real menace to the sport. It speaks volumes for the inborn love of horse, hound and horn in the English farmer that he permits his fields to be ridden over and his fences broken down by men the majority of whom are nothing to him, and whose sole claim upon his sympathy is the mutual bond of love of sport.

The drought that has been so general throughout this country has been felt to a large extent upon the continent of Europe and in England. The hot, dry weather that has prevailed in the latter country has militated seriously against cub hunting, the returns that have been published from time to time showing that hounds have been unable to do much toward thinning out the ranks of the foxes, or in schooling the cub to "git" and run straight when roused "from his lair in the morning." Cub hunting is only a foretaste of good things to come, and consists largely of sitting in one's saddle at a coverside, listening to the music of the hounds as they dust the cubs around the wood, and to the voice of the huntsman as he rates a young hound who has not yet learned that cotton-tails were not created for his special benefit.

All this preliminary work is of great interest to the man who is fond of hound work; but to the vast mass of so-called hunting men, who only follow the hounds for the sake of riding after them, it bears about the same proportion to fox hunting, pure and simple, that five o'clock tea does to the regulation seven o'clock dinner.

The season of fox hunting may be said to date from the first Monday of November. Then, instead of early starts and long waits at the coversides while the above process of schooling is going on, there is the regularly scheduled 10:30 or 11 o'clock meet, with the chance of a quick find and a fast gallop after a flying pack. Edward Banks.

Flushing and Pointing at Field Trials.

Sherrill's Ford, N. C.—*Editor Forest and Stream:* The field trial season on quail is just approaching, and with it the annual meetings of the different clubs; so that I think the following question, put before them for their consideration, would not be out of place, viz.: The present system of flushing birds in front of a dog on point.

The present way of doing this is to tramp and kick about in front of the pointing dog until the birds are put up. How often do we not see at every field trial the handler (I have been guilty of this myself) making gradually increasing semi-circles in front of his dog, in a jerky, erratic sort of way, in the vain attempt to put up the bird, and eventually starting one to the side and down wind, and "There goes the bird, Judge!" when it is palpable to all present that that was not the bird pointed.

Why this humbug? When at trials held on prairie chickens, also on grouse in Scotland and partridges in England, it is recognized that the dog should first establish his point on body scent (not foot scent), then wait for his handler to come up, and at command he goes ahead and locates the birds, thereby demonstrating at once whether he is false pointing or not.

The work done in this manner looks so much more finished and is more satisfactory to the shooter.

Since this is done on all other game hunted by pointers and setters, why in reason should it not equally apply to the American partridge or quail? Of course this does not necessarily apply when working up scattered birds on pine needles, or bevies in woods, as in those cases the dog when pointing is generally very close, and a step from handler puts up the bird owing to light cover; but frequently on a running covey and on scattered birds in tall weeds or sedge the fallacy of the present system is often shown up.

I think other handlers must realize with me, the trouble when first working a dog on quail after chicken, and the necessity of having to make him stand back and hold his point while he the handler walks ahead to flush. The poor dog has been encouraged, probably up to two weeks previous, to go ahead and locate, and is naturally taken aback at the sudden change of proceedings.

The excellent field trial rules of the present day have already had a marked effect toward the improvement of the contests. There is less whistling and shouting and hustling for points; and the bolting, self-hunting, next-county dog will be wisely left at home, and with these improvements I leave it to the several clubs to consider whether the above suggestion would not be in keeping.

C. E. Buckle.

The United States Field Trials Club has declared its field trials off, after postponing them to Nov. 25, the reason being the same as that which caused the abandonment of the Continental trials; that is, scarcity of birds, etc. It is a matter of keen regret to sportsmen that the unfavorable season should be so disastrous to the field trials. This leaves only the Eastern and Irish setter field trial events to take place in the South this year.

Since writing the above, which was received officially from one of the club officials, we have received the following telegram, dated Nov. 12: "The U. S. trials commence on Nov. 25, following the Eastern. Grounds drawn. Birds plenty. W. B. Stafford." This is very gratifying news to all field trial men.

N. E. B. CLUB'S FIELD TRIALS.

THE third annual field trials of the New England Beagle Club, which were held at Oxford, Mass., Nov. 4-7, were the most successful in the history of the club. Not only were there more starters than at any previous trial, but the quality of the beagles as a whole was very high and the work in the Derby and Champion Stakes has never been surpassed.

The highest honors were carried off by Baronet, imported by Thos. Shallcross from the kennels of Mr. Crankshaw, Plover, Cheshire, England. He showed nose, endurance, speed and rabbit sense in his work and won the specials for the best beagle in the field as well as first prize in the most hotly contested Derby yet run at a beagle trial. The other principal winners are well known to the patrons of bench shows and field trials and need no description.

As in previous years the club made its headquarters at Bacon's Hotel. Everyone was well cared for at this comfortable hostelry and Mr. Bacon sustained his reputation for serving the best lunches in the field that are provided at any of the various trials. Among those present during the week were: H. S. and O. F. Joslin, Geo. B. Appleby, Oxford, Mass.; Geo. F. Reed, Barton, Vt.; W. S. Clark, Walter Randall, Linden, Mass.; Thos. Shallcross, Howard Almy, F. W. Cielfeld, Providence, R. I.; E. O. Cornforth, Slatersville, R. I.; F. W. Chapman, Ellsworth, Me.; A. D. Fiske, Worcester, Mass.; A. H. Morse, Quinnebaug, Conn.; H. B. Tallman, Greene, R. I.; A. Parry, Franklin Park, Mass.; W. L. Redfern, E. O. Smith, John Roney, Woonsocket, R. I.; F. G. Stewart, New York, N. Y.; Jas. Wood, Pawtucket, R. I.; H. W. Lacy, Allen Chamberlain, Boston, Mass.; Patrick Kennedy, Peabody, Mass.; Bradford S. Turpin, Roxbury, Mass., and others.

The judges were Arthur Parry and H. B. Tallman. They did their difficult work carefully and their decisions were well received. Game was not hard to find, but the Oxford cottontail has a bad habit of going to earth at the first opportunity and the majority of the runs were short ones.

After the trials Spark R. was purchased by Mr. Redfern and Skip II. by Mr. Almy.

On Monday evening President H. S. Joslin called the annual meeting to order at 8:50. Eleven members were present. Routine business having been disposed of the election of officers took place with the following result: President, H. S. Joslin; Vice-President, A. D. Fiske; Secretary-treasurer, W. S. Clark; Executive Committee, Thos. Shallcross and Henry Hanson.

The meeting then adjourned and a session of the field trial committee was held and the Derby entries called upon to fill. Geo. F. Reed's Spinaway R. in the 15in. Derby and F. W. Chapman's Fury and Howard Almy's Snap in the 13in. Derby forfeited. The others were drawn as reported in the summary.

Tuesday.

Clouds covered the sky on Tuesday morning, but by 9 o'clock they had disappeared and the day was a perfect one for the sport. The running in the Derby was completed.

Class C—Derby—15 to 13in.

First Series.

BARONET—HEADLIGHT.—Down at 8:30 in an alder run. Thos. Shallcross handled Baronet and Geo. B. Appleby Headlight. Baronet worked out his ground carefully. He showed a better nose than his rival, and when the game was up was full as fast. He marked his rabbits to earth prettily, tonguing and digging at the mouth of the burrows. Two rabbits were run during the heat, Baronet easily winning. Headlight appeared to be somewhat deaf and had difficulty in locating the direction in which the chase lay. Up at 9.

TRILL—DOMINO.—Down at 9:05 in the cover where the preceding brace had run. A. H. Morse handled Trill and E. O. Cornforth Domino. Trill moved easily and covered her ground at a good clip, circling wide when at fault. Domino was slower and at times inclined to potter. Trill won the race easily. Up at 9:35.

SUNBEAM—PHANTOM.—Cast off at 9:45 in a brush field. W. S. Clarke handled Sunbeam and A. H. Morse Phantom. Four rabbits were started during the race. Phantom, who has had but four weeks' experience on game, covered his ground well, and when the rabbit was up drove prettily and at good speed. He had the best of the race. Sunbeam was a trifle slower than Phantom and not as good in nose. Up at 10:25.

This race completed the first series, and the second was commenced immediately.

Second Series.

PHANTOM—TRILL.—These prettily matched beagles are kennel mates and were both handled by A. H. Morse. They are used to running together, and now gave us the best race of the day. They had the good luck to start one of the few rabbits in Oxford that are willing to run, and away they went at a gait which left the judges panting in the rear. Finally bunny went to earth, and at 10:35 the hounds were taken up. The race was a close one, but Trill's greater experience told in her favor, and she was the winner by a narrow margin.

PHANTOM—BARONET.—Down at 10:40. Phantom was more dashy and showy than Baronet, but the latter did the better work. Three rabbits were found, and the last made a pretty chase. Baronet won, though it was not a walkover by any means. Up at 11:17.

TRILL—BARONET.—This brace was put down at 11:23 to run for first and second places. Baronet kept up his careful work and succeeded in defeating his more stylish rival. He ran truer to the trail and was steadier than Trill. Up at 12:25.

Lunch of hot oyster stew, sandwiches, coffee, fruit and things that delight a hungry sportsman, was served at the Shepardson farm, and the judges then announced their awards: First to Baronet, second to Trill, third to Phantom; reserve, Sunbeam.

OXFORD, Mass., Oct. 5.—Derby for beagles, 15 to 13in., whelped on or after Jan. 1, '94. Forfeit $3; $5 additional to run. First prize 40 per cent., second 30 per cent., and third 20 per cent. of entry fees and forfeits.

First Series.

BARONET—Awashonk Kennels' b., w. and t. dog (Dauntor—Reckless)

with

HEADLIGHT—H. S. Joslin's b., w. and t. bitch (Frank Forest—Triumph).

TRILL—Bradford S. Turpin's t. and w. bitch (Royal Krueger—Queenie),

with

DOMINO—Cornforth & Deane's b., w. and t. dog (Melrose—Wenonah).

SUNBEAM—W. S. Clark's w. and t. bitch (Buckshot—Nell R.),

with

PHANTOM—A. D. Fiske's b., w. and t. dog (Clyde—Brummy).

After the lunch entries in the 13in. Derby were called.

Class D—the Derby—13in. and Under.

First Series.

THORA—SKIP II.—F. W. Chapman handled Thora and George F. Reed Skip. Thora was timid and refused to hunt. Skip ran a rabbit to earth prettily and worked carefully when trailing, refusing to tongue till the game was afoot. Up at 1:38, after being down a half hour.

THOR.—The bye dog was now put down with Skip and like his litter sister refused to take any part in the sport. He ran a rabbit by sight a few yards and then left the track. Skip drove a rabbit in her usual pretty style and ran the stake with the greatest ease. Up at 2:11.

The judges gave first prize to Skip II. and withheld second and third. This finished the running for the day, as the All-Age classes had not yet been drawn.

OXFORD, Mass., Oct. 5.—Derby for beagles, 13in. and under, whelped on or after Jan. 1, '94. Forfeit $3; $5 additional to run. First prize 40 per cent., second 30 per cent., third 20 per cent. of entry fees and forfeits.

First Series.

THORA—F. W. Chapman's t. and w. bitch (Fitzhugh Lee—Butterfly),

with

SKIP II.—George F. Reed's b., w. and t. bitch (Buckshot—Jute).

THOR—F. W. Chapman's w. and t. dog (Fitzhugh Lee—Butterfly), handler, owner (a bye).

In the evening the entries in both All-Age classes were called to fill. W. S. Clark's Sunbeam and W. L. Redfern's Music were the only absentees.

Wednesday.

A perfect day, but too warm for hunting. Scent lay badly and much of the work was dull and uninteresting. The 15in. All-Age class was run off and the first brace of the 13in. class.

All-Age Class—15 to 13in.

First Series.

NELL R.—BELLE.—Down at 8:30 in pasture land, Nell handled by Geo. F. Reed, and Belle by W. S. Clark. Nell covered her ground the better and showed greater interest in her work. Belle was indifferent in the first part of the race and did not warm to her work till it was too late. Nell did most of the driving and was an easy winner. Two rabbits were found. Down 55 minutes.

LEWIS—ZENO.—Cast off at 9:30, Lewis in charge of Howard Almy, and Zeno in charge of Thos. Shallcross. Zeno failed to run in the splendid form of last year. Lewis was under excellent control, and showed speed and hunting sense. The driving was slow, as the scent was bad, and Lewis easily proved himself the better in nose. Down 30 minutes.

SPARK R.—MARGUERITE.—Geo. F. Reed and F. W. Chapman were the handlers. Before game was found there was a long, tiresome hunt for fur; then a rabbit was put up and the best race of the morning followed. Spark did most of the leading and picked up most of the losses, but Marguerite packed well and made a pretty run on a rabbit that refused to go to earth for some minutes. Down 40 minutes.

DRUMMER BOY—SPRINGER.—The former was handled by John Roney and the latter by George B. Appleby. Springer was slow and heavy in movement, while Drummer showed great speed. His pace was so fast that he over-ran badly and made frequent losses. However, he easily defeated his running mate in a fast but jerky race. Down one hour.

Everyone was now about used up with the heat, and the rest for lunch was a welcome one. It was after 1 o'clock when the next brace was put down.

SNYDER III.—PRINCE.—All the previous races of the day had been run in the brush pasture, but this pair was cast off in the alder run behind the Shepardson barn. George B. Appleby handled Snyder and Patrick Kennedy Prince. Both beagles started and holed rabbits and both did some good work, but Snyder was superior to Prince in nose and pace and in picking up the losses. Down 55 minutes.

Second Series.

SPARK R.—DRUMMER BOY.—Both beagles were on game, but neither would hark to the other and the race was an unsatisfactory one. Drummer Boy was too fast for his nose. Spark was easily the better and showed intelligence, speed and endurance in his work. Down 20 minutes.

SNYDER III.—LEWIS.—A close race, with the advantage in Lewis's favor. Both worked losses well and beat out their ground prettily in the endeavor to make a start. A rabbit was driven to earth after a short run. Down 10 minutes.

SNYDER III.—NELL R.—It was nearly an hour before a rabbit was found. Then came as even a race as one would care to see. The rivals were equally matched and neither had an advantage over the other. Down 58 minutes.

Third Series.

SPARK R.—LEWIS.—The latter was not as fresh as in his former races and seemed to feel the effect of his hard work. Spark did nearly all the work in a long chase. Down 15 minutes.

The judges gave first prize to Spark R., second to Lewis and divided third between Snyder III. and Nell R.; reserve went to Prince.

OXFORD, Mass., Oct. 6.—All-Age Stake open to all beagles, 15 to 13in., who have not been placed first in any open class at a field trial. Entry fee $3; $5 additional to run. First prize 40 per cent., second 30 per cent. and third 20 per cent. of entry fees and forfeits.

First Series.

NELL R.—Geo. F. Reed's b., w. and t. and ticked bitch (Ned—Haida)

with

BELLE—Walter Randall's b., w. and t. bitch (Fitzhugh Lee—Baby Deane).

LEWIS—Howard Almy's t. and w. dog (Bannerman—Parthenia)

with

ZENO—Awashonk Kennels' b., w. and t. dog (Deacon Tidd—Daisy).

SPARK R.—Geo. F. Reed's b., w. and t. dog (Kennealy's Lee—Skip)

with

MARGUERITE—F. W. Chapman's b., w. and t. bitch (Fitzhugh Lee—Dido).

DRUMMER BOY—W. E. Deane's b., w. and t. and ticked dog (Rove—Wenonah)

with

SPRINGER—H. S. Joslin's b., w. and t. dog (Sport—Belle).

SNYDER III.—H. S. Joslin's b., w. and t. dog (Snyder II.—Nancy)

with

PRINCE—D. Quinn's b., w. and t. dog (Sam—Baby Deane).

The running in the 13-inch All-Age class commenced at once.

All-Age Class—13in. and Under.

BABY DEANE—BECKY BATES.—They were cast off just at sunset. Baby was handled by Patrick Kennedy and Becky by W. S. Clark. A rabbit was quickly started, and the race was a pretty one, up and down a hillside into a swamp. Baby showed great hunting sense in her search for game and in casting at a loss. She was a trifle faster than Becky, though the latter was in the race all the time. When it was too dark to distinguish one from the other they were ordered up, and the running for the day was over.

Thursday.

The heavy fog of the morning quickly disappeared and a hot summer's sun beat down all day. Scent, however, lay better than yesterday, and the sport in the champion class was the best of the week. The trials were finished. Becky Bates, who did so well on Wednesday, was withdrawn on account of a severe cold.

FRANCIS—LOLA LEE.—These beagles are as like as two peas and it was difficult to distinguish one from the other. Francis was handled by C. O. Smith and Lola by Walter Randall. The underbrush was very wet and scent lay poorly. Both did some back-tracking, but Francis showed herself to better advantage than Lola and had the best of the poor heat. Down 50 minutes.

BLOSSOM—NANCY LEE.—The former was in charge of A. H. Morse and the latter of Howard Almy. Blossom covered her ground prettily and drove true in a dashing style. Nancy did not press for the lead and acted as if she had been hunted with a faster hound. She merely followed the leader. Down 30 minutes.

FRANCIS—LOLA LEE.—This brace was now given 25 minutes more to see what they would do under more propitious circumstances, but no game was found, and Francis hunted so wild that she could not be found when ordered up.

Second Series.

BLOSSOM—BABY DEANE.—Cast off on a rocky hillside, where a rabbit had been seen. Baby opened first and made the running in a short race. Both are merry, spirited workers, but Baby hunted her ground out better than her mate. Down 29 minutes.

FRANCIS—NANCY LEE.—Francis found a rabbit in a brier patch and drove him prettily to earth. Nancy merely followed. Down 7 minutes.

NANCY LEE—LOLA LEE.—Nancy now ran in better form and depended upon herself and not on her running mate. She won without trouble.

The judges awarded first prize to Baby Deane, second to Blossom and third to Francis. Nancy Lee took the reserve.

OXFORD, Mass., Oct. 6 and 7.—All-Age Stake open to all beagles, 13in. and under, that have not been placed first in any open class at a field trial. Entry fee $3; $5 additional to run. First prize 40 per cent., second 30 per cent., and third 20 per cent. of entry fees and forfeits.

First Series.

BABY DEANE—John Mullane's w., b. and t. bitch (Fitzhugh Lee—Belle Dimon)

with

BECKY BATES—C. J. Prouty's w., b. and t. bitch (Fitzhugh Lee—Francis Forest).

FRANCIS—W. E. Deane's b., w. and t. bitch (Flute D.—Lady Glenwood)

with

LOLA LEE—Walter Randall's w., b. and t. bitch (Fitzhugh Lee—Parthenia).

BLOSSOM.—A. D. Fiske's w., b. and t. bitch (Fitzhugh Lee—Lady Novice)

with

NANCY LEE—Howard Almy's w., b. and t. bitch (Fitzhugh Lee—Jude).

The running in the open classes was now ended and immediately after lunch entries for the Champion Stakes were called. Three filled in the 13in. class and one in the 15in. class. H. L. Kreuder's Buckshot and Zillah were to be entered, but did not arrive till Friday morning. The entries are given in the summary.

Champion Class—13in. and Under.

First Series.

OLAF OF DENMARK—LADY NOVICE.—Olaf was handled by Henry Hanson and Lady by A. H. Morse. Both beagles are stylish, merry workers, and were under fine control. Both are fast. Olaf was tonguey and excitable. Lady is very level-headed and quick in catching the turns. She also outfooted Olaf, but the little fellow was in the race every minute and the chase was an exciting and interesting one. Down 15 minutes on a rabbit that proved to be a good runner. Lady the better beagle of the two.

OLAF—SPOT R.—In the draw Spot took the bye and the judges ordered her down with Olaf as a running mate

The first rabbit started was lost, but the second ran well and made another exciting race. It was hustle and go every moment from start to finish, and when bunny was at last forced to take refuge in his burrow every one was glad of a moment's breathing spell. Down 40 minutes. Spot R., handled by George F. Reed, won.

Second Series.

SPOT R.—LADY NOVICE.—This was a race well worth seeing. The rabbit was pressed hard all the time. Both beagles caught the turns beautifully and showed fire and spirit in all they did. Lady, however, was a little faster than Spot, and cast wider at a loss. She was also in better condition. Spot was handicapped by a litter of pups but three weeks old; nevertheless she did splendid work and pressed Lady hard for the prize. It was a race in which a trifle makes all the difference between a win and a loss, and this slight advantage was in favor of Lady. Down 15 minutes.

The judges awarded first to Lady Novice and reserve to Spot R.

OXFORD, Mass., Nov. 7.—Champion Stake, open to all beagles, 13in. and under, that have won a first prize in an open class at any field trial. Fee to run, $10. First prize, 80 per cent. of entry fees and title of field trial champion.

OLAF OF DENMARK—Henry Hanson's b., w. and t. dog (Bannerman—Parthenia),

with

LADY NOVICE—A. D. Fiske's b., w. and t. bitch (Rambler—Lady Vic).

SPOT R.—George F. Reed's b., w. and t. bitch (Kenneally's Lee—Skip), a bye.

In the 15in. Champion Stake there was but one entry, owing to the non-arrival of Buckshot. Spark R. was awarded first, as given in the summary.

SUMMARY.

OXFORD, Mass., Nov. 7.—Champion Stake, open to all beagles, 15 to 13in., that have won a first prize in any open class at a field trial. Fee to run, $10. First prize, 80 per cent. of entry fees and title of field trial champion.

Lady Novice, Baronet and Spark R. were now cast off together to determine which should win the special prizes given for the best beagle in the trials. They had a dashing run of 15 minutes in an open pasture. The rabbit was pressed hard all the time. Each beagle did splendid work and neither had a great advantage. Baronet pleased the judges the best and he received the award. This was by all odds the finest race of the trials and made a splendid wind-up to an enjoyable week.

To determine the winner of the special given for the best bench placed at the trials, all the winners were judged for show points by Judge Parry. Owing to a mistake A. D. Fiske's Phantom was absent and did not compete. Nell R. won.

Best trailer, Baronet.
Best starter, Baby Deane.
Best voice, Trill.
Best Derby entry bred by owner, Phantom.
Most stylish worker, Lewis.
Greatest sustained speed, Lady Novice. J. A. F.

THE INTERNATIONAL TRIALS.

THE annual trials of the International Field Trials Club were held at Mitchell's Bay, 16 miles from Chatham, Ont., commencing on Tuesday morning, Nov. 5, and ending on Thursday afternoon. On the evening before the trials the club met in Chatham and elected the following officers for the ensuing season: President, L. H. Smith, Strathroy, Ont.; First Vice-President, Wm. Brailsford, England; Second Vice-President, Ed. Armstrong, Detroit, Mich.; Secretary-Treasurer, W. B. Wells, Chatham, Ont. Ex. Com.—Messrs. Guttridge, Nicholl, Atkinson, Kime, Bangham, Totten, Smith, Davey, Tristem and Briggs. Auditors.—Messrs. Atkinson and Nicholl.

The matter of holding the trials later in the season was discussed and left to the executive committee for action. After the experiences of the week there is not the slightest doubt that the trials will be held at least two weeks later in ensuing years. A couple of weeks of fine weather can generally be counted on from the beginning of November and in a dry fall it makes the scent unsettled. Besides the climatic conditions, a club in the South has taken the International club's week and the trials always clash. A change of date will avoid this.

The finances of the club were shown by the treasurer's report to be in a flourishing condition.

Early Tuesday morning the party, composed of some twenty people, left for the Bay, where they joined the dogs and their handler, who were already on the ground. A start was made at 9:20 Tuesday morning, when the first brace was put down.

The trials were very unsatisfactory. In fact it is doubtful if more unsatisfactory trials were ever held by any club. It was all owing to the lack of birds and the greater lack of scent. There were certainly some birds in the county, but their presence seemed to be discovered by the dogs more by accident than by keen noses. When a pointer like Ightfield Deemster pounces in upon a bevy of quail, flushing them on all sides without ever being aware of their presence, there is something the matter with the scent. The ground was dry enough to burn, the grass passed a bright yellow and the brush heaps as dry as tinder. An immense amount of territory was discovered during the week, but the conditions were ever the same. Such a dry season was never before known in this locality, and to this condition is due the fact that the field trials were not field trials, but simply a contest of form and style.

The winner of the Derby was on birds only once, and the second prize dog did not have a point during the contest.

The weather throughout was hot and dry. For the first two days the sun's rays were fierce, and on Thursday it was cloudy and oppressive. It was very hard on the dogs, who had to do so much work for nothing. Every well in the county was dry, and the water bottles did not always hold enough to last the dogs till the end of the heat. Thirst therefore did its share in making the trials unsatisfactory.

The dogs were some of the best that ever put nose to earth. Mr. Brailsford, who inaugurated field trials and whose father gave the first bench show the world ever saw, in speaking to your correspondent said, "Rarely, if ever before, did such a splendid list of dogs contest in trials. Had there been other conditions the trials would undoubtedly have been of the highest order and among the best."

The judges—Thos. Guttridge, Chatham, Ont.; L. H. Smith, Strathroy, Ont., and Wm. Tristem, Detroit, Mich.—had their work cut out for them, but they did it to the best of their ability on the little work they had a chance of seeing. Their decisions in the Derby were universally commended, that sterling old sportsman, Wm. Brailsford, complimenting them on their judgment.

Mary Gold, the liver and white pointer bitch, the property of the Leamington (Ont.) Pointer Kennels, secured first place in the Derby. She is a beautiful little bitch, a hard and conscientious worker, and covers a lot of ground. Gold's only point was the prettiest of the week. She was showing great speed in a rough chopping on the evening of the first day, when she wheeled like lightning and came to a steady point at a treetop. She held it beautifully. It was evidently that point, combined with her splendid ranging abilities and beautiful style, that landed her the honor.

Brighton Dick has a great appetite for work. His style is not perfect, but he ranges with rare ability, cutting out his ground at a great rate. He outpaced several of his brace mates in this event. He has a nasty habit of giving tongue, especially in his first heat of the day.

Dash Antonio covered himself with glory in the All-Age Stake by winning the first prize. He has perfect style and ranging abilities. He was handicapped by a sore tail.

Brighton Dick, second in the All-Age Stake, had some bird work in it. He strengthened the favorable impression he created in the Derby by a couple of beautiful points. His backing was also splendid.

Ightfield Deemster decided third prize in the All-Age Stake with the pointer bitch Faustina. This decision was the only one of the judges' that was at all questioned, and that but slightly. Deemster did three times as much work in the stake as any other dog, and did it remarkably well.

The first brace put down on Tuesday morning was Merry Boy, of the Leamington Kennels, and Selkirk Tessa, W. B. Wells's setter bitch. Both showed good style and ranged well. Nothing found.

At 10:35 Winnie H., Thos. Hallam's setter bitch, and Count Vassar, Jos. Spracklin's setter dog, were put down. Neither showed much speed or style or located game. The Count pointed and flushed a partridge.

Ightfield Mentor and Brighton Maud, the former the property of Mr. A. P. Heywood-Lonsdale and the latter of T. G. Davey, were next. No game was located. Both dogs showed considerable speed and aptitude for work. Mentor's style seemed a little more attractive than the bitch. Their range was thorough and systematic.

Bonnie Dan of Coldhill, another of the English string, and Brighton Dick were put down at 1:05, after lunch. Dick showed good style and speed, outpacing Dan, who, however, did some beautiful ranging.

Selkirk Belinda (W. B. Wells) and Mary Gold were put down in the stubble. Belinda showed the greater speed at the first of the heat, but her style was not up to that of Mary Gold, who at once took every lady's fancy. Some excellent quail country was crossed, but nothing found during the entire heat.

Merry Boy and Selkirk Iris (W. B. Wells) went down next. Ivis did some very fine ranging until she flushed a quail and gave chase. Boy dropped to the flush splendidly. After that their ranging was very good.

Brighton Maud and Mary Gold gave a pretty heat, but nothing was seen of game. They ranged as before.

Mentor and Balinda set off through a cornfield, but failed to locate a marked bevy. The dogs were worked in the direction the birds were seen to go, and Mentor soon came to a pretty point on foot scent. No game was found. Balinda made a good point some time afterward, but spoiled her chances by breaking and running.

At 5 o'clock Iris and Dick went down with game near them. They worked energetically until Dick dropped to a flush of a bevy. There were no points in the heat, but the presence of game made both dogs show good style.

Bonnie Dan and Maud were the last brace put down on Tuesday. Each made a good point and showed great improvement over their former work.

Wednesday.

The second day started with Mary Gold and Brighton Dick in wheat stubble, where birds ought to be, but were not. Dick did his fox-hunting act, and initiated the bitch; but it was a very few minutes before each was working away independently and showing some very fine ranging, the bitch having the advantage in style. They were taken up at 7:55.

Mentor and Maud then went down and gave some very pretty work, the dog showing to the better advantage. He pointed beautifully through a fence, and the setter backed well. Mentor drew up and got over the fence. The setter did likewise, but lost the scent, cut in ahead of the dog, and flushed a single and dropped immediately. On the whole, it was very satisfactory work, and the dogs were taken up after a ten-minute heat.

Selkirk Tessa and Brighton Maud then went down. They ranged through a chopping, but passed a bevy of quail. The dogs were worked back toward them, but so wretched was the scent when the birds were on the dry twigs that the bevy was nearly missed again. Maud, however, led in a pretty point, and Tessa soon followed. They both dropped to a flush. The same performance ensued in the next field.

Bonnie Dan and Winnie H. gave a very slow heat, the latter being the more rapid. As to style each was good, but they located nothing.

Mentor and Dick went down in the last heat in the contest, evidently to determine some prize. They got no game, but did some pretty work. Dick outpaced his brace mate and showed to better advantage. When they were taken up the judges went into consultation and determined the prize winners. In giving the decisions Mr. Smith referred to the hard work of the judges on account of the lack of bird work and said they had done the best they could.

The result gave general satisfaction.

First prize, 40 per cent. of stake $70.00, Mary Gold, liver and white pointer bitch, owned by the Leamington (Ont.) Pointer Kennels. Second prize, 20 per cent. of stake, $35.00, Brighton Dick, black and white setter dog, owned by T. G. Davey, London, Ont. Third prize, 15 per cent. of stake, $26.25, Ightfield Mentor, liver and white pointer dog, owned by Mr. Heywood-Lonsdale, England. Fourth prize, 10 per cent. of stake, $17.50, Brighton Maud, sister to Dick.

The All-Age Stake.

Dash Antonio and Luke, W. B. Wells's black and white setter dog, started off at a lively gait and did some very rapid and systematic ranging, Dash taking the lead. Before they were down long Dash made an excusable flush and dropped. Dash soon held a point well, but no game was found. Luke pointed shortly afterward, and Dash coming up the wind backed well. A single was flushed.

At 10:50 Cleopatra, a black, white and tan setter bitch, owned by Wells, went down with Beppo's Maid, a liver and white pointer bitch from Leamington. Cleo's style was the better and she outpaced her also. The range of both was good, but did not bring forth any game.

After lunch Deemster set a merry pace for Faustina, T. G. Davey's pointer bitch. The scent was decidedly off in a country where birds must have been. Deemster's work was very good and the bitch showed herself to be very hard working and thorough. Deemster came to a point in a chopping, but the bitch crossed without giving any sign. No game was found then or in the heat.

Miss Fortune (Davey) and Roma (Brailsford), two setter bitches, went down at 1:05. The latter proved herself to be a decidedly stylish worker, but the speed of each was about the same. They ranged well, but the only thing the heat brought forth was a false point by Roma, which she drew to well.

Brighton Dick and Ridgeview Tenny (Leamington) went down at 2 o'clock. Dick showed himself to be the better dog. Tenny's range did not take in enough territory, while his mate circled well. The scent was certainly off. Shortly afterward Dick made a flush and dropped to wing, while Tenny came up and pointed; as he did so the birds flushed. At 3:20 the dogs were taken up after a good heat.

Musa, Mr. A. P. Heywood-Lonsdale's dog, drew the bye and was put in a chopping by herself. She failed to locate any game, but showed good style and speed.

The second series was commenced by Beppo's Maid and Cleopatra going down together at 3:55, and worked as before. Beppo made a steady point and Cleo backed Maid, but no game was found.

Deemster and Faustina were then put down together. The former was not long in coming to a splendid point. Faustina came up from another quarter and rapidly swung into a point. The dog was sent on and flushed six birds, dropping immediately. Shortly afterward both dogs got into a bevy of quail in a chopping, but though birds rose on all sides of them, no points were made. The birds were sitting on dry twigs and made no scent. This work was not very satisfactory. Deemster again made a point and the bitch crossed it, but noticed nothing. There was no game.

This concluded the day's work.

Thursday.

An early start was made on Thursday and Deemster and Faustina again went down before 7 o'clock. Their work was as before, when no game was located.

Miss Fortune and Ightfield Roma then went down. Miss Fortune made a flush and immediately dropped, behaving well. Again she made a poor point in a brush pile. Roma flushed a single shortly after and dropped. The bird rose while she was moving. The rest of the heat was taken up with clearer work on both sides.

Cleopatra and Beppo's Maid followed, the former outpointing the latter, while both showed good style and an aptitude for work. There was game in the region and they acted cautiously, but nothing was found.

Deemster outranged Faustina in the next heat when they were put down together, but each showed that he or she was not afraid of work. There was no game found.

Luke and Dick went down together at 11:25 in a stubble field. Luke outpaced his mate, who gave tongue and followed, afterward settling down to steady and independent work. In going down the side of a thicket Luke wheeled and pointed Dick backed. Again no game. Shortly afterward Dick pointed independently and dropped to a flush. Then he pointed again shortly afterward, and Luke backed well; but again no game. The dogs did well, considering the conditions.

Deemster and Dash Antonio then went down. Deemster pointed, but nothing was found. A few minutes later Deemster made another point, flushed and leaped across a ditch in the direction of his bird. Here he dropped and behaved well. The heat was a very short one.

Musa and Faustina were the last brace down before lunch. Faustina drew to a flush. As she drew up to a point a little later Musa ran in and flushed a single. A few minutes' more ranging produced a steady point from Faustina, who dropped to a flush; Musa gave chase.

After dinner Faustina and Cleopatra were put down and ranged very well. Both dogs flushed birds a little later, the bevy raising without a point being made. Up at 1:30.

Dash Antonio and Brighton Dick.—Dash outpaced his rival and showed better style. He pointed a hare, and when he discovered his mistake he looked back at Dick, who was backing him, as much as to say, "Well, you're fooled too." The heat showed no work on game.

This was the last of the trials, and the judges gave their decisions. First prize, 40 per cent. of stake, $46, Dash Antonio, blue belton setter dog, owned by William Bangham, Windsor, Ont. Second prize, 30 per cent. of stake, $34.50, Brighton Dick. Third prize, 15 per cent. of stake, $7.25, divided between Ightfield Deemster, liver and white pointer dog, owned by Mr. Heywood-Lonsdale, England, and Faustina, liver and white pointer bitch, owned by T. G. Davey, London, Ont.

There was a larger crowd than usual following the dogs, and all had a pleasant time.

Mr. W. B. Wells, the painstaking secretary-treasurer of the club, left no stone unturned to insure the enjoyment of the week by all those at the Bay. At the meeting of the club he was unanimously re-elected to the office which he has filled so well for years. His work was fully appreciated by all, and his failure to take a prize with any of his excellent canines was a matter of regret.

ROD RANDOM.

CHATHAM, Ont.

Mr. A. M. Young, of the Manchester Kennel Co., made us a very pleasant call one day last week. He mentioned that birds were fairly plentiful in his section of Tennessee,

POINTS AND FLUSHES.

UNDER date of Nov. 5 Mr. P. T. Madison, secretary of the Continental Field Trials Club, writes us as follows concerning the abandonment of the trials: "I have received letters from Stoddard, Buckle, Mayfield, Gray, Johnson and Hammond, and they all tell the same story: 'No birds.' Mr. Stoddard worked Tick Boy and other good dogs all day without finding a bird. They all say that from nothing to three small bevies in a day's hunt is the result. There are no birds in North Carolina; Tucker could not find any birds at High Point and has gone to South Carolina. As a result of this state of affairs we have received but twenty-six entries to our All-Age Stake. I therefore went to Chicago yesterday with proxies enough to constitute a quorum of the advisory board. After canvassing the situation thoroughly we decided that the best thing to do under the circumstances was to declare the trials off. The forfeits will all be returned at once, and the club will be in a financial condition to give trials next year. I regret exceedingly this state of affairs and yet I think we did the right thing."

Mr. C. E. Buckle's excellent communication is worthy of the earnest consideration of all who are interested in field trials. He points out a feature which at one time was so common that it was farcical. It is still used too much. Criticism from fair and skillful sportsmen like Mr. Buckle would soon suppress the absurdities which have more or less a footing in the competition.

The Messrs. Rutherfurd will sell at public auction a number of fox-terriers to make room for younger stock. For particulars, see their announcement in our advertising columns.

Messrs. G. Muss-Arnolt, Washington A. Coster, Fred. Hodgman and S. C. Bradley arranged to leave for Newton, N. C., on the 12th inst., the Eastern Field Trials Club's trials being the attraction.

We take the liberty of publishing an item, concerning dogs, from a letter written by Lieut. H. T. Allen, for some years military attaché at St. Petersburgh and now of Fort Riley, Kans. Mr. Allen mentions that he has started a kennel of Russian wolfhounds which number five at present, including Col. Dietz and two which Mr. Allen imported. He remarks: "I could get no better dogs or better bred ones in Russia than these I have." Mr. Allen has organized a post foxhound club, to whose revenues he will devote the proceeds of the sales of puppies from his kennel, a generosity which is all the more admirable for its rarity.

The Western Massachusetts Fox Club's eighth annual meet is fortunate in having its meet after rain had fallen, thus escaping the effects of the drought which have proved so disastrous to similar events. This meet takes place at Westfield, Mass. on Nov. 13 and 14. The annual dinner is served on the evening of the first day.

Mr. Wm. Brailsford, who has so skillfully managed the interests of Mr. Heywood-Lonsdale in the field trials and withal so pleasingly as to add many more to his already large circle of friends in America, sailed for England on the Majestic on Wednesday of this week. Mr. Brailsford and Bob Armstrong made a brief call in FOREST AND STREAM'S office on Tuesday. The former expressed himself as being much pleased with his visit.

In our advertising columns, C. C. Gaines, Poughkeepsie, N. Y., offers broken setter, G. A. Buckstaff, Oshkosh, Wis., offers prize-winning beagles. West Philadelphia Kennels, Philadelphia, offer terriers and collies. Box 108, Stevensville, Pa., offers setters. J. Feulner, Cherry Valley, N. Y., offers setter. H. N. Howell, Lancaster, Pa., offers broken setter. I. M. D., New York, offers cockers. G. O. Allen, Mountville, Conn., offers broken setters. F. Cavanaugh, Boston, offers broken setter.

Postponement of Meet.

THE executive committee of the National Fox Hunters' Association met at Lexington Nov. 6 and decided to postpone their annual meet until Dec. 2, '95. Cause, unprecedented drought. ROGER WILLIAMS, ch. com.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Mr. E. Goodall's Beauty, cocker spaniel bitch, Oct. 19, to Corktown Cupid.
Mr. Arthur Knowlton's Fern, English setter bitch, Oct. 26, to Kent III.
Mr. W. H. Worth's
Lawn Hazel, Gordon setter bitch, Sept. 2, to Don N.
Lawn Nance, Gordon setter bitch, Aug. 24, to Don N.
Hilda, Gordon setter bitch, Sept. 4, to champion Rexmont.

SALES.

Corktown Kennels have sold
Œnone, cocker spaniel bitch, to Mr. F. Boulton.
Corktown Flirt, cocker spaniel bitch, to Mr. G. Crabb.
Corktown Trilby, cocker spaniel bitch, to Mr. E. Goodall.
Corktown Chappie, cocker spaniel dog, to Mr. E. W. Fiske.
Corktown Rex, cocker spaniel dog, to Mr. Robt. Aull.
Corktown Taffy, cocker spaniel dog, to Mr. John Firsching.
Mr. W. H. Worth has sold
Lawn Flirt, Gordon setter bitch, to Mr. Wm. Snyder.
Lawn Donald, Gordon setter dog, to Mr. Walter L. Wilder.
Lawn Riot, Gordon setter dog, to Dr. J. W. McCausland.
Mr. J. N. Alexander has sold Chappie, wire-haired fox-terrier dog, to Mr. F. A. Cadwell.

Yachting.

THE Boston *Herald* sets forth in excellent shape the many serious objections to the continuance of the 90ft. class and the advantages to be gained by the revival in its place of the 70ft. class or its modern equivalent. We can commend the *Herald's* arguments most heartily, as they are the same that we have advanced since 1886, and which on each occasion have been ridiculed by the *Herald*, with its fallacious plea for the "fastest yacht" to defend the America's Cup. What it says to-day was equally true when the New York Y. C. refused to enter into an agreement with the Royal Clyde Y. C. in the fall of 1886; when the new deed of gift was made immediately after the receipt of Mr. Charles Sweet's challenge in 1887, and again in 1889 when the motion that the club should meet Valkyrie I. with a 70-footer was declared out of order by the Commodore. We sincerely hope that the arguments of the Boston *Herald* may prove convincing, and that the last yacht of the 90ft. class has been built for international or any other racing. At the same time it must be a matter of regret if the class be allowed to pass away, by conversion or corrosion, without some conclusive racing between Valkyrie III. and Defender. We should like to see these two yachts raced thoroughly and skillfully for a series of races, no matter what the prize may be; until their exact merits on every point of sailing and under all ordinary conditions are satisfactorily demonstrated, and then to see them give way to a fleet of smaller yachts, of not over 75ft. racing length.

WE learn with great regret that the Boston *Herald* disapproves of the new 15ft. class, on the excellent ground that it is promoted by "Anglo-Maniacs." This is a serious charge, and worthy of full consideration before anything further is done toward new challenges and boats. In view of the very high position in international racing now occupied by the "Boston *Herald* man" as the American representative of Lord Dunraven, it might be well for the Seawanhaka Corinthian Y. C. to seek his advice as to just what obsolete type of "mean length" skimming-dish or sandbagger the club should adopt in place of the 15-footer, in order to avoid the stigma of encouraging Anglo-Mania.

Defender's Measurement.

A PERFECT storm of angry condemnation has been aroused in this country by the news cabled from London on Nov. 9, that Lord Dunraven, in a long article in the *Field* of that date, had made the charge that Defender took on ballast between the two official measurements made on Sept. 6 and Sept. 8. The article in the *Field*, which will be published by his Lordship in pamphlet form, alludes as follows to this matter:

'I would confine myself to the cause of my withdrawal, namely, overcrowding of the course, were it not that other matters have been alluded to in the report to the New York Y. C. made by the Cup committee."

He thereupon proceeds to take up the matter of measuring the yachts, and quotes terms of the agreement, including the New York Y. C. rule that the measurer should affix distinctive marks at each end of the load waterline. He then goes on:

"I was under the impression that this rule meant that vessels would be marked on stem and stern in such a way as to make marks externally visible, as is the case under our yacht racing association rules, but I learned at a meeting with the Cup committee on Aug. 30 that, according to the practice of the New York Yacht Club, the load waterline length is marked by a couple of copper tacks on deck. I did not consider this method of marking satisfactory, as it obviously afforded no means of judging whether the vessel was sailing on her proper measured length or not, but I contented myself with observing that it did not appear to me of much practical value, as I did not feel justified in demanding a departure from the ordinary usage without some strong and definite cause.

"Sept. 4 Mr. Smith, chairman of the Cup committee, informed me that Mr. Iselin was anxious for the agreement to be amended so as to insure that one clear week day should intervene between each race. To this I agreed and took the opportunity afforded by this reopening of the agreement to press upon the committee, in the following letter, my views on the subject of measuring and marking previously expressed in conversation:

"'439 FIFTH AVENUE, Sept. 5, 1895.

"'DEAR MR. CANFIELD: I have received your letter notifying me of the alteration of dates. That question having been reopened, I wish to call your attention to another matter which, on reflection, I do not consider satisfactory. This contest may possibly extend over a period of ten days or a fortnight. It is obvious that alterations in the load waterline length of a vessel may, under present conditions, be made without an owner's knowledge and without the possibility of detection. It is, of course, impossible to guard absolutely against such an occurrence, but these contests cannot be compared with ordinary races, and in the interest of the public and of the owners, who have to do their best to see that rules are obeyed, it is surely right and necessary that the Cup committee should take every precaution to see that the vessels sail on their measured load waterline length.

"'For this reason I request that the measurer be instructed to mark each vessel's measured load waterline length on stem and stern, and to take any steps that he or the committee think advisable, by remeasurement at any time, or by any other means, to ascertain that the load waterline length as measured is not exceeded in sailing. To mark the vessels is a perfectly simple matter. A scratch with a file or chisel and a distinct paint mark should suffice. Yours very truly,

"'DUNRAVEN.'"

"To that letter I received no written reply, but my understanding was, and I was told verbally, that the committee saw no object in reconsidering the points involved. I did not further press the matter, as I considered the committee responsible, and that, unless necessity compelled, I had no right to insist. The agreement was signed by Mr. Smith and myself on board of the Valkyrie's tender, City of Bridgeport, on Sept. 6.

"The first race was sailed Sept. 7. I am of the opinion that the Defender did not sail on her measured load waterline length during that race. I should first explain that, to the best of my belief, none of the gentlemen interested in the Defender lived on board of her or on board of her tender, the Hattie Palmer; that the Defender's crew slept on board of her, and that in consequence a good deal of material—men's cots, etc.—had to be transferred backward and forward between the Hattie Palmer and the Defender. We had a good opportunity of observing the Defender when she lay close to us in Erie Basin, previous to docking, after her final trial race with the Vigilant, on Aug. 31. When she came into the Basin to be measured on Sept. 6, it was plain to me, as to all on board the City of Bridgeport, that she was floating considerably higher than on former occasions. This was, of course, quite unobjectionable.

"I may mention that, according to Mr. Hyslop, the official measurer, the Defender was some 6in. shorter when measured for the Cup races than when measured for the Goelet cup race. Both yachts lay inside Sandy Hook on Friday night. The Defender's tender, Hattie Palmer, lay alongside of her, and the crew were at work from dark to 1 o'clock in the morning. On Saturday morning early my attention was drawn by those on board the City of Bridgeport, including representatives of her American crew, to the fact that the Defender was visibly deeper in the water than when measured. She so appeared to me, but as her tender was alongside and engaged, apparently, in taking material out of her, it was impossible to form a definite opinion at that time.

"When I put Mr. Henderson, my representative, on board the Defender about 9 o'clock in the morning, after the Hattie Palmer had left her, I felt perfectly certain that the Defender was immersed deeper than when measured. Not only was her bobstay bolt nearer the water, which might have been the result of an alteration of trim, but judging by the line of bronze plating and by the fact that a pipe amidships, which was flush with the water when she was measured, was nowhere visible, she was in my deliberate opinion floating about 4in. deeper in the water than when measured.

"I was reluctant to make a formal complaint to the Cup committee on a matter which it was, of course, impossible for me to verify, and in any case nothing could be done before the race was started. But as soon as Mr. Latham A. Fish, a member of the committee, came on board the Valkyrie as the Defender's representative, and before the race was started, I stated the whole case to him. I told him I thought that some mistake had been made, and that all the weight put into the Defender, after measurement, had not been taken out before the race; that I was positively certain she was sailing at least a foot beyond her proper length, and I requested him to take the earliest opportunity of mentioning the matter to the committee.

"Mr. Fish asked me what suggestions I could make. I replied to the effect that I wished the committee to put one of its members or some reliable representative on board of each yacht immediately after the race, and to have both vessels remeasured, if possible, that evening. If that were impossible, that the members of the committee or their representatives should stay on board in charge of the vessels until they were measured; that the load waterline should be marked on both vessels externally, in such a way as to be plainly visible, and that the members of the committee should take any other steps they thought desirable to insure that the yachts should not exceed their load waterline length when racing.

"I put Mr. Fish on board of the committee boat immediately after the race. No action was taken that evening beyond ordering the vessels to be remeasured and marked externally on the day following. No members or representatives of the committee were placed in charge pending remeasurement, as I had requested. Had this been done my contention that the Defender exceeded her measured length, and the extreme limit of length imposed by the agreement and deed of gift, namely, 90ft., would have been proved or disproved. The Defender lay on Saturday night at Bay Ridge with the Hattie Palmer alongside of her. Both yachts were measured the following day, Sunday afternoon, when their load waterline length was found to be practically the same as when measured on the Friday previous. But, obviously, that fact affords no proof that either or both of them had not exceeded their measured length when sailing on Saturday.

"My action in making this complaint has been severely criticised. I will only say that I considered it my duty to act as I did, and that I asked for nothing that I was not ready and willing to submit to myself."

The foregoing is all the pamphlet contains on the subject of measurement. The rest is a restatement of Dunraven's case.

At Mr. Iselin's request a special meeting of the New York Y. C. will be held on Nov. 18 to consider the subject of Lord Dunraven's charge.

Mr. Rose's Late Challenge.

THE following correspondence probably disposes finally of the challenge sent by Mr. Charles Day Rose and the Victoria Y. C.:

39 HILL STREET, BERKELEY SQUARE, Oct. 29, 1895.

DEAR SIR: I am in receipt of your letter of Oct. 16, and again beg to thank you for all the courtesy you have extended to me in my recent challenge for the America Cup.

I beg that you will accept my assurance of my great regret in having found it necessary to withdraw the same.

I am writing to Mr. J. D. Smith, the chairman of the committee, on the subject and have no doubt that you will have an opportunity of learning from him the motives that have influenced me in coming to this decision.

The outcome is naturally a great disappointment to all those that desire to see a fair contest. Yours faithfully, CHARLES D. ROSE.

J. V. S. ODDIE, Esq., Secretary, New York Y. C., New York.

ROYAL VICTORIA Y. C., RYDE, Oct. 28, '95.

DEAR SIR: I am instructed by the sailing committee of the Royal Victoria Y. C. to confirm my telegram of Oct. 24 as follows:

"Secretary New York Y. C., New York;

"Have received letter from Mr. Rose withdrawing challenge for America Cup. Have called committee. Will mail you officially.

"THELLUSSON."

I also forward you a copy of Mr. C. D. Rose's letter.

I therefore, on behalf of the Royal Victoria Yacht Club, hereby withdraw the challenge for the America Cup sent by this club in the name of Mr. C. D. Rose.

I beg to acknowledge the receipt of your letters dated Oct. 9 and 16, for which I am much obliged.

I have the honor to be, sir, your obedient servant,

PERCY THELLUSSON, Secretary.

To J. V. S. ODDIE, Esq., Secretary New York Y. C., New York.

SUFFOLK HOUSE, NEWMARKET, Oct. 22, 1895.

DEAR SIR: In view of the repeated comments that my challenge for the America Cup might be construed as an expression of opinion on Lord Dunraven's action in connection with the last race, I beg that you will kindly cable to the New York Yacht Club committee that I desire to withdraw my challenge.

I should like to add that when I decided to send a challenge I did so solely in the interests of sport and with the desire to win back the America Cup, and that no question concerning any incidents of the last series of races in any way influenced me. I therefore naturally deplore my action having been misconstrued. Believe me yours faithfully, CHARLES D. ROSE.

To the Secretary of the New York Yacht Club.

"James D Smith, Esq., 42 Broad street, New York:

"DEAR SIR—I have the honor to acknowledge the receipt of your favors of Oct. 15 and 16, the former advising me of the appointment of a committee of gentlemen to arrange the conditions of a match for the America's Cup of 1896, and the latter inclosing copy of a letter sent to the Secretary of the Royal Victoria Y. C. embodying the conditions formulated.

"Since your letters were written you will have received intimation that, to my great regret, I have decided to withdraw my challenge.

"I have been influenced in coming to this decision entirely through the motives that have been attributed to my action in making the challenge.

"Although it is, perhaps, unnecessary to send you a formal contradiction of many statements that have been made, I should be glad if you would kindly assure your committee that when I decided on sending the challenge it was done entirely in the interests of sport generally, and with the desire to win back the America's Cup, and at the same time it never occurred to me for one moment that my action would be construed by the public into a personal expression of opinion on the result of the last series of races. As, however, the press generally, and a certain section of the public, thought fit to impute to me other motives, and such as might tend to weaken the good feeling that has hitherto existed between the sporting community of the two countries, I trust that your committee will recognize that I have taken the only course that is possible, and exonerate me from any intention of treating the acceptance of my challenge in any other way than with the consideration it is entitled to.

"I beg to thank you personally and your committee for the courteous manner in which they have dealt with my challenge, and only regret that I have found it impossible to proceed further in the matter. "I remain yours faithfully,

"CHARLES D. ROSE."

"39 HILL STREET, Berkeley Square, Oct. 29, 1895."

Society of Naval Architects and Marine Engineers.

THIRD ANNUAL MEETING.

New York, Nov. 7-8.

THE first session of the third annual meeting of the Society of Naval Architects and Marine Engineers was opened at 10 A. M. on Thursday, Nov. 7, at the house of the American Society of Mechanical Engineers, 12 W. 31st st, New York, with President Griscom in the chair. After a short address by the president and the reading of the report of the auditing committee, and other routine business, the first paper on "American Maritime Development," was read, by Capt. Henry C. Taylor, U. S. N., President of the Naval War College. The paper presented forcibly and at some length the opportunities for the development of the commerce of the United States in the northern portion of South America, Capt. Taylor strongly urging the necessity for studying the details of this trade with a view to providing the best possible types of vessels for it. He also urged the necessity for the early completion of the Nicaragua Canal. The paper elicited general commendation.

The Centerboard.

Owing to an unforeseen occurrence, it became necessary to postpone paper No. 2 until Friday, so paper No. 9 was put in its place, on "The Centerboard—Its Influence on Design, its Value and its Proper Use," by W. P. Stephens, Associate, Yachting Editor of THE FOREST AND STREAM. The papers are all copyrighted by the society, but the following extracts from Mr. Stephens' paper are published by permission:

The words "ship" or "vessel" convey inevitably to the mind the idea of a single unbroken water-tight structure, oblong in general proportions, built up on a solid keel, and partaking more or less, whether in the primitive canoe of the savage or the great modern "liner," of one conventional form.

Outside of this great class, comprising the vast majority of craft of all ages, is found a mixed fleet of nondescript types which, while serving each its own special purpose, depart greatly from the accepted ideal of a ship, and, in many cases, violate all the canons of naval science. In this class are the various catamarans, the balsas, the outrigged proas, and the surf boats of Madras, and, most remarkable of all such exceptional types, the centerboard craft which has figured so prominently for nearly a century in the history of navigation in America.

To us, familiar with it from our earliest knowledge of the water, the striking characteristics of the type appeal with little force; but if, with our knowledge of the sea, of naval construction, and of the strains and stresses to which every vessel is subjected, the idea were laid before us for the first time of a vessel with the entire backbone and floor construction cut away for the middle third of her length, devoid of deck frame almost from mast to rudder post, with a great box amidships open to the sea, and with a thin movable plane projecting deep below the bottom, it would be strange if the majority would not condemn on sight a combination so unmechanical, so lubberly, and so dangerous. Looking at the centerboard as nearly as possible from their point of view, a purely theoretical one, we can comprehend in a measure the feeling which led the naval architects and yachtsmen of Great Britain to retain until so late a date as 1887 the rule prohibiting the entry of a centerboard yacht.

In that earnest and even bitter controversy between the adherents of the keel and centerboard types which has extended over the greater part of the past fifteen years, and in which it has been my lot to take part as a strong partisan of the keel boat, a great deal has been written on both sides, but little of it other than controversial, and of no permanent technical value. Now that the fight has ended in the full recognition of the keel yacht in America and the admission of the centerboard yacht to all British races, all partisan feeling has disappeared, and, with the prevalence of broader views on both sides through the surprising developments of modern yacht designing, it should be possible to sum up, more thoroughly and fairly than has yet been done, the points, bad and good, of the centerboard type.

The origin and early use of the centerboard may well be omitted and

the subject taken up at the beginning of yachting in America—about 1845. The first yachts were keel boats, closely related, through English models, to the smaller sizes of revenue cutters and commercial vessels. About New York, the birthplace of American yachting, the deeper portions of the water-front were already taken up, even at that early day; there were no wealthy yacht clubs with luxurious houses and costly basins and anchorage grounds; and the few individual yachtsmen were glad to find safe and inexpensive moorings on the mud flats of Communipaw, Gowanus and Hoboken. A very brief experience of the few available yacht anchorages showed how unsuitable they were for even the shoaler of the existing keel yachts; and with the then famous North River packet and freight sloops before them as models, yachtsmen very naturally drifted into the exclusive use of the shoal centerboard type. At first this worked to the advantage of the infant sport; the yachts were inexpensive in construction, their proportions and models permitted the use of stone or slag for ballast, they could be readily beached for cleaning, or hauled up for the winter, without the use of railways, and suitable anchorage could be had at no expense. In such early yachts as the Steers'ce sloop Julia, in which the centerboard was used only as an adjunct to a vessel of good proportions and model, the influence of the board was beneficial; but before many years the whole design of the yacht was subordinated to the centerboard. Without tracing in detail the many steps of the change, it is only necessary to note the contrast between the keel yacht of 1845 and the early centerboard yachts, on the one hand, and, on the other, the extreme centerboard type which was in universal use in America in 1880.

The centerboard lent itself as a willing accessory to the sacrifice of that depth which is essential to a safe range of stability; mere sail-carrying power being derived from an excess of beam, which was but an additional element of danger. In the search for speed under special local conditions, mainly those of summer racing, the true principles of naval architecture, so apparent in the work of George Steers and others of the earlier designers, were utterly ignored, and a most dangerous and vicious school of designing prevailed throughout American yachting.

Taking the centerboard sloop and schooner as they were up to 1880, dangerously shoal and wide in model; often clumsily built of soft wood with the poorest fastenings; faultily ballasted with stone and iron inside; the hull inherently weak in form from the great beam and lack of proportionate depth; the entire middle portion of keel and floors cut away, with the familiar "hinge joint" where the mast was stepped, just forward of the trunk; and with the deck construction made worse than useless as an element of strength through the absence of all beams in the middle portion of the vessel and the presence of a great superstructure, the cabin trunk—the accepted laws of naval design and construction fail to give any reason why such craft capsized no oftener and kept afloat as long as they did; and we can only fall back, for an explanation, on the doctrine of a special providence.

Whatever may be urged for the shoal centerboard type under certain conditions and in skilled hands, the universal adoption of one extreme of this type for all purposes, and to the complete exclusion of all other types, was as criminal as it was discreditable to the technical knowledge of a nation which had before, as it has since, produced the finest pleasure craft ever floated; and the loss of life, which even now continues in a lesser degree, is something fearful to contemplate. The historic capsize of the huge schoooner yacht Mohawk in 1876, drowning owner, wife and friends, was but a trivial incident compared with the innumerable drownings from smaller craft of equally bad design. That certain yachts of this same type have at times made excellent records in hard-weather races, and even at sea (as instanced by the shoal schooner Vesta in the midwinter ocean race of 1866), in no way disproves the serious charges brought against it by its opponents, or justifies its once universal use.

This is one side of the centerboard question, and a very serious and practical one; but there is another which is much pleasanter to look at. The immense areas of shoal water on the ocean and lake coast of the United States and their tributary rivers have called for light draft as the one prime requisite, and especially was this the case before the days of the steamboat and the railroad. At that period the shoal draft sloop or schooner was the sole means of communication, to mention only one typical locality, between New York and the cities of the Hudson River and Long Island Sound, as well as the numerous small places from which came bricks, lumber and all varieties of farm produce. The whole local coasting commerce, both passenger and freight, was carried in vessels of 3 to 6ft. extreme draft, whatever their other dimensions. On such limited draft any considerable amount of appendage outside of the hull proper, for the purpose of increasing the lateral resistance, was impossible; and, with little or no keel, the early vessels were dependent, for what windward power they had, mainly on the clumsy Dutch leeboards. The real development of this inland trade only began with the adoption of the centerboard (first used on the Hudson River about 1830).

From this time on until the river and Sound trade was monopolized by the steamboats and railroads, some time in the sixties, the centerboard coaster was developed into a national institution; soon extending beyond the first narrow limits of bay and river navigation, and finding a permanent and useful place in the coasting trade between New York, Boston, Philadelphia and the ports north and south from Halifax to the West Indies and South America. In the hands of competent and honest shipwrights the centerboard coasting schooner has disproved all theories as to the non-utility of the type for sea-going purposes; in a hull of moderate first cost and running expense it has carried safely, swiftly and profitably its cargoes of coal, lumber, sugar, firewood, barley, bricks or general freight, both on the lakes and on the Atlantic; up and down the "Beach," across Nantucket Shoals and around Hatteras in winter, light or loaded, taking in and landing its cargoes in localities inaccessible to the keel vessel. In the ocean coasting trade it has been, and still is, a powerful factor for good, and in the local trade it has been a godsend to the small farmer or miller or lumberman, carrying his product cheaply and safely from his own small creek or bay to a profitable market. In the face of such practical results all theories as to the initial weakness of the centerboard type or its inferiority as a sea-going vessel must stand aside; numerous instances of bad design and construction may be found, it is true, but they prove nothing against the type itself in capable hands. Prominent among the centerboard working vessels are the schooners used in the oyster trade between New York and Virginia, one of the fastest and best of which, the William H. Van Name, is described in the appendix.

Returning now to yachting, the popular appreciation which has so justly greeted the successful Defender marks the end of the battle begun in 1880 between the centerboard and keel types. The wonderful qualities of the great Herreshoff keel cutter—qualities which have been displayed in her work throughout the whole season, and not alone in the two unsatisfactory races with Valkyrie III.—have been recognized by all American yachtsmen without a murmur over the absence of the national trade-mark, the centerboard. The superiority of the keel over the centerboard type in speed had already been demonstrated in the success of such yachts as the 30-footers Katheen, Saracen and Fancy over Shark, Hawk and the older centerboards of the class; of the 40-footers Minerva and Gossoon over Verena, Nymph, Chiquita, Awa and Choctaw; of Wasp and Gloriana over some of the fastest of the old centerboard sloops of much greater size. In all of these classes, the recognized champions of the old type, Fanita, Rival, Crocodile, Hildegard and many others, have succumbed to the modern keel cutter, in spite of the efforts to improve them by lower ballast and better sails; and, further than this, the keel has triumphed over the deeper and more modern "compromise" centerboard, such as Cinderella, Tigress, Gorilla, Choctaw, Nymph and Awa—yachts which have shared with their keel sisters in all the refinements of modern designing, construction, ballasting and sail-making. The one exception which calls for special note here is the 46-footer Harpoon, designed in 1891 by Mr. Burgess, her beam being 16ft. 1in. and her draft 7ft. 6in., with a lead keel of 18 tons. While her races with the keel boats Wasp and Gloriana were by no means conclusive, she has made an exceptionally good showing for a centerboard against a keel boat in late years.

The racing records from 1889 to 1893 give ample proof of the superior speed of the keel boats over any type of centerboard yacht, in all sizes up to 60ft. waterline; but in the largest class, under 90ft. waterline, the issue was still in dispute up to 1894, Vigilant's success over Colonia and Valkyrie II. in 1893 giving new hope to the adherents of the centerboard. In strict justice, Vigilant has little bearing on the question; the typical centerboard yacht, as it figured for many years in the controversy, was essentially a hull with no appendage other than a scag or after deadwood, and with no outside ballast. The substitution therefor, as the exemplar of the centerboard type, of Vigilant, with about 6ft. of hull proper and 7ft. of appendage, a keel weighing seventy tons, the actual draft of 13ft. without the board being the same as the keel cutters Genesta and Thistle, was in itself a complete surrender. Accepting Vigilant, however, as a legitimate modernization of Gracie, Fanny and Grayling, the superiority of the extreme keel type, both in racing speed and in general good qualities, has now been fully demonstrated by Defender, and there can no longer be made good the claim that the centerboard is even equal to the keel in speed.

If there be any who would still disown Vigilant and advance the claims of a craft of the old centerboard type, it now rests with them to prove the case against such existing evidence as Wasp and Defender. I have tried during the past season to conceive of some type of centerboard yacht which would carry effectively a sail plan of over 12,000sq. ft. on a waterline of 89ft., and I cannot see that such a craft is within the bounds of practicability. The nearest approach would be an improved Vigilant; and such a craft, with a very deep keel and a great weight of low ballast, would be but a begging of the whole question. Neither can I see that it is possible to design a low-powered yacht of the same measurement to compete successfully with Defender. The value of the low weight is so great, with the modern sail plan, that no amount of mere beam can compensate for it without necessitating a form that in so large a yacht would be less speedy and, in many ways, inferior to the beautifully moulded Defender. In yacht racing, as it stands to-day in this country, with no limit to depth or draft, either through natural conditions or the measurement rule, the field of the centerboard yacht is an exceedingly limited one. The yachtsman who is willing to pay the price can win to a certainty through the long lever, the low weight, the limited displacement and wetted surface, and the easy form of the bulb-fin (whether in the most extreme shape of a Niagara or the more moderate sections of Defender and Britannia), having the advantage over every type of centerboard yacht save in the very smallest classes. Once having the fin for a lever-arm to carry the ballast bulb, all necessity for the centerboard as an aid to lateral resistance at once disappears.

The sole exception to this rule is in the very smallest classes recognized by the yacht clubs—those under 25ft. racing length. In the diminutive class which has lately attracted so much attention through the international races of the Seawanhaka Corinthian Y. C. between Spruce and Ethelwynn, the centerboard, used in a peculiar form, has still an advantage over the bulb-fin. Under the limits of the class, about 15ft. waterline, 23sq. ft. of sail and a crew of two, all necessary power may be obtained through the weight of the men on the weather deck, and there is a positive loss, in ordinary racing weather, in carrying an extra weight of lead bulb of some 400lbs., to be dragged through the water. Under these conditions, it pays to employ, for purposes of lateral resistance, the peculiar form of centerboard introduced by Mr. Linton Hope, an English designer, in 1894, and improperly known as a "dagger" board; the power being obtained, if such a comparison is admissible, by the weight of the crew acting on a horizontal lever, the half beam of the yacht, instead of by the weight of the bulb acting on a vertical lever, the fin. The effectiveness of this form of board, deep, narrow, moving in solid and undisturbed water, and with all useless surface cut away, needs no demonstration. * * *

Where the advantages of this type end and those of the bulb-fin begin is an open question, but it would seem that in the 20ft. class, where three men are allowed, the same principle maintains, and the crew can best carry the allowed sail plan—some 400sq. ft.—by their own weight. When it comes to the 25ft. class, however, with five men and about 625sq. ft. of sail, it is probably a matter of local conditions whether the Sorceress and Ethelwynn type with the light, deep board will be as successful as the bulb-fin type represented by El Chico and Wenonah. In all larger classes low lead must prevail over live weight, save in the comparatively few clubs where shifting ballast, if not unlimited crews, are still recognized.

If this statement of the case be correct, it might be assumed that there is no further place for the centerboard in yachting, but such is very far from true; in fact, the opportunities now offered to the designer for the production of good types of centerboard yachts are far greater than ever in the past. The fact is clearly recognized that the development of the last five years in yachts has been badly in the extreme; that the gain in speed, while positive and conclusive from the point of view of match sailing and prize winning, is comparatively small in actual minutes, and that the price paid for it is entirely too high. It has been and still is possible to win prizes in any class by a lighter construction and a greater draft of water in each new yacht; the result being a craft of extreme first cost and expensive maintenance, difficult to navigate, limited to very deep water, costly to dock and to berth in winter, and involving extraordinary expense for towing. The racing life of such craft is limited to a couple of seasons, and afterward they have practically no sale value. The building of Defender and Valkyrie III., with a draft of 19 to 20ft. on a waterline of 89ft., and of such fin-keels as Niagara, of 11ft. draft and 46ft. waterline, has, indeed, proved the path made to be the ne plus ultra in extreme; but it has as proved that such extreme craft are other than detrimental to the best interests of yachting, or discouraging to the best class of practical yacht owners.

The conformation of the Atlantic coast and of American waters in general presents certain conditions which must be complied with in order that yachting in both of its branches, racing and cruising, may receive the widest possible support and attain the highest development. Both along the coast and throughout the interior are immense areas of shoal water, under 3ft., and, in many places, as on the Florida coast, under 1ft., in depth. On these waters men wish to sail, for pleasure or business, and, for this purpose only, an extreme form of the centerboard type is practicable. For a draft of but a few inches there is nothing superior to the sharpie, peculiarly an American type, and capable of a wide range of use. It is of cheap construction, and, if properly designed according to the exact conditions of its intended use, may be made practically safe in skillful hands. Another excellent type of shoal yacht is that represented by the cruising yawl Lounger, constructed by H. C. Wintringham, the light draft permitting of use almost anywhere in Florida, while, at the same time, the yacht, when loaded or ballasted deeper, has made the passage by sea from New York to Florida and back. A remarkably good vessel for a similar purpose was the schooner Whim, designed by Mr. A. Cary Smith in 1885, with a draft of but 2ft. 8in. on a waterline of 55ft. With a good freeboard, the yacht was loaded to a deeper draft for her many cruises up and down the coast, but when lightened she did excellent service on the shoal Florida rivers.

A different type of shoal yacht is the Cape Cod catboat the Caper, adapted primarily for use in shoal tide harbors and for taking the ground, but doing most of its sailing in deep open water about the Cape, either as a yacht or as a most serviceable fishing boat. While its big rig and hard steering bring it justly under the denomination of a "brute" in the yachtsman's meaning of the word, it still has many positive good qualities as a rough-water boat of very limited draft, and is the best combination of speed, safety and all-round good qualities for racing and cruising that has yet been produced on a total draft of 24 to 30in. That it is capable of improvement can hardly be doubted; but, as it stands to-day, the Cape cat of the standard model, unmarred by the more recent raving improvements, is one of the very best types of shoal centerboard boats. While absolute non-capsizability cannot be obtained on a draft of 30in. or less for a waterline of 25 to 50ft., there is ample practical proof that a reasonably safe and able boat, and one of universal adaptability, may be had from these three classes.

Experience has proved that, in yachting, draft is very largely a matter of habit and education; twenty years ago it was almost an axiom with New York yachtsmen that no yacht up to 50 or 60ft. waterline should draw more than 4ft., or, in extreme cases, 5ft., to be within the limits of practicable use, about 6ft. being allowed for a yacht of 100ft. waterline. Of late years many of these same yachtsmen have taken to craft drawing 10 to 11ft. on a waterline of 40 to 50ft., and have used them, not without inconvenience at times, but, on the whole, with most satisfactory results. One factor, too important to be passed without notice, is the convenient and serviceable naphtha launch which has replaced the old yacht's gig for shore service; but the main thing is that yachtsmen have learned to use and to appreciate deep yachts. While my personal prejudices and predilections have always been for the cutter, such a 40-footer as Minerva or Uvira, and similar craft in the larger sizes, for general yachting about New York, Boston and the coast, and while such yachts have many good qualities to offset the inconveniences of a draft of 9 to 10ft., I can recognize fully the advantages of a draft of not over 6ft. (the working limit within many of our harbors and bays), and the general utility of well-designed yachts within this limit. * * *

In a rather larger class an ideal yacht of this kind is found in the schooner Quicksatep, designed by Mr. Burgess in 1889, of 7ft. draft on a waterline of 65ft.; her steel construction, in addition to the extra room, removing the only objection to the score of weakness, to the shoal centerboard yacht with a trunk cabin. For convenience of use, and for accommodation, this yacht leaves little to be desired; and her speed has been a matter of favorable comment since her first season. In yachts of from 70ft. waterline downward, in which the absolute draft may be kept within 9 or 10ft., there will always remain many advantages on the side of the wide keel cutter; but there will still be a place, both in the secondary racing and in general yachting service, for the well-designed, deep-bodied, centerboard yacht of not over 6 to 7ft. draft.

The last three or four years have brought two changes in yachting which can only be looked upon as detrimental—the introduction of the fin-keel and the excision of the limit of draft. The bulb-fin keel is by no means an absolute novelty; its possibilities of speed are too plain to have been passed over entirely by thoughtful yachtsmen, especially in view of the fruitful experiments of the model yacht sailors. That it was not adopted in large yachts prior to 1891 is due, not to a failure to appreciate its advantages, but to a general reluctance on the part of all yachtsmen to recognize such an obvious machine. By minor changes, all in the same direction, and all with increased speed, one designer after another broke the ice, until it only remained for Mr. N. G. Herreshoff, in the experimental Dilemma, to take the final step; had he not done so, another would. In the same way, up to the end of 1892, yachtsmen, by a tacit agreement of long standing, observed rigidly a certain extreme limit of draft dictated by the average minimum depths over the racing courses and in most harbors. Within this limit, 13ft., are found the large cutters Genesta, Irex and Thistle, with the still larger schooners Sappho, Yampa, Ramona, Dauntless and Coronet. On the part of the American designers there was small incentive, in view of the successful centerboard yachts Volunteer, Mayflower, Grayling, Montauk, Sachem and Iroquois, to exceed this limit; and the British designers, though confronted by that alluring prize, the America's Cup, fully aware of the deficiencies of their existing keel cutters, and with the possibilities before them of a "90-ton Doris," of 18ft. draft, as a successful challenger, still kept within it. When the break came, in 1893, all went in together, Herreshoff with 15ft. in Colonia, and Watson with 17ft in Valkyrie II. and Britannia; Fife in Calluna, and Soper in Satanita, taking about the same. The game has stopped, for this season, at an extreme of 20ft. draft on a waterline of 89ft.; but if it is to be resumed next year, no one can say how much further it may go before a natural limit other than the rejected ones of expense and convenience is reached. Even now, in the course of a season of such work as they are capable of, these great sailing machines are in tow for more miles than they are under sail.

The old-time limit was in every way a desirable one; for all the purposes of wholesome yachting, there is no reason why a total draft of 13ft. should be exceeded, and, for most purposes, 11ft. would be still better. For sea work, even in the largest size of keel schooners, such as Yampa, 13ft. is enough for stability and lateral plane, and quite as much as can be carried with due regard to harbor and docking facilities. For the ordinary run of coasting work, such as is done by the majority of large yachts, a draft of 11 or, better yet, 10ft. is quite as much as is desirable. Up to a waterline of 60 to 70ft., this may be had in a keel craft, but in the larger sizes the keel should give way to the centerboard. Contrast the two types at the head of American yachting to-day, both of 90ft. waterline, and say which is the better—the centerboard schooner of deep and powerful body on a maximum draft of 10ft., such as Lasca, Volunteer, Emerald, Iroquois, Sea Fox and Ariel; or the big single-stickers Defender, Colonia, Vigilant and Navahoe, drawing from 14 to 20ft. It is in the larger classes, whether schooner or cutter, in which the disadvantages of the centerboard type are smallest and the advantages greatest; the questions of safety and non-capsizability disappear in the modern lead-ballasted centerboard yacht of deep body; with steel construction there is a wide margin of structural strength in spite of the division of the keel and floors by the trunk; the absolute size of the interior permits a disposition of the trunk that involves little waste of space; the effectiveness of the yacht to windward as compared with an extreme keel machine is impaired to only a slight degree; and the gain in convenience by a draft of 10ft. instead of 20 is of inestimable value in practical yachting.

Great as the gain is in ordinary longshore yachting and racing, it is perhaps still greater in the sea-going yacht. The proportions and disposition of weights of the modern deep centerboard type tend to make it at all times an easy sea boat; and, when hove to in really bad weather, the absence of a deep keel permits enough leeway to make the yacht easy in a sea where the keel craft is constantly forging out to windward, standing up against the seas like a wall, and taking the full force of every blow. The notable experience of the schooner yacht Iroquois in the great March blizzard of 1888, when she was caught off the Capes of the Delaware, shows what such a yacht is capable of in the very worst weather. This same yacht, designed by Mr. A. Cary Smith in 1886, the first of the type, is at the same time the best example that I know of. Designed originally for offshore cruising, she has proved a complete success for that purpose, as her many winter cruises to Florida, Cuba and through the West Indies testify. In addition, she has made an enviable record in racing against yachts built for speed and that have never been off soundings; and, what is no less instructive, she still holds a higher market value than many more expensive and more ambitiously planned yachts.

The question of draft is the vital one to-day in yachting. With the designing of the two Valkyries, of Colonia and Defender, the natural and sentimental limitations have disappeared, and there is a reluctance on the part of yachtsmen to enact arbitrary and artificial ones. The rule just adopted by the Yacht Racing Association of Great Britain does place a certain limitation on excessive draft—just how heavy it is as yet impossible to conjecture; but in this country there is no present prospect of the adoption of any similar restriction, or of any attempt at penalizing the bulb-fin in favor of the yacht of fuller body, less draft and a greater average of good qualities. While it is hardly possible that any good can come from further experiments in the direction of extreme draft, at the same time there is a hesitation about setting an arbitrary limit. The most practicable function of the difficulty would seem to be in the abandonment of the 90ft. cutter in favor of a smaller size in which an absolute draft of, say, 12ft. would be enough even for the unlimited keel racer; and, in the larger classes, to encourage the development of the deep centerboard type within a limit of about 10ft. extreme draft. It is in this type, as represented by Volunteer, Lasca, and Emerald, that the greatest possible benefit to American yachting in the larger classes may be looked for.

There are three points in connection with the centerboard which can be noticed but briefly here: the use of the board as ballast, the use of the board in very deep yachts, and the true relation of the centerboard to the America's Cup. In regard to the ballast board, the question is still an open one, but my own conviction is that the sole useful function of the centerboard is as an adjunct to the lateral plane; and that the attempt to use the board as ballast also is, at the best, of very doubtful utility and open to serious objection. * * *

The most interesting experiment yet made with the ballast board was that of the 46-footer Harpoon, already mentioned, made by Messrs. Stewart & Binney, for the Adams brothers, in 1892. The original board, of the ordinary wooden construction, was replaced by one of steel plates filled between with lead, the total weight being 3.75 tons, certain alterations of the lead keel being made which resulted in a decrease of the displacement by about 0.75 ton. That the yacht was improved over her first year's form is quite certain; but, as other changes were made, in the sail plan and elsewhere, it is impossible to say how much was due to the weighted board. In the opinion of Mr. C. D. Adams, she was faster off the wind, and to windward in light airs; but, taking everything together, there is no satisfactory evidence of a material gain through the ballast board. No trouble was experienced in using it; with a powerfully geared winch, two men could house it in five or six minutes; as a matter of convenience, where the depth of water permitted, it was often left about half way down from day to day. Some difficulty was experienced in unshipping the board, as was necessary in cleaning the steel surface. Incidentally, Mr. Adams speaks very highly of Harpoon as a sea boat, describing her as superior to Gossoon and the other keel boats built for him and his brother. A weighted centerboard of 1½ tons was tried about the same time in the Burgess 30-footer Hawk, of similar type to Harpoon, but was finally abandoned; on one occasion, the breaking of the chain pendant allowed the board to fall, hanging only by the pin, a mishap that must have resulted seriously in other than smooth water.

There are many instances of the trial of heavily weighted centerboards in smaller yachts. The open racing boat Dare Devil was fitted with one by the late Commodore Dilworth in 1882, but with a resulting loss of speed; and the same experiment has been repeated in more recent years with the same results—a notably small gain in stability, and an actual loss of speed. In canoes and small racing craft, mostly of narrow beam, very good results have been obtained by the use of bronze or brass plates of moderate weight, 100 to 200lbs., one advantage being the superior surface of the metals as compared with wood; but there are indications that the gain is changed to a loss when a greater thickness is employed than is essential to a reasonable degree of rigidity; and that any material amount of lead on the centerboard, even in these small craft, is detrimental to speed. In the larger yachts an instance is found in Queen Mab, the Watson 40-rater, of 59ft. waterline, 16ft. beam and 11ft. draft of hull, originally fitted with a centerboard of Delta metal of 3½ tons, the solid plate being very accurately fitted to slide in the metal trunk. After several seasons' trial this plate was removed, the yacht going to windward satisfactorily without it, and the slot was filled with lead, the stability being in no way impaired.

This brings us to the question of the centerboard in very deep yachts, an experiment that has been very fully tested in Great Britain within a few years past; and with but one result. Since the restriction on the use of the centerboard was removed, in 1887, there have been built a number of cutters of varying dimensions and proportions, from Iverna of 84ft. waterline down to Dis of 36ft., in which centerboards of various weights have been used; in every case, as in the fast 20-rater Dragon last year, the board being finally discarded and the slot filled with lead. * * *

The weight of evidence, though by no means conclusive on these two points, would seem to indicate that the best results are to be obtained in yachts of but moderate depth, and specially designed to utilize as the main factor of lateral resistance a centerboard of little or no intrinsic weight; and that the addition of a centerboard, light or loaded, to a very deep hull of large lateral plane is of very questionable advantage. While it is to be regretted that more ample and positive data on these points is not within reach at present, the designer who goes into the subject more thoroughly than the limits of this paper permit will, I believe, find evidence to justify these general conclusions.

The many discussions of the advisability of the complete abandonment of the centerboard in international racing, which attended the building of Defender last spring, suggested to me a line of investigation which could hardly fail to be interesting, and in a measure profitable, but which I have not been able to take up. This is to assume that Mr. Burgess, in designing Puritan, Mayflower and Volunteer, had been denied the use of the centerboard and compelled to rely upon the keel type alone; in each case with the current yachting knowledge of the day to guide him. The probabilities are that the American yacht in each case would have been so superior in sail area, in power of hull through added beam, and especially in the area and effectiveness of the lateral plane, that the Cup would still have been on this side. The keel has held the Cup this year; Vigilant might well have been a keel boat and yet won in 1892; Volunteer with no centerboard, but with 3ft. more draft, 13ft. instead of 10, would still have defeated Thistle; in other words, recognizing now the marked defects of the British keel yachts Genesta, Galatea, Thistle and Valkyrie II., they were

really beaten by superior power and not by the mere use of the centerboard.

In conclusion, while the centerboard has been at times an instrument of evil through the easy way which it opens to bad design and construction, the device, when properly handled by the honest and skillful designer, is of the highest possible utility. Through it is made possible a craft of extreme light draft which, though capsizable, is still reasonably safe and exceedingly useful in skilled hands; and no other should attempt to use it. With adequate depth and a proper construction, the material being preferably all metal in large craft, it gives a strong, safe and practically non-capsizable sea-going vessel, for either pleasure or trade, on a moderate draft of water. The best possible combination of good qualities—speed, safety, accommodation and convenience of use—are to be had in a yacht in which the greater part of the depth is made up by the hull proper, the keel or appendage being reduced to a minimum (for the sake of light draft) and the main factor of lateral resistance being a centerboard properly proportioned to the hull and placed in the one correct position. Could I say where this position is, I should feel that my work might aspire to a far higher value; but I frankly confess that I know of no rule or formula that covers the case, and there are many more experienced than I, professional designers, who will join in this admission. Some designers do know, but they are very few; some believe that they know, but their boats speak to the contrary; many yachts of excellent proportions and model have been utterly spoiled through the misplacing of the centerboard. As in most of the details of yacht designing, the location of the centerboard is not a matter of exact calculation, but of judgment based on practical experiment and close observation.

While I feel that what I have written is merely suggestive and by no means as positive as it should be, I hope that it may still prove of some practical value in pointing out the complicated nature of the centerboard problem, and the great benefits which must result from its satisfactory solution.

A paper of special interest at the present time is that of Mr. James C. McGuire, Associate, on the subject of "Aluminum: its Alloys and their Use in Ship Construction."

The following extracts relate specially to the use of the metal in yacht construction:

Aluminum.

The metal aluminum, as manufactured to-day on a commercial basis, is made entirely by the electrolitic process, this having supplanted the sodium process, which was discontinued on the introduction of the methods now employed in producing aluminum, for the reason that the price at which aluminum is selling to-day is less than half of what it sold for when manufactured by the sodium process, and the users of aluminum have by no means seen the lowest figures for which this material can be produced and furnished.

The metal is very ductile, and can be rolled into sheets .0005in. in thickness, and, if it is desired, thinner than this; it is hammered into leaf in exactly the same manner that gold leaf is hammered, and is used extensively for decorating purposes.

From the leaf the metal is ground into powder, which has its uses not only for decorating purposes in the form of an aluminum bronze paint, but is used in flash-light photographing, and also very extensively in pyrotechnical displays, burning with a very brilliant light.

Aluminum is also drawn into tubes or wire, and is spun or stamped into the different shapes. It is cast, drop-forged, and in fact is used in almost every way that steel and copper is used at the present time.

It is susceptible to a high degree of finish, by polishing or burnishing, and becomes hard by working, or when being spun into shape, drawn into wire, or stamped out.

It is rendered soft again by annealing, and if required soft for a final operation, such as stamping or spinning, it must be annealed before being subjected to this work.

By forging and cold rolling it can be given considerable rigidity and temper.

Aluminum is the lightest of commercial metals, a given bulk of it being only one-third as heavy as a corresponding bulk of iron.

The color of aluminum is very nearly the same as that of silver, though instead of a dead white as in silver, aluminum has a delicate purple tint.

* * * * * * * * * *

Next to the relative specific gravity which aluminum bears to other metals, the resistance to oxidation is one of its marked qualities. Pure aluminum does not tarnish from the influence of weather, except very slowly, even when exposed in a moist atmosphere.

The action of salt water on pure aluminum is extremely slight, and it withstands the action of sea water much better than iron or steel.

Aluminum, however, does collect the barnacles, very much the same way that steel does, although not quite so rapidly.

A piece of copper and a piece of aluminum were placed on the side of a wooden ship plying between New York and the West Indies, and they were accurately measured before being put in this position, and also after the ship returned.

The copper, while free from barnacles, had lost .037 of an inch, and the aluminum, while the surface was covered with barnacles, had only lost .005 of an inch in thickness.

The more alloy which aluminum contains, the greater the action of salt water upon it, especially those alloys of aluminum which contain zinc. But more will be said on this subject later regarding the corrodibility of aluminum.

* * * * * * * * * * *

The ordinary commercial aluminum is about of the same degree of hardness as commercial copper, and, in fact, pure aluminum acts very much like pure copper, as it hardens remarkably fast when being worked either by forging, hydraulic pressure, rolling, stamping, spinning, or treated in some such similar way.

One of the reasons that one hears it said sometimes that aluminum castings are not strong enough to do the work is that people will ask for pure aluminum castings, or buy the pure aluminum, and make the castings themselves; and, as previously stated, pure aluminum does not make a very strong casting, and there is not one casting in fifty which is ordinarily made of aluminum that should be made of pure aluminum.

There is just the same difference between an aluminum casting with a few per cent. of alloy in it, and the pure aluminum casting, as there is between brass and copper, and, except for special electrical work, very few people would think of having a pure copper casting made.

The difference in specific gravity between the pure aluminum and the alloy is so slight that it is practically immaterial. But this subject will be taken up more at length later.

SPECIFIC GRAVITY.

The low specific gravity of aluminum is probably its most valuable quality.

Ordinary cast aluminum is about 2.59, the sheet or worked metal being about 2.76.

The following is the comparative specific gravity, showing the difference between aluminum and some of the most common of the other metals:

Aluminum castings	2.59	Cast iron	7.21
Aluminum sheet, average	2.72	Wrought iron	7.77
Aluminum drop-forged or hammered	2.76	Soft steel	7.87
		Copper	8.93
Zinc cast	6.86	Brass	8.39
Zinc rolled	7.19	Nickel	8.80
Tin	7.3		

From this it may be seen that the weight of a cubic inch of cast aluminum is .092 pound, and the weight per cubic inch of rolled aluminum is .098 pound.

It will also be seen that soft steel is three times as heavy as aluminum; copper is 3.6 times as heavy; nickel, 3.5 times as heavy.

Silver is four times as heavy; lead, 4.8 times as heavy; gold, 7.7 times as heavy, and platinum, 8.6 times as heavy.

The shrinkage of pure aluminum in casting is $^{17}/_{64}$ of an inch to the foot, to be exact; but it is generally taken in making castings, as 1/4in., or about that of brass. The shrinkage of the nickel aluminum alloys is much less and can be safely reckoned as being only equivalent to that of brass.

Pure aluminum is very sonorous, and its tone seems to be improved by using an alloy with a small percentage of silver, or copper and nickel.

The best results can be obtained, in casting aluminum and its alloys, by melting the aluminum in the ordinary plumbago crucible, similar to those which are used for melting brass or copper, and, if the metal is not overheated, it will not absorb any appreciable amount of silicon from the crucible.

Aluminum does not unite with or absorb carbon, under any of the ordinary conditions, when the two are heated together.

As previously stated, the metal is non-volatile at any of the ordinary temperatures, and in order to prevent oxidation it is not necessary to cover with any substance the metal which is being melted.

A thin film of oxide will form on the surface of the metal when melted, but it is not enough to injure the castings made from it, as this thin film protects the metal underneath from further oxidation.

In casting aluminum, practically the same rules should be followed as in making brass or bronze castings.

Either sand or iron moulds may be used, the best result being derived by using iron moulds; but, under certain conditions, the aluminum blows away from the iron if this method of casting is not properly understood and proper precautions taken. The best bicycle castings are made in iron moulds, although the majority of the more ordinary castings used in commerce are made from sand.

In making up moulds for casting aluminum, as large a gate and as high a riser should be used as is convenient, for the reason that, in the thin casting, one needs quite a head of metal to force the molten metal to the most distant part of the moulds; and then, again, one should have such a volume of metal in the gate that the casting should grow cold before the gate gets cold, in order that, as the metal in the casting shrinks, the liquid metal in the gate will flow in and take its place.

The majority of unsuccessful castings made of aluminum have been due to two causes, viz.: either the metal was overheated and poured too hot, or the mould was not properly gated.

Care should always be taken, in casting the alloys of aluminum, as well as pure aluminum, that the temperature of the mass is not raised too high; for, if the metal is overheated, it will absorb gases, which it will not do if not raised very much above the melting point; and, again, in the case of the alloys, if the temperature is not carefully watched, some of the hardening ingredients will be burnt out, as is the case with zinc, which melts and volatilizes at a lower temperature than that at which aluminum melts.

Another point which it is desirable to observe in making castings from the alloys is to keep the metal thoroughly stirred from the time it gets into a molten condition until it is finally poured; for, if this is not done, the tendency to burn out some of the hardening ingredients will be greater, and also some of the heavier ingredients will settle to the bottom and collect; thus, when a series of castings is being poured from the same crucible, one will not get them all of a uniform degree of hardness.

After the metal is removed from the fire it is a good principle to cool it down with some new metal before casting, in order to be sure that it is not being poured too hot.

This is generally done by taking an old gate and stirring the liquid metal with it, allowing the gate to melt as you stir.

It is a matter of but very little experience to tell by the eye when it is cooled down to the proper temperature for pouring, since, as previously stated, the metal should be poured as cold as possible, in order to have it flow freely and get the best results.

The best alloys of aluminum are made directly; that is, the alloy is produced and combined with the aluminum in the furnace at the same time that the aluminum is produced, which is one of the great secrets in making a successful alloy.

The consideration of the aluminum bronze, and the casting of it, would require a treatise in itself, and the author of this paper will not go into this subject or take up any of the alloys of aluminum on the other end of the scale—that is, where the percentage of aluminum is small as compared with the other ingredients present.

ANNEALING.

After the aluminum ingots have been cast and rolled into sheets, there are many cases where it is necessary to anneal the aluminum before the rolling is carried further, as is the case when the sheet is desired soft for stamping or spinning.

This process of annealing is accomplished by heating the aluminum sheets in a muffled furnace to such a degree of heat as would raise a piece of steel to a dull red, which is in the neighborhood of 700° Fahr., great care being taken that the aluminum is thoroughly heated through, and not only on the surface.

There are many ways of telling when the sheet or wire, as the case may be, has been annealed through, as its temperature varies according to the form of the piece or thickness of the sheet being annealed.

But for ordinary purposes take a pine stick, and if, when drawn across the sheet of aluminum which has been heated, the stick is charred and leaves a black mark behind it, the metal is sufficiently annealed to proceed with further operations on it.

After removing the metal from the muffle, it should be allowed to cool slowly. This is accomplished in many different ways.

The question of rolling aluminum is one of extreme simplicity, and requires but little practice on the part of mill men to roll successfully.

Most of the heavy ingots when starting to be rolled are heated and rolled at a low annealing heat, and there is only one principal feature in which aluminum differs from copper in rolling, and that is that it hardens up very quickly when being rolled—much quicker even than either steel, brass or copper—and the metal has to be annealed for the successive operations, according to the degree of hardness which is desired in the finished sheet; and, also, if an alloy of aluminum, on the percentage of alloy which the sheet contains; the sheet containing the largest percentage of alloy requiring the most frequent annealing.

If this annealing is not done, and the sheet contains much alloy, or is rolled thin, it will crack in the rolls.

Ordinary hand-rolled aluminum, which is rolled as much as possible after annealing, is about as hard as the ordinary hard brass.

Of course, when the ingot or sheet goes to the rolls from the annealing furnace, you can take a larger draft with your rolls than you can later, when the sheet begins to get thin, and also hard from being worked; the draft of the rolls then has to be reduced considerably from the amount first used on the sheet, just after coming from the furnace.

Aluminum is susceptible of taking and retaining a very high polish. All metals exposed to the influence of moisture will become soiled or tarnished and require polishing to a greater or less extent.

In the case of aluminum, although the actual oxidation on the surface of the metal is practically very slight, yet, if the metal is not cared for, there will, to a limited extent, be a certain amount of oxidation taking place.

It is therefore as necessary to clean aluminum by polishing it now and then as it is to keep other metals clean.

The oxide of aluminum is a white powder, which forms in a thin film on the surface of the metal; and as long as this film is not broken or removed, and since the oxide of aluminum itself is insoluble, this coating of oxide forming over the surface prevents, to a certain extent, further oxidation of the metal. But, as a matter of fact, it is practically impossible to keep this oxide from being broken or disturbed. If, however, the oxide is removed from the surface and the metal is kept well polished, it will be found that the oxide forms much more slowly on a smooth surface, which has been well polished, than on a rough surface, or one that has been scratched by using a polish not ground fine enough; these infinitesimal crevices collect and hold the moisture in the atmosphere, which will attack the metal with greater rapidity than on a smooth surface, and it is for this reason that the greatest care should be used in selecting for this work a suitable polish, the chief merit of which consists principally in being ground fine enough.

Any of the polishes used for polishing brass and other metals and fulfilling the above requirement will polish aluminum, and with very much less work on the part of the user than is necessary in keeping other metals clean; the reason for this being, as above stated, that the oxide of aluminum which first forms, being insoluble, the surface of the metal, when once covered with it, retards the progress of further oxidation to a large extent, and further destruction of the surface continues but slowly. In the case of nearly all metals except aluminum the oxide is soluble in water, and consequently, after the moisture has penetrated the oxide, the corrosion continues as badly under the first coating as it did when the metal first began to corrode.

Where oxidation or corrosion of aluminum is liable to take place, due to its exposure to the action of alkalies or acids that attack this metal, it has been found that polishing the metal after its exposure reduces very largely the effects of corrosion, which, when once seriously started upon the metal, seems to act in a sort of continuous manner, especially if this starting has been caused by chlorides or alkalies.

If the people who use aluminum in places where they want it to stay bright, or expect it to look nice and clean all the time, will expend a small portion of the energy and time to keep their aluminum bright which they would on the same article made of other material, they would find that their efforts would be well rewarded, and that the work necessary to keep aluminum bright is infinitesimal when compared with that required in keeping other metals bright.

The best polish, probably, for aluminum is the Acme Aluminum Polish, one of whose chief merits, however, as above stated, consists in its being ground extremely fine.

A great deal of harm has been done aluminum by the reports of people not familiar with its non-tarnishing and non-corroding properties.

If this was properly appreciated, and people would expend the necessary amount of effort to keep it clean, it would soon find its place for many uses, for which at the present time the public at large think it undesirable or unsuited to the purpose in question.

In conclusion, keep your aluminum painted or keep it clean, if exposed to moisture or corroding influences.

* * * * * * * * * *

The question of welding aluminum is a very simple one, and the metal can be welded on any electrical welding machine.

It cannot very successfully be welded by other means than that of electricity, for the reason that it conducts the heat so rapidly that the surfaces get chilled before the union takes place.

When this welding is done by the passage of an electric current, however, the heat is maintained while the surfaces are being brought together until the union is effected.

This method is used principally for joining wire, and in the manufacture of bicycle tires and similar work.

The question is often asked: "Can aluminum be soldered?" The reply is that it can be soldered, but it is difficult to do, the principal reason for this being that it is with difficulty that solder can be made to adhere to aluminum, since the heat conductivity of aluminum is so great that as soon as the solder comes in contact with the metal the heat is conducted away from it so rapidly that the solder is chilled, and will thus not be allowed to flow freely on the surface of the aluminum. This can be overcome to a certain extent by keeping the sheet heated with an alcoholic lamp or a gasoline torch while the soldering process is being carried on.

There are two general methods of soldering. One is to prepare the surface of the sheet chemically, so that the solder will form a chemical combination with the surface so prepared, and adhere; and the second method is to plate with copper or some other metal the surface to be soldered, and then solder together these two surfaces.

The difficulty in this latter method is that, unless the plating is carried on with unusual care and skill, the plating itself will not adhere to the surface of the aluminum after a period of six or eight months, and the surfaces will drop apart, not from the fault of the solder, but from the fault of the plating.

Too much care cannot be taken, especially in using aluminum around water, salt water in particular, to prevent oxidation by galvanic action.

Aluminum stands well at the head in the table of metals arranged in electro-chemical series, thus showing it to be very much more positive than the other ordinary metals, which stand much lower in the table. And when two metals are in contact, especially in salt water, a voltaic couple is formed, which is equal to the sum of the electro-motive forces between the metals, and when such a couple is formed the most positive element is the one that is attacked the more severely. Aluminum naturally suffers the worse, as it is electro-positive to the ordinary metals of commerce, and shows up badly in a comparison.

This subject of galvanic action was investigated very thoroughly by Mr. Yarrow, who constructed the first torpedo-boat for the French Government. He was not able to obtain aluminum rivets which were strong enough to satisfy all the conditions which he thought would be met with, and he was afraid to use copper or composition rivets, for the reason that aluminum and copper, or composition, stood so far apart in the table of electro-chemical series.

So he used iron, which stands closer to aluminum than any other metal from which it would be possible to make rivets.

These rivets have given entire satisfaction, as far as strength and corrosion of aluminum and galvanic action are concerned, but some objection has been found to them for the reason that the paint to a certain extent is porous, and a slight amount of corrosion has taken place on the heads of these rivets; in other words, there has been formed a composition of alumina and iron rust, which has run down and discolored the sides of the boat, so that, in order to keep this boat looking nice, the Government has had to keep it well painted, in order to prevent the iron rivets from rusting.

This question of riveting came up when the Defender was constructed, and the advice of the author of this paper to the builders was to use aluminum rivets, and he offered to furnish these of the same character and grade of material as that from which the plates were constructed.

The author was informed by the manufacturers that they did not have time to investigate the strength of these rivets thoroughly, and pending such investigation they would use bronze rivets.

He argued against this, and advised using an iron rivet, or an iron rivet galvanized, in order to minimize galvanic action. This advice, however, was not listened to, and the boat was constructed with bronze rivets. It remains to be seen how the plates around these rivets are going to withstand the galvanic action.

Even in using bronze rivets in the boat above referred to, the effect of the galvanic action could be materially reduced by coating the inside of the holes with white lead, and then dipping the rivet in white lead or paraffine before driving. But this was not done.

It was also advised that where the aluminum plates joined the bronze plates they take a strip of heavy canton flannel and soak it well for 24 or 36 hours in white lead, and then place this strip between the plates as lapped, and rivet up with this canton flannel, soaked in white lead, between the edges of the two plates, as a "neutral joint." This was not done either.

From the results of experiments abroad, the practice seems to be that it is almost necessary to use aluminum rivets in riveting together sheets of aluminum, especially where it is to be used in and around salt water.

The author agrees with this theory entirely, and does not think that too much stress can be put upon the necessity of using rivets of the same material as the plates, and he also believes that foreign governments have experimented and gone far enough into the subject of aluminum for ship construction to know what is best. They have certainly done more in this line than has been done in the United States, and the results of their experiments cannot be profitably ignored.

It is a fact, however, that aluminum used as a rivet does not give as high a value in shearing, in proportion to its ultimate tensile strength, as is obtained by comparing the shearing strength of steel and its ultimate tensile strength.

The ultimate shearing strength of the ordinary commercial structural steel in comparison to its ultimate tensile strength is about as 75 is to 100, while the experiments that the author has made on the shearing value of aluminum in comparison with its ultimate tensile strength are about as 60 is to 100.

This only means that one has to use a proportionately larger rivet in riveting aluminum plates together with aluminum rivets than one would use in steel rivets in riveting steel plates together.

When this is looked at in the right way, it is a very simple matter to determine the proper area of the rivets to be used in proportion to the thickness of the plates to be riveted; therefore the strong advice of the author to constructors contemplating the use of aluminum plates is to use aluminum rivets also, which can easily be done, in spite of the low unit strain of aluminum rivets in shear.

Aluminum will form a natural alloy with nearly all of the more ordinary metals except lead, antimony and mercury.

The most common alloys, however, are those with copper, nickel, zinc, manganese, silver, chromium and tungsten.

The useful alloys of aluminum with these metals, generally speaking, do not exceed 12 per cent. or 15 per cent. on either end of the scale; that is, if the predominant metal is aluminum, the alloy will not exceed 12 per cent. or 15 per cent., in order that it may impart useful qualities to the aluminum. A greater percentage of alloy than this seems to make the metal either hard or brittle, or impart some other quality which does not add to the commercial advantage of the metal produced.

On the other hand, if the principal ingredient is one of the metals above named, and aluminum is used as an alloying metal, the quality imparted is always an improvement on the predominating metal up to any percentage not exceeding 12 per cent. or 15 per cent. of aluminum. Beyond this point you work into the same state of affairs that you do on the other end of the scale as described above.

The grade of aluminum used in Defender is what is known in the market under the commercial name of "the Pittsburg Reduction Co.'s nickel aluminum."

After a great deal of experimenting on the part of the manufacturers, it was decided, after taking all questions into consideration, that this was the most satisfactory alloy to use.

The alloys that were under discussion were those of copper, zinc, nickel and chromium used individually; experiments were also made by using one or more of these ingredients in the same mix; and, after conducting a large series of experiments, the above alloy was chosen for the reason that it possessed more advantageous qualities than any of the others seemed to possess.

The alloys of copper have been used for this purpose abroad, and seemed to have given satisfaction there, but the results of experiments conducted previous to getting out this sheet seemed to show that the use of 6 per cent. copper, which is what Yarrow used in constructing the torpedo-boat which he built for the French Government, did not give an aluminum sheet which was either as strong or as ductile as that from which the plates above referred to were made.

The plates and angles used in Defender are the largest ones that have ever been rolled, and it can be positively asserted that the successful achievement of furnishing these plates marks a new era not only in yacht construction, but in the possibilities which are offered by future developments in the arts and manufactures for material which possesses the unusually high qualities of that which was furnished for Defender.

The plates used in Defender vary from 1/4 to 3/8in. in thickness, the majority of them being $^{5}/_{16}$ and 3/8.

She is constructed of aluminum plating from her waterline up, which amidships gives an aluminum belt a little over 4ft. wide.

Her deck beams are of aluminum, being composed of 5in. bulb angles, being 5in. on one leg and 2½in. on the other, $^{5}/_{16}$in. thick, weighing in aluminum 3½lbs. to the foot.

These angles were made from the same grade of material as was used in the plates.

All of the lateral and diagonal braces under the deck are aluminum plates about 3/8in. thick. There is also an aluminum stringer plate, about 2ft. 6in. wide, which connects the deck beams with the side of the vessel, and is continuous throughout the length of the vessel.

The rail of Defender is also composed of a 5in. bulb angle of the same size as described above, the 2½in. flange being riveted to the stringer plate above described, and the 5in. leg having the same level as side of the vessel at the point where the two join; from this it will be seen that at the stern of the boat it was necessary to open this angle out until the two flanges were almost in a straight line. This was done without any sign of fracture on the inside of the angle.

The dead-light frames and covers which are placed in the deck are also constructed of aluminum, as well as the lanterns, and also many of the small interior fittings.

Her blocks are of wood, with aluminum sheaves, and they have given great satisfaction, the sheaves being stronger than those constructed in a similar manner, which were used on Vigilant, these latter being made from composition and wood.

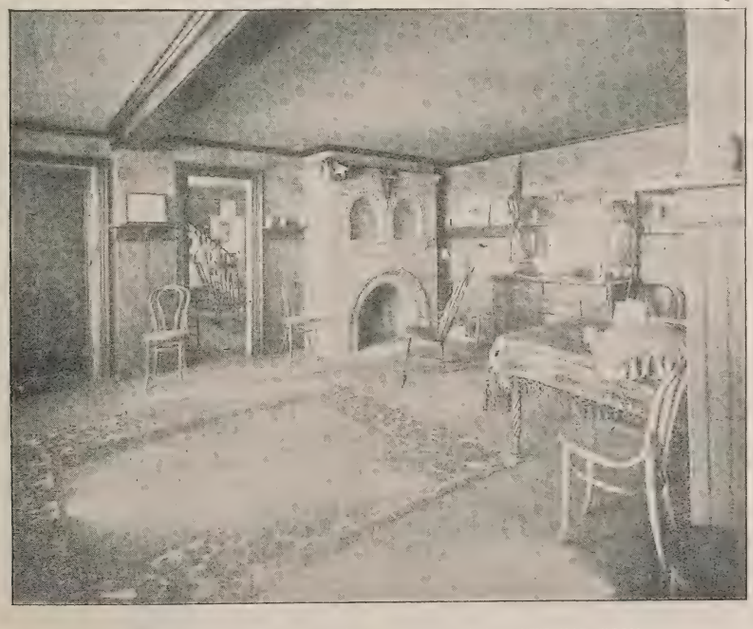
The binnacle is aluminum, as is also nearly all of the metal work on the boat in connection with the plumbing and closets.

It will thus be seen that the main object which the designers wished to accomplish was to get a boat which was not only as light as possible, but which would have its center of gravity as low as was practicable, yet, at the same time, to have no aluminum on the outside below the waterline, owing to the fact that aluminum fouls when exposed to salt water and collects the barnacles very nearly as rapidly as iron and steel. The above object the designers accomplished with great success, as was proven by the superb way in which Defender acquitted herself in the races against Valkyrie III.

Each and every plate used in the construction of the hull was tested, and it can safely be said that, considering the ductility shown, these are the highest tensile tests that have ever been made in any of the alloys of aluminum; especially when it is considered that these tests were made from actual sections, which were quite thick, and cut from the finished plates, two edges of which were left as they came from

PHILADELPHIA CORINTHIAN YACHT CLUB HOUSE——THE HALL.

the rolls, and the other two edges were planed parallel, as it will be seen that the sections tested were about 1½in. wide and of the thickness of the plate from which the specimen was taken.



The heaviest plate in Defender weighs about 200lbs., is 38½in. wide, $\frac{5}{16}$ of an inch thick, and 13ft. 10in. long, which is the largest plate of aluminum that has ever been rolled, so far as the author knows.
